war, and dismiss with bare allusion such important matters as finance, the administrative conduct of the war, and the economic situation North and South. Diplomatic relations with England, admittedly a delicate subject under the circumstances, are handled with a restraint amounting almost to tenderness. On the other hand, the personal traits of Lincoln, Grant, and Lee are pleasantly brought out, and the course of emancipation is rather fully indicated. Mr. Rhodes's style, readable and effective in his larger work, does not adapt itself easily to conditions of limited space; and its effectiveness is not enhanced by a punctuation which at times is extraordinary. For this latter shortcoming, however, the blame should apparently be divided between the author's son, whom the preface credits with the work of literary revision, and the publishers, who might have remedied the defect by intelligent proof-reading.

Volume XX of the "Journals of the Continental Congress," edited by Gaillard Hunt (Government Printing Office), covers the three months from April 24 to July 22, 1781. Out of the mass of financial and military details, whose variety and bulk the recent adoption of the Articles of Confederation did not lessen, a few questions of first-rate importance emerge. Ordinances for the support of public credit, with drastic provisions for the treatment of negligent States, did not get beyond the report stage; but a recommendation that the tender laws of the States, in regard to paper money, be repealed, and that no more paper be issued, was adopted. In May came the incorporation of the Bank of North America and the cheering news of a further grant of 600,000 livres by France. The suggestion of mediation by Russia and the Empire, "eagerly embraced on the part of Great Britain," and taken under advisement by France and Spain, was met by a frank declaration that nothing less than the complete recognition of the independence of the United States "in all its parts" would be acceptable. There was much debate over the instructions to be given to John Adams and the other Peace Commissioners, particularly in regard to the western and northern boundaries. In the end, however, the question of boundary was left undetermined, the Commissioners being charged to obtain the best terms possible, though nothing was to be done without the knowledge and concurrence of France. Of the military operations, those in the South were naturally of chief importance, the status and treatment of American prisoners being of particular concern; but the plans for the Yorktown campaign had not yet taken form.

"The Story of Lucca" (Dent) is the second volume of the Mediæval Towns series which has appeared under the joint authorship of Mrs. Janet Ross and Miss Nelly Erichsen. Here, as in "The Story of Pisa," the former is responsible for the historical chapters, the latter for the description of the city and its artistic treasures. *Mutatis mutandis*, our review of the earlier work (*Nation*, January 27, 1910), might serve also as a review of the present one. Nothing better than Miss Erichsen's portion of the book is to be found in all the series, and the visitor to Lucca who desires to take his sight-seeing seriously can by no means afford to do without it. Mrs. Ross's chapters, on the contrary, fall below the rather low standard of historical narrative which she set herself in "The Story of Pisa." They can be of no conceivable value to the serious student; they may, perhaps, amuse the tourist.

To picture the domestic life of an English civil officer in Northern Rhodesia is the aim of Mr. Cullen Gouldsbury in "An African Year" (Longmans). As his official duties required constant visits to the different villages, the greater part of his time was spent in trekking with his wife through the forest. An important task was to see that the methods adopted to combat the deadly plague of the sleeping sickness were pursued. In all the villages of the infected district the blood of every man, woman, and child had to be examined by a doctor, who gave a certificate of immunity where this was proper. Without this no one was allowed to pass the patrol. All the fisher-villages on the shore of Lake Tanganyika have been moved inland, and it was pathetic, the writer says, to see three steamers which were to open up trade, "each of them high and dry under a crazy canopy of grass, open, endways on, to the winds of heaven." He visited a settlement in the territory of the Germans and received the strong impression that "at present their tenure of the country is more in the nature of an armed occupation than of definite colonization." There is much in his volume that is trivial, but he shows throughout commendable interest in the native. Civilization and education are stigmatized as "the twin scourges of the native races." The ten illustrations are reproductions of photographs by the author. There is no index.

From the Fordham University Press comes a volume of occasional addresses under the general title of "Modern Progress and History," by Dr. James J. Walsh, whose previous books have been noticed in these columns from time to time. In these addresses, as always, Dr. Walsh misses no good opportunity to strike a blow at the ignorance and prejudice which would brand the Catholic Church, in past ages, as the declared and consistent foe of scientific progress. If he does not succeed in convincing the unbiassed reader that the word *friend* should be substituted for *foe* in this formula, he has at any rate proved that the facts of history justify no such attitude of unqualified condemnation of his church in this respect, as many have been ready to assume. The figure of a wilfully ignorant church on the one side holding the official bludgeon successfully over the heads of earnest seekers after truth on the other, is a figment of the overheated imagination which never had its counterpart in historical reality. The conditions which hampered and retarded intellectual progress in mediæval Europe were other and deeper than differences of religious belief.

Aside from this question of the relation of Catholicism to progress in the past, Dr. Walsh vigorously assails the overvaluation which we of the present are complacently putting upon the achievements of our own time. The really important problems with which men are occupied now, he maintains, have again and again presented themselves in past ages, and whenever humanity has grappled with them seriously they have been settled about as well as at any other time, even our own. History shows no steadily rising line of inevitable evolutionary progress. There have been cycles of achievement, ups and downs of accomplishment, and at the present time we are very far from occupying one of the high points in the curve of human advance. If we cannot unreservedly follow Dr. Walsh in the contention of a former volume that the thirteenth century constituted the highest of those points, still we may well listen to his caution against an overestimate of the essentially material brilliancy of what is new in the civilization of to-day.

Andrew Sloan Draper, Commissioner of Education of New York State, died on Sunday in Albany in his sixty-fifth year. From 1894 to 1904 he was president of the University of Illinois. He received from that institution, as well as from Columbia and Colby, the degree of LL.D. He was the author of "The Rescue of Cuba" and of numerous works on educational topics.

Thaddeus Burr Wakeman died last week at his home in Cos Cob, Conn. He was born in 1834 and graduated from Princeton in 1854. He devoted much thought to humanitarian subjects and leaves a number of published works, among them: "An Epitome of Positive Philosophy and Religion," "The Religion of Humanity," "Liberty and Purity," "The Age of Revision," and "Evolution or Creation."

John T. Dye, a prominent lawyer, who died a week ago at his home in Castleton, Ind., aged seventy-seven, was the author of one book, "Ideals of Democracy."

Science

SEMI-CENTENNIAL OF THE NATIONAL ACADEMY OF SCIENCES.

WORCESTER, Mass., April 27.

The annual meeting of the National Academy of Sciences, held at Washington April 22, 23, and 24, assumed an unusual character on account of the fact that this was the fiftieth anniversary of the foundation of the Academy. As a consequence, the usual meeting with the reading of papers by members gave place to a series of sessions, with addresses by distinguished foreigners, and a reception at the White House, at which medals and awards of the Academy were presented by the President of the United States. To all of these a large number of distinguished guests were invited.

The meeting was opened in the large amphitheatre of the National Museum, on Tuesday morning, by the address of the retiring president, Dr. Ira Remsen, who gave an interesting account of the foundation and purposes of the Academy. Two reasons were given leading to its foundation, one that there was then very little scientific work done by the Government, so that it was difficult for the country to obtain scientific advice; secondly, that the country was

then at war, and the idea of doing all that one could for the nation was in the air. Although the number of incorporators was small, namely, fifty, it contained very distinguished names, the calibre of which is sufficiently indicated by citing those of Louis Agassiz, Joseph Henry, Wolcott Gibbs, and Benjamin Peirce. In the charter it is provided that the National Academy of Sciences shall be the scientific adviser of the Government. President Remsen described in detail some of the early cases in which this function was exercised in matters of considerable importance. As time went on and the creation of scientific bureaus had supplied many scientists employed by the Government, this function was less frequently exercised, but as late as 1908 the advice of the Academy was asked by Congress on the important matter of coordinating and simplifying the work of scientific research and survey by various Government departments. The Academy, at first limited to fifty, then to one hundred members, has now been increased to a possible one hundred and fifty, the actual number being one hundred and twenty-five, a number which is probably far smaller in proportion to the scientific activity of the country than that of the Royal Society of London.

The first of the addresses by distinguished guests was that of President Arthur T. Hadley, of Yale University, on the subject, "The Relation of Science to Higher Education in America." President Hadley described in a most happy manner the contrast in the position of science at the universities at the time of the foundation of the Academy and at present. Fifty years ago, he stated, scientific instruction at Yale College was entirely by books. Referring to the fact mentioned by Dr. Remsen, that his father, James Hadley, had been one of the few early members of the Academy, not representing science strictly so called, President Hadley stated that as philologist his father made exact use of the scientific method, teaching his students to dissect and recombine Greek verbs as a botanist would analyze a plant, and that his course in freshman Greek was the most scientific course given at Yale College in his time. Dr. Hadley described with great sympathy the advance of scientific studies in our colleges and universities, commending the introduction of research and the development of laboratory instruction, and while acknowledging the effect that this had had in pushing aside classical instruction, he refused to regard the phenomenon as a matter of regret. He did, however, point out the danger of considering as scientific everything that is called science by its devotees. "When the National Educational Association," said Dr. Hadley, "asserts that it is high time that algebra and geometry should be displaced from high-school studies and replaced by science (heaven save the mark!), it is time that we should look to our definitions."

President Hadley was followed by the distinguished secretary of the Royal Society of London, Prof. Arthur Schuster, who spoke upon "International Coöperation in Research." The development of science has led to the study of such enormous problems that it is no longer possible for the individual scientist to work by himself; neither is it possible to draw any political lines across the face of scientific endeavor. Many questions, such as those of meteorology, terrestrial magnetism, solar research, require the coöperation of a large number of workers, not only for the collection of observations, but for their discussion. In the last quarter century many international scientific congresses have come together, and as a result much coöperative research has been undertaken. One of the most successful of these international committees is the Solar Union for the study of all phenomena connected with the physical properties of the sun and of the radiation issuing from it. Our knowledge of terrestrial magnetism has been greatly increased by the work of the Carnegie Institution of Washington, which has enlisted the coöperation of observers in many countries. There still remains a proposal which has not been carried out —the examination and criticism of data furnished by many observers in a central bureau devoted to their reduction, presentation, and criticism. The most convenient means for international cooperation is probably furnished in the various national academies of science already existing. These have been in recent years united in the International Association of Academies, which has already been the means of bringing about a number of important tangible results, such as the great catalogue of scientific literature, which, published in four languages, has made the results of research in all the sciences accessible to every one. Professor Schuster, however, described the difficulties of carrying on cooperation or of enforcing certain regulations regarding uniformity and system, as illustrated by the presentation of meteorological data, by any organization not having a local domicile and a permanent and continuous administrative body. He hoped that in future it would be possible without exciting national jealousies to have such a permanent institution, which would undoubtedly do much to promote international good feeling and scientific efficiency.

In the afternoon of Tuesday, the Academy and its guests were entertained and enlightened by a most scholarly address by Dr. George E. Hale, on "The Earth and Sun as Magnets." Dr. Hale, who is the foreign secretary of the Academy, exemplifies in his own work what should be expected of a member of a learned academy, and although in his lecture he communicated the results obtained by others in connection with the earth's magnetism, what he had to say of the sun was limited to his own work done in the solar observatory of the Carnegie Institution at Mt. Wilson, California. More than twenty years ago, Dr. Hale invented the spectrohcliograph, which he has since improved to such an extent that, by utilizing different rays of the solar radiation, he has been able to take photographs of the sun's envelope at various heights above the surface, and has thus been able to get an extraordinarily detailed knowledge of the sun's structure. In this way he has been able to show the existence in sun spots of vortical motion very much resembling the appearances of water spouts and tornadoes in the earth's atmosphere. The crowning discovery, however, was made but a few years ago, that these vortical movements produce a displacement in the spectrum of some of the solar lines. These were immediately connected by Dr. Hale with the discovery made by Zeeman in 1895 that light emitted by hot metallic vapor placed between the poles of a magnet has its spectrum lines displaced, the reason being that light is now supposed to be emitted by the small bodies known as electrons, the motion of which is affected by a magnetic field. Dr. Hale accordingly assumes, what is extremely probable, that the motion of the electrons in the sun's atmosphere whirling in vortices, which he has already perceived, produces a magnetic field which may be identified by the displacement of the spectrum lines. Moreover, within a few months Dr. Hale has examined the whole surface of the sun to see whether there is a general distribution of magnetism resembling that of the earth, with the result that such a fact has been rendered extremely probable, perhaps even definitely demonstrated. This is certainly one of the most important discoveries in physics, probably the most important in astrophysics, ever made in America.

On Thursday morning another astrophysical subject of even greater scope was treated in an address by Dr. J. C. Kapteyn, of the Astronomical Laboratory of Groningen, Holland. The use of the word "laboratory" is explained by the fact that Dr. Kapteyn never looks at a star himself, but discusses all the results that have been obtained by observers at all times and in all places, with a view of finding out the general motions of all the stars of which we have any knowledge, with respect to one another, by means of the only knowledge we have, namely, that of their motion relative to the earth. It should perhaps

be stated for the benefit of the layman that such knowledge is obtained in two ways—first, by the so-called proper motion; that is to say, motion up and down or from side to side on the celestial sphere, which is determined by the classical observations of positional astronomy, and, secondly, by the motion in the line of sight, that is, towards or away from us, knowledge which is obtainable only by means of the spectroscope and which we have been able to reach only in the last few decades. Supposing all this knowledge has, however, been obtained by hundreds of accurate observers, it still remains by the construction of some plausible theory to coördinate the motions of these thousands of observable stars into some generalization which will suffice to describe the motions of the universe from creation until now. To sum up briefly Dr. Kapteyn's description, we may say that if there had been created two great masses or "bubbles" of stars in each of which all stars moved irregularly, like the molecules of a gas, and which in addition had a motion of streaming as a whole in parallel directions until the two masses had impinged upon each other, this would approximately represent the state of the universe. It is found that if stars are classified according to their spectra, the so-called helium stars being supposed to be the youngest, then these stars are found to have the slowest motion. As the stars grow older, they acquire greater velocity. The reason for this is difficult to give, but it is probably due to gravitational forces, these being almost the only forces with which the astronomer has had as yet to do. Studies have been made upon many nebulæ which seemed to be moving most slowly and are nearest to the primordial matter. Such investigations may give a good idea of the enormous problems of astronomical science of to-day, together with the daring nature of the speculations required, and at the same time the exactness of the information that may be obtained and is required to justify them.

The afternoon of Wednesday was made memorable by an entirely unusual event, that of the reception of the Academy and its guests by the President at the White House and the conferring of the Academy's awards. Dr. Woodward, president of the Carnegie Institution of Washington, made the addresses of presentation to Mr. Wilson, who, in graceful and well-chosen words, conveyed the distinctions either to the recipient or to the Ambassador of the country in which he lived. The Watson medal for astronomical research was received by Dr. Kapteyn in person. The Draper medal for astrophysical research was awarded to M. Henri Deslandres, of the Astrophysical Observatory at Meudon, near Paris, for his invention of and work with the spectroheliograph, which closely parallels that of Dr. Hale. The Alexander Agassiz medal, founded and presented to the Academy by his friend, Sir John Murray, as a memorial of his work in oceanography, was awarded to Dr. Johann Hjort, of the Norwegian Fisheries, and was received by the Minister of Norway. The only award made to an American was that of the recently established Cyrus Buell Comstock prize of $1,500 to Prof. Robert Andrews Millikan, of the University of Chicago, for his precise and original measurements of the fundamental electrical quantity of the charge on an ion, and Dr. Woodward in his presentation characterized the verification of the atomic theory (or, as he might have said had he been addressing a more technical auditory, the ionic theory) as the greatest advance in physical science of the last two decades. The President in his felicitous reply, quoting Dr. Woodward's phrase of the "adumbrations of Democritus," concluded by expressing to Professor Millikan his envy of "one able to practice a science at once calculable and exact." Thus the range of science from the structure of the universe to that of the atom was exemplified in the awards.

Thursday morning was devoted to the business meeting, at which the principal action was the election as president of that most urbane gentleman and leader of the medical profession in this country, Dr. William H. Welch, of Johns Hopkins University; as vice-president, Charles D. Walcott, holder of the most important scientific position under the Government, the secretaryship of the Smithsonian Institution; as home secretary, Dr. Arthur L. Day, director of the Geophysical Laboratory of the Carnegie Institution; and of Russell H. Chittenden and Edmund B. Wilson as members of the Council. The following new members were chosen: In physics, Henry Andrews Bumstead, of Yale University, and Edward Bennett Rosa, of the National Bureau of Standards; in chemistry, Gilbert Newton Lewis, of the University of California, and Lafayette B. Mendel, of Yale University; in geology, Louis Valentine Pirsson, of Yale University; in mathematics, Leonard Eugene Dickson, of the University of Chicago; in astronomy, Armin Otto Leuschner, of the University of California; in anatomy, Ross Granville Harrison, of Yale University; in zoölogy, George Howard Parker, of Harvard University; and in plant physiology, Erwin Frank Smith, of the Bureau of Plant Industry. Ten foreign associates were also elected.

This exhausting business being finished, the members and their guests, recuperated by a trip down the Potomac in the Mayflower, completed the celebration by a dinner at the New Willard.

The speakers introduced by the toastmaster, Dr. Woodward, were Vice-President Marshall, who, addressing the guests as "Fellow Scientists" (presumably considering himself a political scientist), introduced into his remarks and eulogy of real scientists the rather unfortunate statement, which was headlined in the newspapers the next day, that any scientific expert could be retained on either side of any case for from $50 to $500. Evidently, Mr. Marshall shares the too common opinion that a scientist is a person who applies science to the making of money. The British Ambassador spoke in most happy vein of his appreciation of science and of his relations unfortunately now to be severed with men of science in America. The grand old man of the Academy, Dr. S. Weir Mitchell, gave a most delightful account of the foundation of the Academy and his reminiscences of his connection with it during the last forty-eight years. Dr. W. W. Keen, president of the American Philosophical Society, held at Philadelphia for the promotion of useful knowledge, gave an account of that most respectable and dignified of American learned societies founded one hundred and eighty-seven years ago by Benjamin Franklin, and having furnished eight Presidents of the United States, including the present, among its members. The evening concluded with a dignified speech by Senator Burton, emphasizing the importance to the Government of the services of the trained scientific expert.

Thus concluded a most successful and dignified celebration of the first half-century of our leading scientific society.

Arthur Gordon Webster.

Frederick Warne & Company have in preparation "Animal Portraiture," by Wilhelm Kuhnert and R. Lydekker.

C. Easton, of Amsterdam, in *The Astrophysical Journal* for March, provides a fairly trustworthy and detailed representation of the apparent distribution of the stars in the Milky Way, by the somewhat tedious process of combining all available photographs into a general chart. For many years a naked-eye student of the Galaxy, he concludes that this method is far superior to earlier attempts to reconcile the visual representations of many observers often conflicting. The splendid galactic plates of Barnard, Max Wolf, Pickering, Russell, Bailey, and others are the foundation of this photographic chart, which for the first time forms a sound basis for fixing the medial line or galactic plane, wholly replacing all previous estimates. One is struck with the highly perplexing intricacy of structure in the greater part of the zone, and the sharp definition of many features. Indeed, the "broad and ample road," vague and rather uniform, split in two over half its girdle, as in all earlier descriptions of the Galaxy, quite disappears. Other striking features revealed by the chart are the long lateral offsets in Taurus, Orion, and Scorpio. "It

can hardly be by mere chance," says Mr. Easton, "that most of the streams radiating from the gigantic assemblage of suns about Sigma and Nu Scorpii are directed to the very brilliant patches of milky light in Scutum and Sagittarius." He further proceeds to test the spiral theory of the galactic system, and in the middle of his chart presents a hypothetical spiral whose curving wisps perhaps account for the Milky Way as actually projected on the sky. He places our solar system not at the centre of the spiral, but rather to one side, away from Cygnus and towards Argo. Star streams lying almost in our line of sight must show as brilliant patches; while between them are frequent lanes and relatively dark spots, such as the "Northern Coal Sack." Comparison of the different types of spiral nebulæ, of which Ritchey's splendid photographs and those of the Keeler Memorial afford ample presentation, leads to the conclusion that our galactic system would seem to be already in an advanced stage of development throughout unestimated æons.

Drama

In an interesting biography of Tyrone Power (Moffat, Yard), William Winter predicts that this player will soon be recognized as one of the foremost interpreters of the classic drama upon the English-speaking stage, and in matters of this kind the veteran critic has often proved himself a sagacious prophet. Mr. Power, who springs from distinguished theatrical stock, has had a singularly varied and adventurous career, and has made his way to the front in spite of much adversity and discouragement, acquiring invaluable experience in a very wide range of characters. Among his best achievements may be noted his Caliban, his Marquis of Steyne (in "Becky Sharp"), his Bassanio (with Henry Irving at the London Lyceum), his Judas ("Mary of Magdala"), his Ulysses (in Stephen Phillips's play), and his Drainman (in "The Servant of the House"). Recently he has won both critical and popular approval by his dignified and virile impersonation of Brutus, which was the most impressive feature of William Faversham's successful revival of "Julius Cæsar." He is now playing Brutus at the head of his own company, and meditates a series of Shakespearean representations. A man of lofty stature and striking presence, he is physically eminently well fitted for the embodiment of tragic or romantic personages, and nature has conferred upon him the additional advantage of a noble voice. He is capable both of passion and pathos. After twenty years of constant training, he is now in the early days of his artistic prime, and, as he has already exhibited courage and persistence, there is no reason why he should not go far. The time is ripe for the appearance of a qualified tragedian.

"Lucky Pehr," an allegorical play in five acts, translated by Velma Swanston Howard and published by Stewart & Kidd Co., of Cincinnati, may be called a little "Faust." Pehr, the fifteen-year-old son of a crotchety old bell-ringer who lives in a church tower, is released on Christmas Eve from his narrow existence by fairies, who send him forth, provided with a wishing ring, to see life. A charming little fairy maiden is his good angel, coming to his assistance whenever he is hard pressed. The plan of the play was such as to bring out some of Strindberg's best talents, especially his capacity for highly fanciful details. As in that other allegorical work, "The Dream Play," winter melts miraculously into summer, kings and castles spring into existence with the mere thought of them, and disembodied voices charge the air. The working out of the action and moral is too slight to warrant a detailed account of Pehr's pilgrimage, which reveals political corruption in high office in several lands, as well as selfishness on the part of the hero himself. Even when playing the rôle of reformer in one city, Pehr has to admit that his motives are not disinterested. Only when he comes to a full understanding of the meaning of self-sacrifice does his little handmaiden recognize his affection for her as love and consent to marry him.

Early in May Baron Henri de Rothschild's new play, entitled "Crœsus," will be presented in the London Garrick Theatre by J. Salter Hansen, with Arthur Bourchier in the title part. The play will be given in an English version, prepared by the author himself, who is thoroughly conversant with the language. Mlle. Gabriel Dorziat, a distinguished French actress, who also possesses a good working knowledge of English, has been engaged for the leading female character. The millionaire author makes no secret of the circumstance that his story is founded on fact. His hero is an immensely wealthy man, who throughout life has been haunted by the dread that the possession of great riches must inevitably be a barrier to disinterested love. Crœsus in the play gives his heart to two different women, one of high rank, the other of humble birth. But in both cases the result is the same. His money comes between him and the realization of his hopes. Baron Rothschild will superintend the rehearsals of his play.

Music

AMERICAN MUSICIANS VS. EUROPEAN.

The recent production of Mr. Walter Damrosch's "Cyrano de Bergerac" has led an indignant critic in one of our weeklies, whose loyalty to things American exceeds his discretion, to assert that this opera would have been an overwhelming success if its composer had only been a foreigner, or if it had but come before the Metropolitan's audience with the prestige of a European production. To this was added a general wail that was once frequently heard in the land, to the effect that there is no hope for any American composer or musician who has not got an unpronounceable foreign name, or been a favorite of kings and queens. The stamp of approval of Europe, it is asserted, not only is essential to success, but gives an ephemeral success to foreign composers who are not on their merits entitled to it.

To all this we would enter a general denial. Whatever truth there may have been in it at one time, there is virtually none to-day. We now have in New York as discriminating a musical public as is to be found anywhere. It could in no wise be prevailed upon to slight an American composer of merit, for it is ever in search of musical novelties and is actually predisposed to favor home talent. Ample proof of this is seen in the success of MacDowell. His music made its way here into the affections of all music lovers before it found favor in foreign concert halls; and so did the work of Parker and Chadwick. Victor Herbert's and Reginald De Koven's original operettas—notably "Robin Hood" and "Rob Roy"—achieved a great popularity in this country without any foreign advertising or glamour to help them. Is it to be believed that Mr. Herbert's "Natoma," which, by the way, has thus far been produced thirty times, did not achieve greater success because it had not first been heard abroad? As a matter of fact, the American opera composer gets a hearing a little easier than a foreigner, as instanced by the performance of the work of a young Boston musician, whose several productions have wholly failed to interest the public. As for "Cyrano," the librettist, Mr. Henderson, has himself written of it that "it is not at all likely that any one will fall into the error of believing that Mr. Damrosch has added a masterpiece to the gallery of operatic creations." Unfortunately, the American public demands masterpieces, from whatever source they may come.

And as to the performers, is it not true that some foreign artists who have come here with great reputations have fallen absolutely flat? Is not the Metropolitan Opera House known as the graveyard of foreign reputations? We could cite one artist at the opera, and two on the concert stage this winter, whose preliminary flourish of trumpets availed them not at all. On the other hand, artists like Ysaye, Kreisler, and Madame Culp succeed immediately because of their superb art and for no other reason. On the other side of the Atlantic the discriminatory character of American musical judgment is clearly evidenced by the eagerness of foreigners to play and sing in this country. There are amusing cases on record of singers who have appeared at the Metropolitan, and, after one or two performances, were allowed to go, and who have then billed themselves in large letters abroad as "from the Metropolitan Opera House in New York." In the field of chamber music the Kneisel Quartet made its way to the front, not because its members

had great foreign reputations or because they were foreign-born, but because their work speedily won them international fame. Fannie Bloomfield-Zeisler and Maud Powell would, we think, hardly credit their success here to their having studied abroad; and who can deny that a patriotic feeling and an American pride in their achievements have greatly helped Lillian Nordica, Emma Eames, and Geraldine Farrar? Moreover, it will not be long before artists wholly trained on this side of the ocean will achieve first-class reputations at home before ever crossing the Atlantic.

The Philharmonic Society of New York, Josef Stransky, conductor, last week issued to its patrons the preliminary prospectus for the coming season, and announces for its New York series at Carnegie Hall twelve Thursday evenings, sixteen Friday afternoons, twelve Sunday afternoons, and a novelty in the form of an afternoon concert for young people. The number of Friday afternoon concerts remains at sixteen, the Thursday evening series has been reduced to twelve, and the Sunday afternoon subscription series has been raised from eight to twelve. The season will open on October 30 and extend until the first week in April. In addition to its regular New York series, the Philharmonic Society will, as usual, make several Southern, New England, and Middle Western tours. The preliminary list of soloists includes Mischa Elman, Carl Flesch, Jacques Thibaud, Teresa Carreño, Julia Culp, Alice Nielsen, Jacques Urlus. The soloists from the ranks of the orchestra are Leo Schulz, 'cellist; Henri Leon LeRoy, clarinet, and Xaver Reiter, horn.

Geraldine Farrar will create the title rôle in Giordano's new opera, "Madame Sans-Gêne," at the Metropolitan Opera House during the season of 1913-1914. The opera is based on the play of the same name dealing with the adventures of the famous washerwoman-duchess at the Court of Napoleon I, which Madame Réjane and Miss Ellen Terry played in this country years ago. There is also a possibility that Miss Farrar will essay the rôle of Carmen.

Philadelphia does not love Brahms. The result of the balloting for the local symphony orchestra's request programme was that he came sixth, with 61 votes for his first symphony. Tchaikovsky led, with 454 votes for his Pathétique, followed by Beethoven, whose fifth got 268 votes, while Schubert came third, with his "Unfinished."

Parisians celebrated the opening of their new opera house, the Théâtre des Champs Elysées, as the most important event in the musical world since the dedication of the Grand Opéra. The artistic director of the new house is the tenor, Ernest Van Dyck, and among the conductors who will appear are Toscanini, Hasselmans, Mengelberg, and Weingartner. In the list of singers engaged are Lilli Lehmann, Lucienne Bréval, Chaliapin, Van Dyck, Muratore, and the repertory is to embrace all of Wagner's operas, including "Parsifal," Strauss's "Elektra" and "Rosenkavalier," Weingartner's "Abel und Kain," and many of the masterworks of Gluck, Mozart, Beethoven, and Weber. Berlioz, also, who never could persuade his countrymen that he was really an opera composer, is represented by two of his operas, "Benvenuto Cellini" and "The Trojans." Indeed, the compliment was paid him of opening the house with his "Benvenuto," the conductor being Weingartner, who is a Berlioz specialist, and has done much to keep alive an interest in his works in Germany. He was received with favor, and altogether the performance, in which Vorska, Lapelletrie, and Judith Lassalle appeared, aroused much enthusiasm. The fact is recalled that, when this opera was first produced in Paris, it failed, because of the current predilection for Italian tunes. Berlioz hitterly opposed Wagner when, subsequently, he tried to gain a foothold in Paris. Yet it is because of the change in taste brought about through Wagner's influence that Paris is now in a position to appreciate "Benvenuto Cellini."

A Parisian, Erik Satie, now has a set of three pieces which make Strauss's Domestic Symphony (which is supposed to depict a day in the composer's life) seem quite commonplace and unaudacious. Satie's pieces are entitled "Véritables Préludes flasques (pour un chien)." In the first the dog is supposed to get a scolding. In the second he is left alone in the house. In the third he gambols. The audience made the pianist repeat each of the préludes, and poor Debussy, whose own new préludes were afterwards played, fell flat after this exhibit of modern musical methods.

Richter has decided that he will not publish his memoirs. He has, however, made copious notes, which, after his death, will remain in possession of his family.

Art

The Miniature Painting and Painters of Persia, India, and Turkey from the Eighth to the Eighteenth Century. By F. R. Martin. Two volumes in folio, with 344 plates, comprising more than 600 miniatures. London: Bernard Quaritch. £20 net.

Most lovers of art have some casual acquaintance with elaborately wrought Oriental miniatures, roughly called Persian, though quite as likely to be of Indian workmanship. Such miniatures, as commonly seen in libraries or at the book dealers', are generally of the eighteenth century. The linear workmanship is meticulously fine rather than expressive. At long range the spotting of the color may be effective, but a nearer view shows that the surfaces are unduly broken up. The subjects—effeminate grandees sitting at reception of homage, gazing at dancing girls, playing polo, or what not—evoke thin youthful memories of the "Arabian Nights." On the whole, the observer of this work is likely to dismiss it as mildly interesting in a decorative way.

One who has pressed his study of Persian miniature painting a little further is likely to talk about the glories of the seventeenth century court of Shah Abbas. Here the drawing of the miniatures is more sprightly, the general pattern equally complicated but better disposed, the color spotting decisive and effective. Here, too, begins to appear portraiture of quite extraordinary simplicity and character. A very few amateurs may have gathered the names of great masters of the fifteenth and sixteenth centuries—Bihzād, a powerful and succinct draughtsman after the Chinese fashion; and his pupil, Mīrak, a marvellous inventor of decorative spacing. So far, with increasing admiration, the curiosity of the discursive lover of art may well have taken him. It is the merit of Mr. Martin's monumental work to show that the finest Near Eastern painting lies still further back in the fourteenth and fifteenth centuries, with the artists who served the Timurid emperors. This art seems to have drawn from China whatever was fine in the way of linear exquisiteness, while retaining the Mesopotamian sense for the charting of design in color spaces. Or perhaps in the Tartar conquerors themselves we may rather look for that principle of boldly adjusted spots linked by fine linear tracery which is the glory of the best miniatures of the Nearer East.

This art, like most finer expressions of Muslim civilization, was derived from Hellenistic examples. It was four centuries or more after the great conquests before the art of the miniaturist began to flourish. In a few precious manuscripts which go back to the liberal Fatimid dynasty of the twelfth century, we find the Oriental painters freely copying the late miniatures of the decadent Greeks. The examples are scanty, mere decoration or illustration of medical or other scientific works. Yet the Muslim painters already declare a kind of independence. Where the Hellenistic models still sought for roundness, the Arab miniaturist spreads his bold colors flat. Otherwise the primitive work is extremely crude and hardly worthy of Mr. Martin's enthusiasm. Yet one would exchange many finer works of art for that rude effigy which may well represent the cultured and magnanimous sovereign, the great Saladin. When late in the twelfth century the Abbasid Caliphs of Bagdad overcame the Fatimid line, the miniature painting, to judge by the scanty remains, pursued the same adaptive course, showing some tendency to fall into a decorative but rather lifeless schematism. It was the Mongol conquest of the middle of the thirteenth century that cut the slender link with classical antiquity and introduced into Persia and Arabia a living art. Until further exploration of the buried cities of Turkestan has been made, we shall not be able to say how far the Tartar subjects of Hūlagū and Tamerlane had assimilated the contemporary Chinese painting of the Yuan style. It seems

more likely, however, that their art had developed rather independently, being influenced, if at all, by much earlier Chinese painting of the Tang dynasty. In any case, there is, until the fifteenth century, absolutely no trace in the Near East of influence of the remarkable landscape schools of Sung and Yuan. Landscape appears in the Mongol and Timurid manuscripts of Persia and Turkestan, simply as skilful pattern-making, highly complicated, and quite without that fine selection and spatiality which is the mark of the Chinese landscape school. In fact, Chinese landscape was too much of an aristocratic cult ever to have been taken up and transmitted by the rude hordes of the Mongol conquerors. What really happened was the quickening of the balanced spotting and the breaking up of the old jejune symmetries by vigorous linear drawing and informal composition. There seems to have been a moment of hesitation before the new linear style could be fused with the native cartographic manner. Plate 58, an exquisitely fanciful illustration of a prince surrounded by the most enchanting fairies and goblins, date about 1440, is a marvellous linear weaving, and quite Chinese in aspect. Plate 52, a courtly reception in a garden, has much of the niggling elegance of the Ming style, and already something of the over-elaboration that was to be the bane of the Persian school of painting. The date is about 1430. Plate 66, about 1490, representing riders in a forest, a scene from the Shāh Nāmah, shows the bold and skilful assemblage of contrasting spots which is the specific excellence of fine Persian work. It is as well most romantic in feeling as an illustration. At about this time, as the great Bihzād was coming to be an elderly man, the glories of the school were already on the brink of decline. In the best miniatures of the Timurid period, in so formidable a portrait as that of Timūr himself, in half a dozen of the best sheets of Bihzād and his pupil, Mīrak, must rest the claims of this art to world-standing. It is Mr. Martin's particular service to have pointed unmistakably to the masterpieces while fully describing and illustrating the entire field.

It would be unprofitable here to follow the story through later Persia and Muslim India. The documentary and social interest of the art grows to the end, while its æsthetic significance dwindles. Nor have we time to follow Mr. Martin in his excellent review of that orthodox geometrical decoration which in its best aspects we call Saracenic. From Mr. Quaritch's fine collotype plates, which include a number of colored examples, the student and the dilettante may draw their own inferences. The text and the selection of illustration represent the work and the enthusiasm of nearly twenty years. It is due to Dr. Martin's indefatigable zeal as a collector that many of the finest miniatures have been rescued from certain destruction and placed in safe hands. Under these circumstances it is natural that he should exalt his office, and perhaps one should not grudge him his occasional reminders that this or that work puts Rembrandt or Dürer at disadvantageous comparison. As a matter of fact, such parallels are usually too remote to be profitable. With the exception of a handful of magnificent portraits no Persian drawing for a moment compares in human interest with a good design by Dürer or Rembrandt, or, for that matter, of Adolf Menzel or Charles Keene. The mastery of functional line is rare among the Persian masters, nor did they usually seek in a composition any emotional effect beyond the flattery to the eye of ornate and supremely elegant pattern. As illustrators, for clarity and character, the Gothic miniaturists were their superiors. Yet when one gazes passively at the balanced emerald and jade of a fine Persian miniature, and grasps its hazardous oppositions of violet and crimson and rose, and marks the nervous tracery that binds the spots into an organic whole—why, the bit of painted paper may well seem the most beautiful thing in the world. This supreme merit in color decoration is surely enough to claim for this delightful art without indulging in perilous comparisons.

For making accessible to students and art lovers an art ill known and within its chosen limitation superlatively excellent, Mr. Martin deserves unstinted praise. We are glad to note that this comprehensive and fundamental work is merely preparatory to further publication in the field.

"The Art and Craft of Garden-Making" (Scribner), by Thomas H. Mawson, which appeared first in 1900, has now reached a fourth edition, revised, enlarged, and much more fully illustrated. The present edition contains as many as 428 half-tones and drawings and seven colored plates. The plans especially are inspiring examples of what can be done with line drawing in this kind of exposition. The color work is good, except, as is often the case in photographic color reproductions, for the bright reds, which are too assertive. There is an index of illustrations, besides a well-arranged and cross-referenced general index. The reader soon discovers that the "art and craft" described is that of England only. It is not so quickly evident what is meant by "garden-making." Apparently, Mr. Mawson is here a follower of Kent, who, as is often heard, "leaped the fence and found that all nature was a garden." At any rate, the material covered makes a pretty thorough treatise on the designing of English private estates. The American-trained practitioner would be inclined to agree in the main with the definition of landscape architecture as "the art of co-relating the component parts of a scheme over large areas," but our practice would lead us to put more emphasis than Mr. Mawson does on informal design. "Topographical architect" would seem to us to increase the disadvantages of the present name by suggesting that the work of the profession is caring for the setting of architecture. Our quarrel is rather with the other half of the title, and some of us would be glad to have the profession called "landscape design," which at least denotes its proper scope.

The ideal of the landscape architect is well put:

> To infuse the drab necessities of existence with an inherent beauty, to divert the common crowd from low ideals by the elevation of their environment, and to cause those who never really loved art and who resent it as a departure from their own level of mediocrity, to rise to more worthy aims.

A most excellent counsel of perfection, but a bit exacting of a professional man whose profession is after all half business! The chapter on Rock, Wall, and Bog Gardens is new, the material on drives, entrances, and carriage courts has been recast to apply to modern motor traffic. To the previous illustrations have been added many excellent photographs of Mr. Mawson's work, now in a state of perfected construction and plant growth, which shows the realization of the original design.

The death is reported from Glasgow of the well-known Scottish landscape painter, William Macbride. He was very active in the movement which resulted in the Glasgow school.

Finance

TRYING TO READ THE FUTURE.

A general break in prices on the Stock Exchange, towards the close of last week, cast a feeling of more or less uncertainty over the financial outlook; it was resumed when this week opened. Nowhere does the course of the stock market exert so much influence on passing opinion, even outside of Wall Street, as it does in this country, and the decline in prices had its usual effect on this occasion—more particularly so, when the spirits of the business community have been so long depressed, not only by the recurrent talk of "legislative uncertainties at Washington," but by the confusing twists and turns of European diplomacy.

This particular decline in prices was undoubtedly influenced by the returning uneasiness in political Europe over the Montenegrin occupation of Scutari and the resultant attitude of Austria. But even so, the absence of heavy selling of stocks, either by home institutions or by outside investors, was a subject of remark, and this caused general inquiry as to what, after all, is the actual situation. Numerous predictions regarding our own financial outlook were made, publicly or privately, this week.

They did not agree at all points with one another. The head of an important local business house, after pointing out that times are good in the West and retailers' stocks of merchandise low, went on to say that matters would almost certainly brighten up as soon as the tariff discussion (which always makes merchants talk pessimistically) was out of the way. But one of the most influential Eastern bankers outside of New York city gave his opinion that business is going to show a marked decline, even though the readjustment would cause no serious trouble, since business men were prepared for it.

A New York banker, who has personally handled some of the largest corporation bond issues, stated his view that borrowing companies must make up their minds to pay hereafter something not far from 5 per cent. to the investor. Another banker, quite as well known in the home and international market, declared that phase of the situation to be purely temporary. From some banking sources, intimations came that money might be very tight in the autumn, and that such conditions should be guarded against by prospective borrowers to-day; from others, of equally high standing, came the reply that the "tight-money talk" is overdone, and that the thing which every one is preparing for, does not happen.

On occasions of the sort, the attitude of the general public towards the existing market is apt to give the real clue. It did so at this time in 1903, when the "rich men's panic" was in full swing; it did so again in 1907, when agonized liquidation, on an enormous scale, had shown as early as March both what was the position of the large financiers and what was foreshadowed for the market.

But nothing resembling that has been in evidence this month. Aside from a few special incidents like the fall in "Rumely," the stock market's history since the first of April has been made up of alternate advances and retreats of the so-called "professional bear interest." At the opening of the month this "bear account" was plainly much extended; its sales had not caused general outside selling; some items of good news were received, and some bad news failed to influence prices. As a result, the "short interest" retreated hurriedly, and prices rose. When the speculative account for the fall had been eliminated, and the outside public was no more inclined to buy than it had previously been to sell, the "bear interest" returned, using as their pretext, first, the St. Paul bond episode, and next the belligerent threats of Austria.

How, then, is such a state of things to be interpreted? There are several possible explanations. It might mean that outsiders are pessimistic, but apathetic, and could be shaken from their apathy by a determined and continued lead on the part of powerful speculators. It might mean that the public does not choose to move in either direction, until it gets some definite indication of the course of events in two directions—the response of general trade when the tariff debate is actually concluded and the uncertainties are removed, and the action of Europe's trade and money markets when the Balkan fighting ends or a new international complication arises.

Or it might mean that investors are aware that a year of great material prosperity is behind us, that stocks of merchandise in retailers' hands are low, that Europe's manufacturers are too well sold up at home to think of invading our markets on a large scale when the lower duties are proclaimed, that our position on international exchange is exceptionally strong, and that home crop reports to date are altogether reassuring.

But any one of these three suppositions gets us no further than the inference that there are many puzzling and conflicting elements in the financial outlook. Neither in 1903, nor in 1907, nor in any other recent year when prophecies of evil were thus numerous, have there ever been so many important events immediately ahead, whose nature, scope, and bearing on home and international finance were at the moment so uncertain. At the moment, it is altogether probable that our own as well as the foreign stock exchanges are mainly absorbed in watching for the turn of events in Europe.

Cloth bound. Per vol., **50c.** net. By mail 56 cents

WRITING ENGLISH PROSE
By Prof. W. T. BREWSTER.
The Professor of English Literature at Columbia University explains and illustrates how best to arrange and set down the general run of English compositions.

THE LITERATURE OF THE OLD TESTAMENT
By GEORGE F. MOORE, Professor of the History of Religion, Harvard University.
Presents the latest knowledge on its subject in the same way as for any other literature.

FROM JEFFERSON TO LINCOLN
By WILLIAM MacDONALD, Professor of History, Brown University.
Professor MacDonald covers accurately and clearly that eventful period from 1815 to 1860, laying stress on constitutional growth, the rise and progress of political parties, and slavery. Side by side, runs the account of the new sense of democracy among the people, the territorial expansion, and the history of the Mexican war.

THE CHILD, Its Care, Diet, and Common Ills
By E. M. SILL, M.D., Leeturer, Polyelinic Medical School, ete. Helpful illustrations. $1.00 net.
Just the information a young mother needs about the feeding, clothing, airing, and exercise of infants and young children. It tells in very simple language how to distinguish the different diseases, gives a carefully prepared list of antidotes for poisons, and, in general, gives the help a mother needs before a physician arrives.

THE LIVING PLANT
By WILLIAM F. GANONG, Professor of Botany, Smith College. (American Nature Series). Uniform with C. W. Beebe's "The Bird: Its Form and Function." Profusely illustrated. 8vo. $3.50 net.
An exposition, designed to be as direct and clear as possible, of the facts about the life of plants, including a description and explanation of their physiological processes, together with a discussion of the causes determining their structures, forms, colors, and sizes, and of the principles underlying their evolution and their improvement by man.

SCIENCE FROM AN EASY CHAIR (Second Series) By E. RAY LANKESTER.
Nature (London): "The high-water mark of popular papers on scientific subjects." $2.00 net.
Henry Holt & Co., 34 W. 33 St. New York

The Price of Inefficiency
By FRANK KOESTER
This book lays bare national evils due to inefficieney, and largely responsible for the high cost of living, and suggests remedies. Comparisons with other countries give point to the critieism, which is constructive as well as destructive.
Octavo. $2.00 *net.*

The Education of To-morrow
By ORLAND D. WEEKS, M.A.
A vigorous overhauling of educational ideals to show what sort of eurrieula are best for an eeonomic democracy. It contends for a closer relation between education and the life interests, if not the vocations, of the community. 12*mo.* $1.25 *net.*
STURGIS & WALTON CO.
31-33 East 27th Street, New York.

William Lloyd Garrison
The Story of his Life, told by his Children. Illustrated with over 40 portraits, views ete. 4 vols., 8vo, gilt top, $8.00 *net.*
"A masterpiece of modern historical biography. . . . To call the work a mine of information would be to convey a false impression; it is rather a well-arranged library in which attendant hands are always present to point the way to the exact thing wanted. . . . Finally, the work, while as instructive as the driest manual, is as interesting as a romance."—*Boston Advertiser.*
"It is, for the anti-slavery record, final; and the service done to our national history is as great as that to a father's memory. Its one eminent trait, however, is its justice."—*Atlantic Monthly.*
"In fact, Southern history is not complete without this work."—*Atlanta Constitution.*
****For sale by booksellers. Sent, postpaid, on receipt of price by the publishers.*
HOUGHTON MIFFLIN COMPANY
BOSTON AND NEW YORK

The Inferno
By AUGUST STRINDBERG
Author of "The Son of a Servant," "Countess Julia," etc. Translated, with an Introduction by **Claud Field.**
12*mo.* $1.25 *net. By mail,* $1.40.
This autobiographical novel is one of the most intimate studies of personal psychology that has been offered to the world. It is as appallingly frank, as unsparingly veracious, as anything this gifted but erratic genius has produced. The book is a veritable "black ray" in the sky of literature, and an antidote to a too facile optimism. It has a certain resemblance to Oscar Wilde's "De Profundis."
New York **G.P. Putnam's Sons** London

Columbia University Studies in History, Economics, and Public Law
Vol. LIII. **THE CIVIL WAR AND RECONSTRUCTION IN FLORIDA**
By WILLIAM WATSON DAVIS, Ph. D., Assistant Professor, American History, University of Kansas; Sometime University Fellow in American History, Columbia University. 8vo. *Paper covers,* $4.00. *Cloth,* $4.50.
LONGMANS, GREEN, & CO.

THE GREAT ART GIFT-BOOK OF THE YEAR
ART By Auguste Rodin
(Translated from the French of Paul Gsell by Mrs. Romilly Fedden.) With over 100 illustrations in photogravure and half-tone. Buckram, $7.50 net; three-quarter levant, $15.00 net; carriage additional. A book which takes its place at once as the most important art book in years. It covers practically the whole range of art, and abounds in memorable analyses of the works of the masters of painting and sculpture, ancient and modern. *Send for descriptive circular.*

New Books for Colleges and Secondary Schools

JOURNALISM

Newspaper Writing and Editing
By WILLARD G. BLEYER

This book fully meets the requirements of Courses in Journalism as given in our colleges and universities, and at the same time appeals to practical newspaper men as a most interesting and suggestive treatment of the subject. (To be published in June.)

ENGLISH AND LITERATURE

The English Lyric
By FELIX E. SCHELLING

Beginning with the earliest emergence of English song, Professor Schelling traces the development of the lyric in England down to the present time. In the Types of English Literature Series. $1.50 net. Postage 10 cents.

Romance, Vision, and Satire
By JESSIE L. WESTON

"The book should prove very useful as parallel reading in courses which aim at giving a general survey of English literature."—*New York Evening Post.* $1.25 net. Postage 13 cents.

The Masters of Modern French Criticism
By IRVING BABBITT

"A penetrating analysis of the influence of modern criticism for good and evil on literature and on the intellectual welfare of the age."—*The Nation.* $2.50 net. Postage 16 cents.

RECENT ISSUES IN THE RIVERSIDE LITERATURE SERIES

Selected Lyrics from Wordsworth, Keats, and Shelley. Edited by CHARLES SWAIN THOMAS. Paper, 15 cents; linen, 25 cents, net. Postpaid.

Selected Lyrics from Dryden, Collins, Gray, Cowper and Burns. Edited by CHARLES SWAIN THOMAS. Paper, 15 cents; linen, 25 cents, net. Postpaid.

Poems and Stories by Bret Harte. Edited by CHARLES SWAIN THOMAS. Paper, 15cts; linen, 25cts, net. Postpaid.

Southern Poems. Edited by CHARLES W. KENT. Paper, 15 cents; linen, 25 cents, net. Postpaid.

Macaulay's Two Speeches on Copyright, and Lincoln's Address at Cooper Union. Edited by EDWIN L. MILLER. (To be published in May.)

College Life. By Le BARON R. BRIGGS. New Library Binding. 35 cents net. Postpaid.

EDUCATION

Problems of Educational Readjustment
By DAVID SNEDDEN

This book comprises some of Commissioner Snedden's most notable addresses and essays on crucial educational problems involved in the better adaptation of our institutions to the needs of the people. (To be published in June.)

Industrial Education: Its Problems, Methods and Dangers
By ALBERT H. LEAKE

A study and criticism of the opportunities provided for the education of the artisan. It deals entirely with that large percentage of the population which receives all its education in the elementary schools. In the Hart, Schaffner and Marx Series. (To be published in May.)

GOVERNMENT

Readings in American Constitutional History
By ALLEN JOHNSON

"This book is a valuable addition to this phase of the literature of American history, and it should prove very useful for college instruction in the subject."—*American Historical Review.* $2.50 net. Postpaid.

The Elements of Political Science
(*Revised Edition, 1913*)
By STEPHEN LEACOCK

"A treatise by one who appreciates the necessity of clear definitions, fine distinctions, precision of statement, and fairness of view-point."—*The Outlook.* $1.75 net. Postpaid.

Preparing for Citizenship
By WILLIAM B. GUITTEAU

This book gives a clear explanation of how and why governments are formed, what government does for the citizen, and what the citizen owes to his government. 75 cents net. Postpaid.

BUSINESS

Capitalization: A Book on Corporation Finance
By WILLIAM H. LYON

Written by a man of thorough experience, both in investment banking, and as a corporation lawyer, the volume is authoritative."—*Moody's Magazine.* $2.00 net. Postpaid.

Psychology and Industrial Efficiency
By HUGO MÜNSTERBERG

The book is written for persons engaged in large affairs who wish to obtain the best men for their respective jobs, who wish to train these men most intelligently in their work, and so are certain to obtain the best possible results. $1.50 net. Postage 13 cents.

The Value of Organized Speculation
By HARRISON H. BRACE

One of the Hart, Schaffner and Marx Prize Essays; written with the purpose of presenting both advantages and disadvantages with absolute impartiality in order that the net value of organized speculation as an economic and social factor may be truly estimated. $1.50 net. Postage, 13 cents.

DESIGN

A Text-Book of Design
By CHARLES F. KELLEY and WILLIAM L. MOWLL

"The authors' analysis of the subject and use of technical terms are less confusing to the layman than is often the case, and the text is clear and concise."—*The School Arts Magazine.* $2.00 net. Postpaid.

SOCIOLOGY

The Family in Its Sociological Aspects
By JAMES Q. DEALEY

"Professor Dealey's discussion of present-day family problems, as influenced by American democracy and by conditions in great cities, is clearly put, sane, and permeated by a healthy ethical sense."—*The Survey.* 75 cents net. Postpaid.

Significant New Books

What Children Study and Why

By CHARLES B. GILBERT, Formerly Superintendent of Schools, St. Paul, Newark and Rochester. 337 pages. $1.50.

A timely book on an important and much-discussed subject—the school curriculum—this volume offers material that can be found in no other one book—material by which to judge all proposed changes and reforms in the elementary school course.

It gives a clear, broad-minded analysis of the values of the different subjects taught in elementary schools.

Psychology as Applied to Education

By DR. P. M. MAGNUSSON, State Normal School, St. Cloud, Minn. 345 pages. Illustrated. $1.50.

An up-to-date, well-poised and practical pronouncement on the application of the principles of psychology to the work of teaching.

"Laboratory Psychology," "Child Study," "The Montessori Method," "Educational Reorganization," the Boy Scout and Playground Movements are a few of the interesting subjects discussed.

FOR 1912 IS NOW READY. Cloth, $3.50 net
D. APPLETON AND COMPANY

William Lloyd Garrison

The Story of his Life, told by his Children. Illustrated with over 40 portraits, views, etc. 4 vols., 8vo, gilt top, $8.00 *net.*

"A masterpiece of modern historical biography. . . . To call the work a mine of information would be to convey a false impression; it is rather a well-arranged library in which attendant hands are always present to point the way to the exact thing wanted. . . . Finally, the work, while as instructive as the driest manual, is as interesting as a romance."—*Boston Advertiser.*

"It is, for the anti-slavery record, final; and the service done to our national history is as great as that to a father's memory. Its one eminent trait, however, is its justice."—*Atlantic Monthly.*

"In fact, Southern history is not complete without this work."—*Atlanta Constitution.*

BOOKS—NEW AND INTERESTING

School and Home Gardens

By W. H. D. MEIER.....80 cents

A book for the practical gardener in school, city, or home. Its interest and value are shown by a few of the chapter titles: Selection and Care of Decorative Plants, Plan of the Yard, The Lawn, Annual Flowering Plants, Planting Shrubs and Trees, Roses, Shade Trees, Fruit Trees, Small Fruits, The Vegetable Garden.

Pageants and Pageantry

By ESTHER WILLARD BATES, with an introduction by William Orr.....$1.25

An invaluable work for those arranging pageants or episodes for reproduction in school, home, or playground. Besides five original pageants:—A Roman Pageant, A Mediæval Pageant, A Colonial Pageant, The Heart of the World (a fairy pageant), and A Pageant of Letters; comprehensive suggestions are given regarding the staging, costuming, organizing, expenses, and sources of amateur pageants and plays.

History as Past Ethics

By PHILIP VAN NESS MYERS.....$1.50

A distinct addition to historical literature and the historical viewpoint. History is treated in its ethical significance, and there is a detailed study of *moral* life in the various stages of historic evolution. College teachers of both history and ethics will find the book a suggestive text for class or lecture use.

History of Modern Elementary Education

By SAMUEL CHESTER PARKER.....$1.50

For the prospective teacher or student of education, this forcible work surveys elementary education from the first vernacular schools of mediæval cities down to the present time. Typical movements, institutions, and individuals are emphasized, and the elementary school systems of Prussia, England, New York City, Pennsylvania, Massachusetts, and Indiana are studied in detail.

British Social Politics

By CARLTON HAYES.....$1.75

A good book for student, historian, social worker, practical economist, and citizen. It deals with the revolution that has occurred in Great Britain's social politics during the present ministry. There is a discussion of Workmen's Compensation, Trade Unionism, Child Welfare, Old Age Pensions, The Unemployed, Sweated Labor, the Housing and Land Problem, the Lloyd George Budget, Curbing the Lords, National Insurance, The British Cabinet 1905-1912.

The Friendship of Nations

By LUCILE GULLIVER.....60 cents

The celebration of Peace Day on May 18th, as recommended by the Commissioner of Education, Mr. P. P. Claxton, embodies many exercises which can be most fittingly provided by the use of "The Friendship of Nations." This book is full of life and color, and gives an attractively written, impressive account of the Peace Movement. The story may be used in school or home in connection with history; civil government; physical, political, and commercial geography; moral and ethical training; or as a manual for public exercises.

Swedish Song Games

By VALBORG KASTMAN and GRETA KÖHLER ..... 75 cents

A delightful collection of Swedish song games for school or playground. The music has the lilt of all folk songs, while the games give opportunity for initiative as well as imitation, and hence are both recreative and educational. The illustrations are from actual photographs of public school children in Stockholm.

Kühnemann's Schiller

By EUGEN KÜHNEMANN, translated by Katharine Royce, with an introduction by Josiah Royce. In two volumes. The Set.....$3.00

Dealing with the literary, critical, philosophical, æsthetic and ethical aspects of Schiller's person and life work. Everywhere the story of the poet's life is made subordinate to the deeper and larger interest in the evolution of his powers, his ideas, his poetry.

Essentials in Journalism

By HARRY FRANKLIN HARRINGTON and THEODORE T. FRANKENBERG.....$1.75

A practical book, written by men of experience in reportorial and editorial positions, for the use of young people preparing for newspaper work. It includes a series of assignments, stories to be written out, articles to be put in approved form, and those exercises which differentiate newspaper writing from other literary activities.

Social Forces in Modern Literature

By PHILO M. BUCK, Jr. $1.00

This study of European literature of the past century traces the gradual rise of the interest of pure literature in the mutual relation of man and society, and presents the answers essayed by six leading writers: Montesquieu, Rousseau, Lessing, Goethe, Wordsworth, and Shelley. The book is adapted to classes in comparative literature, and will also be of value to the general reader.

WAR AND OTHER ESSAYS

By the late William Graham Sumner, LL.D., Professor of Political and Social Science, Yale University.

The "Nation" expressed the keynote of the scores of discriminating and flattering reviews which Professor Sumner's essays have received, when it said: "This book offers a fund of enjoyment to any sober-minded and intelligent reader."

The second edition is now ready. 8vo. Cloth binding. Gilt top. 381 pages. Bibliography.

$2.25 net; postage 22 cents extra.

THE ECONOMIC UTILIZATION OF HISTORY

By Henry W. Farnam, M.A., R.P.D., Professor of Economics, Yale University.

The first three chapters deal with scientific methods in economics, while the remaining nine chapters deal with their application. The book is at once scholarly and "good reading." 12mo. 240 pages. Cloth binding. Index.

$1.25 net; postage 10 cents extra.

IRRITABILITY

A Physiological Analysis of the General Effect of Stimuli in Living Substances

By Max Verworn, Professor at Bonn Physiological Institute.

The Silliman Lectures delivered at Yale University in 1911-12, revised by the author, and now ready for immediate publication. 8vo. 300 pages. Diagrams and illustrations.

$3.50 net; postage 20 cents extra.

CONSERVATION OF WATER

By Walter McCulloh, Consulting Engineer of Niagara Falls.

A convincing and clearly illustrated account of the present need for control of water and the methods used in New York State to insure its conservation. 8vo. 100 pages. 40 illustrations, diagrams, etc.

$2.00 net; postage 20 cents extra.

THE JUDICIARY AND THE PEOPLE

By Hon. Frederick N. Judson, LL.D.

A consideration of the causes of the discontent with our judiciary recently expressed in the public press and even in a national party platform, together with suggested remedies. 12mo. Cloth binding. Gilt top. 260 pages. Index.

$1.35 net; postage 10 cents extra.

THEORIES OF SOLUTIONS

By Svante Arrhenius, Director of the Nobel Institute of the Royal Swedish Academy of Sciences, Stockholm.

The Silliman Lectures delivered at Yale University 1910-11.

The demand for this work has necessitated a second edition within a year from its first publication. 8vo. Cloth binding. 247 pages. Index.

$2.25 net; postage 15 cents extra.

THOMAS Y. CROWELL CO., NEW YORK

LONGMANS, GREEN, & CO.'S RECENTLY PUBLISHED BOOKS

History and Historians in the Nineteenth Century

By G. P. GOOCH. $3.50 *net.*

The object of this work is to summarize and assess the manifold achievements of historical research and production during the last hundred years.

The Last Century in Europe 1814-1910

By C. E. M. HAWKESWORTH, M.A., late Scholar of Queen's College, Oxford, Assistant Master at Rugby School. $1.40 *net; by mail,* $1.55.

In this book an attempt is made to furnish a continuous narrative of European history from 1814 down to 1910.

A History of Europe

By A. J. GRANT, M.A., King's College, Cambridge, Professor of History at the University of Leeds. $2.25.

The author has kept in view throughout the idea of Europe as being an organic whole, and has chosen his topics with a view to their bearing on the development of European culture and Society. With Colored Maps and Plans.

The First Twelve Centuries of British Story

By J. W. JEUDWINE. $4.50 *net.*

A slight sketch and criticism of the social and political conditions in the British Islands from 56 B. C. to 1154 A. D. With 21 sketch maps and 3 photographic reproductions of mediæval maps.

Syllabus of American Colonial History

By WINFRED TREXLER ROOT, Ph.D., Assistant Professor of History, University of Wisconsin, and HERMAN VANDENBURG AMES, Ph.D., Professor of American Constitutional History, University of Pennsylvania. $1.00.

It shows the relation of colonial history to other history, emphasizing phases and periods usually neglected or treated incidentally.

The Ancient World

By CLEMENT DU PONTET, M.A., Assistant Master at Harrow School. $1.20.

It gives a brief survey of ancient history, developing in broad outline the story of the empires of the ancient world from the earliest times to 55 B. C.

The Science of Logic

By P. COFFEY, Ph.D. (Louvain), Professor of Logic and Metaphysics, Maynooth College, Ireland. Two vols., $2.50 *net,* each.

An inquiry into the principles of accurate thought and scientific method.

Introductory Philosophy

By CHARLES A. DUBRAY, Ph.D., Professor of Philosophy at the Marist College, Washington, D. C. $2.60.

In this work especial attention is given to those problems which at the present time stand in the foreground and are of special importance to the ordinary student in college.

Essays in Radical Empiricism

By WILLIAM JAMES. $1.25 *net;* by mail, $1.38.

Railroads: Vol. 1, Rates and Regulation

By WILLIAM Z. RIPLEY, Ph.D., Nathaniel Ropes Professor of Economics in Harvard University. $3.00 *net;* by mail, $3.20.

This treatise, more detailed and elaborate than a mere text-book, aims to set forth the nature of the railroad problems of the times, commercial, fiscal, and political; while at the same time avoiding the extreme technicalities of the narrow specialist. The first volume, now ready, deals with the matter of rates and governmental regulation; while the second, in preparation, deals with matters of finance and corporate organization.

The Romance of the Hebrew Language

By the REV. WILLIAM H. SAULEZ, M.A., B.D., Rector of Ninfield. $1.40 *net.*

An attempt to explain the romance and living energy that lie hidden within the pages of the Old Testament when read in its original language.

A Survey of English Literature, 1780-1830

By OLIVER ELTON, Hon. D.Litt. (Durham), Professor of English Literature in the University of Liverpool. In Two Volumes. $6.00 *net.*

"Nothing quite like this—on so extended a scale—has been done for any other period of our literature, and the treatise should obtain for its author a high place among living critics."—*Nation.*

History of English Literature

FROM "BEOWULF" TO SWINBURNE

By ANDREW LANG, M.A., Hon. Fellow of Merton College, Oxford. $1.75 *net.*

In writing this manual the aim of the author has been to present his subject in an interesting way so that the student, or general reader, may be enticed to peruse and enjoy "the immortals" on his own account.

Applications of Logic

By ARCHER T. ROBINSON, Assistant Professor of English in Massachusetts Institute of Technology. $1.20.

The purpose of this work, is to adapt some of the more fundamental theories of the subject to the practical aim of instruction in the expression and criticism of thought.

Modern Inorganic Chemistry

By J. W. MELLOR, D.Sc. $2.20.

A new Text-Book for advanced classes, written from the modern standpoint. The whole subject has been developed in the most logical teaching order.

A Laboratory Manual of Alternating Currents

By JOHN H. MORECROFT, E. E., Assistant Professor of Electrical Engineering in Columbia University. $2.80.

The experiments described in this work are designed for the use of senior students in Electrical Engineering, and so considerable knowledge of the laws of alternating currents is assumed.

The Mechanics of the Aeroplane

By CAPTAIN DUCHENE. Translated from the French by JOHN H. LEDEBOER. $2.25 *net.*

A Study of the Principles of Flight.

General Physics

By WILLIAM WATSON, D.Sc., F.R.S., Assistant Professor of Physics Royal College of Science, London. $2.10.

A new text-book adapted to general college courses in physics and introductory courses for technical students.

Differential and Integral Calculus

By LORAIN S. HULBURT, Ph.D., Collegiate Professor of Mathematics in Johns Hopkins University. $2.25.

An elementary text book for colleges and engineering schools. It is the result of many years' classroom experience on the part of the author which assures its thoroughly practical character as well as its teachableness.

FOR HIGH SCHOOLS

Essentials in Early European History

By SAMUEL BURNETT HOWE, A.M., Head of the Department of History in the Plainfield High School, New Jersey. $1.50.

This book is adapted for the two years' course recommended by the Committee of Five. About one-third deals with ancient history, and the remainder is given to modern history down to 1760.

A First Course in Algebra

By FREDERICK C. KENT, Associate Professor of Mathematics, University of Oklahoma. *Ready Soon.*

The equation is made the central idea and a principle is employed as soon as it is mastered in the solution of equations. Interest in the subject is stimulated by numerous practical problems of every-day life.

Composition and Rhetoric

By CHARLES SWAIN THOMAS, Head of the English Department, Newton (Mass.) High School, and WILL DAVID HOWE, Ph.D., Head of the English Department, Indiana University, and Zella O'Hair, Instructor in English, Shortridge High School, Indianapolis. $1.20.

The wide use given this book is due chiefly to the very practical character of all the work. This work was developed and reworked in class for many years until the best results were obtained from all the pupils. It is easy to teach and much enjoyed by the pupils.

Writing and Speaking

By CHARLES SEARS BALDWIN, Ph.D., Professor of Rhetoric in Columbia University. $1.20. Also in parts: Part I, 70 cents; Part II, 70 cents.

A text-book of rhetoric and composition planned in treatment to meet the practical needs of the secondary school. It contains hundreds of exercises, interesting, various, and often original, while the theory of rhetoric is shown to students as it is, brief and simple for all practical purposes.

High School Exercises in Grammar

By MAUDE M. FRANK, A.M., De Witt Clinton High School, New York City. 75 cents.

As a manual of English grammar, designed particularly for high schools, this text is intended to serve a special purpose. Its aim is to provide the material needed for the rapid, intensive work which is most practical and most profitable.

A Selection from the Spring List of **F. G. Browne & Co.**

"The publications of this firm mark a distinct advance in tasteful bookmaking."—*The Ave Maria.*

ITALIANS OF TODAY (2d American Printing Ready)

By RICHARD BAGOT, author of "My Italian Year," etc. Being a sympathetic description of the Italians as they are to-day, dealing in general with modern Italy. The latest book from the pen of this well-known author.

12mo. $1.25 net; postpaid, $1.34

"Timely, interesting, and highly readable."—*The Dial.*
"Deals with social, industrial, literary, military, and political conditions."—*Literary Digest.*
"Admirably fulfils its function."—*The Continent.*
"The most sensible popular account of recent Italian conditions and policy that we have seen."—*The Nation.*

ITALY'S WAR FOR A DESERT

By FRANCIS McCULLAGH. In this book a detailed, consecutive, uncensored story is told of the Italian invasion of Tripoli from October 3 to October 31, 1911. Mr. McCullagh is the well-known war correspondent who, towards the end of October, 1911, returned his papers to General Caneva as a protest against the treatment of the oasis Arabs.

Profusely illustrated. Large 8vo. $2.75 net; postpaid, $2.94

"Written in good temper, the book is a valuable contribution to contemporary history."—*Boston Globe.*
"Traces a definite connection between the Futurist propaganda and the invasion of Tripoli."—*New York Evening Post.*

OUR NEIGHBORS—THE JAPANESE

By JOSEPH KING GOODRICH, author of "The World To-day Series," etc. This is the first volume in a new popular series treating of the history and characteristics of "Our Neighbors" of other lands.

Beautifully illustrated. 12mo. $1.25 net; postpaid, $1.32

"A mine of useful information."—*Rochester Post-Express.*
"Both informative and entertaining."—*Christian World.*
"The illustrations add much to the value of the text."—*Bookseller, Newsdealer and Stationer.*
"A full bibliography and index gives easy access to any part of the book."—*Salt Lake Tribune.*
"If the subsequent volumes reach the standard of this first one, the series must certainly meet with approval."—*Boston Transcript.*

In preparation: THE CHINESE; THE FILIPINOS; THE DANES

OLD CHINA AND YOUNG AMERICA

By SARAH PIKE CONGER, author of "Letters from China," etc. Little stories of China and America written with a strong moral and patriotic purpose.

Illustrated. 16mo. 75 cents net; postpaid, 82 cents

"Will appeal especially to teachers and parents."—*Minneapolis Tribune.*
"Will encourage patriotism and high ideals in the young."—*New York Evening Post.*
"Few more charming books have been written."—*Rochester Post-Express.*
"Motives of religion, patriotism, and domestic love."—*Christian Science Monitor.*

IMPORTANT TEXTBOOKS

OUTLINES OF ECONOMICS DEVELOPED IN A SERIES OF PROBLEMS. By Members of the Department of Political Economy in the University of Chicago. Enlarged Edition.

The problem of improving the current methods of teaching elementary economics is now attracting widespread interest. This book is planned to answer the demand for improved courses. The ideals which have most fundamentally determined the character and content of the book are: (1) A belief that the elementary course in economics offers exceptional opportunities for training in thinking and reasoning; (2) A desire to connect the theoretical principles of economics with the actual facts and with current problems of the business world.

The result is a careful, analytical syllabus of the subjects usually covered in the introductory course, accompanied by some 1,200 questions and problems. It is expected that the *Outlines* will be used in connection with some textbook. Wherever adopted, the book has improved conditions in a marked degree. It has stimulated interest, vitalized the subject, and aroused independent thought.

The authors of the *Outlines* will publish in September a source-book of selected readings and illustrative material for the use of classes in elementary economics.

160 pages, interleaved, 12mo, cloth; $1.00, postpaid $1.13

A LABORATORY GUIDE IN BACTERIOLOGY. By PAUL G. HEINEMANN, Instructor in Bacteriology in the University of Chicago. Second Edition, Enlarged and Revised.

The field in bacteriology is rapidly enlarging, and the knowledge gained is being put to vitally practical use, not only in medicine, but in several of the commercial industries. With the exception of the Laboratory Guide, there is no practical handbook for students preparing for work in the various branches of the science in the fermentation industries, in agriculture, in medicine, in the municipal control of milk and of water-works, etc.

The new edition of the Laboratory Guide is designed to cover the outlines for work in elementary courses in the various branches of bacteriology. It is intended to serve as a guide not only to the instructor, but especially to those practically engaged in applying the fundamental principles of the science. In technique and method it has been carefully revised and brought down to date, and itself represents the progress made in the science since the first edition appeared in 1905.

216 pages, 12mo, cloth; $1.50, postpaid $1.59

TWO STANDARD SERIES

FIRST-YEAR MATHEMATICS FOR SECONDARY SCHOOLS. 378 pages, 12mo, cloth ; $1.00, postpaid $1.15

SECOND-YEAR MATHEMATICS FOR SECONDARY SCHOOLS. 296 pages, 12mo, cloth; $1.50, postpaid $1.63

TEACHER'S MANUAL FOR FIRST-YEAR MATHEMATICS. 176 pages, 12mo, cloth; 80 cents, postpaid 89 cents

By GEORGE W. MYERS, Professor of the Teaching of Mathematics and Astronomy, College of Education, University of Chicago, and the Instructors in Mathematics in the University High School.

The most striking departure from the old way of teaching consists in the fusing of arithmetic, algebra, and geometry into a single study. To confine the student to the handling of symbols for one year and to the study of forms for another is to shut out all possibility of natural development. Instead he is now led to express geometrical facts by algebra, and to illustrate algebraic ones by geometry, and thus to grasp the *essential* facts that underlie both.

ENGLISH POEMS. Selected and Edited with Illustrative and Explanatory Notes and Bibliographies. By WALTER C. BRONSON, Professor of English Literature in Brown University.

I. Old English and Middle English Periods. 436 pages, 12mo, cloth; $1.00, postpaid $1.15

II. The Elizabethan Age and the Puritan Period. 550 pages, 12mo, cloth; $1.00, postpaid $1.15

III. The Restoration and the Eighteenth Century. 541 pages, 12mo, cloth; $1.00, postpaid $1.15

IV. The Nineteenth Century. 635 pages, 12mo, cloth; $1.00, postpaid $1.15

This series of four volumes is intended primarily to afford college classes in English literature a convenient, inexpensive, and scholarly collection of the most important English poetry.

AMERICAN POEMS. By WALTER C. BRONSON. Similar in plan to "English Poems." One Volume, 680 pages, 12mo, cloth; $1.50, postpaid $1.68

PANAMA: And What It Means

By JOHN FOSTER FRASER

Author of "The Land of Veiled Women," "Canada As It Is," etc.

In this volume on the great canal we have the point of view of an international traveler, student, and author of repute.

The author not only gives us his impressions of present conditions in the work of the canal and in the canal zone—the engineering and sanitation difficulties overcome—obtained from careful studies and personal observations made on the spot, but he presents us with a history of the canal project from the beginning—"the dream of four centuries." He discusses the meaning of the canal to the commerce of the nations of Europe, North and South America, and Asia; the question of tolls, fortifications, and the canal as an instrument of war.

$1.75 *net*. *Postage*, 12 *cents*.

SOCIAL ENVIRONMENT AND MORAL PROGRESS

By Dr. ALFRED RUSSEL WALLACE

Author of "Man's Place in the Universe," "The World of Life," etc.

With cogent reasoning and conclusive logic Dr. Wallace presents in this volume his social and ethical conclusions on the important subject of the social environment and moral progress of the race. "We are no better than men of old," he says, and proceeds to lay down upon a philosophic basis his terse argument for the initiation of new conditions, whereby the race may be certain of its moral progress—conditions which are not based upon the doctrine of eugenics, but upon a convincing and interesting principle of selection new in its application to social science.

$1.25 *net*. *Postage*, 10 *cents*.

An intensely interesting book of great merit.

THE STORY OF THE RENAISSANCE

By WILLIAM HENRY HUDSON

Author of "An Introduction to the Study of Literature," "Rousseau and Naturalism in Life and Thought," etc.

A broad survey of that interesting period of European history. The author has made his work instructive and entertaining. There are chapters on "The Age of Inventions and Discoveries," "The Revival of Learning," "The Renaissance in Religion," "Philosophy," "Education," "Art and Literature."

"The time-honored generalizations about the Renaissance have here passed through a studious and thoughtful mind possessed of a strong historical sense, and out at the point of a pen uncommonly skilled in presenting complex material in simply constructed and well massed paragraphs. In the process the old ideas and the old facts have gained new interest and suggestiveness."—*The Nation.*

AMERICAN REPRESENTATIVES FOR THE CAMBRIDGE UNIVERSITY PRESS

The Nation

NEW YORK, THURSDAY, MAY 8, 1913.

The Week

The tariff bill goes safely through the House. The predicted splitting open of the Democratic party has not yet come, but we must be patient. There is still the Senate. It is to the Senate that humanity (protected), with all its fears, with all its hope of future years, is looking for relief. There is, no doubt, excellent precedent for such fond expectations. With the lower house, a large body whose numbers exclude the possibility of real deliberation, a body made up of men painfully aware of the directness and immediacy of their responsibility to the people, nothing much could be done. Only in the calm atmosphere of the Senate chamber can the voice of reason make itself heard, the voice of reason protesting against the reduction of the duty on citrus fruit because "it takes a citrus ten years to develop," the voice of reason protesting against undue haste, as Senator Burton fears, in making changes in the economic system of a nation, said undue haste extending only over a period of thirty-odd years. But the indications are that the Senate, too, is about to succumb to the undue haste which the country at large calls for; and the approaching election of Senators by popular vote is expected to encourage this departure from the old-style "deliberation."

Secretary Redfield dwells with much satisfaction on the big volume of our foreign trade, as shown by the figures for the nine months of the current fiscal year ending March 31. The total of exports and imports is $3,300,000,000; and, as the Secretary points out, this rate, if continued, will make the total for the fiscal year $4,400,000,000—a figure far in excess of any preceding record. To reckon in this way is, of course, hazardous; but the same conclusion is reached if we compare the total for the nine months with the corresponding figure of a year ago. The increase has been nearly $400,000,000—divided, as it happens, evenly between exports and imports, the increase being a little less than $200,000,000 in each case. Allowing the same rate of increase for the last quarter of the fiscal year, we should have a total increase of about $530,000,000; and, the total volume of our foreign trade for the preceding fiscal year having been $3,858,000,000, this would make the present year's total nearly $4,400,000,000. Last year, in its turn, broke all records, as did the preceding year, the total for the fiscal year 1911 having been $3,577,000,000. For the five years before that, the figure had been in the neighborhood of the three-billion mark, it being $2,975,000,000 in 1906 and $3,303,000,000 in 1910, while the highest mark was touched in 1907, when it stood at $3,315,000,000. It should not be forgotten, in considering these figures, that, while they show a most remarkable growth of our trade, as compared with former times—and especially a vast increase in exports of manufactures—a very considerable deduction must be made, so far as their actual significance is concerned, for the world-wide rise of prices which is automatically reflected in them.

Secretary McAdoo's announcement that, beginning with next June, all national banks holding deposits of public money will be required to pay 2 per cent. interest on such deposits, merely extends the scope of the Act of 1908. It provided that regular or temporary depositaries of such funds should pay to the Government "interest at such rate as the Secretary of the Treasury may prescribe; not less, however, than 1 per cent. upon the average monthly amount of such deposits," and that the rate should be uniform throughout the United States. Secretary MacVeagh had required a rate of 2 per cent. on such public deposits as were "inactive"; that is to say, on those which were for special reasons not subject to recall in the routine operations of the Treasury. On public deposits which were constantly subject to such recall, and which made up by far the greater part of the account, Mr. MacVeagh imposed only the 1 per cent. minimum interest charge. This ruling he based on the fact that the banks must not only be prepared for repayment of such deposits on call, but are required to pledge Government bonds with the Treasury as security.

Undoubtedly, this second requirement somewhat altered the status of Government deposits, as compared, for instance, with balances deposited by interior banks with the larger city institutions, on which a 2 per cent. interest rate is habitually paid. Secretary McAdoo, however, is clearly right in fixing a higher rate at the present time, because the condition of the general money market is such as to warrant it. When the rate is made discretionary with the Treasury such considerations should properly govern his action. But it should be kept in mind that the status of Government deposits, under our very imperfect banking and currency system, is itself anomalous. Neither the Bank of England nor the Bank of France pays any interest on deposits of public money, although they hold the greater part of the funds collected from taxation. But those institutions are the prescribed fiscal agents of their respective Governments, and are obliged to perform certain duties for the Treasury, such as transferring public funds, free of expense, from one Treasury agent or office to another, where they may be required for public disbursement. In the Aldrich bill for a central reserve institution, it was similarly provided that this depositary should hold the cash balance of the Government, but should perform the duties of fiscal agent free of charge and should therefore pay no interest on the public deposits.

It is the hollowest pretence to assert that the presence of a Japanese element in California amounting to less than 2 per cent. of the population constitutes a menace to white supremacy or to the integrity of the white race. Nor can the occupation by the Japanese of four-fifths of one per cent. of the cultivable area of the State constitute an economic menace. In the field of labor competition the California Board of Labor Statistics reports: "The average wages for both Japanese and Chinese regularly employed and receiving board, $1.396 and $1.406, respectively, are higher than those for 'miscellaneous white' men, $1.311, and Italians $1.108. 'Miscellaneous white' men were paid $1.889 per day without board, as against $1.623

paid to the Japanese." But the essence of the matter is not in the comparatively insignificant economic rôle played by the Japanese in California to-day, but in the fact that their numbers are steadily declining. The "problem" is getting to be less and less of a problem with time. The fact that the Japanese Government is loyally living up to its promise to discourage emigration to this country is, of course, only one more reason why we should violate our treaty obligations and the elementary laws of fair dealing. It would never do for white men to resemble the Japanese in anything.

Mr. Dan Hanna's Cleveland *Leader* has come out flatly for an amalgamation of Republicans and Progressives. Mr. Hanna goes much further than even Mr. Munsey, the original patentee of the holding-company plan. It is no third party which is here contemplated, that shall take over the assets—with none of the liabilities—of the Republican and the Bull Moose parties. The *Leader* advocates a course of action which shall "bring back to authority and service a Republican party purified and popularized," a party which shall "return to its high mission brought nearer the masses by its chastisement." Here, evidently, is the feeling that the Bull Moose organization is less a real party than a "kick," a sacred secession after the old Roman fashion, a hunger strike, anything but an absolute cutting loose from old moorings. Mr. Hanna looks across the State line and notes what is happening to the Progressives in Michigan. He looks east by south and notes what is happening to the sacred protectionist principle at Washington. In the face of adversity he finds that blood is thicker than water. What Col. Roosevelt's feelings are in the matter it is difficult to say. Probably he doesn't care. Even if Munsey and Hanna and Perkins and Flinn should prove recreant, he has Miss Jane Addams and Judge Ben Lindsey with him.

The confirmation of Charles P. Neill as United States Commissioner of Labor Statistics is matter for sincere satisfaction. President Wilson has done an excellent thing in renewing this nomination of a tried and faithful official, not a member of his own party, in the face of opposition manifested by rejection of the nomination both when made by Mr. Taft and when first made by himself. The opposition in the Senate was, indeed, not based on grounds of partisanship or of spoilsmongering, but its success would none the less have been deplorable. Some of the Southern Senators have objected to Mr. Neill on account of the character of certain reports relating to labor conditions in Southern States, issued by the Bureau of Labor while under his charge. But no one who knows Mr. Neill and his record doubts either his uprightness or his ability.

Every boss has his own way of doing things. Our own Murphy had a word of simple greeting with the President in the presence of whoever happened to be in the room. Roger Sullivan, of Illinois, prefers a half hour of private conference in the White House. But Thomas R. Taggart, of Indiana, does not go to Washington at all. He stays at home and plans to extend his grip upon the Democratic organization. In his first step in that direction, he has been repulsed. His candidate for Postmaster of Indianapolis, urged upon Wilson by Representative Korbly, has been rejected in favor of a "forward-looking" Democrat who possesses abilities more suited to the position than mere political instinct. And the next plum upon which Mr. Taggart's eye is fixed, the Mayoralty of Indianapolis, is not so close as it was a few days ago. Instead of the nomination going by default to a machine choice, the candidacy of a well-known citizen, with positive achievements to his credit in civic improvements, has been announced in opposition to the Taggart nominee.

A notable legal victory over prejudice and oppression has been won by colored people in Baltimore, where the West segregation ordinance has been declared invalid. By means of this precious act it was sought to establish a colored ghetto in Baltimore. A previous ordinance having been declared invalid, this new one was drawn with the greatest care and all possible ingenuity. It constituted a new crime—that of moving into a block in which are both whites and negroes. Remaining there was also a crime, and in order to make it seem fair, it was made to apply to both whites and blacks. After taking months to consider it, the judge declared it invalid on the ground that, if enforced strictly, every block in which there was a mixed population would have to be vacated. The judge carefully avoided passing upon the merits of the case, beyond saying that the framers of the ordinance "in the endeavor to please certain interests have overlooked the rights of citizens generally." There is some talk of an appeal, but there is a general feeling that this will not amount to anything.

Now that Mr. Mellen has revealed the fact that he gave $50,000 to Roosevelt's campaign fund in 1904, won't the Colonel explain whether this had anything to do with his frequent complimentary references in public to the president of the New Haven? He used to quote that gentleman with unction, and refer to him as the type of a sensible railway man who knew that government regulation, Roosevelt fashion, could do no harm. President Mellen was as anxious, however, as Roosevelt's other good angel, Mr. George W. Perkins, to do good by stealth. He made a contribution, but as he was fully aware that it was demanded of him only as a railway president, he thought it but right that the company should refund the money by means of a mysterious stock transaction. This appeared on the books as if it were a personal profit of $102,000 for Mr. Mellen; but now, rather than rest under that false appearance, he states that the money was really all given to politicians. Of how many other concealed gifts of the kind was Roosevelt a beneficiary in 1904? After all that has been disclosed, he might as well now order the full publication of the accounts of that year.

A kind word or two for that latest enemy of the people, the pernicious middleman, is deducible from an interesting summary, given by the *World*, of the Federal Government's investigations into the economics of milk production. Tests made at the government experiment stations in New Jersey indicate that milk of a good quality cannot be produced at less than 4 cents a quart. Actually, the farmer receives, on the yearly average, 3½ cents a quart. Milk of good quality sells in New York city

at 9 cents a quart. Here is an enormous difference of 5½ cents between what the farmer gets and what the ultimate consumer pays. But this difference is not to be explained by the intervention of a long succession of middlemen. Here are no commission merchants, jobbers, wholesalers, and retailers, each with his blood tax. The same business firm that takes the milk from the farmer places it at the consumer's door; and one middleman does not seem too much under any system of commodity distribution. The natural inference is that we have been tempted of late to exaggerate the "illegitimate" profits of the men who stand between the producer and the consumer. How much of the apparently enormous increase over the original cost is due to those legitimate factors we used to study about in college, "time-value" and "place-value," which must always be added to the original value of the raw product?

Of Brooklyn's army of school children, nearly 250,000 in number, 30,000 come to their classes hungry—so at least we are told. The figures are based on a series of investigations conducted by "sixteen members of the Junior League," who have reported their findings to the Bureau of Charities. The Bureau's reports account for 8,795 children in twelve schools. Of these, it was found that 3,178 children had only tea or coffee and bread for breakfast. One thousand children came to school without any breakfast. Instructive as these figures are, one cannot help wishing that the Junior League might make a canvass of the section of Manhattan Borough below Chambers Street and find out how many bank cashiers, brokers' clerks, lawyers, engineers, and newspaper men come down "hungry" to their offices after breakfasting only on bread and tea or coffee; also, how many of these same brokers' clerks and newspaper writers come to the city without any breakfast as a result of trying to catch the 8:19 for the city. One wonders how the French, a nation notoriously addicted to bread and coffee for breakfast, have managed to render such admirable service to the cause of civilization. One also wonders why a question so really important as the under-nourishment of school children cannot be dealt with by investigators equipped with an ordinary knowledge of arithmetic and with common-sense.

The Bible leads Victor Hugo by a narrow margin in San Antonio. Of thirteen leading citizens polled by the San Antonio *Light*, six place the Bible among their favorite books and five name "Les Misérables." This showing is all the more remarkable when one considers that Dickens occurs only five times, with "A Tale of Two Cities" twice. Putting aside the hypothesis that San Antonio has recently been visited by a cyclonic book agent selling a forty-volume set of Victor Hugo in half-morocco on the subscription plan, we are forced to conclude that San Antonio's reading taste is predominantly ethical and educational, which is more than can be said for metropolitan book centres. As one scans the list of San Antonio's favorite books—Spencer, Carlyle, Macaulay, Milton, Byron, Dickens, Emerson, Bryce—the law of book distribution in the United States becomes plain. Texas and Wyoming absorb the numerous reprints of the classics which are constantly poured forth. New York and Philadelphia absorb the stories about Gibson lovers on a deserted island and red-blooded Texas cowboys.

Is it not as plain as a pikestaff that the formal celebration of a century of peace between two nations is bound to lead to bloodshed? It is upon that foundation of Cubist logic that British suffragettes and Laborites and Irish irreconcilables are protesting against the contemplated ceremonies in connection with the hundredth anniversary of the signing of the Treaty of Ghent. We don't imagine that "General" Drummond and her followers are really convinced that an affirmation of Anglo-American amity will mean war with Germany. It is simply too good an opportunity for throwing a few stones through a window; and if it happens to be the windows of the temple of peace, that doesn't matter. To sabotage a peace mission is piquant novelty and good advertising. Keeping this fact in mind, we may steer our way through the argument that the peace of the world is promoted by warship competition, and that the peace of the world is endangered when two nations express the desire to live at peace with each other.

The formal recognition of the Chinese republic by our Government is the latest manifestation of democratic diplomacy on the part of the United States, as opposed to dollar diplomacy. The intricacies of a situation like that which now confronts the Chinese republic may frequently render an act friendly in intention one of doubtful helpfulness. Thus there are those who maintain that by recognizing the present Chinese régime, Mr. Wilson is strengthening the party of Yuan Shi-Kai against the more democratic party headed by Dr. Sun Yat-Sen. But such an argument, while it would apply to Mexico, where patently a Government of reactionary tendencies based on violence is in power, will not apply to China, where we have as yet no reason to suppose that one element is for progress and another for reaction. Time must show that. The clash of parties will undoubtedly be forthcoming at Peking, but for the present we are bound to assume that we can best serve the interests of the Chinese people by extending to them our formal expression of sympathy and confidence.

Kipling has just produced his first play, in one act, but in the same week the last contest was held for the English Cup by professional football teams. This event must have prompted him to repeat what he once wrote about "the muddied oaf at the goal," for the crowd of spectators numbered no less than 121,000! This was, to be sure, a record, but it is significant of the vast interest taken by the English public in professional football. We suppose that, under the finest weather conditions, and with college rivalry at its pitch, no more than 45,000 Americans ever got together to see a football match. The question is whether they do these things better in England—or worse. It is pointed out that the audience of 121,000 was largely made up of workingmen. This meant a lost day for the majority of them, to say nothing of lost shillings in the betting, which is the worst feature of these games. On the other hand, we have the familiar defence of a day in the open for artisans, exciting sport, and the zest of an extra holiday. It would hardly be safe to argue that England is going to the dogs simply because 121,000 witnessed a game between 22.

THE NATION AND CALIFORNIA

Secretary Bryan's statements in Sacramento on Saturday, together with the messages which he sent to President Wilson and received from him, leave a sense as of a frustrated mission. This is borne out by the boastful utterances of Gov. Johnson. He announces that he will sign the anti-alien bill—meaning the anti-Japanese bill—passed by the Legislature, after giving the President a "reasonable" time to examine it and to communicate with him about it, if Mr. Wilson desires to do so. His whole attitude is that of one triumphantly glancing towards Washington, and saying, with the air of a politician successful in his manœuvring for position: "It's your next move."

So it is; and what the nature of that move must finally be, there is, in our opinion, no doubt. The nation will have to assert itself. We have only praise for the course which President Wilson and Secretary Bryan have thus far followed in this California matter. They have been patient and considerate. They have stretched a point to show themselves conciliatory towards the Governor and Legislature of California. Mr. Bryan's journey to Sacramento, to confer at first hand, was not only an unprecedented act, it was an unexampled courtesy to a State. But tact and forbearance cease to be virtues when persistence in them imperils a vital principle. In all this affair, the last word, by both right and duty, rests with the Government of the United States. And when the need comes to speak that word, it must make perfectly plain to all the world that no one of the States will be permitted to trample upon an obligation of all the States. If Gov. Johnson persists in setting himself up against President Wilson, he must be taught as emphatically as Gov. Altgeld was taught by President Cleveland, that there are certain clear Federal powers interference with which by a State the national Executive will not brook.

It is, of course, to be hoped that any open clash of the sort may not be necessary. Various possibilities of delay are referred to in the dispatches. Mr. Bryan has held out the distinct hope that, if California would not be precipitate, relief and adjustment might be had by diplomatic negotiations. One suggested method of cooling off is to submit the Californian anti-Japanese legislation to a referendum. That the result of this would be doubtful is admitted even by the impetuous members of the Legislature. They express the fear that the vote in Southern California might overcome that in the northern part of the State. This report lets in one more ray of light upon an issue which has so many appearances of being manufactured. A tiny element in the population, occupying an infinitesimal fraction of the land, can hardly be throwing a great State into such convulsions as the politicians would have us believe. We may reasonably hope, therefore, that the sober second thought may yet have its turn in California.

If it does not, however, the thing that will have to be done is not in the least doubt. There has been a good deal of loose talk about the "reserved rights" of a State to pass such land-legislation as is pending in California. Congressman Kent of that State sent a telegram home alleging that treaties had nothing to do with the case. But the particular treaty with Japan has everything to do with it. There are no reserved rights of the States whatever in the matter of treaties. They gave those up in the Constitution as absolutely as they did the right to levy customs taxes. Treaties are negotiated by the President, not a Governor, are ratified by the Senate of the United States, not by a State Legislature, and when ratified are the "supreme law of the land," by which the judges in every State shall be bound, "anything in the Constitution or laws of any State to the contrary notwithstanding." This indicates at once a way in which the President may proceed. In case the anti-Japanese law is finally found to be as flatly in violation of our treaty with Japan as the different versions of its tenor and effect seem to show, Mr. Wilson can notify Japan that he will immediately have the legislation taken into the courts, where it is certain to be declared invalid. This should be accompanied by plain and firm notice to the authorities of California. They must be made to understand that any action by them either disregarding a treaty or embroiling us with a foreign country, will not be tolerated. It is not a question of usurpation or bullying or grandiose display. The matter is one simply of national dignity and good faith, resting upon unquestioned power. This being so, the State, in the ultimate decision, must give way to the Nation.

IS CONGRESS DECLINING?

"Democracy seems incapable in many cases of creating an Assembly representing itself to which it can pay the tribute of respect." This hard saying is quoted from a recent address by Mr. Arthur Balfour on the House of Commons. In that body he had seen many changes since he first entered it thirty-nine years ago, and he could not deny that some of those changes had impaired its prestige. He would not concede any distinct deterioration in the membership. It was as honest and, taking one House with another, it was as able as it had ever been. "But I have to admit," pursued Mr. Balfour, "that I think we stand less well in the opinion of the country. I do not think that a debate in the House of Commons is looked to with the same respect or interest or attention as it was when I was a younger politician. If that be so, it is a great tragedy."

Similar doubts and fears have been expressed of late in regard to Congress. Particularly has this been the case with the Senate. Our second chamber has been well-nigh reconstituted within the past ten years. Any one familiar with it as it was at the beginning of President Roosevelt's Administration, could not fail to be startled by the change that it presents to-day. It is not merely that so many familiar old faces are gone. Time and the fortunes of politics will bring in their changes. But the complexion of the Senate is not simply different, it is altered. A composite photograph would show a variation in the type. In place of the good gray heads, like Senator Hoar's, and of figures looking every inch a Senator, we see, first of all, a body of much younger men, and then a prevalent bearing which is more commonplace than one used to observe from the Senate galleries, and which may be called, without offence, the business presence. More than one visitor in Washington has been heard to grieve at the transformation, which seems to many a clear indication of a decline.

Of conditions at the other end of the Capitol, not so much is said. Frequent change in personnel is something like a rule in the House of Representatives.

It is the first to be shaken by political upheavals. Men come and go quickly, and are forgotten. Last year's election swept a great many new members into the House, whose stay in Washington will be brief. But for the time their thronging there gives the House a new aspect. Yet no one alleges any marked decay in its moral fibre; and its average of ability has not conspicuously fallen off. It is too soon to judge finally of the effect of the new seating arrangements of the House upon the interest and closeness of its debating. In this country it has been true for many years, as Mr. Balfour states is now the case with Parliament, that the discussions of Congress are not followed by the people with more than a languid attention. In that respect it would be difficult to make out any decline, or even any appreciable change.

The whole subject is one beset by "the pathetic fallacy." It is largely a matter of individual judgment, for precise external tests are hard to come by and apply, and the personal equation will creep in. One's early impressions of a Legislature or a Congress are apt to be favorable, and will remain to color the later opinions which one forms. Can this be the same Senate which once so imposed itself upon my imagination? Is it possible that these bustling and matter-of-fact Senators in pepper-and-salt clothes have replaced the majestic-looking men in black whom I used to see here? Such comparisons are natural, but they are misleading. A young man of to-day might find the actual Senate as interesting and even, at times, as impressive as his father found the Senate of 1890. It was a little later than that year that Senator Hoar made a speech denying that the Senate had degenerated. Some Senator of long memory could perhaps make out to-day as good a case as Senator Hoar then did.

All these matters are relative. "Pristine purity" will not always bear examination. The number of "scoundrels" in the Continental Congress was certified to with emphasis by John Adams. As a rule, the golden age—which is always a generation behind—was not so golden as we are apt to think, and the iron or brass age upon us is not so unrelieved by better qualities as we are tempted to imagine. On the question of the repute and power of Congress or Parliament a great many things have to be taken into the account before a considerate judgment can be formed. Times change, and manners change with them. New forms of influencing the public rise up to displace or modify the old. For example, the extraordinarily multiplied means in our day of carrying on discussion of public affairs outside the halls of Congress cannot but have had their effect in diverting attention somewhat from Congressional debates. If Mr. Balfour, with all his criticisms and apprehensions, could still affirm that he is "an optimist" as regards the House of Commons, no American need feel that there are such signs of decay in Congress as to make him despair of its future.

WILSON IN NEW JERSEY.

When Mr. Wilson sets out to make a new precedent, he does it so quietly and simply that not all are aware of the significance of his action. His return to New Jersey for two days of speechmaking on State issues was preceded by no thundering in the index. He merely said, when he was Governor, that he should come back as President to go before the people, in case the Legislature burked the bill for jury reform, and he has been true to his word. That seems uneventful. People may wonder a little that he could thus break away from his engrossing duties in Washington; they may exchange guesses about the result of his venture; but few of them perceive the full meaning of this novel act by a President of the United States.

For many years Presidents have assumed the right to have a good deal to say about the politics of their own States. In that matter they have long been freely consulted and generally deferred to. It was so with Grover Cleveland and New York. Not all of his interventions here were successful, but he intervened. After his second election he appealed publicly to the Legislature not to choose Edward Murphy United States Senator, but chosen Murphy was nevertheless. President Roosevelt's practice is still fresh in all minds. He ordered the election of Wadsworth as Speaker of the Assembly. He brought about the election of Root to the Senate. Nothing in the State was, in fact, too small for Mr. Roosevelt to take cognizance of, nothing too large for him to meddle with. But not even he ventured to come in person to appeal to the people against the Legislature. He was content, as were McKinley and Taft in their dealings with Ohio politics, to send messages and to be represented by friendly spokesmen. Woodrow Wilson came to speak for himself.

His course in doing so is to be read, first, in the light of his continuing interest in the affairs of New Jersey. He does not wish his work in that State undone. The remaining pledges which he and his party made to the voters he desires to see carried out. Above all, he is determined to prevent, if possible, the return of that system of sinister control in New Jersey which for years sank the Democratic party of that State in defeat and disgrace. It was on this point that the President was most explicit and biting on his first day of speaking. He did not hesitate to name names. The ears of the New Jersey "Jims" must have tingled as he was speaking. Who they are, what they represent, how they go about their nefarious work, nobody who heard Mr. Wilson could have been left in any doubt. The arraignment of the men and their methods was bold in the extreme, and bids fair to be effective.

Whether it proves to be or not, whether or not the Legislature at the approaching special session enacts the bill for jury reform over which it was deadlocked in February, President Wilson will at any rate have accomplished another purpose which it is evident that he had in mind. This is to make his thought clear on the general political situation in the country, and to put beyond all question his determination to be the leader of his party. He had some things to say to New Jersey, but he also had some things to say to the nation. Jersey bosses got their warning, but neither were Democratic schemers and marplots at Washington let go without due admonition. Mr. Wilson's speeches were local, yet at the same time national. His cool and searching analysis of the last Presidential election, with his inference that the Democrats were by it merely put on probation, was coupled with the deliberate serving of notice on those within the party who are intriguing against the execution of the popular will, that if they do not yield they

will be crushed. The words were uttered in New Jersey, but they were intended for the whole country.

This is clearly the large and final significance of President Wilson's campaigning for two days in New Jersey within two months of his entering the White House. He said that he should be a talking President, and already it is plain that he means to make free use of the one voice to which the entire nation will listen. He let it be known that he should be a President with policies, that he should spare no effort to execute them, that he should be very specific and not be afraid of being personal, if necessary, and that he should brook no challenge of his party leadership. That he fully meant all this, his coming to New Jersey wrote large. He has begun the great experiment. That in it he puts his political fortunes at hazard is obvious. The risks are great. The test will be severe. President Wilson will be called a dictator. His interference will be resented. But this will not matter, if only he show wisdom in choosing his issues, and if his old courage and skill in championing righteous causes before the people do not fail him.

"THE PERFECT AMBASSADOR."

The long delay in selecting Ambassadors and Ministers, though in at least some cases the need of new men is urgent, is probably due in part to the difficulty in finding just the right appointees. What the precise qualities are which make a successful diplomat, has been disputed from time immemorial. The maxims and wise instances have a way of contradicting one another. Even the old jokes about being sent to "lie abroad" for one's country, and about an enormous capacity for Rhenish wine, without falling under the table, being better than a knowledge of the Twelve Tables, are scarcely examples of speaking a true or helpful word in jest. To be sure, there are some Executives who profess to be able to detect the highest diplomatic gifts on sight. It will be remembered that Dear Maria was told that Bellamy would make "a corking Ambassador." But that, after all, was in confidence; and few Presidents can be so sure of their own judgment. Several of them have had occasion ruefully to recall Walter Bagehot's remark that a diplomatic officer in a foreign country must be "not only an agent, but a spectacle." Too many American Ministers and Ambassadors have indeed been spectacles—to gods and men.

That the difficulty in making proper Ambassadorial appointments is one of long standing, appears in a manuscript which was written by a French plenipotentiary of the seventeenth century, Louis Rousseau de Chamoy. Himself an envoy of France to the German Diet, and otherwise versed in the foreign politics of the day, he wrote, mainly for his own amusement, a sort of handbook of diplomacy which he called "L'Idée du parfait Ambassadeur." It was dedicated to his chief, the Minister of State, but reposed for more than two hundred years in the pigeon-holes of the Foreign Office, until it was discovered and printed by a modern diplomat, Louis Delavaud. An account of the work is given in the Paris *Temps* by Gaston Deschamps.

It is somewhat amusing, and not without instruction, to find that the questions which are vexing us to-day were gravely discussed by this experienced Frenchman, without coming to a definite conclusion. Take the matter of wealth and display. Certainly, declares this gentleman of the King's chamber, it is well that an Ambassador be rich. Lavish expenditure "impresses and pleases the public," which judges the success of an Ambassador by the magnificence of his table and of his service. He will find many advantages in the conversation of eminent persons whom his elegant hospitality is able to attract, and will put himself in the way of settling certain questions over a glass of rare wine which perhaps cannot be disposed of in any other way. Still, M. de Chamoy hastens to add, it would be a mistake to suppose that riches are indispensable in an Ambassador. Ostentation may repel; and, besides, the possession of a splendid equipage and ability to give great banquets do not necessarily imply that a man is cut out for large affairs. The skilled man of brains, though with moderate means, may succeed where the rich but stupid diplomat will surely fail. So there you are, in 1697 as well as in 1913!

In the perfect Ambassador the matter of personal appearance must not be overlooked. He should have, affirms the author, a fine face and noble bearing. The public naturally attributes power and importance to a man of distinguished port. A modern example might be cited in the person of Sir Rennell Rodd, lately British Ambassador in Rome. Earlier in his career he was sent on a special mission to Abyssinia. Himself about six feet four inches in height, Sir Rennell associated with him three or four other Englishmen of equally strapping proportions, and by sheer physical impressiveness was able to carry his point with the wondering Abyssinians. By all means let us have Ambassadors with eye like Mars to threaten or command. Yet, softly, urges our hedging French authority, who shows by his balancings how good a diplomat he was; impressive looks are desirable, but it must not be forgotten that the very greatest talents may be found in an undersized man. But though of presence weak, he must not be in speech contemptible. For "eloquence" is the prime quality in the Ambassador, according to De Chamoy. "In vain will a prince entrust him with his interests if he is not able to speak and write in terms commensurable with the dignity of his sovereign."

Shall the "parfait Ambassadeur" be accompanied by an "ambassadrice"? This is one of the questions discussed in the treatise. The writer comes out strong on the side of the angels. "A wife may be of the greatest assistance to an Ambassador." Granting that some women are indiscreet, there are many who are prudent and quite capable of keeping secrets. Still, there are certain diplomatic ladies, De Chamoy confesses, whose arrogance and talkativeness make observers regretfully conclude that their husbands would have done better to leave them at home. Thus does this ancient counsellor, this French Polonius of diplomacy, give us to understand that, in "ambassadrice" as well as "ambassadeur," it is the imponderable and elusive personal quality which counts most. If he or she is really fashioned by nature for a diplomatic career, happy is the country which can command their services. But if you ask how the appointing officer is going to be sure of it in advance, this is one of the things that every diplomatist knows, but that no diplomatist will tell.

THE PASSING OF THE ASTOR HOUSE.

New York, or rather Manhattan, is proverbially indifferent to the relics of its past; yet there must be few citizens, particularly of the older generation, indeed there must be few visitors to the city, who will not pause for a moment to regret the passing of the Astor House. Trinity and St. Paul's, like St. Peter's, still guard little sacred spots in the changing flux of the Wall Street district. They seem safe from the pressure of commerce, though the doors of St. John's are closed. But the Astor House! There is more history suggested by those ancient walls than by any other downtown structure. For here Presidents have lodged and men who shaped the nation's course in its most critical hours. Here foreign visitors flocked, as in later years they went to the Brevoort, the Everett, the Fifth Avenue, and the Windsor, and latterly to the Waldorf-Astoria, the Plaza, the St. Regis, the Hotel Astor, the Ritz-Carlton, and the Vanderbilt. The whole record of the city's growth and development, if not that of the customs and habits of the entire country, may be traced in the history of New York's hostelries.

When the Astor House went up people grumbled because it was so far uptown, and because it was the old story of trade forcing its way into a most exclusive neighborhood, so soon to be Barnumized. Here were homes of aristocrats of commerce and letters, charming in taste, simple and attractive in appearance, built upon shaded streets—and then this hotel came to bring its crowds of sightseers, and draw business around it like a magnet. Soon the *Herald*, then the yellow journal of the day, took a home diagonally opposite to it, and Newspaper Row arose to drive the home-owners further and further uptown. Speedily the Astor House became the centre of the town's life and politics. Great state banquets were given here, and foreign visitors went to it eagerly, for its fame had spread across the seas. The officers of visiting fleets stopped at it as a matter of course. Here Henry Clay heard of his nomination in 1844, and Daniel Webster eight years later learned that he had failed in the Whig Convention of 1852. Pierce, Van Buren, Buchanan, Taylor, Seward, Choate, Douglas, Jefferson Davis, all foregathered here; and then came Lincoln, too, and the young Prince of Wales. Horace Greeley marvelled in 1837 because 647 people slept under its roof on a single night. What would his shade say to the Woolworth building, now next door, or to the new Equitable building, which is to house 18,000 people day by day?

Next one thinks inevitably of the Civil War, for the troops came past this old hotel to be cheered on the way to the front; not only the New York regiments, the Seventh leading, but visiting regiments marched up or down Broadway from the docks to the old "Park Barracks," eager for the more solid encouragement dispensed at the rendezvous. Patriotic committees without number met at the Hotel Astor to save the Union. Riots the old hotel saw more than once—pro-slavery gatherings, then a fierce outbreak or two against the pro-Southern *Herald* across the way, which made that sheet try another tack. Then came the sinister draft riots. The roar of the crowds attacking the *Tribune* office was clearly to be heard behind the closed doors of the Astor, and some of its patrons doubtless drifted across City Hall Park to hear Gov. Seymour make his weak address to the mob, as they may have heard "Ben" Butler in his major-general's uniform stand on the front steps and swear at the poltroons who would light fires in the rear when the army was battling at the front for the nation's life.

Doubtless the Astor ended then its heroic age. It survived to see a new hotel far uptown bearing its historic name. It lost caste, but then obtained new fame by reason of its restaurant. When that closes on May 29 a real institution will have passed. Many a man who has mounted a high stool there for forty years for his noonday repast will feel homeless indeed, and curse the fate that drives him to tables, a Frenchified menu, and to German or French waiters, instead of the honest Irishmen who carve and serve in the rotunda. What wiseacres they have been, to be sure; from their lips has dropped many a pearl of political wisdom, and news as well, culled from the politicians and newspapermen to whom they ministered. A shrewd knowledge of human nature, and a native wit, are theirs—have they not been opening men's pockets and finding their way to their hearts by way of their stomachs these many years? Somehow, one can never think of them as being in unions and led by an Ettor or a Giovannitti, or as living elsewhere than in old Greenwich Village, with never a "Dago" or anybody but an Irishman in sight.

Well, what is to come after? A hotel, we hope. It would be the purest folly for the Astors to build another forty-story building on what remains of their holding after the city takes the corner for the subway. A superb parcel of land the two branches of the family control; but one has only to recall conditions in the real estate field downtown and the vigorous efforts to prevent the great building to be placed on the Equitable lot, to see how absurd would be the building of another skyscraper to-day. But a downtown hotel is needed still, and in it could be retained the glory of the old restaurant. Many a traveller would welcome the opportunity to make his hotel headquarters near the business section and so convenient to Brooklyn and all of Long Island. There are a hundred arguments for a moderate-priced hotel downtown; we trust the Astor managers will heed them when they come to rebuild.

EDUCATION BY THE PEOPLE.

"Hitherto she but ploughs and hammers," wrote Carlyle of America in 1850. And he was repeating and summing up the verdict of a generation of English travellers when he added that painful tribute to "our American cousins": "They have begotten, with a rapidity beyond recorded example, eighteen millions of the greatest bores ever seen in the world before—that hitherto is their feat in History." That was spoken, as Malvolio says, without much mitigation or remorse of voice. Yet the American "bore" of 1850, believing still—in spite of *himself*—in democratic institutions, might have heartened his faith by a retrospect over the history of prophecy. If he had run through a shelf full of the books of travels in the United States written by apprehensive English Tories he would have observed that the critics of democracy had already occupied two distinct positions. In the earlier years of the century they had confidently predicted that a government by the people could not be permanently established. When time, even before the Civil War, seemed to belie that prophecy, they shifted ground, admitted the establishment,

but proclaimed on many a caustic page that the people were not to be congratulated on their achievement. Popular government, they conceded, might endure, but only to perpetuate a nation of shopkeepers who would employ Reading, 'Riting, and 'Rithmetic merely to put money in their purses. For the bore of 1850 there was an escape from this oppressive prospect by the door of humility. Prophecy had failed once and might be wrong again. He might not be the fulfilment of the democratic dream, but only its pioneer. For him the plough and hammer; for his sons the "pursuit of happiness."

Cherishing we scarcely know what secret hope and vision, he turned now, in the fever of his mid-century business, with unabated vigor to the perfection of his system of popular education—his second great democratic experiment. Upon his common schools he had built high schools and upon his high schools he was now beginning to build his State universities, all dedicated to the proposition that the democracy opens all her doors of opportunity to all her people. What grounds there were in those days for predicting that institutions so constituted and so dedicated must perish from the earth one may discover in those half-dozen preliminary, perfunctory, and unread pages, entitled "History," which are printed in the fat, prosperous-looking catalogues of the great State universities of the West. Established they are beyond the shadow of a doubt. And those who prophesy against the people have advanced to the second stage of criticism. "What, after all," they are asking, "has education by the people accomplished? Does not your 'second great democratic experiment' confirm the results of your first? What has come of your effort to lift yourselves out of the forge and the furrow by your bootstraps? Do you not still plough and hammer? O Demos, where are your spiritual rents? What commerce have you with the skies? Has not this your supereminent organ of popular education, the State university, for its being's end and aim the multiplication of the father's material goods by the son? And must it not be so in the nature of things forever?"

I.

It is not difficult to understand how, warrantably or not, the notion spreads abroad that the State university, with its prominent technical schools and colleges, is in the grip of a carnal imagination, and that through its intimate intercourse with the people it exerts an immense influence tending to fortify them in their besetting sin, a corrupt love for the things of this earth. Such is the penalty for leading a public life. The State university, like a Representative in Congress, gets into power by promising to look after the interests of its constituents, or, rather, it may be said, like a promoter, it promises big returns on money invested—and, also, pays them. It is this frank parleying with the people, this unblushing western way of passing the hat for pennies all round the State, that offends to the quick the sensibilities of men who studied ethics and learned to despise the dollar on foundations provided by benevolent corporation lawyers and reclaimed banditti of high finance. "You send us your boy from the counter, or the shop, or the tail of the plough," so runs the argument to the parent, "and in three or four years we will return him to you with tripled or quadrupled earning capacity! You sow ten bushels of scientific investigation, and you will reap a thousand bushels of improvement." Irresistible! —this appeal to the pocket. But is not this to join forces with that ominously popular journalism which on Saturday night and Sunday morning burns incense before the Golden Calf?

Merited and timely as such criticism may appear to a transient observer of the State university, it will be recognized as superficial and essentially false by any one who has felt the inner throb and glow of the enterprise. Idealist the institution is not, if idealism means a sterile yearning for the unattainable. Materialist it is not, if materialism means satisfaction in the welfare of the senses. It is at the same time intensely visionary and intensely practical; its driving power is the creative artist's craving to externalize and eternize his dream. It would honor every truth by use, and it holds that the triumph of the spirit is the subjugation of the world. The pecuniary support that it solicits is but the means to the realization of a vision embracing almost the whole of life, and the wealth that it helps to create is but the first fruits of the harvest. Not the only fruit. An idealist from the University of Edinburgh says that if you are to be governed by the people, you must submit to "collective folly." A graduate from a State university says that if you are to be governed by the people, you had better educate your governors. An idealist from the University of Oxford demands a wise paternal Government, supporting its children in their ignorance and distress. A graduate from a State university declares that the wise and fatherly Government prevents the distress and ignorance of its children by teaching them to support themselves. Still another Oxford idealist says that the remedy for the "evils of democracy" is to strengthen the power of the State by making it the central organ for the dissemination of a knowledge of the best that has been said and thought in the world. These words the faculty of a State university would probably recognize as fairly descriptive of their undertaking. They would dignify the entire range of human conduct by discovering for all the people and by making prevail from the lowliest to the loftiest the right and excellent form of every activity. They resent with justice the rather widely prevalent notion that the consecrated search for light is a monopoly in the possession of the old New England colleges. "Even in our concern for the applied sciences," they say, "there operates the identical passion for perfection which you extol and strive to keep unspotted from the world. You have preserved your idealism in glass jars; we have not lost ours by putting it to work in the bread of life. Immersed in sense though we seem to be, we are Platonists no less than you, pursuing through the things that lie nearest to us the divine idea, and we shall pass in due time from the love of sensuous to the love of supersensual beauty."

"Will you? That is precisely the question," rejoins a skeptical voice from somewhere east of Buffalo. "Go and communicate to the farmers your passion for sweetness and light! In all seriousness, are you approaching the possibility of doing that? We do not doubt your ability to pass from triumph to triumph in your conquest of the material world, and indefinitely to improve your technical processes and increase your economic efficiency. Yet to us your absorption in agriculture, business, and engineering does not seem to prophesy a new generation of more genial, humane, and conversable men, but a second generation of Carlyle's 'bores,' speeding on safer railways through richer fields to bigger business and sitting down of an evening in more admirably constructed dwellings, better heated, better plumbed, and better lighted, to read the *Saturday Evening Post* and meditate more profitable investments. We do not see the provision in your scheme of higher education for shunting the people to a line of progress issuing in a society that is an end in itself. When do you expect to go before your legislators and get them to appropriate a million dollars for a kind of education that cannot be guaranteed to return a penny to the pockets of the taxpayers? When they are ready to do that, we shall agree that you are equipped to compete with our New England colleges that carry on the great human traditions. Till they are ready to do that, the point of departure for our higher education will remain the terminus of yours. Whatever your secret aspirations toward a genuine intellectual leadership, you cannot flee from the destiny of democratic enterprises; the 'beast with many heads' can go only whither the feet will carry him."

II.

Though these charges against educa-

tion by the people are serious enough, the eastern critics of the State university are not content with pointing out that its character is determined and its functions limited by its pecuniary dependence upon the taxpayers. If they were the only controlling factors, some modest provision for the higher cultivation of the mind might be lugged shamefacedly through the Legislature clinging to the skirts of a magnificent provision for the higher cultivation of the fields. And so, indeed, the university administration does maintain on its own demesnes a little ground room for the humanities, just as the game commissioners preserve a little refuge for the prairie chickens among the corn, as a barely tolerated relic of feudal privileges. But, argue the critics, the immediate determination of the character of the State university is by the high schools and the stress of their influence is in precisely the same direction as that of the taxpayers.

This is again to attack the democratic principle and to deny the power of the State university to exercise any high intellectual leadership. If it were in fact, as it is in theory, the head of the system of public education, then, as is admitted, it need not despair of its longest hopes and its most ambitious dreams, despite the indifference of the taxpayers. Actually empowered with their will, entrusted with their educational destiny, it would think for itself and for all its members, bring its subordinate parts into harmony with its great design, set its own high standards of excellence, and see to it that no good procurable by private means should be unpurchasable by the colossal purse of the people. These, however, as we are informed, are idle and unprofitable speculations. The hard fact which sooner or later must be faced is that the State university has no independent life, nor, in the last analysis, any important originating power. The body of which it is theoretically the head will not endure its dictation. The high schools dictate to the university, the parents dictate to the high schools, the children dictate to the parents; the parents comply with the children, the high schools comply with the parents, the university complies with the high schools. The sheer necessity of accepting what the high school offers has caused the university to acquiesce in the strange new theory, against which the president of the Modern Language Association recently lifted an indignant voice of protest—that one subject is as good as another, if it be equally hard and equally well taught.

Now, to those in the State university who are concerned with the older "academic" studies which lead through a long preliminary discipline of the taste and a gradual opening of the understanding to the free speculations of philosophy, to the enlarging and sobering retrospect of history, and to the permanent consolations of literature and art—to those concerned with such studies this new educational doctrine is a rank and pestilential heresy, begotten in juggling confusion and repugnant to experience and common-sense. To accept it is to assume that in four years you can make a bachelor of arts of a man who, for instance, can neither write, read, nor speak any language under the sun.

"That," say the critics, "is exactly what the liberal arts college in the State university is trying to do, and the undertaking is preposterous. Why not abandon it and accept the manifest destiny of a 'free' institution? For there is apparently a kind of higher education which does not rest upon anything lower. Your brethren who profess the useful arts and the applied sciences seem to thrive on your pestilential heresy. They have adapted themselves to their environment. We prophesy that they will prove the fittest to survive the struggle for existence. We prophesy that, so far as your power to support it is concerned, the ancient hierarchy is doomed." It is not our purpose to examine here the accuracy in detail of this eastern view of the arts course in the State university, but if any reader suspect that we have laid on the black with a trowel, let him read Prof. E. P. Morris's article on "The College and the Intellectual Life" in the April number of the *Yale Review*.

III.

Interested observers situated in endowed institutions in the East reflect upon this position of affairs with something like self-congratulation. When the young prospering universities of the West first began to make their as yet undefined influence felt beyond the boundaries of their States, it was feared in some quarters that they would cut into the constituency and menace the prestige of their ever-venerable elders. But now, if we may credit Professor Morris, the danger has pretty well blown over. The State institutions have attained their majority, their character is settled, and the bent they have taken puts them out of the competition. "Their arts course," he says, "has been comparatively unimportant"—it will be noted that the rest of the sentence subtly yet significantly serves to define "unimportant"—"hardly more than another college in addition to those already existing in the State." A handsome compliment, either way you look at it! Their only really considerable function, he adds in effect, is vocational training; and, in performing that, they supplement, not supplant, the function of their academic predecessors, which still, as of old, is, "to put the young man between eighteen and twenty-two into possession of his intellectual heritage, to hand on to him the wealth of emotion and experience which the race has accumulated." We may, therefore, now amicably divide the educational world—again we give the gist of his conclusions in our own words. Since a complex of forces largely economic has inevitably locked the State university and the high school in one system, and the endowed college and the expensive preparatory school in another, the western university will look after the body, and the eastern college will look after the soul. And we are sure that this arrangement ought to be agreeable to all parties concerned.

Such a partition of functions, however, the western State university can ill afford to regard with complacency. For what would the permanent acceptance of the intellectual hegemony of the eastern colleges involve and what would it signify? It would involve sacrificing whatever youths of high intellectual promise the West could produce to its soulless vocational system, or else sending them eastward at the age of fourteen, with the probability that they would grow up to look upon their early surroundings as æsthetically barren, and a fair likelihood that they would form their connections and make their residence in the East. It would tend, in other words, to remove the leaven from the inert lump and place it in the risen bread—to strengthen the lust for stocks and bonds that prevails everywhere in Chicago and the love for sweetness and light that prevails everywhere in New York. It would signify that the supposedly opulent West was too poor, too crude, too busy, too blind, too much bent upon improving its ploughs and hammers, to give any attention to creating a refined society, to offering any satisfaction to the needs of the spirit, to affording any shelter for those of its young men and maidens who hunger and thirst for the "accumulated emotion and experience of the race."

There is something, furthermore, in these deductions which should make the plain citizen, without reference to sectional interests, open his eyes and consider what to do next. For it is to be observed that the people as educators are to acquiesce not merely in the college monopoly in the production of liberal culture, but also in a class monopoly in the consumption of it, entrenched, fortified, and established by hereditary wealth. It has been a popular superstition among us that the power of great fortunes in a small class is offset by the power of great ideas in a large class. We are now to learn that in the immediate future the intellectual heritage is to be reserved more and more exclusively for the rich man's son and added to his other advantages. For only he can afford the costly luxury of a secondary school which *prepares*. The pupils of the

high school, says our author, "often young men of character and capacity, are not prepared for academic study and can be admitted only at the price of the retardation of the intellectual advance of the college." This amounts to saying that our public schools, which we had thought opened the doors to the highest educational opportunities, are become, on the contrary, a perpetual bar to those opportunities. Professor Morris is entirely candid in this matter; one should be grateful to him for putting the case in so clear a light. "The democratic ideal," he says, "and the intellectual ideal are here in conflict!"

But if one may judge by the apparent nonchalance with which he turns his back upon the democratic ideal, he has never known her, loved her, nor seen the beauty of her face. What is the democratic ideal? Education of all the people, at the expense of all the people, for the welfare of all the people—does or does not that include the liberal culture of the people? That and nothing less is the purpose with which the democratic ideal travaileth. Because she has borne heavy burdens and the heat of the day, and her children are many, shall we think that the light has faded from her eyes, that her strength is spent, her heart grown dull and indifferent to the "young men of character and capacity"? Because the mighty Mother has not wholly accomplished in the twinkling of an eye what has been hitherto the slow work of centuries, shall we charge her with imperfect vision, abandon our faith in her, declare her incapable of providing for her offspring? In the watches of the night she takes counsel of her tragic history and the dark days still fresh in memory, when friend and foe alike pointed at the hideous "conflict" between her and black slavery. And she recalls how some in that hour were for dividing the continent into a democracy of the North and a "slaveocracy" of the South, just as now it is proposed to divide it into a giant working materialism of the West and a leisurely affluent idealism of the East. And she remembers in what throes of emancipatory anguish she preserved her integrity and achieved the realization of her dream Is it likely that the faith kindled by that conflict will be quenched by this? Is it going to be a more impossible task to strike the golden fetters from the somnolent imagination of the people?

IV.

In the face of this question one should be thankful that the impending Holy Alliance of intellectual ideals with inherited capital has not yet put an end to the liberty of prophesying. To any one who knows the temper of the State university it is absurd to suggest that it will entertain any such proposals for peace and the distribution of territory as we have here been reviewing. Its battle is already half won, and it is flushed and exultant with a great moral victory. It has shown to the people the folly and the turpitude of wasting the sweet uses of time in indolent expectation of unmerited opportunities and unearned benefits—of waiting for what they want until some prince of special privilege in his genial hour sees fit to give it to them. It has taught them the great elementary virtue of standing on their own feet and paying their own way. It has thoroughly demonstrated to them their ability to procure what they desire; it only remains to kindle their enthusiasm for what they lack. Articles like that of our eastern critic are dropping the necessary spark.

It is absurd to assert that the united will and means of two or three millions of citizens cannot compete successfully with the sporadic generosity of two or three scores of private individuals. It is absurd to declare that a great commonwealth cannot afford at its university a liberal arts college of absolutely the first class, and in its high schools ample preparation for it. To speak in the brutal tongue of the market, we have yet to hear that a high-grade professor of philosophy is a dearer commodity than a high-grade professor of civil engineering, or a high-grade instructor in classics, than a high-grade instructor in manual arts. The higher and the lower technical education which have already been provided are not less, but more, costly than equivalent provision for the humanities.

It is equally absurd to declare that the support of the people cannot be organized except for material interests and self-regarding ends; in the humblest walks, as history blazons, it can be organized for the adoration of God and the recovery of the Holy Sepulchre. And the very obligation that the State institutions are under at the present time to refrain from religious instruction should make it appear more imperatively their duty to bring not some, but all, of their students into quickening relationship with at least the purely human traditions of beauty, wisdom, temperance, truth, and justice.

With these ideals the democratic practice has been temporarily, superficially, heedlessly in conflict at times; the democratic ideal and the deeper sentiment of the people, never. And one may venture with confidence to predict that if the present organization of public education is inimical to them, if free access to them is menaced by an exclusive and aristocratic leaguing of endowed college with expensive preparatory school, then the people through the State universities will be touched in their deepest loyalties to defend them, will be inspired by their dearest hopes to extol them, and will not cease to provide for them till they have vindicated their equality of interest in them with the oldest colleges in the land.

STUART P. SHERMAN.

NEWS FOR BIBLIOPHILES.

A rare book is that of which the title page is here copied:

LITTLE DERWENT'S
BREAKFAST.
BY A LADY
ILLUSTRATED BY ENGRAVINGS.
Seek and find
Instruction with a thankful Mind.
Southey.
London:
SMITH ELDER & CO. 65 CORNHILL.
M.D. CCCXXXIX.

It is a thin octavo of viii+84 pages, with a slip explaining a misplacement of some verses which *are* on p. 14, but *ought* to be on page 3. The illustrations, four in number, are very old-fashioned woodcuts. The preface consists only of these words:

The following simple poems were written for the amusement of a Child of Seven Years Old, whose name appears in the Title Page. He is a Grandson of the late S. T. Coleridge, Esq.

It has never been reprinted, and has now become scarce. In fifty years I have not seen three copies, though it was one of the pleasures of my childhood. Probably the juveniles for whom it was mainly intended have read it and thumbed the modest book quite out of existence. On Little Derwent's breakfast table there are the loaf of bread, milk, honeycomb, sugar, salt, eggs, tea, and coffee—the three last mainly for the elders. Each of these comestibles is celebrated in verses adapted to the capacity of a child—especially of a child whose grandfather was a philosopher and a poet. If the Muse sometimes foots it rather heavily, there are moments of flight into loftier regions. The processes by which the loaf of bread reaches the breakfast table are thus summarized:

There's
Threshing—winnowing—to market taking—
Grinding—sifting—mixing—making—
In the oven nicely baking—
Ready, when your fast you're breaking—
Eat it then—and all is done!

All except that grateful pleasure,
E'en the youngest heart may treasure,
In days of labour or of leisure;
Seeing in what bounteous measure
God for all our wants provides!

The best verses in the book, however, are devoted to the theme of Early Rising—a theoretical virtue not usually overprized by the young:

Up, up with the cock when he cheerily crows,
When Nature awakes from her night's repose.
He calls the farmer—"Come guide the plough"—
He calls the maiden—"Come milk the cow."
Up, little Derwent, away, away!

Up, up with the cock when he cheerily crows,
And carols his morning song to the sky;
Follow him forth o'er each balmy field,
And taste the health-giving air they yield.
Up, little Derwent, away, away!

Up, up with the bee in "the hour of prime,"
Who tells little boys how to value their time:
His books are the flowers on which he feeds,
He sips the honey—but leaves the weeds.
Up, little Derwent, away, away! . . .

Then up with the birds the bright sun to see,
With the working ant, and the busy bee;
Leave dull sloth with his drowsy head,
Don't let him come to *your* little bed:
Begin, like the birds, with a song of praise,

Go on, like the insects, in wisdom's ways,
You'll be good, and happy and merry as they.
Up, up, little Derwent, away, away!

"Little Derwent's Breakfast" is followed by some occasional poems addressed by the authoress to the same child, including one on giving him a Greek Testament on his tenth birthday.

Derwent Moultrie Coleridge was the eldest son of Derwent Coleridge, who was the second son of the great poet. "Little Derwent" was born in 1828, and died in 1880 at Sydney, New South Wales. His younger brother, Ernest Hartley Coleridge, is happily still with us, and apart from his distinction as a verse writer has rendered good service by his editorial labors on Byron and Coleridge. The first Derwent was educated at St. John's College, Cambridge, and was ordained in 1825, and was master of Helston School from that year to 1841, when he became principal of St. Mark's College, Chelsea. He left Chelsea for the rectory of Hanwell, which he held till 1880, and died in 1883. He was a vital influence in education, and has left a brief biography of his unhappy brother Hartley, which is remarkable for its brotherly sympathy and honest frankness.

Of the four illustrations, the most interesting is the frontispiece, which represents a group of five persons in whom we may perhaps recognize the Rev. Derwent Coleridge, his wife, and Miss Trevenen, with "Little Derwent" at her knees. The author of "Little Derwent's Breakfast" did not put her name to the book; but the secret was known to some, and is revealed in Boase and Courtney's "Bibliotheca Cornubiensis" (II, 793). Emily Trevenen, of Helston, was the descendant of an ancient Cornish family. She was the daughter of the Rev. Thomas Trevenen, and from 1826 until her death on July 29, 1856, attached herself to the Rev. Derwent Coleridge and his wife Mary Simpson Pridham, the daughter of a Plymouth banker. "Little Derwent's Breakfast" has now become a rarity, and although a new edition is projected, it will not have for bibliophiles the same charm as the little book of 1839.

WILLIAM E. A. AXON.

Correspondence

LATIN AND THE MODERN LANGUAGES.

TO THE EDITOR OF THE NATION:

SIR: Within the past few years, so far as I know, all of the large universities of the Middle West have abandoned the old four years' requirement of Latin for entrance, and have allowed the student to offer in its place German or French. It is possible in consequence to compare the work in freshman English composition of a student who offers the classics for entrance credit with that of one who offers a modern language. From this it may be possible to come to some generalization as to the relative value of these studies as a training in English.

It is only just to add that obviously the test is not always perfectly fair, for the student who offers a modern language for entrance credit instead of Latin may, to begin with, be the weaker student, and may have made his selection with an eye single to his intellectual deficiencies. Unfortunately, too, in this case, the test could not be complete, because of the fact that until this year the old two-year Latin requirement was rigidly imposed on all schools accredited to the University of Nebraska, and we had in consequence few matriculants who were able to offer four years of preparatory German or French. But under these conditions the test was made repeatedly with first semester freshmen, and in all cases the results were about the same.

For all who had four years of Latin the percentage of delinquency was below 7. For those who had three years of Latin and from one to two years of a modern language, in this case, as in the others that follow, chiefly German, the percentage rose to 15. For those who offered two years of Latin and two years of a modern language the percentage of delinquency jumped to 30. For those who had one year or less of Latin and from two to four years of a modern language the percentage was 35. The point of this seems perfectly clear, as clear as figures can ever be: the more of Latin required in the preparatory work the better are the results in college English; and, further, the modern languages do not when tested show the practical results claimed for them—this notwithstanding the common complaint that the teaching of Latin in most secondary schools is far from ideal.

Nor should we be surprised at these results. French and Spanish, as well as Italian, are virtually grammarless tongues, and afford little drill where pupils need it most, in the mutual relationship of ideas in a thought, which we roughly denote by the term "syntax"—though for models of style and structure probably no languages are more effective than French and Italian. And as for German, that most serious competitor of Latin in secondary schools, though it has a formidable grammar, it yet lacks style and structure into which it may weave its grammar. For whether it is that German prose still remains the helpless victim of the incubus of scholastic philosophy and transcendental speculation, or whether there is something in the German mind dark and mysterious which delights in circumlocution for its own sake, certain it is that the German sentence is a marvel of illogical phrase-building and thought concatenation. There is nothing like it in English literature since the days of the Elizabethan pamphleteers and Milton's "Areopagitica." Lowell has compared it to a ship that responds slowly to its helm. It might better be likened to the painful staggers of a Cyclops—*monstrum horrendum, informe, ingens, cui lumen ademptum.* It is ponderous when sportive, profound when delicate, formidable when ironical, stupendous when natural, and for the English reader always bordering on the misty verge of unintelligibility. PHILO M. BUCK, JR.

Lincoln, Neb., May 1.

THE NUDE AND THE STAIRCASE.

TO THE EDITOR OF THE NATION:

SIR: I have been waiting feverishly to see if any one else would see it. No one has. I alone have been able to understand—I and the painter, M. Duchamp.

I discovered the key to it on the very first day of the exhibition as I stood in the crowd of private-viewers before that masterpiece, "A Nude Man Descending a Staircase." It is a picture calculated to explain itself; it is, in fact, *Automatic Art;* and yet, as I looked round me a moment after making my discovery, I saw that no one else had understood. No one was doing what I had just done.

Now, the picture had made me open and shut my eyes a number of times very rapidly, and what I saw between those eye-flashes made me continue the process. Obviously, that was precisely what the artist had counted on, for the whole thing was then perfectly plain to me. Of course, it is possible that I am an exception, that no other human being can open and shut his eyes as rapidly as I can; but even a person who can open and close his eyes only some three hundred times a minute, let us say, would have been sure to get glimmerings of the meaning of this revolutionary picture, had he the least affinity with the genius of the painter. To me, at my high speed of eye-flashing, the secret lay open. Striking a thousand-wink-a-minute pace, both eyes keeping perfect step, what did I see? I saw precisely what the title of the picture had told me I should see—I saw a nude man *descending* a staircase. He came down one step at a time, gracefully and repeatedly disappearing off the margin of the picture at the bottom as long as I continued to wink. Slats? Shingles? Nothing of the sort. Those bags of golf clubs, oh, poor, blind, unwinking Public! are *motion-states.* Wink, and a glorious young Apollo starts at the top of a polished stair and descends to his bath—which is somewhere off the margin at the bottom. Stop winking, and instantly he flies to pieces, to atoms of motion, that is; for motion breaks up into its relative states, and each atom of motion resumes its unkinetic, unsynthetic *atomtudes.* Do you realize the genius required to locate accurately in the time and space of the picture these multifarious unsynthetic atomtudes? This is the mere A B C of Futurism and the Cubist schools.

Now try winking with alternate eyes, at the rate, say, of five hundred a minute per eye. What happens? Before you, motionless and *collected* as a god, the nude stands on the middle step of the staircase. Also, he is now no longer nude. His clothes, evening dress under an expensive fur coat, which had hung somewhere amuck the atomtudes, are now upon him. In short, he has returned from his bath, and is waiting for his wife—who is tying her veil upstairs off the margin of the picture. In one hand he holds an opera hat, in the other a cane. What else he might acquire with increased speed of winking, I cannot say—perhaps a cigar, possibly his wife herself. A more remarkable effect, an actual effect, is to be had, however, by slightly decreasing the speed of alternate winks. You can then see the nude assembling, synthetizing, on the middle step, and his clothes assuming their faultless atomtudes upon his godlike form. The genius of the artist was so all-comprehending that the nude's clothes arrive from the different times and places of the picture in an infallible order.

Only one mystery remains. By no amount of optical ambidexterity can it be discov-

ered just where the nude keeps his clothes. If, for example, you stop unwinking abruptly in the midst of the nude's process of undressing, the atoms of motion so instantaneously resume their unkinetical atomtudes that even the fur coat is whisked out of all recognition. Of course, it lurks somewhere in the times and spaces of the picture—but where? Ah, what a sense of infinite genius does one have in contemplating that question! J. R.

Bloomington, Ind., May 1.

THE PRICE OF ENGLISH BOOKS.

To the Editor of The Nation:

Sir: The high prices of English books in this country are not due entirely to the tariff, however ill-judged the latter is when applied to the materials for the intellectual growth of the nation. English publishers are represented in this country by branch houses acting under the name of the original publisher or by agents to whom the sale of the publications of English works is entrusted.

The prices of books are not uniform among the different American representatives, nor are the prices of a single agent uniform. In many cases the prices of English books in America correspond in amount to the cost of the same in England, an English shilling being represented by twenty-five cents. Such prices are possible, because American agents are supplied at a lower price than the ordinary wholesale price in England. The invoices in the custom house will, I think, establish this statement. In spite of this, we find one agent announcing: "In translating the English prices into American money, the rate used is fifty cents to the shilling to cover the cost of duty and other expenses attending importation." Taking the works of the American representative of a leading English publishing house, we find that the same principle is frequently applied. Several important works issued to commemorate the tercentenary of the publication of the King James Bible cost in this country exactly twice as much as in England. A volume costing eight shillings and sixpence at retail in England is sold in this country for four dollars and a half. Another volume published at five shillings is sold for two dollars and a half, and so on in proportion for other works.

Owing to the lower price which American agents pay in London for books, it is perfectly possible for the American agent to pay the duty upon the book and still sell the same for a reasonable profit.

The Home University Library, which is sold in England for one shilling bound, was announced in this country at seventy-five cents per volume. The price is now fifty cents per volume in the United States, while in Canada the volumes of this excellent series are sold for twenty-five cents. The books in Everyman's Library, we believe, are now sold for thirty-five cents. The Cambridge Manuals of Science and Literature cost in America forty cents per volume, in London and Canada twenty-five cents per volume. Many books published in England are not net books, and can there be purchased for three pence in the shilling discount.

But a small fraction of the books published in England are reprinted in this country. For the vast number of English publications which are not reprinted here no American publisher is benefited, but the American is taxed by the tariff on books in every importation. As the intellectual growth of the nation and general culture depend upon ready access to the world's freshest knowledge, any duty upon this means for national growth is indefensible. The scholars in our universities and the people in our homes are thus taxed when no corresponding benefit is bestowed upon any material interest. Congress should, therefore, remove promptly all duties upon books and thus afford immediate access to the best literature of all cultivated nations. Foreign publishers in America, by virtue of the lower prices at which their books are obtained, would find no interruption of their trade.

TEACHER.

Cornell University, May 3.

THE NATIONAL GEOGRAPHIC SOCIETY.

To the Editor of The Nation:

Sir: I received this morning a circular letter from the secretary of the National Geographic Society, of Washington, informing me that I "have been nominated for membership in the organization," that the membership fee is $2 per year, and the *Geographic Magazine* published by the Society "is sent free to all members." This identical letter is sent broadcast to everybody in the land, and, as the result shows, has procured for the magazine more than two hundred thousand subscribers. No interest in geography on the part of those who are thus "nominated for membership" is assumed, nor is anything necessary to become a member besides the payment of $2 per year for subscription to the magazine.

Now, I am not belittling the work of the Society, which, on the whole, is very creditable, nor intimating that its magazine is not worth $2 a year. But it does seem to me that a scientific institution which claims a national character ought not to employ methods for procuring "members" which, to my knowledge, no European society of similar purpose would for a moment stoop to. I ought to add that a New York institution of the very highest standing used a very similar method for obtaining members until a few years ago, but has since abandoned it. N. M.

New York, April 18.

THE EXCHANGE PROFESSOR.

To the Editor of The Nation:

Sir: A letter in the *Nation* of April 17 suggests the formation of an exchange system of professors among our own universities. Such a system has been in operation for the past two years. Harvard University sends each year an exchange professor to spend a month at each of the following named colleges: Colorado, Grinnell, Beloit, and Knox. Each of the colleges in the system is entitled to send one of its teaching force to Harvard every year. The college man does some teaching in the university, for which he receives a small salary, having the major part of his time free for research work in such lines as suit him best.

In 1911-12, the Harvard exchange professor was Albert Bushnell Hart, who gave in each of the colleges named a course of lectures to advanced students in American history, and another course, open to the general public, on American statesmen who have shaped the development of our national institutions.

In 1912-13, Prof. George Herbert Palmer is the Harvard representative to the chain of colleges. Professor Palmer gives a course of three lectures weekly to advanced classes in ethics, two lectures weekly, open to all who wish to attend and can find places in the lecture-room, on the English poets, and some readings from his own translations of Homer and Sophocles. In addition, by his generous giving of his time, energy, and personality, he makes a distinct contribution to the college life, affording a concrete example of the value of the liberal arts type of education.

The exchange professor during his stay at one of the colleges identifies himself with the college and its interests, attends faculty meetings, joining in the discussions, and getting inside the working machinery of the institution.

From the side of the colleges, the plan is proving an excellent one; the presence of the university professor is stimulating in all departments. On the side of the university, the system will doubtless lead an even greater number than heretofore of the alumni of the four colleges to the graduate and professional schools of Harvard. Moreover, the university authorities are enabled to procure accurate and first-hand knowledge of the work of the "fresh-water" colleges. Caroline Sheldon.

Grinnell, Ia., April 28.

"HOOSIER."

To the Editor of The Nation:

Sir: Many attempts have been made to explain the origin and meaning of the name applied to a native of Indiana, but all have failed to prove convincing or even wholly plausible. A new account—or rather the earliest of all—has recently come to my notice, which appears to possess at least some of the qualities which have been missing in the others.

Indiana acquired Statehood in 1816, the year following the downfall of Napoleon. Soon afterward a Polish officer who gave his name as Col. Lehmanowski came to the United States, drifted Westward, and, finally, settled within the borders of the young State. According to his story, he had served in many campaigns under the great captain, of whom he was an enthusiastic admirer, and had made a narrow escape from execution at the hands of the restored Bourbons. (Incidentally, it may be remarked that he declared Marshal Ney also had escaped and come to this country in 1815.)

Lehmanowski's admiration of his old commander led him to prepare a series of lectures on his campaigns, which he delivered in various places. He is believed also to have been the author of a "Life of Bonaparte," now very rare, which was published in Salem, Ind., in 1818.

In his account of the wars he had occasion often to mention the exploits of the light cavalry known as hussars, which had originated in the 15th century in Hungary.

Pronounced with the *u* long and spelled with one *s*, which in the Magyar tongue has the sound of *sh* or *zh*, the word in his mouth became *hoozhár* or *hoozyár*, with final accent. Thus pronounced and often repeated it became familiar to his neighbors, who, however, shifted the accent, English fashion, to the first syllable.

For some time the word thus introduced had no special application, but in the late twenties the digging of the canal around the falls of the Ohio River at Louisville attracted many laborers from Indiana as well as Kentucky. Naturally, in such an assemblage, there were many physical encounters. In one of these a man named Short, coming from Washington County, Indiana (of which Salem is the county seat), where Col. Lehmanowski and his oddities of speech were well known, gave a Kentucky champion a sound drubbing. The victor strutted about and, finally, springing into the air and knocking his heels together, shouted, "I'm from Indiana, I am!" And then, recalling the Colonel's tales of the picturesque cavalry, added, "I'm a *Hoózhar!*"

The name thus impulsively adopted became current, and like many another has persisted long after its real origin was forgotten.

H. M. KINGERY.

Crawfordsville, Ind., April 24.

Textbooks

PEDAGOGY.

Prof. William Lyon Phelps's "Teaching in School and College" (Macmillan) is a frank, vigorous, and certainly a readable little book. But the noble enthusiasm for the profession of teaching with which he sets out—as an art, in which perfection is as well worth striving for as in architecture or in poetry—seems not fully justified by what follows. In some respects his conception of the ethics of teaching is rather fine and exacting, particularly in the matter of the respect due to students' papers. He has a scant respect for pedagogy. Required English composition for those who have nothing to say he justly ridicules. And he is clear enough in holding that the first duty of the teacher is to know his subject. Evidently, however, even an intense belief in the value of what one has to teach will not go very far. That "the shortest cut to an immediate big salary in schoolteaching is not by the curriculum-route, but through the football gridiron" is treated with complacency, if not with approval; and we are told that the two most efficient institutions of education in the United States are at West Point and Annapolis. Most significant, however, is the remark that in the teacher's art there is something "distinctly histrionic." Here we must record our emphatic dissent. But the idea helps to explain the tone of the book. At times we are reminded of the Indiana novel; again we seem to be listening to a very clever after-dinner speech; and there are pages which recall an English acquaintance who was wont to remark, "I said rather a good thing the other day. Wouldn't you like to hear it?"

Whether "What Children Study and Why" (Silver, Burdett), by Charles B. Gilbert, is a definitive contribution to this subject, we forbear to say; the dust that has been raised over this question leaves one helpless and bewildered. But the book itself is marked by a kind of Huxleian vigor and good sense. In the face of an hysterical demand for instruction in sex-hygiene, it is surely to the point to learn that such instruction is distinctly harmful for those who are not ripe for it, and that the typical spinster who teaches in our schools, often a very young spinster, is nearly the last person to give it; Mr. Gilbert thinks that such instruction might be given in private by the school physician. It is not less timely to raise the question whether industrial education is urged for the sake of the pupil or for the sake of the employer of labor. "A recent national convention on industrial training was distinctly a manufacturers' convention." And in response to the vague, but no less insistent, demand for moral instruction in the schools, we are glad to meet the pointed question, How? though Mr. Gilbert does what he can to give an answer.

In "Better Schools" (Macmillan), Dr. B. C. Gregory, late Superintendent of Schools in Trenton, N. J., and Chelsea, Mass., tells an old story, but tells it out of the freshness of personal conviction and experience. His version of "the matter with the schools" is that the subject-matter makes no appeal to the child nature, and especially to his love of action; hence, the child and the subject fail, so to speak, to connect. Doubtless, this is true; but the problem is not solely and abstractly to develop the child, but to enable him to push his self-development through under the conditions of practical life. To this perhaps the author would assent. In any case the self-development of the child is a refreshing offset to "training for practical life"—it also suggests how quickly the pedagogical fashions change. And it is similarly refreshing to learn, in old-time language, that education should develop "power." It does seem that a youth who has been exercised in arithmetical problems should be able, when the need arises, to teach himself the subject of "partial payments." Indeed, for what does education stand, if not for a superior power of doing the things that one has not been taught to do? Yet any such implication is wholly foreign to the prevailing vocational theory.

As a volume of useful information and suggestion, Elsa Denison's "Helping School Children" (Harper) clearly deserves the recommendation given in the preface by Mr. Allen, of the Bureau of Municipal Research. That the school should be a centre of active interest and coöperation on the part of the citizens of its community goes without question. This unofficial interest is necessary to make the public school a really social and human institution.

ENGLISH.

Among the new textbooks for freshman composition, the one that deserves to be welcomed most generally is Prof. James W. Linn's "The Essentials of English Composition" (Scribner). "It is written as much to interest as to insist, as much to stimulate as to command. It gives few rules, and those simple; many suggestions, and those, it is hoped, clear": these sentences from the preface describe the nature of the book aptly, and are themselves an example of the clear, stimulating style in which it is written. In point of style, indeed, it is superior to any similar book now in use in our colleges. Part One, somewhat more than half of the volume, is devoted to the whole composition, the paragraph, the sentence, words, and punctuation; Part Two, the rest of the volume, to the forms of discourse, including argumentation. The discussion of argumentation unfortunately lacks a specimen brief; otherwise, every chapter is at once concise and adequate. The author has wisely excluded illustrative selections, so that the instructor who uses this manual is left free, in the present uncertainty as to the kind of selections that are most desirable, to choose what he pleases. In appearance, as well as in contents, Professor Linn's little book surpasses the usual freshman composition textbook—the binding is of olive-green flexible leather stamped in gold.

More radical in plan is "Thought-Building in Composition" (Macmillan), by Robert Wilson Neal. In this handbook the forms of discourse, which are tending to be stressed less and less in freshman composition courses, are dismissed with little more than the remark that they should be taken up in advanced courses. The emphasis is laid, instead, on the orderly expression of thought, and the book supplies an ample quantity of discussion and suggestions for a highly disciplinary course in writing English. The author's point of view might be symbolized by one of his favorite words, "thought-blocks," which has at least the merit of hinting that composition is a pretty solid matter. No "models" are included.

"Representative Essays in Modern Thought" (American Book Co.), edited by H. R. Steeves and F. H. Ristine, is a collection of discourses by writers of the Victorian era and of our own day on questions of biology, philosophy, politics, sociology, religion, etc. (art, for some reason, being ignored altogether). These essays are intended primarily for use in freshman composition courses, as reading that will aid in "expanding the student's ideas and increasing the number of his points of contact with vital questions." The scheme of the book is thus in general accord with a relatively new but already prominent tendency away from the "model" fallacy, and from the old-fashioned teaching of "rhetoric," in favor of distinct stress on "ideas." In this book, certainly, ideas are stressed with a vengeance; typical essays are William Morris's "The Labor Question from the Socialist Standpoint," Frederic Harrison's "The Future of Women," William Hurrel Mallock's "The Scientific Bases of Optimism," and William K. Clifford's "The Ethics of Belief." The authors confess that such essays have "an appearance of forbidding profundity," but they assert that speculation is stimulated, that the profundity disappears, and that the student soon becomes happy in the conviction that his common sense and reasoning powers are "sufficient equipment for an approach to any of the subjects offered." That may be true at Columbia, where, we are told, most of these essays have been used with success, but the ordinary freshman in the American college will find them impenetrable. In addition to the matter of difficulty, one may well question whether modern thought as

here represented is adapted to the intellectual needs of the freshman; unless, indeed, we are seeking to produce lusty radicals rather than symmetrical human beings. The essays are for the most part eccentric rather than central, bizarre rather than pure. In quest of literature that is "irritating" in effect, the editors have succeeded only too well.

"British and American Eloquence" (Ginn), by Dean R. I. Fulton and Prof. T. C. Trueblood, presents accounts, averaging about eight pages in length, of the lives of twenty-two prominent orators, together with several selections from the greatest speeches of each. The book thus brings together material that is for the most part not conveniently accessible elsewhere.

Volume II of "Intercollegiate Debates" (Hinds, Noble, & Eldredge), edited by Prof. E. R. Nichols, is composed of fourteen specimens of debates held in the college year 1910-11, all of them on topics relating to politics or political economy. In almost every case an extensive bibliography is appended to the text of the debate.

A book that will be useful in courses on American literature, particularly in colleges, is Prof. Walter C. Bronson's "American Poems (1625-1892)" (University of Chicago). Somewhat less than half of the space is allotted to the poets of the seventeenth and eighteenth centuries and the minor poets of the nineteenth century; if the greater poets of the nineteenth century do not, relatively, fare so well, it is because of the editor's assumption that the selections from these poets will be "supplemented by liberal reading in their complete works." Thus Emerson, who has a good claim to be regarded as our foremost poet, is represented by poems covering less than twenty single-column pages. The notes and bibliographies are quite as excellent as those of the editor's volumes of "English Poems." The page and the binding are entirely satisfactory.

Of textbook editions of standard literature, at least three deserve to be mentioned: "Selected Poems of Christina G. Rossetti" (Macmillan's Pocket Library), edited by Prof. C. B. Burke; "Poems and Stories by Bret Harte" (Houghton Mifflin, Riverside Literature Series), edited by C. S. Thomas; and "Robert Browning: A Selection of Poems (1835-1864)" (Putnam, Pitt Press Series), edited by W. T. Young, lecturer at the University of London. Browning has been the prey of so many fond editors that it is refreshing to turn to Mr. Young's sensible and really luminous introduction and notes.

CLASSICS.

Advocates of the Direct Method of Teaching Latin have been seriously hampered by the lack of textbooks. This lack has been in some measure supplied in the past year by the publication of "Primus Annus," a first-year book by W. L. Paine and C. L. Mainwaring, supplemented by a companion volume, "Deeem Fabulæ Pueris Puellisque Agendæ" (Clarendon Press), by the same authors. Still more recent is "Perse Latin Plays" (Cambridge: W. Heffer & Sons), by W. H. S. Jones and R. B. Appleton. The main features of the method are by this time familiar. The "Primus Annus" is intended for strictly oral teaching. Every lesson combines a Latin passage with extensive oral exercises, which are to be prepared at home, in which the answers to the questions are deducible from the passage read. This reading material is modern Latin, and many of the subjects are modern. The amount of drill that is possible with such a book depends wholly upon the teacher, but much more emphasis is laid upon drill than those unfamiliar with the method suspect. The plays are intended for recitation. They are of the most simple nature, and easily within the power of pupils in their first term. In the "Decem Fabulæ," the first play, a dramatic version of Pyramus and Thisbe, is written almost entirely in the present indicative and imperative. The subsequent plays become more complex until the final one, "Verres," embodies substantial portions of one of Cicero's speeches. The "Perse Latin Plays" demand more knowledge on the part of the pupils and would belong perhaps to the second year. These, too, are on both modern and ancient subjects. The first, "Somnium," is most amusing. A boy is sent to bed by an irritable father before he has got his lesson. In his dreams the Roman hero about whom he was to write appears to him and tells him a story, which wins him much praise from his teacher the next day. This book has an extensive introduction devoted to suggestions as to the use of the direct method.

A "First Latin Reader" (American Book Company), by H. C. Nutting, is as unconventional as the Latin Primer by the same author. While its aim is to lead up to Cæsar or some similar prose, its primary object is to develop the pupil's power to read Latin. The lessons are carefully graded, and the subject matter is unusual. The 140 passages are divided as follows: Forty-five from early American History, fifty-five tales of land and sea, also American, twenty-five stories from Cæsar retold, and fifteen selected passages from Latin prose authors. The greater part of the book is accordingly Modern Latin, but Latin of a good quality. While the irreeoncilable will continue to object to everything which does not hark back to the last century of the Republic, the progressive teacher should welcome something which will show his pupils that Latin is only dead to those who have no power to see its life. This book marks a departure which, it is to be hoped, will find many imitators.

"Latin Subordinate Clause Syntax" (American Book Company), by M. A. Leiper, is a short compendium of the usage of Cæsar and Cicero in the selections usually read in schools. There is no particular merit in the book, beyond the statistical information as to the comparative usage of the authors mentioned. This gives the opportunity to focus the attention of pupils upon the most common constructions. Otherwise, except possibly for ready review, there seems but little reason for the book's existence.

Messrs. W. B. Gunnison and W. S. Harley have added to their Latin series an edition of "Cicero's Orations" (Silver, Burdett). This contains the orations usually read, with passages for sight reading from Cicero's letters and "De Senectute" and Sallust's "Catiline." A grammatical and syntactical appendix, with a number of exercises in prose composition based on the text, relieve the pupil of the necessity of consulting grammar or composition book. The notes are excellent, with perhaps too much translation. The illustrations are fresh and attractive. The exercises are well graded and organized. The vocabulary gives too many renderings, but this is a common fault. An unnecessary appearance of scholarship is given by a bibliography which refers to many books inaccessible to high-school teachers, because they are either in foreign languages, or in some cases long out of print. In general the edition is commendable.

A very attractive edition of "Demosthenes on the Crown" (American Book Company) has been prepared by Prof. M. W. Humphreys. The editor has embodied in this book the experience of more than thirty years' teaching of this particular oration. He writes, therefore, with the needs of students steadily in view. A short introduction is devoted to a discussion of Demosthenes's style, which seems too meagre for students at this stage, and to a criticism of the relations of Demosthenes and Æschines. In this he opposes the current view as to Æschines's character, and while admitting that he was insincere and a demagogue, acquits him of the charge of treason. He also emphasizes the fact that Demosthenes himself was far from perfect, and needs our charitable judgment for many faults. The historical setting of the speech is discussed very extensively in the appendix. The notes are restrained and resemble those of similar editions, except for a more detailed explanation of historical allusions.

MODERN LANGUAGES.

Fraser and Squair's "French Grammar" has long been recognized as a standard work, especially useful as a book of reference. However, owing to its length and to its being only partially divided into lessons, many teachers have of late been turning to shorter and differently planned handbooks. These authors have now brought out a "Shorter French Course" (Heath), which combines the thoroughness of the earlier work with a judicious distribution of the grammatical material into ninety-two lessons. In addition, there are copious review exercises, an appendix dealing chiefly with verbs, and vocabularies.

The many teachers of French who have profitably used V. E. François's manuals of French composition should welcome his "Essentials of French" (American Book Co.), divided into eighty-five lessons, in which the author's familiar qualities of clearness and practical arrangement of material are once more conspicuously displayed.

Perhaps the best feature of W. B. Snow's "Fundamentals of French Grammar" (Holt) is the clearness with which grammatical rules are stated. An innovation is the author's method of teaching the verbs by tenses, without classifying them into the different conjugations.

The latest addition to the attractive Oxford Modern French series is Daudet's "Lettres de mon Moulin," ably edited with an introductory sketch of the author and notes by H. C. Bradby and E. V. Rieu.

In another Oxford series, under the general editorship of Professor Weeks, appear Balzac's "Gobseck," one of his happiest creations, and his short "Jésus-Christ en Flandre," a not altogether successful excursion

into the field of the supernatural. The introduction and notes are by R. T. Holbrook. An unusual feature of the notes is the quizzing on points of grammar to which the student is occasionally subjected, *e. g.*, "Is the *me* here elided dative or accusative? How can you *prove* which it is?"

"Molière en Récits" (Heath), by M. L. Chapuzet and W. M. Daniels, is designed as an introduction for beginners to nine plays of Molière. The narration of the plots is well managed, much of the language of the original being retained. A vocabulary is provided.

Ginn & Co. have published Corneille's much-edited "Cid," with commendable introductions to both the play and the "Examen," notes and vocabulary, by C. Searles.

Six representative and interesting Italian short stories, respectively by Matilde Serao, Grazia Deledda, Fogazzaro, Fucini, Verga, and d'Annunzio, ably edited by E. H. Wilkins and R. Altrocchi, have been published by Heath. The judicious and succinct biographical and critical introductions prefixed to the stories are an especially valuable feature of this textbook, which is further provided with notes and a vocabulary.

Holt & Co. have lately added three interesting and ably edited volumes to their list of Spanish textbooks: Lope de Vega's "La Moza de Cántaro," edited by M. Stathers; "Selections from Mesonero Romanos," edited by G. T. Northup, and Valdés's striking novel, "La Hermana San Sulpicio," edited by J. G. Gill.

Ginn & Co. have published a new Spanish Grammar, by Alfred Coester, well arranged and especially commendable for apt illustrative sentences; also a short "Elementary Spanish Reader," with vocabulary, by E. S. Harrison, containing a good selection of brief prose extracts and a few fables in verse.

Grillparzer's "Libussa" is almost as tempting to the commentator as Goethe's "Faust," with which it has been compared. That Prof. G. O. Curme needed in his edition (Frowde) only nine pages for notes to the text is therefore not a little surprising. But he leaves nothing unexplained. This is chiefly because of an ample introduction in which, after a sympathetic and on the whole just review of Grillparzer's life and works, there is a connected account of the play. A chapter on Libussa in history and legend is commendably brief, furnishing material for all that we need: a general impression of Grillparzer's relation to his sources.

M. B. Lambert regards the late Wilhelm Raabe as "the most distinctly German of German writers of the latter half of the nineteenth century." The short story "Eulenpfingsten" well represents Raabe's exuberant humor and free but not easy style. In the notes and the vocabulary of his edition (Heath) Mr. Lambert has taken pains to provide the information that the reader of Raabe requires in full measure.

President J. S. Nollen's "German Poems, 1800-1850" (Ginn), is an anthology compiled with the most scrupulous care both as to selection and as to the interpretation of details. It admirably represents a period of German literature in its most characteristic expressions.

Prof. W. A. Hervey's edition of Schiller's "Kabale und Liebe" (Holt) is a notable product of the best American scholarship, comprehensive, deliberate, and judicious. Good reproductions of Weckerlin's portrait of Schiller and of Ramberg's illustrations to the play adorn the excellent volume.

HISTORY.

We think it by no means unlikely that the publication of "Parallel Source Problems in Mediæval History" (Harper), by Frederic Duncalf and August C. Krey, may come to be looked upon as the beginning of a new period in the elementary teaching of history in this country. The plan of the book is, so far as we know, wholly novel. Instead of the familiar source-book, with a collection of documents and extracts chronologically or topically arranged, covering a considerable period, and accompanied by brief introductions and bibliographies, the authors of the present work have undertaken to show teacher and student how to use historical sources in a scientific way, namely, for the ascertainment of historical truth. Five typical episodes—the coronation of Charles the Great, Canossa, the capture of Jerusalem in 1099, the departure of the university from Paris in 1229-1231, and the coronation of Cola di Rienzo—are selected for study. First comes a brief account of the episode in question; then a list of the sources relating to it, with a critical estimate of each; next, a list of questions on the sources; and, finally, the sources themselves, in translation. The questions are intended to be answered in writing, an example of the kind of answer expected being given in an appendix. The ordinary source-book, invaluable when properly used, unquestionably becomes in many cases only a convenient selection of readings with which to supplement, explain, or vivify a text. The volume of Professors Duncalf and Krey, on the other hand, is a laboratory manual. Its limitation, of course, is the small field which it covers, but the thorough carrying-out of the method in even this small field will afford a critical training such as few students of history, we fear, now get in either school or college. The book certainly deserves the serious consideration of teachers.

A new and enlarged edition of the "Guide to the Study of American History," by A. B. Hart and Edward Channing, published in 1896, has been issued under the title of "Guide to the Study and Reading of American History" (Ginn). To the contributions of the original authors has now been added that of their colleague, Frederick J. Turner. The pedagogical matter of the earlier work has been much condensed, and the topical outline, which originally ended with the Civil War, has been somewhat enlarged and brought down to the present time. In addition, the numerous classified reference lists have been overhauled, and in most cases amplified; and some new lists have been inserted. Much care appears to have been taken to rid the text of the numerous typographical errors which crept into the old edition. The treatment of French colonization in the eighteenth century, and of English colonial development from 1690 to 1750, is still inadequate; and the island colonies, quite as important as those of the mainland from the point of view of colonial policy, are omitted altogether.

"Readings in American Constitutional History" (Houghton Mifflin), by Prof. Allen Johnson, of Yale, is a collection of nearly 200 extracts from contemporary sources, arranged to show the development of the American constitutional system and governmental policy from colonial times to the present. While a few extracts are given from charters, statutes, or constitutions, the larger part of the material is drawn from official reports, the messages of Presidents and Governors, Congressional debates, court decisions, and the like. The volume thus supplements, but does not duplicate, other documentary compilations in the same field. The introductory notes to the several pieces, while brief and informing, incline to a discussion of the general subject quite as much as to an explanation of the origin of the particular document; and there are no reading references. To say that such a book demands a skilful teacher is to repeat a commonplace; but the volume can hardly fail to stimulate the reviving interest in constitutional history, and will certainly prove a boon to students who cannot command a large library. The mechanical execution of the book is especially good.

"A Source-Book of Ancient History" (Macmillan), by George W. Botsford and Lillie S. Botsford, while intended more particularly to supplement Botsford's "History of the Ancient World," can, of course, be used to advantage with any textbook. Its special distinction is its inclusion of Oriental sources in addition to Greek and Roman; and we note that, among the sources drawn upon, the Bible holds an honorable place. The extracts cover a wide range, and include special as well as standard translations. To the several chapters are appended lists of questions, designed to call attention to the more important facts to be drawn from the selections; but the authors disclaim a purpose to afford, in this way, any special training in historical criticism.

The useful "Syllabus of European History" (Hanover, N. H.: E. P. Storrs), prepared by Herbert D. Foster and Sidney B. Fay, has passed to a fourth edition. The outline now includes the period from 1870 to 1900, but reading references for the added sections have, for the most part, been omitted.

Among recent "helps" for teachers of history and government we note Arthur M. Wolfson's "Outline for Review: Civics," and Francis A. Smith's "Pupils' Notebook and Study Outline in English History" (American Book Co.). The former is a skilful compendium adapted to use with any textbook. The latter provides a skeleton outline to be filled in by the pupil, and in addition a few outline maps.

J. R. H. Moore's "Industrial History of the American People" (Macmillan) has a number of distinctive features. Important topics, such as the fisheries, lumber, the fur trade, labor, agriculture, commerce, money and finance, colonial government and administration, problems of city life, manufactures and transportation, are treated in separate chapters, some of which embrace only the colonial and revolutionary periods, while others are comprehensive surveys brought down to the present time. Doubtless a topical method of this sort has advantages in elementary instruction, but one misses here a clear impression of our industrial growth as a whole, and of the in-

BURLINGAME PUBLIC LIB.

fluence of one problem upon another. Mr. Moore has not overcrowded his text with details or statistics, and has permitted himself a good deal of leisurely discussion and moralizing, some of it, perhaps, a bit obvious. His style, too, is familiar, and tolerant of occasional inelegancies and even slang. A teacher's manual, issued separately in pamphlet form, contains a few pedagogical suggestions and a rather undiscriminating list of books.

A recent addition to the rapidly growing number of source books in the social sciences is Prof. Frank A. Fetter's "Source Book in Economics" (Century). This volume of 385 pages introduces the student to monographic and Government literature that in considerable degree is inaccessible to large classes, and presents material that is needed to enrich instruction in the subject. There is a preponderance of official and documentary literature, the editor's citations from standard authors being comparatively few. Among the latter may be mentioned Herbert Spencer's theory of the origin of exchange, and Sir Henry Maine's discussion of the origin of markets and prices. As illustrative of the method of treatment, it may be noted that the section on Labor and Population contains material drawn from reports of the Tariff Board, National Conservation Commission, Department of Agriculture, and the British Board of Trade. It is at least a question whether the citations do not lose somewhat in effectiveness because of their brevity.

SCIENCE.

Prof. Wilhelm Wundt's "Introduction to Psychology" (Macmillan) in its original tongue has had extraordinary popularity in Germany, and will doubtless be welcomed here by a wide circle of readers. Notwithstanding the brevity of treatment, the author has managed with great skill to present to the reader some of the most important psychological problems in a simple and lucid form. The book is an addition to our psychological literature, even for those who do not follow its author in all the positions he maintains.

The "Introduction to Psychology" (Frowde), by T. Loveday and J. A. Green, of the University of Sheffield, is a short book written more especially for teachers, as is indicated by its sub-title. The authors aim to provide no more than a simple introductory course of study, and therefore deliberately evade the philosophical problems which are often included in books of this type, and also omit all reference to the physiology of the nervous system and detailed discussion of the sensations, of spatial perception, and of many other topics to which much space is devoted in the usual psychological textbook. Whatever one may say as to the propriety of such omissions, there is at least a great advantage, in that it avoids the impression left upon the reader of many modern textbooks on this subject, that psychology is a branch of neurology, or is to be identified with the purely objective study of behavior.

The nine editions of "Hertwig's Manual of Zoölogy" in German furnish abundant proof of its excellence as a textbook. Prof. J. S. Kingsley's third English translation (Holt) has been much enlarged and improved, even on the German edition, by the addition of material pertaining to American zoölogy and to subjects of more recent biological importance, such as Mendelism and cellular biology, although much of the old-time evolutionary doctrine and relations of species are retained. It forms an admirable textbook for beginners.

A good college textbook of zoölogy combines the description of animal types with biological principles and stimulates the imagination by suggestive treatment of zoological hypotheses and experiments. A mere catalogue of animal forms, or a formal presentation of anatomical details deadens interest and makes a burden of what should be a fascinating work. R. W. Hegner's "College Zoölogy" (Macmillan) combines many of the former features in an agreeable way, but omits all philosophical consideration of heredity, species, and the factors of organic evolution. The entire animal kingdom is concisely but fully treated, and the descriptions of the larger groups are well balanced. Habits, instincts, and reactions to stimuli find a prominent place, while the diagrams and illustrations generally are well chosen and instructive.

Peabody and Hunt's "Elementary Biology" (Macmillan) is a useful textbook for beginners, especially in physiology and hygiene in relation to human welfare. Insects, birds, and fishes are treated with particular regard to their relations to man; bacteria receive judicial attention not only because they are responsible for diphtheria, tuberculosis, and other ills—a fact which means little more to a beginner than to be told that such ills exist—but also because of their universal distribution in nature and their general biological importance. The inevitable chapter on stimulants and narcotics which public opinion demands in such books finds its place here, but just as large a percentage of boys will smoke and drink to excess as though this chapter were left out. More important than such forced precepts is the spirit in which the book is conceived: "Growing boys and girls ought to come to feel, as they have never felt, that they have in their keeping a most complex and wonderful piece of living machinery, which can be easily put out of order or even wrecked."

The new movement for agricultural courses in our public schools is bringing forth a number of textbooks, among which should be noticed "High School Agriculture" (American Book Company), by D. D. Mayne and K. L. Hatch. It exemplifies the present tendency to crowd between the same covers all possible departments of the study of agriculture, from chemistry to entomology, from field crops to poultry. It endeavors to include the problems of all sections of the country, so that one small volume treats of the grapefruit and cotton as well as the apple and wheat. It is true that the information is accurate and up-to-date; also that in discussing the various breeds of cattle and poultry the publishers have drawn unusually freely on their best help, illustration. But the attempt to include everything results badly. Many parts of the book are so brief as to be crowded and dry; and an excellent chapter, that on Farm Management, by Andrew Boss, appears to be shorn of one of its most valuable parts, instruction in the keeping of farm accounts. We are of the opinion that high-school textbooks of agriculture will eventually be specialized for two different sections of the country, the North and the South, with possibly a third, California, and that animal husbandry will be reserved for a separate volume. They will be thus of much greater value to our young people.

The "Practical Measurements in Radio-Activity" (Longmans), by W. Makower and H. Geiger, is an admirable, much-desired manual, not only useful to students, but of value to investigators in the fascinating field of radio-activity as well. Tables of radio-active constants, with the exception of the Maché Unit (used solely in the physiological application of radio-active substances), are given. The theories of most of the experiments are well and clearly expressed.

The advertisement pasted into the cover of the book, "Features in which 'Bradbury's Chemistry' Excels" (Appleton), stimulates a search for the ten excellences claimed. The author, Robert H. Bradbury, is enthusiastic and doubtless would get results whatever method he followed, in spite of the ten commandmental features animadverted, some of which are actual perversions. "The synthetic classification of the elements, which completely determines the order of topics in a work of reference, should only be allowed a subordinate influence upon the arrangement of an elementary text." Yet science is supposed to make its really great strides by such classifications, which mean generalization. No other grand (even if inadequate) generalization seems to have been followed in the book. The author is so close to detail and so occupied with the idea of *appearing* original (with modesty) that he has used the illuminating term in reference to one element that it "is difficult to prepare." The element is not difficult to prepare if one has only enough of its halogen compound. Failure to state accurately what is known and given accurately in other texts overshadows "originality."

The aim of Edmund B. R. Prideaux's "Problems in Physical Chemistry with Practical Applications" (Van Nostrand) is to provide a series of arithmetical examples illustrating the more important developments of physical chemistry. The problems included are such as possess a particular importance for the physico-chemical investigator and technical chemist, and a previous knowledge of the fundamental chemical laws, as well as the meaning of elementary physical magnitudes and operations, has been assumed throughout. Dr. Prideaux has succeeded in converting the somewhat prolix results of physico-chemical research into a form suitable for teaching, and his book should prove of much assistance to the student of physical chemistry in teaching him to apply principles learned in lectures. The work differs materially from other books of problems and calculations.

Teachers of geometry rely largely on architectural and industrial designs to supplement proofs of theorems. Such designs and their line constructions are not easily accessible, and as a result teachers are apt to depend on a few hackneyed examples. To supply this need, Miss Mabel Sykes has collected and analyzed a great many examples of designs in a "Source Book of Problems for Geometry" (Allyn & Bacon). The author deprecates the "widespread tendency in education to substitute amusement for downright work," and her book shows

no tendency in that direction. With its large collection of skeleton drawings and reproductions of actual designs, which are carefully analyzed, the book is valuable. In addition, there are good bibliographies, catalogues, and an index.

The old and simple days when arithmetic was arithmetic and geometry was geometry are apparently gone. Each new schoolbook in these subjects contains a preface which shows that the chief aim of the book is not to teach the subject in hand. The "Elementary Arithmetic" and "Advanced Arithmetic" (Charles E. Merrill Co.), by Fletcher Durell and Elizabeth Hall, are no exceptions. Thus we learn: "By special treatment of the concrete applications of arithmetic, the series develops bread-winning power; and by cultivating a grasp of the functions of number processes, it develops a broad, cultural power." The children who are expected to get all this from arithmetic are not beyond the tender age of ten years. For the older children, Part II "is so arranged that it may be taught either spirally or topically." It is difficult to criticise this plan, as its meaning, unless it is some new form of arithmetical English, is not obvious. Fortunately, and the same is true of the "Silver-Burdett Arithmetics" (Silver Burdett & Company). Books I and II, by George Morris Philips and Robert F. Anderson, if we leave out much of the padding in these arithmetics which consists of up-to-date guide-book statistics of business and geography, there remains a fairly good arithmetic. What we should really aim to do is to teach children accuracy in numbers, and a good teacher does not need such factitious aids to interest them.

"The Essentials of Physics" (Ginn), by George Anthony Hill, is written on a novel plan. The author treats the whole subject of physics in a series of questions and answers. Each great principle is first illustrated in this way, and then follows an unusually long list of problems for the pupil to answer by himself. Undoubtedly great precision is obtained, but breadth and consecutiveness of thought would probably suffer. If the method meets approval, the book will be found well prepared, and, in all cases, it would be a useful help to the teacher.

Frederick C. Reeve's "Physical Laboratory Guide" (American Book Co.) is an adequate text. It would be better to require more experiments in mechanical measurements, especially with verniers, and there is no advantage in changing the established order of topics.

The work of Prof. Edwin H. Hall in introducing and standardizing laboratory work in physics for preparatory schools is too well known to need comment. Hall and Bergen's "Textbook of Physics" was a most useful pioneer. Professor Hall now gives us "The Elements of Physics" (Holt) as a successor to that work. The text is accurate and well written. It is pleasant to have an author show himself thoroughly conversant with the whole subject, and, at the same time, not strive for attention by freakish originality.

A manual of "Laboratory Exercises in Physics" (Allyn & Bacon) has been prepared by Robert W. Fuller and Raymond B. Brownlee of the Stuyvesant High School New York city. The book is primarily intended as an accompaniment to Carhart and Chute's "First Principles of Physics," so far as general treatment and arrangement of experiments are concerned. It is certainly one of the best guides for laboratory work in physics now on the market.

"Electricity and Magnetism" (Macmillan), by Robert Harbison Hough and Walter Martinus Boehm, of the University of Pennsylvania, is a text on the elementary principles of electricity for the use of students in engineering. The subjects treated are those which are to be used later in engineering instruction. There may be considerable doubt whether engineering students should not have a much more thorough course, yet if the authors' aim is approved, the book will be found to be satisfactory.

A revised edition of Millikan and Gale's "First Course in Physics" (Ginn) has been prepared. A notice of this popular text appeared in these columns when the first edition was issued.

Literature

ACADEMIC AUTOCRACY.

University Control. By J. McKeen Cattell and Others. New York: The Science Press.

Professor Cattell, through his journal, the *Popular Science Monthly*, has made himself in a peculiar sense the tribune of those American professors who chafe under present conditions of university control. Now the material which has been distributed over a number of years and through several magazines is brought together. Professor Cattell's four contributions are in part expository and even more an attack upon the present preponderancy of the university president. His chief recommendation is that the president, with reduced salary and prerogatives, should be elected by the faculty, and the trustees by a large corporation of alumni and voluntary associates somewhat analogous to the Oxford voting M.A.'s. Profs. Joseph Jastrow, George T. Ladd, J. E. Creighton, and George M. Stratton point to the danger of regimentation. Over-organization and concentrated control, they feel, tend to check and cripple activities that should be essentially free and personal. The professor tends to become merely an employee in a none too enlightened bureaucracy. John J. Stevenson and John Jay Chapman especially emphasize this helpless condition of the professor as regards tenure under present conditions. Mr. Chapman thinks that a mere shred of that class loyalty which is so strong in workingmen would do much to restore security of professorial tenure and complete freedom of teaching. Stewart Paton and James P. Munroe especially urge the necessity of conference and closer co-operation between faculties and boards of trustees, and President Schurman offers a plan by which such coöperation might be obtained.

Even more impressive than these criticisms by distinguished persons is the ballot which Professor Cattell took from two hundred and ninety-nine of his colleagues in science. The vote covered the entire country and all sorts of colleges and universities. More than a third of the voters, 114 out of 299, approved the university presidency as it stands, but of this conservative minority two-thirds felt that university faculties have insufficient powers. More than three-fifths of the voters, 185 out of 299, approved Professor Cattell's scheme for radically reforming the government of universities along democratic lines. Or to put the result of the referendum in another fashion, there was a handsome majority for revolutionizing the present system of university control, whereas only one voter in six expressed himself as contented with things as they are. And this is not the utterance of young or flighty persons. In the very full and interesting letters of reply to Professor Cattell's circular, it is easy, for any one conversant with American university affairs, to recognize many of the strongest and wisest personalities in our academic life. Here is no casual discontent that may lightly be disregarded.

To weigh either Professor Cattell's reform project or the numerous suggestions made by his contributors and correspondents, we must first know just what the existing form of university government is in America. Our remarks apply only to the private foundations, which are also the richest and highest in academic repute, and we shall not hesitate to repeat what may be obvious to certain readers. The ultimate and only legal seat of power in a private university is the board of trustees. This is a self-perpetuating body, or, in the familiar phrase, a close corporation. The number of trustees varies considerably. The seven Fellows of Harvard and the thirty-two trustees of Princeton probably represent pretty well the limits of membership. It should be added that most boards admit a minority representation, usually from a fifth to a quarter of the entire body, of members elected for a term of years by the alumni. All trustees serve without pay, and exercise their managing function chiefly through a paid executive, who is also a member of the board, the president of the university. He is also a member of the faculty, and its chief executive officer, the active agent of the trustees in raising money, appointing or dismissing professors; the chief informant and counsellor of the board in all matters affecting academic polity. Moreover, the only statutory and correct access for either the individual professor or the faculty collectively, to the board which they serve, is through the president. A

professor, legally speaking, is simply a nominee of the president and an appointee of the board, and implicitly he holds his place wholly at the pleasure of the two powers. Columbia University has been frank enough to write this proviso into her laws. Any professor who displeases the board is subject to summary dismissal, and this power has not been allowed to rust from disuse. Virtually the power of the board has tended to lodge itself in the person of the president, for the modern trustee is generally a man of great affairs, little versed in educational matters, and prone to regard the president as a kind of universal superintendent with plenary responsibility for financial and academical results. Technically, the professors, whether individually or severally, are in a state of complete subordination towards a remote and august board whom they may approach only through the president.

We have given this extreme juridical view of the situation first in order to lend due emphasis to the facts, which by no means correspond to the theory. The mere fact that some thousands of self-respecting gentlemen are teaching in American universities is evidence that presidents are not usually petty tyrants, nor boards of trustees ignorant and arbitrary. Under the fiction of trustee control, many faculties have managed to do very much what they please. Yale, for example, is governed by the tightest form of old-fashioned corporation. Yet each school elects its dean, each department its chief, nominating as well its own candidates for promotion or appointment. Except that the president is appointed by the trustees, it is hard to see how there could be a fuller measure of democracy. The board is chiefly a benign special providence which confirms the will of the professors and finds the necessary funds. Long ago the seven Harvard Fellows consented to the establishment of a board of overseers elected by the alumni. The overseers have merely an advisory capacity in legislation and appointment, but have the substantial power of vetoing any action of the Fellows. It is strange that this ooviously advantageous form of the bicameral system has not been widely imitated in America. Otherwise the administration of Harvard is highly autocratic. The deans, committee chairmen, and department heads are regarded as cabinet officers and are appointed by the president. This cabinet theory is widely held, and may be said to be our ruling type of academic government. Certain presidents have accepted their election only on assurance of complete control over committees and administrative appointments. On the other hand, many faculties have successfully resisted the cabinet idea. The case of Yale has already been cited. Princeton elects her committees in full faculty, while her deans and department heads are appointed by the president and board. At Princeton, too, the trustees have consented to the establishing of a regular conference with a faculty committee, thus abandoning the practice that the president should be the sole medium of communication. Recently the trustees of Johns Hopkins have circularized their alumni inviting nominations for the presidency of the university. We have wished to show how much the theory of autocratic control by president and board is mitigated by the facts. Incidentally, we shall have suggested the curious differences of academic polity in America. It is possibly the uncertainty of the whole academic situation quite as much as any concrete hardship that underlies the discontent so cogently expressed by Professor Cattell's correspondents.

Before approaching the express grievances of American university faculties, a fruitful topic, it may be well to contrast the variously modified autocracy prevailing among us with the democratic simplicity obtaining among the universities of the German Empire. There the power lies primarily in the faculty of full professors, which elects the rector, usually for a single year, reports candidates for promotion or appointment, and in general controls the business and teaching of the university. The action of the faculty is subject to confirmation by a smaller faculty body, the Senate, consisting of professors of a certain seniority or in administrative positions, but the Senate has merely the right of veto. All faculty measures ultimately are submitted to the Ministry of Education, corresponding roughly to the American board of trustees, which, however, limits its activity to distributing the money supplies and choosing among the nominees submitted by the faculty and senate. It will be observed that the entire initiative rests with the permanent faculty, and that there is nothing corresponding to an American university president. All power is vested in the upper hierarchy of the faculty. Organization and legislation are kept at a minimum, the rule being that the freedom of the teacher should be the widest.

It is the vision of the German university faculty, thus serenely conducting its own affairs, that has led to the suspicion, most tactfully hinted by Professor Cattell, that our university presidents and boards of trustees are superfluous. Such is not the case; they are perfectly logical products of the need of building up new institutions masterfully and of maintaining and increasing great endowments. If there were an American university beyond financial need, its trustees could perhaps do no greater service than to abdicate in favor of a trust company, authorizing the faculty to conduct its own business after the German plan. Or if the States should take over and finance the private universities, a similar change in university government might be in order. But since no American university admits financial repletion, and the States for years to come are likely to be dubious sponsors for higher education, the board of trustees is likely to remain a necessity, and with it the university president. So long as trustees are active solicitors and contributors of university funds, so long will they reasonably require that their chief executive agent be their man. Such support as boards commonly give to their faculties could not properly be expected on any other condition. Short of completely changing the financial basis of the American university, its government is not going to be radically altered. It is incumbent upon those who approve Professor Cattell's plan of a great body of university electors for trustees to show that this plan would provide steady and ample supplies of funds. Theoretically nothing would more benefit the American university than the broadening of its financial basis. The power to give or withhold now lodged in the hands of the few is a subtle temptation to the most considerate and enlightened trustee, and at least a potential danger to many a university. Moreover, the ceaseless cry for money forces the election of trustees whose knowledge of and interest in the ideals and details of education is often the slightest. You may have an accomplished gentleman and student of education as a trustee, you must have a money-raiser. The difficulty is not confined to the academic field. In some art museums we have the fatuous spectacle of inexpert trustees, sometimes themselves notorious victims of the art dealers, regularly overruling in the matter of purchases the expert curators whom they have employed. On the whole, we think that university trustees in America have imposed their authority with singular moderation, showing merely a natural tendency to depend too much on the president, and an unfortunate reluctance to consult the faculty otherwise than through him.

If the existing system of university control is likely to persist, it is highly important to reform its admitted defects. And such reform would involve, first, a reasonable devolution of power upon the faculty, a willing submission on the part of president and trustees to democratic conditions of administration, and, finally, and perhaps most needfully, a real education for boards of trustees. We believe the so-called cabinet system of university control, by which the president appoints all administrative officers and committees, will

always end in sapping the enthusiasm, loyalty, and efficiency of a university faculty. Admit that a faculty is a capricious and none too effective body, its control over educational policy and, broadly speaking, over the recruiting of its own personnel, is essential to its self-respect. The moment a faculty is reduced to a perfunctory or subordinate position, its academic prestige will wane. Spectacular endowments and specious programmes may for a time conceal the decline, but the tone both of teaching and research will gradually be lowered. The idea of commercial efficiency which dominates the president and trustees will disastrously permeate the whole body, and the free spirit of scholarship will depart from that university.

That university president will rule best and longest who cheerfully delegates a large part of his powers to his faculty, and adjusts himself willingly to the hazards of democratic control. Purely administrative officers he may well regard as his cabinet aids, but for him to attempt to control the fundamental committees which shape educational policy, or the departments which are the natural units of teaching efficiency, is to advertise the fact that the conduct of his university is to be strictly limited by the limitations of his own personality. No man is large enough to venture to set such bounds to the activities of a great university. In short, the task of a president who rightly conceives his function is largely that of persuasion. President Eliot, through a long and eminently successful career at Harvard, constantly tempered his autocracy by a habit of hearing all interested persons patiently, and permitting the most protracted faculty discussion of his projects. What was a grace in an autocratic president is a necessity for him who aspires to rule without impairing the spirit and initiative of his faculty.

As for the dignity and security of the American professorate, an issue prominent in all this discussion, we agree with Mr. Chapman that the American professor gets about what he deserves. As a matter of fact, appointment or dismissal over the heads of the faculty are so rare in American universities as always to appear scandalous. Indeed, it is easier to pry a limpet from his rock than an incompetent professor from his chair. Yet it is assuredly a grievance, if largely a theoretical one, that a professor may either be appointed or dismissed without the consent of his colleagues. It is a grievance, however, that the American professorate need endure not a moment longer than it wills. If there were in the calling that minimum of *esprit de corps* which leads, say, lawyers and physicians to associate themselves and pass on questions of professional ethics, the whole academic situation would quickly mend. An association of university professors could pass authoritatively on cases of dismissal, taking these unfortunate affairs out of the realm of rumor into that of fact and judgment. Without emulating the militant tactics of the trade unions, the mere definition of professional needs would be helpful. It would do good, for example, simply to classify our universities according to the treatment they accord to their teaching staff. The advantage of being on the "white list" would soon be apparent to the most reactionary presidents and governing boards. The fact that such protective associations have not been formed shows plainly either that the grievances of the American professor are quite negligible, or else that he is a spiritless and uncoöperative creature, meriting no better consideration than he usually receives. Probably the truth lies about midway between the two extremes.

We are convinced that were there no boards of trustees, the American university, on penalty of bankruptcy, would have to invent them. Thus the most urgent issue in our American educational situation is the education of the individual trustee and of the boards collectively. And, curiously enough, the most obvious and practical means of such education, regular intercourse between governing boards and their effective agents, the faculty, is almost wholly neglected. We wonder what would become of a manufacturing concern whose directors were not at liberty to consult an engineer or department head except through the mediation of the general superintendent, or to indulge such natural intercourse only under suspicion of impropriety. Between faculty and trustees there should unquestionably be some regular and normal method of communication other than the president. Obviously, it would not be possible or proper for each individual of a large faculty to have direct access to the board or to its individual members. What is needed is some sensible adaptation of our usual American system of representation. Dr. Paton's suggestion is a joint committee of faculty and trustees. Such a conference has recently been established by his own alma mater, Princeton. Evidently, such a conference committee is a step in the right direction. Yet we doubt if any committee that exists merely for discussion, and is without executive powers, can be long-lived. It is at best a time-wasting expedient which separates too much discussion from resultant action. A more effective means of conference would be to give to delegates of the faculty the right of appearance and speech in meetings of the governing board; but here again the status of such delegates would be doubtful, their presence might merely be tolerated, their aspect occasionally that of impotent obstructionists.

President Schurman seems to us to have reached the heart of the matter when he recommends that his board should regularly elect a minority representation of professors on nomination of the faculty. This could be done by simple agreement between faculty and trustees, without amending charters or other legal formality. The trustees, as vacancies occurred in their number, would agree to elect the nominee of the faculty up to the stipulated number. The faculty, on their side, could put their representatives under such conditions of term and manner of service as might seem expedient. Where deans are elective, they might well be *ex-officio* faculty trustees. The important thing would be that the faculty representatives should be freely elected and fitted to speak for the great departments of teaching. As a detail, the degree of representation already accorded by most boards to the alumni might well be extended to the faculty. This would still leave the permanent trustees in a strong majority, but would force them to debate and consider all university problems broadly on their merits. The faculty representatives would constitute a sort of privy council and valuable auxiliary for the president. They could immediately offer expert advice on any educational issue arising in the board. Every department and every professor of the university would have the assurance of a competent spokesman in the board. It would be the duty of such representatives to voice not merely faculty conviction, but faculty sentiment, a very important mediation which a president is often reluctant or positively unable to undertake. In fact, the discontent so clear and ominous throughout Professor Cattell's book possibly rests less on concrete issues and particular grievances than on a sense that under the present system of university control the professor does not get a due hearing and a square deal with his employers.

With such a sentiment governing boards and presidents must, in the end, reckon most seriously. It affects spirit and efficiency. Nothing could more effectually allay such discontent than the plan of faculty representation on boards of trustees. Nothing would more tend to liberalize and make more efficient the present oddly autocratic system of university control. It is to be hoped that the Cornell board may choose to set the good example, and that it may be widely followed. In any case, there is an especial prestige awaiting that board and university which shall first elect to reshape its polity along lines truly American and democratic.

CURRENT FICTION.

Jocasta and the Famished Cat. By Anatole France. A translation by Agnes Farley. New York: John Lane Co.

Reading the works of Anatole France in the English translation, one unconsciously associates each successive volume with the bland old Epicurean of the medallion stamped in gold upon the cover. Even with the translator's note reminding us that the present volume was a first venture in fiction, originally published in 1879, it is difficult to think of the author as a young writer, for already he is surveying his contemporaries in their keenest self-absorption with the cool detachment of an old resident in the ivory tower. "Jocasta" appeared in the heyday of naturalism two years after "L'Assommoir," and in its elements it is an ugly piece of bourgeois tragedy with a sentimental heroine hanging herself in a bathhouse with her nephew's necktie, loved by a young surgeon who analyzes his sensations and dissects the nervous system of frogs. In the hands of almost any other writer of his generation this material would have taken shape as a depressing "human document" illustrative of a mechanical theory of life. But M. France has never really adopted the mechanical theory of life; he has only played with it and amused himself with the spectacle of those who were in the grip of it. He does not invite his reader to participate in the illusion of the piece, but rather to share the author's neutrality. The suicide of the heroine thus lacks the sting of actuality, and it affects one hardly more than a knife-thrust in a tale of Boccaccio.

If this sombre matter has left a bad taste in the mouth, one has only to turn the page and forget the sordid sorrows of Philistines in a gorgeous chronicle of the picturesque denizens of the Latin Quarter who foregathered at the Sign of the Famished Cat. "No one who is sane affords me much amusement," quotes M. France with approval, and, as he sees it, all Bohemia wears motley. From the windows of the ivory tower one looks down upon the poetical enthusiast in his garret no less than upon the scientific enthusiast in his laboratory. Yet though he preserves here his characteristic aloofness, he portrays his troop of intoxicated originals with an incomparable zest in their idiosyncrasies, and with a mellow quality in his mirth that suggests an only half-extinguished sympathy. Labanne, the sculptor, who must read treatises on the *pigmentum* of the black races and the geological formation of the Antilles, and fifteen hundred volumes before he can touch clay for his statue of Black Liberty, must occupy a place in his creator's heart. Indeed, the door of Labanne's studio, with its inscriptions carved and chalked by "various people," will seem to some readers almost to epitomize M. France's "criticism of life." These are the inscriptions:

"Woman is more bitter than death."

"Academicians are all bourgeois, Cabanel is a hairdresser's assistant."

"Laud we the womanly form, which still, as of old, uplifts
Chants hieratic, in praise of the greatest of beauty's gifts."—Paul Dion.

"I have brought back the clean linen. Monday I will call for the dirty at the porter's lodge."

"Athens, ever venerable city, if thou hadst not existed, the world would not yet know the meaning of beauty."

"Labanne is a rat. I don't care a damn for him."—Maria.

And there were many others on the door.

An Affair of State. By J. C. Snaith. New York: Doubleday, Page & Co.

Concert Pitch. By Frank Danby. New York: The Macmillan Co.

We wonder if it might not be politic for novelists to be more chary of their great men, created out of whole cloth. Do these colossal statesmen, conquerors, poets, painters, musicians, in whom we are expected to believe, really get themselves believed in? Is it of avail to give titles to their masterpieces, and to assert that their names are household words, when fraud and puppet is written all over them?

Mr. Snaith's James Draper is incredible not because he was once a haberdasher and is now a member of a British Cabinet, but because he is so plainly a little man exhibited as a big one. It is idle to represent him as the intimate of a duchess, the cleverest woman in the United Kingdom. It is idle to show him in the act of being privately visited and consulted by a king: we do not credit a duchess or a king who could hang upon the words and the will of an emotional weakling like the alleged Draper. He has married a daughter of the aristocracy, who, very properly, despises him in the beginning, and quite incredibly worships him in the end. But this comes about after the Draper, just appointed Prime Minister, and confessedly the only man who can save England from civil war, does his best to throw away his life and his country for a point of private "honor." It has been a long journey from the grim realism of Mr. Snaith's earlier work to the unblushing make-believe of his present manner. Yet the relation of certain figures and incidents of the story to fact has roused the British fancy, and the book has made a sensation in England.

Frank Danby's (Mrs. Frankau's) latest novel is upon a higher plane. The action hangs, however, upon the character and conduct of a remarkable musical genius, author of two operas, which are described as familiar the world over. Harston Migotti is understood to be the son of an English prince and an Italian singing woman. He has the "artistic temperament" in its most hopeless, if not its most distressing, form. He does not make an excuse of it to be vicious and to profess immunity from the effects of vice. He is simply the egotist to whom there is no virtue or vice—nothing matters unless as it contributes to his art. The only way to prevent such a being from being simply a nuisance, in life or in fiction, is to endow him with success of the highest order. Hence Migotti. But the story does not begin and end in him. Indeed, he is not even the central figure. He appears, to add a new element to the action, at the point where most novelists would have brought it to a close. Manuella is daughter of a parvenu pair possessed of millions shabbily made in South Africa and bent upon pushing to the top in London society. The mother arranges a match for the girl with a wicked duke, and she finds herself pledged to him before she knows what she is about. But, unawares, she has already given her heart to a virtuous earl. All we should expect in the natural order of events would be the discomfiture of the duke and the triumph of the earl (whose title is far older, if not so lofty). But here Harston Migotti comes in, and with her impulsive marriage to him Manuella's real experience of life begins. It is an experience which tests all her womanly strength: she comes out of it triumphant, and is not without her reward. Here, as in "The Heart of a Child," Mrs. Frankau has quite escaped that preoccupation with the affairs of sex as sex which marked her earlier books, and which reasserted itself in "Joseph in Jeopardy." Never has she written with a firmer touch, or with more evident sincerity. The book is distinguished from the ordinary novel—from "An Affair of State," for example—as a work of art is distinguished from a mere invention.

Ranching for Sylvia. By Harold Bindloss. New York: Frederick A. Stokes Co.

We have all heard of the gallant of olden time upon whom his lady imposed the task of retrieving her glove from the lion's pit. According to the story, his valor survived the test, but not his chivalry. Sylvia's knight, if less spectacular in performance, was stancher in allegiance. George's devotion was all but inalienable. It survived her preference for another suitor in her first marriage. Then it weathered the two years of her widowhood, during which Sylvia amused herself delicately in England and George zealously strove to extract an income for her from her Canadian wheat land. As executor of her hus-

band's estate, he felt that he could do no less, and as a gentleman of leisure he felt that the exercise would do him good. Not until he returns to England confident in the expectation of a faithful servant's reward, and finds that he has been a second time overlooked in Sylvia's matrimonial plans, does George forswear her service and transfer his affections, the considerate author having provided a Canadian substitute.

If novels could be made by machinery they would, presumably, read very much like this one, with a steady flow of colorless words and a conspicuous absence of emphasis and enthusiasm.

Brass Faces. By Charles McEvoy. Boston: Houghton Mifflin Co.

This clever story of British origin shows rather a novel aspect of what may be called the reversed detective motive. The situation is piquant. An innocent idle young man (not so very young in years) is summoned to the rescue of a maiden held in duress in a London house. He gets her away and conceals her in a lonely country place. Whereupon a noble family, whose honor is at stake, set about to recover the runaway and lay hands on the abductor. An American girl of detective propensities gets on the trail of the chivalrous young man, and there is a mighty good chase, in which the reader, so to speak, runs with the hare. It is good sport, although towards the end both hare and hounds lag a little.

AN EARLY JOURNALIST.

Sir Roger L'Estrange: A Contribution to the History of the Press in the Seventeenth Century. By George Kitchin, M.A. (Edin.), B.Litt. (Oxon.), Lecturer in English Literature at the University of Edinburgh. With 11 full-page plates. New York: E. P. Dutton & Co. $3 net.

Mr. Kitchin's sub-title and the opening paragraphs of his first chapter furnish a sufficient warning that this book will afford little of the pleasure that attends the reading of a good biography. It must be viewed rather as a contribution to history, particularly to the history of the English press in the seventeenth century. As such, it deserves very high praise, both for the faithful and minute scholarship it exhibits on almost every page, and for the importance of the new materials it has placed within the reach of students. It serves worthily as a complement and a supplement to Mr. J. B. Williams's "History of English Journalism to the Foundation of the Gazette," and carries the interesting story, as it were, a chapter farther.

Whether our gratitude to Mr. Kitchin as a contributor to the history of the English newspaper quite stifles our regret that he has not also enrolled himself among eminent biographers is a question that should be put; but, fortunately, it is also one that need not be dwelt upon ungraciously. It is true that, as we are told, L'Estrange "has left scarcely any private history," and that his life was monopolized by public affairs. It may be granted that he was "neither a sufficiently large person in public life, nor in private interesting enough in himself to warrant the troubling of posterity with anything approaching an intimate biography." But we are inclined to believe that, if Mr. Kitchin had used in the body of his text bits of biography which he has tucked away in footnotes, and if he had drawn upon his large knowledge of the period for illustrative material to be used in furnishing a scenic background, he might have gladdened the hearts of some readers without incurring the frowns of the Muse of History, however severe the countenance of that august maiden may have tended to become ever since she has been compelled, through the whims of fashion, to attire herself in original documents.

But Mr. Kitchin has declared that it was not the plan of his book to present L'Estrange "in a picturesque light, which is generally a fallacious one." He believes that the "sobriety of modern history is unfriendly to romantic color," and we need neither disagree with him nor press the matter farther. It is sufficient to remark that his deliberate choice to be a historian has enabled him to display one virtue rarely attained by biographers—freedom from partisan bias. He admits that as a writer L'Estrange was "a Goth of the Goths," but rightly emphasizes his virility and gives us an excellent discussion of the old Cavalier's translations, the only portion of his literary work that possesses interest to-day. If he does not altogether justify Macaulay's statement that L'Estrange's "nature, at once ferocious and ignoble, showed itself in every line that it penned," he nevertheless admits frankly that the chief figure of Restoration journalism, the critic of Milton, the opponent of Baxter, the hunter-down of Titus Oates, "could be, and habitually was, meanly cruel." What virtues L'Estrange had were in the main private and reserved for his friends; hence they scarcely figure in this account of his public career, which, it is almost needless to say, furnishes small comfort to those latter-day writers and readers of Tory proclivities who batten their loyal imaginations upon the Stuart period.

Mr. Kitchin divides his book into twelve chapters, the first two of which cover L'Estrange's early days, his confinement in Newgate, his dubious services in Kent, his obscure years of exile, his return under the Protectorate, and his exploits as a pamphleteer on the eve of the Restoration. The next nine chapters deal with his career as anti-Puritan controversialist, surveyor of the press and purveyor of news, opponent of the Stationers Company, investigator of the Popish Plot, editor of the *Observator*, and implacable enemy of the Whigs, idol of the high-church clergy, and—for reward of it all—a poor and aged victim of the Revolution. These chapters constitute the backbone of the book, and they are filled with information about the state of printing, the journalism, the politics of the time. Adequately to describe or discuss them is impossible within the compass of a normal review, and it must suffice to say that the wealth of details which may repel some readers, will certainly make the book a standard work of reference for students. The twelfth and final chapter deals briefly with the old man's life as a hack-writer after the Revolution, and contains the interesting discussion of his translations to which reference has been made.

Three appendixes treat bibliographical matters and mass the evidence for the thoroughness of the investigation that preceded the writing of the book. Unfortunately, however, Mr. Kitchin's work as a bibliographer leaves something to be desired. Titles are usually abbreviated and are sometimes inaccurate. Full information with regard to the number of editions is often withheld. Worse still, there are careless omissions of titles—*e. g.*, the well-known answer to Halifax's "Letter to a Dissenter," although referred to elsewhere, is not entered in the list of the political writings. "L'Estrange no Papist: In Answer to a Libel Entituled L'Estrange a Papist," which bears its author's name, is omitted, while "L'Estrange no Papist nor Jesuite," to which some doubt attaches, although it is probably genuine, is admitted without question. These and other lapses from fulness and accuracy are not serious, but they raise an ironical smile when one observes how Mr. Kitchin comports himself with regard to the lapses of previous writers upon the bibliography of L'Estrange, who, in the nature of things, were far less qualified for the task than that worthy's biographer.

For example, this latest authority, referring to the bibliography of L'Estrange given in the "Cambridge History of English Literature," remarks, "There is no evidence for L'Estrange's authorship of 'Physician Cure Thyself,' and the style not remotely resembles his" (p. 432). This is sufficiently categorical, but it happens that on the present reviewer's desk lies a copy of L'Estrange's "Apology" (1660), in which, on page 157, we find these words:

> Particularly *Milton* put forth a bawling piece against Dr. *Griffith* and somebody

else another scurrilous libel, entituled, EYE-SALVE: I did not think it much material to reply upon these . . . but however, being excited to it by a private Friend, I return'd these following *Answers*.

This brings us to the bottom of the page. On turning, we find page 158 blank, but immediately upon it comes L'Estrange's famous answer to Milton, "No Blinde Guides," and directly upon that, another inserted tract, to wit, "Physician Cure thy Self; or, an Answer to a Seditious Pamphlet, Entitled Eye-Salve for the English Army, etc." Following this we have an unnumbered page closing the "Apology," on the back of which, precluding the supposition that a modern binder is responsible for the insertion of the two separately paged tracts—is a list of *errata* applying both to the "Apology" and to "No Blinde Guides," to say nothing of a final leaf containing a "Catalogue of Some Books printed for Henry Brome," L'Estrange's faithful publisher.

It is needless to draw a moral, but perhaps it may not be amiss, in conclusion, to express some solicitation for the fate of the English language in Great Britain, now that British historical scholars, in emulation of their cacophonous American compeers, have begun to have their careless way with it. Solicitation for the fate of the English language in America has long been common both here and in the British Isles; let us Americans in turn cherish a poignant anxiety for the welfare of the language of our mother country, lying as it does at the mercy of the pens of insular historical specialists. Mr. Kitchin writes (p. 48), "Roger had seized, probably with an eye to Monk, news of whose arrival had just come out, on those elements which were most embarrassing to the Government." Something has happened to a sentence on page 69: "The little restraint observed in his first attack on the poet [Milton] has entirely disappeared, and the most venomous spirit discovered." But a truce to such cavils. In his next book, Mr. Kitchin will doubtless revise his style more carefully, and he may find it worth while to pay special attention to the possessive case of proper nouns ending in *s*. "Scrogg's" and "Somer's" are forms that mar too many of his pages. They do not, however, diminish our gratitude to a well-trained scholar for a work of distinguished merit.

A NEW LIFE OF BYRON.

Byron. By Ethel Colburn Mayne. New York: Charles Scribner's Sons. 2 vols. $6 net.

In her introductory chapter our new biographer of Byron expresses surprise that "there is only one full-length 'Life and Letters'" of the poet in English, and this published as early as 1830. That is indeed a strange lack, when it is remembered that Byron is one of the greatest names in our literature and one of the most interesting and perplexing personalities in history, and that a vast amount of material has been made public since Moore's day. And it may be said at once that Miss Mayne has supplied this want not unworthily. She knows the literature; she selects what is significant and entertaining; barring the occasional note of flippancy or egotism which comes almost inevitably with the present rage for cleverness at any price, she writes a good and buoyant English; her criticism of Byron's work is properly eulogistic, with just reservations; and, except on one debatable point, her conception of his character is penetrating and sound.

It is pleasant after the years of obscuration through which Byron has been passing to read once more a discriminating appreciation of his great and virile work. The philosophy of Miss Mayne may not always be tenable; there is, in particular, a paragraph (Vol. I, p. 156) in praise of "Childe Harold" which has some rather witless talk about volcanic spontaneities, and not writing great poetry but being a great poet, and that sort of thing; but almost invariably she selects the right poem or passage to praise or condemn, and sometimes she gives her reasons. She can feel the sweep of "Childe Harold"; she can enjoy the magnificent wit of "English Bards" and see its astonishing superiority to the "Imitations of Horace"; she can respond to the flow of the Oriental poems, and yet distinguish the sham in them from what has been deeply felt; she shows a delicate skill in selecting the few superb lyrics from the mass of Byron's short poems, though some of us do not share her adult contempt for the wolfish Assyrian that stirred us in boyhood; above all, she knows that "Don Juan" is one of the incomparable splendors of the human mind, though here again we miss any theoretical or philosophical criticism to justify her taste.

But criticism is only incidental to Miss Mayne's scheme. She has in mind to present a portrait of the man, and to distribute the due measures of censure and praise. Her approach to the enigma of his character is frankly that of a woman to a man who has not been kind to her sex, and occasionally the strain of this attitude leads to rather amusing assumptions of knowingness, but on the whole it results in a wise discrimination between what was of permanent importance in Byron and what was ephemeral. It is a truth, and an important one in judging his character, that "directly love in any form appears, he is the Sentimentalist—ready to feel everything, and to do nothing: for friendship, fame, and freedom he could act; for love he could only dream." It is true, also, that he was ignoble in his relation to women, but generous as a rule to men. There is a truth in this paragraph, and some amusement at its close:

> But when one speaks of happiness with reference to any woman's relations with Byron, one is bringing two irreconcilable things into sharp opposition. The woman did not live, has never lived, who could reconcile them. Obsessed as he was by the idea of woman, at bottom Byron despised her wholly; and no one can be happy with, or make happy, a creature scorned. Always to tyrannize, humiliate, wound, her he had fascinated, in revenge as it were for the power upon him with which mere sex endowed her, was to him the game of love—for in life, he saw love only as a game. In his poetry, it is true, the passion is exalted, the woman frequently "wins"—but always, let us perceive, by abnegation of her very being. . . . I hold no brief for the tigress. All that Byron sang of gentleness, devotion, sacrifice, may find an echo in most women's hearts; but there is a wide distinction between our choice, and man's proclamation of its sole rightness for us.

In one or two points the feminine point of view has possibly led Miss Mayne into exaggeration. Most readers, we fancy, will feel that she gives rather too much weight to the temper of Byron's mother as a decisive influence on his character, and she is perhaps not entirely fair to Byron in estimating his relation to Shelley. On one other point she has, in our judgment, fallen into actual error, though many literary students of the period will agree with her. In 1909 Mr. Richard Edgcumbe published a book entitled "Byron: The Last Phase," which, besides dealing with the poet's share in the Greek uprising, undertook to prove that the one passion of his life was for Mary Chaworth (Mrs. Musters). According to Mr. Edgcumbe, Medora, supposed to be the daughter of Mrs. Leigh, was really the child of Mrs. Musters and Byron, and was adopted by Mrs. Leigh to save the true mother's reputation. In maintaining this theory Mr. Edgcumbe repudiated the scandalous story promulgated by Harriet Beecher Stowe. This book, together with Lord Broughton's "Recollections," which also repudiated that story, was the occasion of a review in the *Nation* of November 4, 1909, to which those may turn who care to see the question argued at length. Miss Mayne rejects Mr. Edgcumbe's book as unworthy of serious consideration, although she admits that he is "something of an expert" on details of Byron and Shelley biography. On the other hand, she accepts Lord Lovelace's defamation of Mrs. Leigh in "Astarte" as incontrovertible. This is not quite ingenuous. Both Mr. Edgcumbe and Lord Lovelace claim to possess, or to have seen, documents which they do not print; and the appearance of these lurking papers, which ought by all means to be made

public in place of the semi-revelations now current, may at any time quite settle the points in dispute. But as the case stands, Lord Lovelace has by no means proved his point. Miss Mayne says not a word about the arguments given by Mr. Edgcumbe to show that the most damnatory letter printed as "Astarte" could scarcely have been addressed to Mrs. Leigh. She quotes from "Manfred," but omits the lines which tell strongly against her theory. She does nothing to weaken the testimony of Hobhouse (Lord Broughton). She has, we think, been led by her thesis, in general true, to a false application. We are bound to assert our positive conviction that the weight of available evidence exculpates Byron and Mrs. Leigh from the gross charge which his latest biographer so lightly accepts and repeats. Otherwise her appreciation of the man is just and liberal without being sentimental.

Protestantism and Progress. By Ernst Troeltsch. (Crown Theological Library.) Translated by W. Montgomery. New York: G. P. Putnam's Sons. $1.50 net.

In this handy and attractive little volume English readers may read in an excellent translation the gist of the ideas of one of Germany's younger leading theological thinkers. As professor at Heidelberg, Dr. Troeltsch sits in the seat of predecessors who led the conflict of Calvinist against Lutheran and of the "natural law" of Pufendorf against the *jus divinum* of Catholicism and Early Protestantism. But he is not the mere closet scholar burning midnight oil over the conflicts of the past. The understanding of the present is the goal of all his historical study. He analyzes the "modern world," by which he means the world of to-day, to discover what are its essential characteristics, how far these characteristics are traceable to Protestant influence, and how far the Early Protestantism of Luther and Calvin and Zwingli has itself been transformed with the progress of the world.

Dr. Troeltsch draws a sharp line of distinction between Modern Protestantism, which he thinks is in harmony with twentieth-century civilization, and Early Protestantism, which he thinks could not have kept in harmony with the progress of civilization unless it had itself undergone a transformation. For sixteenth-century Protestantism, like Roman Catholicism, was a religion of authority, claiming to regulate the state and society according to the supernatural standpoint of a revelation to be found in the Scriptures. Modern Protestantism, on the contrary, as he conceives it, seeks neither to control nor to be supported by the state; it accepts the principle of a plurality of religious convictions and religious societies; it leaves the formation of religious associations to voluntary individual effort and personal conviction. Early Protestantism distinguished itself sharply and with cruel violence from the Anabaptist, spiritualistic, mystic, and other "illumined" or "sectarian" movements which were proceeding parallel with Early Protestantism itself and which rested, not on the supernatural authority of the Scriptures, but on the personal revelation or conviction of the individual believer. Modern Protestantism has become what it is by accepting and assimilating these individualistic mystic movements which Early Protestantism so sharply rejected. He sums up as follows (p. 198):

> Thus Protestantism became the religion of the search for God in one's own feeling, experience, thought, and will, the seeking of an assurance of this supreme centre of all knowledge by the concentration of all personal convictions on this one point, while trustfully leaving open all the further obscure problems about which the Dogmatics of the earlier Protestantism had so much to say. Lessing, in his famous saying that the search for truth was preferable to the unsought possession of it, gave a typical characterization of modern religious feeling, and in doing so picked out just that thread in the web of Protestantism which the modern world is still eagerly weaving into its fabric.

Professor Troeltsch, one scarcely needs to add, does not voice the religious views of all his fellow-Protestants in the Fatherland. By many, especially by those who have lived in Lutheran atmosphere, he has been attacked for his anti-supernaturalism and his excessive emphasis on personal conviction of truth. Whether one agrees or not with his conclusions, one cannot fail to enjoy the scholarly insight and discriminating nicety with which he traces the shading differences between different conceptions of religion.

Boyd Alexander's Last Journey. With a Memoir by Herbert Alexander. Illustrated. New York: Longmans, Green & Co. $3.50 net.

Down the Mackenzie and Up the Yukon, in 1906. By Elihu Stewart, formerly Superintendent of Forestry for Canada. With map and illustrations from photographs. New York: John Lane Co. $1.50 net.

My Tropic Isle. By E. J. Banfield, author of the "Confessions of a Beachcomber. New York: Outing Pub. Co. $2.50 net.

The three volumes before us are well above the average of their kind in solid value of contents and interesting presentation. Boyd Alexander's earlier African explorations, described in two volumes under the title "From the Niger to the Nile," gave him a name among geographers all over the world and brought to him the Founder's Medal of the Royal Geographical Society, as well as its Honorary Diploma of Fellowship. A few months after the reception of these honors he sailed from Liverpool for another African journey, the fatal ending of which was made known to the world in the latter part of May, 1910. The openly professed objects of this journey were, first, to make an ornithological collection in the Cocoa Islands of San Thomé, Principe, and Annobon; next, to cross to the mainland and make a similar collection on the Cameroon peak; and, finally, if things went well, to fit out a caravan of camels and pass through Wadai to Darfur and on to Khartum. To his brother Herbert he had confided the thought that it would be a fine thing to get through to El Fachir, win the confidence of the Sultan of Darfur, Ali Dinar, and persuade him that his own welfare demanded the frank acceptance of the suzerainty of Great Britain, with active coöperation in the suppression of the slave trade. Evidently his determination to complete his undertaking at all hazards grew upon him as time went on, for a passage in his diary written some three months before his death tells us that if the French refused him the right of passage through their territory, he had determined to try to get through at any cost—"as a native, with my face stained with permanganate of potash, which from trials I made can stain the skin to any depth of color. Of course, I should have taken nothing with me, but would have lived on native fare and not washed for some sixty days." Such is the devotion of the true explorer. He reached the Cameroon peak just in time to witness at uncomfortably close range the great eruption of April, 1909, and, in fact, was charged by the natives with producing that eruption, by firing into the crater and stirring up the devils therein. The diary of his entire journey fills about two hundred pages. The manuscript was discovered by the French near the spot of his murder at Ilarné and turned over to Miss Olive McLeod, to whom he had been engaged to be married and who had made the long journey to Fort Lamy in order to learn what she could of the circumstances of his death. The diary informs us that route-maps had been made from Maifoni to Fort Lamy and thence to Abechir, but these were not recovered. The memoir by his brother reveals from boyhood on a strong and attractive personality, and the reader feels that the deep fraternal affection evident on every page has not hindered a truthful portrayal.

As Mr. Stewart's book on the Yukon and Mackenzie Valleys embodies the substance of a report made to the Canadian Government in the autumn of

1906, it seems a little belated. Still, his standing as a former Superintendent of Forestry for Canada is a better voucher for careful habits of observation than many volumes descriptive of the Canadian Northwest can boast, since exploration in this part of the globe has almost reached the status of a popular summer outing. Though the author is now managing director of "Canada Timber and Lands, Limited," and the publisher's prefatory note frankly appeals to the commercial interest of the region "with the completion of the Panama Canal in sight," the volume is a soberly written narrative, unmarred by the offensive tone of the mere exploiter. An interesting touch is his allusion to the still burning coal veins near Fort Norman, where, at least since the explorations of Sir Alexander Mackenzie, one hundred and twenty-four years ago, the fire has been incessantly eating away the fuel which might one day have been so useful to the settlers, who, we are told, are to build up a great empire in this northern territory in the not distant future. From Edmonton to Vancouver Mr. Stewart travelled about 4,250 miles, and the time occupied was a little less than three months. His concluding chapter is a spirited appeal for the establishment of a well-equipped hospital, somewhere in the region of the Mackenzie watershed. A few established physicians are to be found at Athabasca Landing and Peace River, but beyond the latter the little that a few missionaries can do is supplemented only by the occasional visit of a Government physician. Cannot some one do for this region, he asks, the service which has been rendered to the Labrador through the agency of Dr. Grenfell?

"My Tropic Isle," Mr. Banfield states, is in reply to a demand for more complete details of his isolated life than were given in his "Confessions of a Beachcomber." His purpose is to fill in hastily a few of the lacunæ in his earlier sketch and then to devote himself to special features of novelty and interest—"vignettes of certain natural and unobtrusive features of the locality, first-hand and artless." The locality in question is described as the most fascinating and most desirable on the coast of North Queensland, but is not, we believe, more specifically identified anywhere in the volume. The author's characterization of his work as "artless" would doubtless be justifiable under more than one of the present-day definitions of art, but readers who still think that it makes some difference in what kind of dress a thought is clad will wish that more of our writers were "artless" in the same refined way as Mr. Banfield. A short quotation from a chapter on A Tropic Night will give a fair idea of the tone of his descriptive passages:

> As the tide rose, it prattled and gurgled, toying with tinkling shells and clinking coral, each tone separate and distinct, however thin and faint. My solitary watch gives the rare delight of analyzing the night thoughts of the ocean, profound in its slumber, though dreamily conscious of recent conflict with the winds. All the frail undertones suppressed during the bullying day now have audience. Sounds which crush and crowd have wearied and retired. The timid and shy venture forth to join the quiet revelry of the night.

Mr. Banfield is an open-eyed observer, and the habits of the birds, fishes, animals, and plants of his island environment make up a large share of his book. We shall not deny that there are passages here and there suited to stir the slumbering fires of the "nature-faker" controversy, but it is a delightful volume none the less.

The Story of the Borgias. By John Fyvie. New York: G. P. Putnam's Sons. $4.50 net.

This is a welcome book, for it brings common-sense and impartiality to bear on a topic which has been too often the sport of fanatical prejudices. For more than three centuries the Borgias had no defenders, except the formal eulogists of the Papacy. It is now forty years since Gregorovius showed that Lucrezia Borgia was more sinned against than sinning. Since his time, apologists have been at work to whitewash Alexander VI, and even to minimize the turpitude of Cæsar Borgia. The somewhat absurd Baron Corvo ingenuously insisted that what the world regarded as black was really pure white; and, recently, the Jesuitical Sabatini, by casuistry and *suggestio falsi*, arrived at the same results.

Mr. Fyvie, on the contrary, starting without prejudice, asks himself, What are the historical facts in this disputed matter? And he sticks closely to facts. The vouched for tale of murder, adultery, treachery, and cruelty is sufficiently monstrous, after the unverified charges have been deducted. Mr. Fyvie inclines to believe, with Gregorovius, that Cæsar murdered his brother, the Duke of Gandia. He leaves the question of incest open. He dismisses the legend that Pope Alexander VI died after drinking by mistake poison which he had prepared for Cardinal Corneto.

These are some of the chief points which Mr. Fyvie pronounces upon. From beginning to end, however, his examination of the evidence and verdicts thereon are equally discriminating. His chapters on Cæsar Borgia's career may be commended for their clearness, and so may his account of Lucrezia's life in Ferrara, and of that city itself. He concludes with a sketch of Francisco Borja, who, after passing his youth at the court of Charles V, became a Jesuit and rose to be general of that order.

Many matters of secondary interest, but still important, would merit comment if we were writing a detailed review. We will refer to two, however, because they show Mr. Fyvie's general rightness of view. First, he remarks that, although the object of Alexander VI was to aggrandize his son Cæsar, at the expense of the Church, "the final result of all his scheming was the ruin of that son and the exaltation of the Church [Papacy]. Before his time the Italian princes, and even the smaller lords and barons, had thought little of the temporal power of the Holy See. But the Borgia showed Julius II what a Pope with courage and ambition and money was able to do. . . . He took up the work where they left it and carried it to its completion."

The second point worth mentioning is that the author does not make the common mistake of supposing that Machiavelli regarded Cæsar Borgia as "the very incarnation of an ideal prince." What Machiavelli implied was that, under the wicked conditions of the time, Cæsar was the prince best fitted to carry out his scheme. The distinction is fundamental, and that Mr. Fyvie sees the truth, strengthens the reader's confidence in his other interpretations.

Partisans have so complicated the Borgian story as to make it as puzzling as a Baconian cipher. Readers who desire facts, told straightforwardly, should begin with Mr. Fyvie's narrative. They hardly need to go farther.

Notes

Under the title of "Some General Principles of Management Applied to the Problems of City School Systems," Dr. Franklin Bobbit introduces the Twelfth Yearbook of the National Society for Study of Education, published by the University of Chicago Press.

Announcement is made from the same Press that the authors of "Outlines of Economics Developed in a Series of Problems," will publish in September a source-book of selected readings and illustrative material which they have assembled for the use of their classes in elementary economics.

H. Addington Bruce will bring out in the near future, through Crowell, "The Education of Karl Witte."

The announcements of Doubleday, Page & Co. include: "Mrs. Red Pepper," by Grace S. Richmond; "Ever After," by Juliet Wilbor Tompkins, and "What Can Literature Do for Me?" by Prof. C. Alphonso Smith.

In "The New Unionism," which will be issued soon by B. W. Huebsch, André Tridon deals with the organization of labor.

Among the announcements of the Yale University Press are "The Ethics of Public Service," by Henry Crosby Emery, and the Page Lectures on "Morals in Public

Business," delivered in 1912 by Edward D. Page.

In the next few weeks Stokes will bring out "Panama: Its Creation, Destruction, and Resurrection," by P. Bunau-Varilla, and "The Human Slaughter House," by Wilhelm Lamszus, translated by Oakley Williams.

Putnams have in hand: "The Son of a Servant," by August Strindberg; "Joyous Gard," by Arthur C. Benson, who has taken for his title the name of Launcelot's castle; "A Candid History of the Jesuits," by Joseph McCabe; "A History of England," by A. D. Innes; "Personality," by F. B. Jevons; "The Man Who One Day a Year Would Go Eelin', and Some Other Little College Things—Mostly Athletic," by Charles Halsted Mapes, and the following Cambridge books: "The Song of Roland," translated into English verse by Arthur S. Way; "Paganism and Christianity in Egypt," by Philip David Scott-Moncrieff; "Dictionary of the Hanza Language," third edition revised and enlarged, by Charles Henry Robinson; Fielding's "Journal of a Voyage to Lisbon," edited with introduction and notes by J. H. Lobban; "Prima Legenda," first year Latin lessons, by J. Whyte, and "British Borough Charters, 1042-1206," edited by Adolphus Ballard.

Macmillans have in preparation a reissue, at thirty-five cents the volume, of Bohn's Popular Library. The following volumes are now ready: Swift's "Gulliver's Travels," edited with introduction and notes by G. R. Dennis; Motley's "Rise of the Dutch Republic," with a biographical introduction by Moncure D. Conway, 3 vols.; Sir Richard Burton's "Pilgrimage to Al-madinah and Meccah," introduction by Stanley Lane-Poole, 2 vols.; Lamb's "Essays," including the Essays of Elia, Last Essays of Elia, and Eliana; George Hooper's "Waterloo: The Downfall of the First Napoleon," new edition with maps and plans; Fielding's "Joseph Andrews"; Cervantes's "Don Quixote," Motteux's translation, with Lockhart's Life and notes, 2 vols.; "The Idylls of Theocritus, with the Eclogues of Virgil," English verse translation by C. S. Calverley, introduction by R. Y. Tyrrell; Fanny Burney's "Evelina," edited, with an introduction and notes, by Annie Raine Ellis; Coleridge's "Aids to Reflection, and the Confessions of an Inquiring Spirit"; Goethe's "Poetry and Truth from My Own Life," revised translation by M. Steele Smith, with an Introduction and Bibliography by Karl Breul, 2 vols.; Ebers's "Egyptian Princess," translated by E. S. Buchheim, and Arthur Young's "Travels in France, during the years 1787, 1788, and 1789," edited with introduction and notes, by M. Betham-Edwards.

The descriptions of the prehistoric ruins of Guatemala, in the *National Geographic Magazine* for March, afford glimpses of a people, living in 440-540 A. D., probably, similar in some respects to the ancient Egyptian. Mr. W. F. Sands, formerly our minister to that country, gives a general account of the region and its attractiveness. A more inspiring spot, he says, can hardly be imagined than those avenues of carved monoliths leading through arches of palms to some invisible altar or temple. Referring to the native Indians of the present day, he believes them to be the finest stock in the country.

From G. Bell & Sons, of London, we have received a "new edition" of Andrew Lang's "Helen of Troy," which was first published in 1882. The poem still reads pleasantly in its slow-moving eight-line stanzas. It begins with the coming of Paris:

All day within the palace of the King
In Lacedæmon, there was revelry,
Since Menelaus with the dawn did spring
Forth from his carven couch, and, climbing high
The tower of outlook, gazed along the dry
White road that runs to Pylos through the plain,
And mark'd thin clouds of dust against the sky,
And gleaming bronze, and robes of purple stain.

Dean Briggs, of Harvard, has taken from earlier publications four essays which he "regards as suitable for college students in general," and has printed them in a little volume entitled "College Life," in the Riverside Literature series of Houghton Mifflin. The subjects are "The Transition from School to College," "The Mistakes of College Life," "College Honor," and "Routine and Ideals." They need no introduction from us, and we need only say a word for the attractive form in which they now appear.

Two admirable selections from American literature have been added to Everyman's Library (Dutton). One is Crèvecœur's "Letters from an American Farmer," with a pleasant introduction by Warren Barton Blake. The other, if not entirely by an American, deals with life on this side of the water, being Robert Buchanan's "Life and Adventures of Audubon." To this the publishers have prefixed, as introduction, a paper on Audubon by John Burroughs, which was first printed in the *Nation* of July 1, 1869.

The Oxford University Press (Frowde) has published a selection of the Poems of Elizabeth Barrett Browning, on thin paper, with green and gold binding, and in pocket size. The only serious omission is that of "Aurora Leigh," which was left out, doubtless, purely for physical reasons.

"An Anthology of English Prose (1332 to 1740)" (Longmans), by Annie Barnett and Lucy Dale, endeavors, foolishly from most points of view, to give extracts from 48 writers in less than 250 pages, the average length of the extracts being perhaps two pages. Though the editors have done as well as the plan permitted, one is bound to feel that a large number of the selections have not been extracted painlessly. The preface, by Andrew Lang, endorses the suggestion that one who desires to survey the development of the English language and literature might profitably begin with Stevenson and work back to the unfamiliar beginnings. An earlier volume, covering English prose from 1741 onwards, has already been published.

"Early English Classical Tragedies" (Frowde), edited with introduction and notes by John W. Cunliffe, affords an excellent basis for the study of English tragedy before Marlowe—that is, English tragedy in its beginnings. The plays included in the volume are "Gorboduc," "Jocasta," "Gismond of Salerne," and "The Misfortunes of Arthur." The last of these, although produced later than "Tamburlaine," belongs to the Senecan tradition. The notes to "Gorboduc" are supplied by H. A. Watt, who has already published a good monograph on this play. Dr. Cunliffe has annotated the other plays and has written the introduction, which traces through Seneca and the Italian drama of the Renaissance the elements which combined with the native tradition to produce the popular tragedy of the Elizabethan age. Besides the Senecan influence, which is very strong in all four of the plays here edited, Professor Cunliffe takes account of the mediæval conception of tragedy, which in no small measure determined the handling of tragic themes by the early Elizabethan dramatists. There are sections also devoted to the critical theories concerning tragedy that were developed during the Renaissance. The whole introduction bears the stamp of accurate scholarship, and the volume, altogether, may be recommended without reservation to students of the English drama.

Max Bellows's "German Dictionary" (Holt), arranged on similar lines to the French Dictionary of his father, John Bellows, to whose memory it is dedicated, is a marvel of compactness. German-English and English-German parts are arranged concurrently on the same page, innumerable typographical devices obviate repetition, and the gender of German nouns is indicated, without the article, by three varieties of type. The pronunciation of English words is regularly, that of German words only occasionally, given. The vocabulary includes the most recent technical terms in both languages. Examples seem at first, as is inevitable in a relatively small manual, somewhat few under the more common words; but they are really more abundant than they seem; they clearly reveal the meaning and the uses of the word in question, and they have the true idiomatic ring in both tongues. The page is unusually open and handsome.

A small book which has as a part of its plan to mention virtually every writer of lyric poetry from Anglo-Saxon days to the present must of necessity be cursory. And when, further, its author defines the lyric, rightly we believe, so as to include portions of long poems, *e. g.*, Donne's "Anatomy of the World," not usually so classed, the volume takes on much the form of a *catalogue raisonné*. Such are the virtues and limitations of "The English Lyric" (Houghton Mifflin), contributed by Prof. Felix E. Schelling to Professor Neilson's series, The Types of English Literature. The book will serve a useful purpose. Underlying movements are indicated, and there is sufficient appreciation of individual writers at least to fix their places in a justly graded scheme; and, above all, there is good taste. Yet after having given Professor Schelling credit for dealing skilfully with a vast amount of material, one must regret that the plan of the series did not permit of a different treatment. He might profitably have confined himself very largely to the main lyrists of each period, using lesser figures merely for background. This would have given space for full illustration, from great poets, of large tendencies and persistent themes. In the Elizabethan age what is most important to note is the manner in which the few leading writers polished off the ideas introduced in the rough from Italy and France by Wyatt and Surrey and others. Yet scarcely more than

a dozen pages are given to Sidney, Spenser, and Shakespeare together. The religious writers of the following age are touched on most briefly, and Wordsworth, though frequently mentioned, receives but three or four pages of solid treatment. One or two slips have been noted. Sidney's death is referred to the year 1588, and why Sève for Maurice Scève?

Judged by the general run of social studies with which our day is familiar, "Reflections of a Beginning Husband" (Harper), by Edward Sanford Martin, pictures a world of mild problems. It is cast in quasi fictional form. Though Peregrine and Cordelia risk marriage on sixty dollars a week, there is no fear that they will come to want. Benign and wealthy parents on both sides sit back and watch the opening struggle, only waiting until the advent of little Samuel shall give them a legitimate excuse to relax their purse-strings. Yet within this limited sphere there are many questions to be decided, and here the author plies his tender satire. With what shall you spread your board when you "have to invite so many people who have had too much to eat and are trying to get thin"? "Promotion," as a friend told Peregrine, "cometh neither from the East nor the West, but from the cemetery." Yet Peregrine is inclined to think that in the long run character counts, and "character is a very expensive product, and hardly to be had at the ten-cent store, where we and our contemporaries are prone to go for it." Parents of an only child will probably sympathize with the remark that "it is just as easy to raise six children as one," because one takes up all your time, and six can't do more. Both Cordelia and Peregrine are pleased over their growing list of invitations to dinner, yet these leave them little time "to read up anything good to say." Scattered through the book are discussions of labor unions, politics, higher education for women, and the like, all genially conducted.

The second Bulletin and Review of the Keats-Shelley Memorial, Rome, contains several contributions of general interest. There are two facsimiles—of fragments from the manuscript of "Lamia," and of a Byron-Guiccioli paper; a half-tone of Severn's pathetic sepia drawing of Keats on his deathbed; reproductions of two pages of Hazlitt's "Characters of Shakespeare's Plays" with Keats's notes; Severn's portrait of Shelley in Rome; and the copy of an engraving by Pinelli depicting a night burial in the Protestant Cemetery, Rome. Among the articles are "How Shelley Approached the Ode to the West Wind," by H. Buxton Forman, and "On the First Two Lines of Epipsychidion," by A. de Bosis. Some Keats volumes now in America are described by Mr. R. Underwood Johnson; Mr. H. Nelson Gay gives an historical sketch of the Protestant Cemetery—a paper annotated with his characteristic care; and Sir Rennell Rodd, the British Ambassador, who with Mr. Gay edits the Bulletin, tells how the graves of Shelley and Keats were preserved. Mrs. Leigh Hunt's unpublished diary, for five weeks in the autumn of 1822, refers to the Hunts' journey from Pisa to join Mrs. Shelley at Genoa. Letters from Hunt to W. W. Story, Keats's last bank account, and various other pertinent topics fill a sheaf of shorter articles. A catalogue of the second thousand works added to the library of the memorial takes 80 pages, and will, with its predecessor, be welcome to bibliographers. These quarto bulletins are models, worthy of the international memorial by the Spanish Steps; and as the interest in Keats, Shelley, and their group is perennial, the bulletins are certain to be prized more and more. (New York: The Macmillan Co.)

Any one who has associated with scholars interested in the humanities will be likely to have heard certain objections raised to the present form and editing of the Loeb Classical Library (Macmillan). Some of the Greek volumes have been printed in a type and on a paper outrageous to the eye; the adoption of verse translations is pretty widely deplored, since probably the first and most important service desired is ease in finding the precise meaning of an unusual word or a tangled sentence of the original; and, lastly, some of the authors might be annotated a little more freely without much increasing the labor of the editor and to the great benefit of the ordinary reader. In the latest addition to the Library all of these faults are still apparent, though in varying degrees. Two volumes out of the four have now appeared of Horace White's clear and excellent version of "Appian's Roman History." One volume of F. Storr's "Sophocles" is also added to the section in green. So far as the printing goes, this is a marked improvement on the Euripides, which in one of the volumes ran to 600 pages and necessitated paper so transparent as to fatigue the eyes. But the type in the Sophocles is still a little crowded. Mr. Storr's translation is in metre; the dialogue is rendered closely and with considerable spirit; but the choral passages are, as a rule, somewhat flat (the difficulty of reproducing them is, we admit, enormous), and at times depart so far from the original as to render little or painful service to the lagging reader of the Greek. The "Bucolic Poets" of J. M. Edmonds is in prose, with the Amœbean and more lyrical parts in various metres. Mr. Edmonds has manifestly lavished much pains on his task, and has turned out an accomplished piece of work. He has used archaic phrases with a good deal of taste, and his lyrics really move; yet again it must be remembered that very few readers will open the volume for the English alone, and some, we fear, who no doubt ought to know more Greek, will find it a slow business to match the original with the translation. The "Argonautica" has been turned into good honest prose by R. C. Seaton, and that is as it should be.

The general editors of the Library should understand very speedily that, so far as the Greek authors go, without a clear page of type and a use of simple prose, the whole undertaking will fail of its magnificent promise. One Latin author also appears in the recent issue, the first volume of "Cicero's Letters to Atticus." The translation by E. O. Winstedt is lively and sufficiently literal, erring at times, possibly, by an overstraining after jocularity. Mr. Winstedt adds an occasional explanatory note, and might with profit be more liberal in this respect. The Library is performing a notable service to education, and may prove of even greater usefulness. To the originator of the project one might say, as Cicero wrote at the end of a letter to Atticus: "Bibliothecam mihi tui pinxerunt. . . . Eos velim laudes."

The series of lectures delivered at Columbia in 1911 by ten classical scholars has been issued by Lemcke & Buechner in a volume with the title, "Greek Literature." The result is a reasonably complete exposition of the subject. It might be urged that one more lecture could have found a place in the series before the attention was shifted to the Greco-Roman development. The Hellenistic period is well provided for, in its purely literary aspect, by Prof. Henry W. Prescott, but the career of Greek on its own ground, down, at least, to the age of Justinian, claims a hearing. Lucian and Plutarch certainly have a place in any comprehensive survey. Prof. Paul Shorey's introductory lecture is a shining propylæum. In it an intimate interpretation of Greek thought is seen through the perspective of a catholic realization of other literature. Even his strong personal equation is a pleasing stimulant, especially when his arbitrary judgment is counteracted later as, for example, by Prof. J. R. Wheeler's sympathetic treatment of Euripides in his clear presentation of the Greek spirit as transmitted by the three great tragedians. Prof. H. W. Smyth gives not only a worthy account of Homer, but follows the triumphal progress of Epic Poesy through Europe. In catching up the scattered rays from the broken prism of Lyric poetry, Prof. E. D. Perry succeeds well, and especially with the most difficult part. He takes the nobler view of Sappho, both of her character and of her poetry. To Bacchylides he accords scant and, it may seem to some, inadequate consideration. A fresh and convincing account of the rise and progress of Greek Comedy is given by Prof. Edward Capps. Of the new comedy he neatly says: "The mirror held up to nature is no longer a concave mirror." As the opinion of a professional diagnostician Greek scholars will welcome the tribute paid by Prof. F. J. E. Woodbridge to Greek philosophers, when he says: "There may be greater philosophical conceptions than those which the Greeks have left us, but I know not where they are unless they are in the future."

Where so much is given minor criticism seems ungracious, but it would have been a welcome addition if Prof. Bernadotte Perrin, an expert upon Plutarch, could have brought Biography within his province and, whatever Xenophon's demerits as a historian, we demur at the writer's curt dismissal of the author of the "Anabasis" as an "agreeable dilettante," and regret, too, the exclusion of Polybius from consideration. And in Prof. C. F. Smith's enthusiastic and generally adequate appreciation of Greek oratory we miss a more concrete presentation of the present-day value of Isæus. The title of the last lecture, like the first, invites generalization. Prof. Gonzalez Lodge distinguishes with critical acumen between the purely Latin and the Greek elements in Roman literature. He gives large credit to the Greek contribution, but it seems strange that he must needs assume the defensive for anything so regal, so self-contained, as the great Roman lit-

erature, and it is even repellent to find, on the closing page of just this series, the exclamation: "Greek literature remained always to the Roman his most dearly prized slave, but still his slave"! Cicero, Lucretius, and Horace knew better, and Homer was no more Virgil's slave than Virgil was Dante's.

Under the title "Economic Utilization of History" (Yale University Press) Prof. Henry W. Farnam has collected a number of addresses and articles which find their unity in a plea, running through them all, for a better social vision and a more enlightened and scientific handling of our many social problems. Of most interest, because of their rather original treatment, are the first two chapters, concerned with the methods to be employed in economic investigation. Three considerations are emphasized in this discussion: a systematic extension of methods of investigation and analysis in which there shall be greater coöperation between the various agencies now at work, a more scientific handling of the material accumulated with the aim of arriving at generalizations that shall have the dignity of scientific laws, and the importance of utilizing the vast amount of economic material in the history of our own country. With this goes a much needed warning to the economist to be on his guard against allowing his present vogue to encourage dilettantism. Later chapters discuss purposes and methods of labor legislation, and indicate the shortcomings in our present practice. To economic pathology, a subject that has been too much neglected by economists in the past, the author urges the application of the experimental method. He includes in this designation human degeneracy, exhaustion of natural resources, and diseased governmental systems. Of especial interest is his discussion of our slowly growing concern over the problem of "posteritism," which has to do with the preservation of the race and the maintenance of its quality. "Socialism has emphasized the injustice of many of our social institutions. Posteritism points out our shortsightedness."

The death is reported from Cambridge, Eng., of the Rev. W. G. Searle, in his eighty-fifth year. He wrote the history of Queens' College, "Onomasticon Anglo-Saxonicum," and compiled a "Catalogue of the Illuminated MSS. of the Fitzwilliam Museum."

Sir Tatton Sykes died on Sunday in London. He was born in 1826, and was the author of "Sidelights of the War," 1900, and "The New Reign of Terror in France," published three years later.

Our attention is called to the death early last month of Prof. Henriette Louise Thérèse Colin, since 1904 head of the French department of Wellesley College. She held the degree of master of arts from Leland Stanford Junior University and the Ph.D. from the University of Pennsylvania. Madame Colin studied in Paris, Florence, and Rome, and had been decorated by the French Government with the insignia of Officier d'Académie; later of Officier de l'Instruction Publique.

Erich Schmidt died last week in Berlin, where he had been rector of the University and a professor. He was born at Jena in 1853. After teaching philology and the history of literature in Würzburg, Strassburg, and Vienna, he became for a time the director of the Goethe Archives at Weimar, and then was appointed successor of W. Scherer as professor of the German language and literature at the University of Berlin. Several of his books relate to Goethe, among them the well-known "Richardson, Rousseau und Goethe." His "Lessing" is the standard biography of that writer.

Alice Maud Meadows, who died on Monday at Red Hill, a few miles from London, had some reputation as a writer of verse and fiction. When she was only fourteen years of age her first story was accepted by the Surrey *Comet*. Among her novels are "The Romance of a Madhouse," "Out from the Night," "The Eye of Fate," "One Life Between," "The Moth and the Flame," "The Infatuation of Marcella," and "An Innocent Sinner."

Science

The Applications of Logic. By A. T. Robinson. New York: Longmans, Green & Co. $1.20.

It is a platitude beloved of college presidents and other official optimists over our educational situation, that one of the chief benefits to be derived from a college training consists in the acquisition of the power to think competently for one's self. To develop such a power should assuredly be the primary intellectual aim of the colleges. Yet surprisingly little is, as a rule, done to adjust educational means directly and intelligently to this end. We pour upon our undergraduates vast masses of historical, linguistic, and scientific information, some part of which we require them, under the plan of term-examinations, to retain for a few months—and no longer; we do something, probably, to improve taste and cultivate the power of enjoying literature; and we bestow enormous pains, though for the most part with disappointing results, in an attempt to impart some rudiments of the art of writing English. But we concern ourselves with the art of thinking in a much more casual manner. The freshman, however much distracted by the noisy sideshows of the campus, can hardly avoid recognizing that he has a great many facts to "learn," and that he is also expected to acquire and exhibit—when dealing with his English instructors—a certain degree of correctness and skill in the use of his own language. But it is questionable whether he so generally and clearly understands that his business also is to learn to think in a critical, orderly, and workman-like fashion, to acquire correctness and skill in the use of his own reason.

Courses in English composition usually give some training of this sort, but they give too little and they are often preoccupied more with rhetoric than with logic. Courses in formal logic should have for their principal function the production of a *habit* of analytical thinking and of intellectual circumspection; but as usually given, they are encumbered with scholastic baggage, and are far too brief to produce the effect of habituation in which lies their potential usefulness. Other courses, in languages, in natural science, and especially in economics, give a good deal of valuable exercise in methodical and self-critical thinking; but they give this essentially as a by-product. The present reaction against the doctrine of "formal discipline" leads some teachers to suppose that training in careful and correct thinking comes best as a by-product. But it would be easy to show that this conclusion is a mistaken inference from a true premise. Not the teaching of logic, indeed, but the cultivation of logicality, should be *both* a by-product of most other courses of collegiate study and also the object directly aimed at in no inconsiderable part of the student's work.

Mr. Robinson's little book is significant as a sign of a growing appreciation of all this; and it is likely to render genuine service towards bringing about a change of emphasis in English courses for freshmen from rhetoric to logic, from the problems of expression to the problems of actual truth and consistency. Though the book at a number of points is open to criticism, and needs supplementation from other sources, as a whole it should have upon the beginning undergraduate the extremely valuable effect of awakening his logical self-consciousness, of giving him a good general notion of what "a logical habit of mind" means, and of stimulating in him some desire to acquire skill in the art of thinking, and perhaps even some capacity for feeling shame when he exhibits ineptitude in that art. The book contains a large amount of material, usually well selected, for "exercises" in the analysis of arguments and expositions. In these not the least part of its usefulness should consist; for, just because training in the application of logic is chiefly a process of habit-forming, its two principal methods should be the constant critical analysis of arguments of all sorts—arguments which people have actually used, on subjects pertinent to the student's other studies or to his everyday interests—and the frequent and long-continued production by the student of original written exercises in proof, inference, and the analysis of problems, which exercises are thereafter subjected to searching critical analysis in conferences between student and instructor. It may be added that Mr. Robinson's book is not least logical in reminding the student of the subject that logic has its limits.

Ginn & Co. are bringing out this season "School and Home Gardens," by W. H. D.

Meier, and "Agronomy: Practical Gardening for High Schools," by Willard N. Clute.

Sir William Osler, who is now delivering the Silliman Lectures at Yale, will publish the substance of them through the Yale University Press.

Putnams announce the following science books from the Cambridge University Press: "Papers set in the Mathematical Tripos, Part I, in the University of Cambridge, 1908-1912," and "Vegetation of the Peak District" (Southern Pennines), by C. E. Moss.

No cartographic work of recent years deserves higher praise than the "Atlas of Finland," with its two volumes of explanatory text, revised from an earlier edition and published in French by the Geographical Society of Finland at Helsingfors. Its contents are remarkable in variety, embracing physical and geological features, climatic data, sociological, economic, and governmental problems. The coloring of the charts is so well toned that they are a pleasure to the eye, and not an offence to that sensitive organ, as is too often the case with statistical atlases. It is not too much to say that a view of the Atlas, with consultation of the text when desired, will greatly increase any previous stock of information about Finland, and will at the same time inspire a high respect for the energy and enlightenment of that far northern country, which we too often overlook when considering the civilized areas of the world.

The latest number of the "Bulletin of the Imperial Earthquake Investigation Committee of Japan" (Tokio, February, 1913), discusses recent variations of sea-level in Japan and Italy, as indicated by a comparison of accurate mareograph records at various coastal stations for the past fifteen years. For Japan the conclusion is that the islands, which form an arc convex to the deep Pacific and concave to the shallow Sea of Japan, are probably the result of pressure from the continental or interior side, and that the effects of this pressure are still recognizable in somewhat irregular changes of level and in frequent earthquakes. More stations and longer records are evidently needed before the questions thus raised can be settled. For Italy it is inferred that the small changes of level thus detected are associated with the Messina-Reggio earthquake of 1908; the strain caused by warping of the earth's crust having produced a crack beneath the strait between the two cities that suffered most from the resulting shock.

As one of the House and Garden-Making Books (McBride, Nast & Co.), has been issued Mr. William Tricker's "Making a Water-Garden." The size of this tiny volume does not allow full consideration of the subject, but in its limits it is excellent. It considers chiefly the planting of small artificial pools with aquatic plants, mostly water-lilies, and briefly discusses their preparation, maintenance, and protection. The photographs and the text preach that a small water garden is both attractive (which we knew) and inexpensive (which we had not supposed). After our recent droughty summers it is worth knowing that for these gardens no greater daily supply of water is needed than that which will offset evaporation. In fact, running water, especially if cold, appears to be detrimental to the plants. Goldfish are necessary to kill the larvæ of the mosquito, but they add to the attractiveness of the garden. The little book will encourage better knowledge of aquatic plants and their uses.

William Morris Fontaine, for more than thirty years professor of geology and natural history at the University of Virginia, is dead in Charlottesville. He was born in 1835, and served in the Confederate army. Several scientific papers bear his name.

Dr. Francis Parker Kinnicutt died suddenly last Friday evening at the home of a fellow physician in New York, where he had just read a paper on "Oral Sepsis." He was born in Worcester, Mass., in 1846, and graduated from Harvard in 1868. Three years later he took his medical degree from the College of Physicians and Surgeons. In 1905 he became joint editor with Dr. N. B. Potter of "Sahli's Clinical Diagnosis." He was president of the Association of American Physicians, 1906-'07; a member of the American Medical Association of New York, the New York Academy of Medicine, the American Museum of Natural History, and a trustee of the Children's Aid Society.

Drama

It is perhaps futile to argue against an obsession, and one marvels at the patience with which the late Andrew Lang, in his "Shakespeare, Bacon, and the Great Unknown" (Longmans), has unravelled the contradictions and absurdities of the Baconian heresy. The book, which was the last from its author's pen, is dedicated to Dr. Furness, "in memory of an old promise." It was in type at the time of Lang's death, but he had had no time to correct even the first proofs. Nevertheless, there is no reason to believe that he would have made any material changes in the work. It is carefully reasoned throughout, and we have observed no inaccuracies in the citations. The book takes the form, in the main, of an argument against the works of G. G. Greenwood, who, while rejecting the general supposition that the actor, William Shakespeare, was the author of the plays, neither affirms nor denies that they were the productions of Bacon. He is content to regard them as the work of a Great Unknown, whose features, however, in the later developments of his theory, come to bear a singular resemblance to those of Bacon. The particular sect of heretics whom Greenwood represents is dubbed by Lang "the Anti-Williams." The whole thing seems to us, in Lang's phrase, "like the dream of a child," and we rather wonder that he should have been willing to give so much time to its refutation. He takes up, however, *seriatim*, the usual empty objections which the Baconians have urged against the Shakespearean authorship of the plays, and which, for the most part, are based on a complete disregard for the differences that distinguished the Elizabethan age from our own—especially in matters pertaining to education and authorship. One of these objections, by the way, we heard advanced a few years ago by a fervent Baconian, the old sexton of St. Michael's (near St. Albans), where Bacon lies buried—namely, that no mere player could have had the knowledge of kings and noble personages which the plays exhibit. But, as Lang observes, Shakespeare's characters, drawn from such circles, show nothing of the tone and manners of courtly society that is not purely poetic and conventional.

A large part of Mr. Lang's book has an interest aside from the particular controversy with which it is connected—for instance, the observations on Shakespeare's classical knowledge, such as it was, and the means by which he acquired it; also on the meagreness of tradition concerning the poet in the late seventeenth century, which, as our author remarks, is nothing out of the ordinary. Especially important are the pages that relate to Greene's famous attack on "Shake-scene" in his "Groatsworth of Wit," and to the preface of the First Folio edition of the plays. Contrary to the common interpretation, Lang denies that Greene makes any reference in the above-mentioned passage to Shakespeare's employment of revising the plays of other men, the dramatist's grievance being merely that an actor who put forth great pretensions as a playwright was now about to deprive of their occupation the authors who, although not actors themselves, had hitherto supplied the companies with plays. As regards the First Folio preface (which he is inclined to accept as Ben Jonson's work), Lang defends the editors from the charge of any intentional untruthfulness in their declaration as to the "divers stolne and surreptitious copies" (of the plays) which they now offer "cur'd and perfect of their limbes." We would call attention also to the plates (page 180) of the Carew monument, in the church at Stratford, as it actually is and as it appears in Dugdale's "History of the Antiquities of Warwickshire" (1656). The comparison brings out clearly the gross inaccuracy of Dugdale's illustrations. The point is of importance, since Greenwood has made much of the discrepancy between the Shakespeare monument at Stratford, as we see it to-day, and the representation of it in Dugdale's work, the poet in the latter appearing, as Lang remarks, "a gloomy hypochondriac or lunatic, clasping a cushion to his abdomen." Altogether, it is evident from this book that the hand of the author had not lost its cunning up to the end.

Failures continue to be frequent on the London stage, and some of the theatrical writers complain of the fickleness of public taste, but a simpler explanation of the trouble seems to be that only a small proportion of recent productions have had any substantial merit. Plays of good quality do not often lack patronage. Not a critic was very enthusiastic over "The Inferior Sex" at the London Comedy, and it is not altogether surprising to hear of its withdrawal after a run of two weeks. It has been replaced by John Galsworthy's "Strife," with Norman McKinnel once more in his old part of John Anthony.

Ethel Irving has encountered bad luck in her first experience in management at the London Globe. Her opening piece, the "Vanity" of Ernest Denny, has come to speedy grief. She is replacing it with a revival of the "Lady Frederick," of W.

Somerset Maugham, one of the most popular of recent comedies. It is five years since this piece was seen in London, so it will return with a certain amount of freshness. Miss Irving has played the title part nearly five hundred times. She will be supported again by C. M. Lowne and several of her former associates.

It appears that Rudyard Kipling's play, "The Harbour Watch," just produced in the Royalty Theatre, London, has nothing to do with his story, "The Bonds of Discipline," although several of the principal characters of the latter are reintroduced in new conditions.

Miss Horniman's company, from the Gaiety Theatre, Manchester, will begin a three weeks' season in London at the Court Theatre on Monday, May 12. Performances of the following six plays will be given: "The Whispering Well," by F. H. Rose, with music by J. H. Foulds; "Jane Clegg," by St. John G. Ervine; "The Pigeon," by John Galsworthy; "Nan," by John Masefield; "Elaine," by Harold Chapin, and "Prunella," by Laurence Housman and Granville Barker. Several one-act plays will also be given, some of them for the first time.

In a letter to the London *Times*, Sir Herbert Tree writes:

In reference to the Censorship debate, it seems to me that the resolution passed in the House of Commons (in favor of the abolition of the Censorship) was one of pious misapprehension of the conditions that govern the theatre. It is precisely because we desire freedom for the drama that we prefer the intelligent autocracy of the Lord Chamberlain to the inevitable tyranny of a mob-led "common informer." This opinion is, I believe, held by nearly every manager in the United Kingdom, by the vast majority of actors, and by many of our distinguished authors. Were the stage to be subjected to police interference after production, there would be no end to the indignities and inconveniences to which authors and actors would be exposed. Innumerable self-appointed censors would arise, who would add a new terror to a first night at the theatre. Such a state of things would necessarily render managers more timid in the presentation of plays. At present, the responsibility is thrown upon the Lord Chamberlain. It may be that injustice has been done in past times in the administration of the Censorship, but there is good reason to think that a wider and more tolerant policy obtains in the Lord Chamberlain's office of to-day, and among the permanent officials of that department. And assuredly epicures who prefer their drama "high" are catered for by private societies, under whose auspices such plays can conveniently be heard *in camera*.

Music

The Interpretation of Piano Music. By Mary Venable. Boston: Oliver Ditson Co. $1.25.

The Growth of Music. By H. C. Colles. New York: Henry Frowde.

When Richard Wagner wrote that "music is inconceivable without melody" he little suspected that thirty years after his death there would be active several prominent composers who virtually taboo melody. While professionals are paying some attention to these cubists in the tonal world, music lovers go on enjoying the melodious inspirations of the classical and romantic masters. Nay, not content with relishing the more obvious melodies, they seek more and more for those that are entangled contrapuntally. How to Find a Hidden Melody is the title of the most important chapter in Mary Venable's book. With the aid of excerpts from various compositions printed in such a way that the notes that should be emphasized stand out conspicuously, she gives many valuable hints as to correct and interesting musical readings. All musical notation is merely suggestive, leaving much to read between the lines, and what adds to the uncertainty is that the printers have often been careless in regard to following copy. "I have passed no less than the whole forenoon, as well as yesterday afternoon, in correcting these two pieces, and I am actually quite hoarse from stamping and swearing," Beethoven once wrote. But even when carefully corrected, the printed music leaves many riddles unsolved. Liszt, Tausig, Bülow, Busoni, and many others have done much to elucidate the problems of interpretation, and Dr. Riemann worked out an entirely new system of marks for phrasing.

All these things are discussed fully in "The Interpretation of Piano Music," a particularly instructive chapter being the third, in which it is shown how correct playing of piano music could be helped by using the bowing signs employed in compositions for the violin. No less valuable is the chapter on Orchestration at the Pianoforte, one of the innumerable innovations the musical world owes to Liszt. While Chopin exhausted the idiomatic possibilities of the piano, Liszt went beyond him in making it a miniature orchestra. "When uncertain how to interpret a piano passage, it is often helpful to think of it as rendered by the orchestra," says the author; and the editions of D'Albert, Bülow, and others often contain directions like these: "Here imitate the tone of a flute"; "imitate the sound of harmonics on the harp"; "like a brass band"; "quasi-clarinetto"; "sound C—F shrill like a trumpet call here; at *b* like a drum beat."

For the procuring of such effects a thorough mastery of the use of the pedals is necessary, and to these, therefore, a long chapter is devoted, with copious references to the labors of others in this field. Every conservatory girl now knows the utter absurdity of the remark of Moscheles that "a good pianist uses the pedals as little as possible." Rubinstein, on the contrary, declared that "the pedal is the soul of the piano," indispensable at every moment; while Chopin declared that "the correct employment of the pedal is a study for life." In speaking of Chopin's tempo rubato, the author refers to Paderewski's chapter on it, in "Success in Music," as the most scholarly discussion of this subject which has appeared in print; yet she repeats the ludicrous old notion that "there should be no rubato in the left hand"—a notion which Paderewski utterly demolished in that chapter.

Admitting that "musical history cannot be taught from a book," Mr. Colles nevertheless has written a history of music. It is, however, a book of only 160 pages, and no attempt is made to include all of even the great names of men and works. A small selection has been made of a few of the salient works by a few of the greatest men, and the author tries to trace the growth of musical technique by means of them. Except in the early chapters, those works chiefly are discussed which people are likely to hear at concerts, in church, or at home. A useful feature of the book is an appendix to each chapter in which reference is made to cheap collections of songs or pieces illustrating the styles of different epochs and countries. The book as a whole is suggestive, and not difficult to read.

One of the most interesting events of the past season was the concert given at the Metropolitan by Arturo Toscanini. There was much curiosity to know whether he would be equally satisfactory as a conductor of symphonies and tone poems. Reports from abroad as to his activity in concert halls differed; some spoke of brilliant successes, others of disappointments. His Metropolitan concert certainly was a disappointment. His conception of Wagner's "Faust" was superficial; it lacked gloom as well as depth. Strauss's "Till Eulenspiegel's Merry Pranks" was, under his bâton, neither brilliant nor humorous; it was simply commonplace. The only satisfactory feature of the whole concert was the last movement of Beethoven's ninth symphony. In this he had the advantage of a trained choir, with the aid of which he gave one of the most stirring performances of that great movement ever heard here. But the three purely instrumental movements preceding it were read without any proper regard for the tempo.

Puccini recently travelled all the way from Pisa to London to witness the revival of "The Light That Failed." He wished to see if it would be suitable for operatic purposes, and, if so, if he could get Mr. Kipling's permission to use it. After the fall of the curtain he had a chat with Forbes Robertson, "to whom," says a London journal, "he communicated the particularly interesting fact that he had five new operas to be produced shortly." This statement, the writer adds, "will be welcomed with enthusiasm by musical amateurs." Skepticism is perhaps a better word than enthusiasm. Inasmuch as six years elapsed between the composition of "Madama Butterfly" and "The Girl of the Golden West," it is not likely that Puccini has since 1910 composed five new operas.

The most popular of all concertos for the violin is Max Bruch's, in G minor. It

quickly surpassed even the favorite one by Mendelssohn. The manuscript of this concerto is for sale, for $5,000. Dr. Bruch is seventy-five years old, and his circumstances border closely on poverty. A committee, headed by Constantin von Sternberg, and including many other prominent musicians, has been formed for the purpose of purchasing this manuscript and presenting it to the Congressional Library, in Washington. Contributions may be sent to Andrew Wheeler, jr., general treasurer, No. 1608 Market Street, Philadelphia.

Felix Leifels announces that for next season he has arranged a trip for the New York Philharmonic Orchestra which will take it as far west as San Francisco. The tour begins in Chicago on April 12, 1914. After playing in Des Moines, St. Louis, and Kansas City, the orchestra will visit Texas, and then head for the Pacific Coast, returning by the Northern route. This will be the longest tour ever taken by the organization. In some of the cities to be visited the orchestra will take part in music festivals.

Julius Hopp has made arrangements with the Palace Holding Corporation, conducting social centres in Newark, Philadelphia, and Brooklyn, with offices in New York city, to give symphony concerts in those cities in coöperation with that corporation, which owns large halls in the three cities mentioned. Popular-priced orchestral concerts are to be given in Newark, Philadelphia, Brooklyn, and New York in connection with the halls owned by the Palace Holding Corporation.

New York is no longer the only city in the world excepting Bayreuth that has had public performances of Wagner's "Parsifal." Zurich produced it a few weeks ago. Zurich is not a very large city, and there were shortcomings in abundance, but the audience enjoyed it immensely.

Art

Italian Bronze Statuettes of the Renaissance. Vol. III. By Wilhelm Bode. London: H. Grevel & Co.

Die Anfänge der Majolikakunst in Toscana, etc. By Wilhelm Bode. Berlin: Julius Bard.

All lovers of Italian art will be grateful for these two books. In regard both to text and to illustration they are splendid guides in special fields of art that have only recently come to be known and appreciated by students and collectors. One of them, the third volume of "Italian Bronze Statuettes of the Renaissance," finishes a publication which was started by the author some years ago, at a time when the interest of collectors in Italian bronze statuettes, largely awakened through his efforts in acquiring important pieces for the Berlin Museum and the collections of some of his friends, had hardly begun. On the appearance of this last volume of a pioneer work, we find that many of our own American collectors have developed a taste for these charming decorative works, which may be said to have the same relation to the large sculptures of the masters as sketches have to finished paintings. The gathering together of an important collection of Renaissance bronzes by Mr. Morgan has been the work of but a few years. And there has just taken place for the first time a public sale of a small but well selected collection of bronze statuettes, that of Mrs. Lydig. When a new class of art objects makes its appearance in the auction-room it is a sure sign that the public is beginning to appreciate its value.

This third volume treats of the great Florentine and Venetian masters of the sixteenth century, Giovanni da Bologna and his large school, Jacopo Sansovino, Alessandro Vittoria and others. The classification of the followers of Giovanni da Bologna, the relation to the Italian sculptors of some of the northern artists who came to work under Giovanni, the segregation of similar works by Sansovino and Vittoria, are some of the problems which the author sets out to solve with his usual sagacity. It is interesting to note that examples belonging to American collections have been drawn upon for the illustrations. From our Metropolitan Museum the large Madonna by Jacopo Sansovino, the purchase of which, four years ago, was the starting point of an already important collection of bronze statuettes, is reproduced.

Dr. Bode was the first to call the attention of the art world to this field, and it has remained almost exclusively his. He has been the great authority to which most of the bronze statuettes of the sixteenth century which have come into the market within the last years and which have commanded high prices, have been referred before they have been sold. The Italians who used to be so sadly behind in the scientific study of their own art, have still done no research work on their bronze statuettes. A few younger men in Germany, a few in Austria, especially Schlosser, of Vienna, and in England Maclagan, who made the catalogue of the exhibition of Italian sculptures at the Burlington Club last year, are about the only ones who have followed Dr. Bode's lead.

It is rare to see a man who is no longer young, and whose life is full of discoveries, able to keep up so splendid an interest and so searching a curiosity in new fields of art. Together with the last volume of his work on Italian bronzes, he has issued a book on the early Italian majolicas. Students of ceramics had felt that the highly praised majolica of Urbino, Faenza, and other manufacturing centres of the sixteenth century was decorated in a way which, although admirable in design, color, and technique, was after all hardly suitable to articles of glazed earthenware intended largely for everyday use. It was the work of artists who were trying to achieve results which can only be achieved in painting by imitating the portrait and fresco painters and by covering plates and dishes all over with representations of elaborate mythological and allegorical scenes. The tendencies of the late Renaissance artist who aimed at the close imitation of nature and thus began what we may call photographic realism in art, were further developed by the seventeenth-century masters of the Barocco style, whose work is much less valued to-day than it was fifty years ago. In the field of painting, modern collectors in their appreciation of the art of the primitives respond to the taste, to the ideas, the sympathy of our own time. With the true scholar's instinct Dr. Bode felt from the first that the appreciation of Italian majolica would parallel the appreciation of Italian painting, and for the same reason. That he was right is proved by the fact that of late years the hitherto unknown Italian majolica of the fourteenth and fifteenth centuries has come to be greatly valued.

The book has an admirable historical introduction, with authoritative presentment and discussion of the subject. The illustrations, with their descriptive captions, will be easily understood by the English-speaking reader and prove extremely instructive. Such remarkably successful reproductions are rare in scientific works; many of them are in color, and all are revelations of the early phases of the art, especially of Florence, but there are also some Carolingian examples. The simple shapes and colors of this early ware have made it possible to get colored reproductions which are artistic and at the same time so thoroughly faithful that not only the color, but the very texture of the pottery is given. Some of the reproductions are from private collections, Dr. Bode's own wonderful collection, and that of Figdor, of Vienna. Dr. Bode has generously presented a few pieces of his early fifteenth-century majolicas to the Metropolitan Museum.

"Fifty Paintings by George Inness" (F. F. Sherman, $20 net) is a companion volume to Elliott Daingerfield's memoir of Inness, and, like it, is handsomely made and limited to 300 copies. The illustrations are collotypes of good execution, and the catalogue indications on the guard-papers are limited to title, date, ownership, and dimensions. There is a brief introduction by Mr. Daingerfield. This album possibly does not stress adequately Inness's work of the late sixties and seventies, but it affords admirable material for the study of his mature style. The book would be much more useful if provided with the usual text of a *catalogue raisonné*, and at the price this service might properly be expected.

Finance

THE "EUROPEAN WAR ARGUMENT."

A week ago our financial markets, after having brooded disconsolately for a month or more over troublesome factors in our home situation, suddenly lapsed into a state of renewed alarm over European politics. This state of mind began on Tuesday of last week, which opened with a dispatch, quoted from the London *Daily Mail's* Vienna cable, to the effect that the Austrian Government had decided to take into its own hands the expulsion of the Montenegrin troops from Scutari. The day ended with another dispatch from London, reporting that the Austrian army was moving in force towards the Montenegrin frontier.

In the interval, foreign government bonds and other securities had fallen on Europe's stock exchanges, and prices had broken under heavy selling in New York. Wall Street went home rather expecting to read in the next morning's papers that the Austrian regiments had crossed the border; that Germany had declared the necessity, under the Triple Alliance, of supporting Austria; that Russia had announced its decision not to tolerate armed interference with a Slav state; and that France was preparing to call out its reserves on the frontier of Alsace.

But not one of these expectations was fulfilled. The foreign dispatches in Wednesday morning's newspapers seemed to prove conclusively that the conference of the neutral Powers was holding steadfastly together, acting unitedly in the common interest. On Thursday, European stock exchanges were closed for a church holiday, and Wall Street, left to do its "reflecting" single-handed, indulged in a fairly active stampede of "bear covering."

Europe's markets on Friday morning responded somewhat more hesitantly than had been expected, and, in addition, there began to circulate, on all the European markets, those carefully concocted alarmist dispatches, coming no one knew from where or on what authority, but keeping alive the apprehension that, despite the London assurances that the Powers were standing together and Montenegro yielding, nevertheless the Balkan Highlanders might refuse to leave Scutari unless dislodged by force, or that Austria might do so foolish a thing as to march across the border in the midst of the peaceful negotiations.

All this represented a familiar stage in the critical last arrangements of diplomacy, and on Monday of the present week, as there was every reason to expect, an official announcement came that the King of Montenegro had yielded to the Powers and agreed to surrender Scutari. But the mere fact that apprehensions should have reached such a pitch brought up again the question, What would have been the actual outcome, on the markets and elsewhere, if the worst of last week's misgivings had come true? This is not in all respects an easy question to answer. For one thing, no one can surely say how far the decline on the foreign stock exchanges since the first week of October, the withdrawal of capital from the market, the hoarding of cash by the Continental people, the rise in European bank rates, and the world-wide stringency of money, were themselves the "discounting" of such a possibility—as a result of which, the event would not be received with all the financial agitation which belongs to it.

It may not be uninteresting to take a look at precedent in such a matter as a war between first-class European states. It is forty-two years since war has occurred between such Powers. Since 1871, Russia has fought Turkey, Turkey has fought Greece, Spain has fought the United States, England has fought the Boers, Russia has fought the Japanese, Italy has fought Turkey, and the Balkan States have crushed the Ottoman Government. In many of these conflicts, one really great European Power was engaged; in none of them have two such Powers been drawn in. Therefore, it may be interesting to inquire what happened, marketwise, at the actual outbreak of the Franco-Prussian War in 1870.

That war, which was actually declared in the middle of July, was unlike the great majority of such international conflicts, in that it came almost without warning. No European stock exchange was hinting at such a thing, three weeks before Napoleon III declared war. On June 30, the French Premier, Ollivier, said to the Deputies: "In whatever direction we turn our eyes we see no irritating question in dispute, and never at any time has the maintenance of peace in Europe been better assured." On the first day of July the New York papers were discussing as a joke the fact that the Spanish crown was being offered in vain to a succession of non-Spanish princes. Only at the end of the first week in July, when the Duc de Grammont, commenting on the report that Prussia's candidate had been accepted by the Cortes, declared that the French Government would never consent to a Hohenzollern candidate, did the foreign offices hear of possible impending trouble.

On July 15 the war broke out. Thus it was fairly a bolt from the blue. There was a panicky break on the stock exchanges; British consols fell 5 points, other European government bonds as much as 10 or 11. In a fortnight the Bank of England rate went up from 4 per cent. to 6, the Berlin Bank rate to 8, and on August 13 the Bank of France suspended cash payments on its notes.

Yet that was all. As soon as it became clear that Great Britain would not be drawn into the conflict, the Bank of England in two weeks reduced its rate from 6 to 4½. The New York Stock Exchange, after its first panicky break in the middle of July, grew calm again, and business went on as usual. An export of $15,000,000 gold to Europe only temporarily disturbed the situation, and the autumn New York money market, in the words of a contemporary market reviewer, "maintained a degree of ease quite remarkable for this season of the year."

The moral of this latest modern instance is just a bit difficult to draw. We should actually have an advantage over 1870, if war were to break out now, in that such an event has been "discounted" this year, as it was not then. Against this consideration stands the vastly greater cost of war to-day. Yet that also might be offset by the fact that nowadays, even in war, the world is accustomed to "think in hundreds of millions" where it thought only in millions during 1870.

A PREFACE TO POLITICS

by

WALTER LIPPMANN

THIS book is an attempt to sift and enrich the reform enthusiasms of our time, to give them the background of a critical philosophy, and to illumine them with the modern spirit. "We live," says Mr. Lippmann, "in a revolutionary period and nothing is so important as to be aware of it. The measure of our self-consciousness will more or less determine whether we are to be the victims or the masters of change. Without philosophy we stumble along. The old routines and the old taboos are breaking up anyway, social forces are emerging which seek autonomy and struggle against slavery to non-human purposes."

$1.50 net

THE CIVIC THEATRE

IN RELATION TO

THE REDEMPTION OF LEISURE

A BOOK OF SUGGESTIONS

BY

PERCY MACKAYE

The Civic Theatre idea implies the conscious awakening of a people to self-government in the activities of its leisure. To this end, organization of the arts of the theatre, participation by the people in these arts (not mere spectatorship), a new resulting technique, leadership by means of a permanent staff of artists (not of merchants in art), elimination of private profit by endowment and public support, dedication in service to the whole community: these are chief among its essentials and these imply a new and noble scope for the art of the theatre itself.

No issue, political or industrial, before the people to-day exceeds in immediate importance or prophetic meaning the problem of public recreation. New, as the voicing of this issue is in the nation, one may yet, with confidence, predict that it will soon rank among the foremost in the platforms of social and political campaigns—and be recognized at the seat of government—for its need is as dire as the problems of industrialism which cause it.

MITCHELL KENNERLEY PUBLISHER, NEW YORK

At the head of the fiction of the year stands

The Amateur Gentleman By JEFFERY FARNOL

A novel that is even greater than "The Broad Highway." "It will be surprising indeed if it does not prove to be one of the greatest works of fiction produced in modern times." —*Springfield Union.* $1.40 *net. Postpaid,* $1.52

"EVERYMAN'S LIBRARY," says the *New York Times,* "marks an epoch in the publishing of books. At one-fourth the price of the average novel it is possible to procure in this library, a volume of the best literature the genius of man has produced, printed on excellent paper, in easy readable type, and bound in a form and fashion that is at once convenient and esthetically pleasing. This is, of course, high praise, but the standard set from the beginning and so admirably maintained calls for nothing less."

Practically every volume required for the supplementary reading of a very comprehensive course in the history of English literature is to be found among these attractive volumes. They cover every department of literature, and each volume has been supplied with whatever introductory matter the reader is liable to need. The student who does not acquire a love of good reading by the time he leaves college may be a good business machine, but not a "full man," and he cannot be helped to it more easily than by making him acquainted with the golden list of this incomparable Library.

All Teachers are invited to send for the complete classified list, with descriptive notes, of the 640 volumes now ready.

MANUAL FOR TEACHERS
274 pages, cloth, 60 cents a copy

A new book built on new lines, approaching the subject from the content rather than the formal side. It recognizes the fundamental principles in the training of young children by first filling the sources from which it is attempted to draw.

Retrospections of An Active Life
By JOHN BIGELOW

Now Ready
Volume IV, 1867-71; Volume V, 1872-79

THESE two volumes complete one of the richest records of public life in American annals. John Bigelow, whose death in 1912 closed a career of ninety-two years, was unquestionably one of the most interesting figures in recent American history. In the first three volumes of this work he described his home life in Malden, his education, early law and literary work, his association with Charles O'Conor, John Van Buren, Samuel J. Tilden, Preston King, Charles Sumner, Fitz-Greene Halleck and others, his editorial services on the New York *Evening Post,* of which he was one of the proprietors, and his association with William Cullen Bryant, its editor. His first trip to Italy and England is described.

In these two concluding volumes Mr. Bigelow brings his record from 1867 to 1879—that after-the-war period which is one of the most vital through which the nation has ever passed.

DEVOTED TO THE SCIENCE OF RELIGION AND THE RELIGION OF SCIENCE

FOUNDED BY EDWARD C. HEGELER *$1.00 yearly; 10c. single copy*

CONTENTS FOR MAY

THE RELIGION OF BIOLOGY; Its Truth and Its Superstitions. Count Goblet D'Alviella.

The indestructible character of life must be explained morally as well as mechanically. Statistics are no less eloquent when they establish the fact that the generative powers of man are decreasing and that the cerebral power is increasing.

THE CALL OF SCIENCE TO THE CHURCH. H. E. Jordan.

The church has put too much emphasis on the future life and has not taken into account the things of this world. Progress means change and the church stands still. Eugenics, the new science, offers the church her greatest opportunity.

THE SPIRITUALITY OF THE EAST AND THE WEST. Stanwood Cobb.

Every one of the great world religions has arisen in the East and had its conception in the mind of an Oriental. The East is ever striving for mastery over mind. The West is ever striving for mastery over matter. Either without the other is but half right.

THE NICHIREN SECT OF BUDDHISM (illustrated), T. J. Kinvabara.

Among the Buddhist sects in Japan, this one here described has a great following, and is distinguished by zeal and missionary spirit.

TALES WITH PHILOSOPHICAL MORALS. Philip E. B. Jourdain.

A search for the Absolute may indeed be fit cause for tears, as proved in the story of peeling an onion.

THE SPIRITUALITY OF THE OCCIDENT. Paul Carus.

The higher ideals of Western civilization do not counsel submission to God, but rather courageous effort to build up a nobler life through deeper comprehension of the laws of nature.

CHRISTIANITY AND THE NICHIREN SECT OF BUDDHISM. Paul Carus.

The teachings of Nichiren combine the best of Christianity and Buddhism into one great harmonious religion.

Book Reviews and Notes.

Paul Elmer More's
THE DRIFT OF ROMANTICISM

"It is seldom, indeed, that we find so keen a vision of the sources, interrelations and ethical tendencies of writers seemingly so dissociated and yet in fact radically connected as furnish the themes for the essays that make up this remarkable volume. . . . The attention of all who are qualified for such study will be held unflagging to the end."—*The Churchman.*

"Mr. More sums up the thoughts he has developed in this book, and these reflections on life and literature are remarkable for their force and their beauty of expression."—*San Francisco Chronicle.*

"To many minds his book will bring that peculiarly intimate sense of conviction which seems to flow from an immediate recognition of soundness and sanity. If any are inclined to quarrel with his philosophy as dogmatic, they cannot, at any rate, fail to value his uncommon sincerity and clearness of thought. The Drift of Romanticism is a profound book, but not an obscure one; it is suggestive without being responsible."—*The North American Review.*

HISTORY AS PAST ETHICS
An Introduction to the History of Morals
By Philip Van Ness Myers

A Review:

"This book completes a series of historical text-books approved in more than thirty years' use for their balanced judgment and lucid eclecticism. It is designed for advanced classes, but will appeal strongly also to the well-informed reader for the new co-ordination that it supplies to the main facts of world history. The development of ethical ideals is traced from the dawn of consciousness in the kinship group to the evolution of morals under democracy."—*The Churchman, April 12th*, 1913.

LETTERS AND MEMORIALS OF
Wendell Phillips Garrison
Editor of The Nation, 1865-1906

In one volume, crown 8vo, 300 pages, with photogravure portrait.

During the forty-one years in which he edited the *Nation*, with a thoroughness, ability, and conscientious devotion unsurpassed in the records of American journalism, Mr. Garrison was an indefatigable correspondent, never employing an amanuensis, but writing tens of thousands of letters with his own hand to his contributors, who embraced practically all the leading American scholars and critics of the period. From a dozen groups of these, which have been kindly loaned by the recipients, a sufficient number of selections has been made to illustrate the relations between Mr. Garrison and his great corps of contributors, the frankness and tact which he exercised towards them, and the wide range of his interests, tastes, and sympathies. The volume also contains a brief sketch of his life, a dozen of his best poems, and several of his characteristic editorials, reviews, and essays, besides a fine photogravure portrait.

Price, $1.50 net postpaid.

SMALL, MAYNARD & COMPANY, Publishers, 15 Beacon St., Boston

The Nation

NEW YORK, THURSDAY, MAY 15, 1913.

The Week

President Wilson's decision to proceed with a currency bill at the extra session of Congress has much to commend it as bold political strategy. It is striking while Congress is hot. The President's prestige and influence are now great, and evidently it is his plan to throw them behind the movement to procure reform of our banking and currency laws at the earliest possible date. It is to be hoped that success will crown his courageous tactics. But everything will depend upon the bill itself. We ought not to make haste at the risk of stumbling. A had or even a makeshift measure would be worse than further delay. It is a laudable ambition in the President to move forward swiftly with this important matter, with which the Republicans have only fumbled for years, but it is better to be slow than to be sorry. Everybody will eagerly await the publication of the terms of the bill. If they are not sound or satisfactory, they will certainly not appear to be of the nature of the king's business which requireth haste.

Whatever else the Senate does with the Tariff bill, it ought to strike out the section providing for a "discount of 5 per centum on all duties imposed by this Act . . . on such goods, wares, and merchandise as shall be imported in vessels admitted to registration under the laws of the United States." The Senate is, or ought to be, the special guardian of treaties, which it helps to make the supreme law of the land; and the provision cited is in flat violation of our treaties of commerce with several nations. The binding nature of these treaties is squarely admitted by the Tariff bill itself. In another section it provides for a discriminatory duty of 10 per cent. on goods imported in foreign vessels; but at once adds that this duty shall "not apply" in case those vessels are "entitled by treaty or convention or Act of Congress to be entered . . . on payment of the same duties" as those imposed on goods imported in ships of the United States. But some over-ingenious person seems to have imagined that there is a difference between a discriminating duty on foreign ships and a "discount" in favor of American ships. It appears to have been thought that the treaties provided merely against the former. It is obvious, however, that the two things are logically the same. Moreover, the treaties shut out any such verbal distinction. For example, our treaty with Great Britain stipulates that "the *same* duties" shall be paid on goods in British vessels as in American. The trick of saying "discount" instead of "discriminatory duty" is clearly ruled out by that. This the Senate must easily see. It should without ado strike out the treaty-violating section.

The President's nomination of Mr. John Purroy Mitchel ends the long deadlock over the New York Collectorship. Although Mr. Mitchel does not stand so high in public estimation as before the final struggle over the subways, few will deny that he has rendered services of solid merit to the city. His presence on the Board of Estimate has been of great value on more occasions than one, when he, Mr. McAneny, and Mr. Prendergast, voting together, insured many of the notable advances of the city government during the last three and a half years. Nobody has dared to impugn his honesty of purpose, and nobody ought to forget his admirable service, notably in the cleaning up of Coney Island during the brief period when he was acting Mayor. His administrative and investigating experience as Commissioner of Accounts will stand him in good stead in the Custom House, where we expect to see him make a good record. As for the politics of it, Senator O'Gorman claims a personal victory. Tammany is reported disgusted; but the disgust is not created, we are sure, by the thought that this probably removes Mitchel from the Mayoralty contest. Best of all, however, is the fact that Tammany still finds itself unable to point to a single nomination to office by Mr. Wilson as proof that he has "recognized" it.

When some of the four thousand other bills that have been introduced in the California Legislature are examined, the one aimed at the Japanese ceases to look so queer. One begins: "To eat, to work, and to be recompensed for enforced idleness is hereby declared to be the inalienable right of every man, woman, and child in this State." It ends by conferring upon the Governor authority to appoint a "citizen of this State to be designated as the Commissioner for the Abolishment of Poverty." On its face, this benevolent measure applies to aliens ineligible for citizenship along with the rest of the inhabitants, but there must be enough patriotism at Sacramento to obtain an amendment that will exclude all such persons. Endless State boards are proposed, including one to examine and certify all candidates for the profession of barber, and another to do the same for "chiropractors." One member was goaded into remarking that the Legislature was attempting to regulate everything but the birth-rate. He must be a reactionary. What is wrong with a bill giving school boards power to regulate the dress of school children, and to establish uniforms for them? Or one to create the office of Bee Commissioner, to care for the State's bees? Or another making it a misdemeanor to keep any bird in a cage less than three feet square? Or one providing that soldiers who do not like the fare at the Veterans' Home may have a pension and live where they please? Was Armageddon fought and won—in spots—for nothing?

Inadequacy of census returns is brought home by their treatment of Indiana. The leading products of that State are books and politicians, but the enumerators say almost nothing about either of them. Yet what literature, in the person of Meredith Nicholson, is saying about politics, as represented by certain Democratic leaders, is more entertaining than a library of statistics. "The beer," declares this author, "must be squeezed out of the Democratic party in Indiana before it can measure up to the national standard. The two most pernicious figures in Indiana politics," he continues, "have been the sinister and atrabilious Crawford Fairbanks and

the ingratiating and oleaginous Stephen Fleming." A more noted personage receives this characterization: "Mr. Taggart is the most interesting, the most puzzling, and the most maddening of Hoosier mortals. He is as unaccountable as he is winning and charming." Mr. Nicholson refuses to believe that the winning but maddening Taggart has any real interest in the election of the Fairbanks candidate for Mayor of Indianapolis, despite his public appeals. However this may be, the literary man's entry into the campaign ought to increase enormously the difficulties of Mr. Bell's nomination. Hoosiers respect a man who can write books.

Secretary Bryan's speech at the dinner of the peace conferrees on Friday evening contained a fuller explanation than he had before given of his plans to prevent war. He speaks of them, not as his own plans, but as those of President Wilson; indeed, the idea underlying them has often been put forward. It is, in brief, that all nations shall bind themselves by treaty never to begin hostilities without first having taken time and provided the machinery for an impartial inquiry into the merits of any international controversy threatening war. What is sought is a breathing-space, during which inflamed passions may subside. This seems an obvious and rational method, but many have smiled at it, in a superior way, as fanciful. They refer to it as one of those happy thoughts of the novice which old hands will at once dismiss as impracticable. But the said old hands should not overlook the very favorable reception which Mr. Bryan's proposals have received, abroad as well as at home. Both private and official opinion in Europe has given him wide endorsement.

A Brazilian Government loan of £11,000,000, offered last week to the English investment public on what were relatively very inviting terms, failed to attract subscribers. Although bearing the interest rate of 5 per cent. and offered at the price of 97, only one-tenth of the bonds were taken by outside investors, the balance being left on the hands of the underwriting bankers, among whom were the Rothschilds. The Brazilian bonds were perhaps not the very highest grade of securities, and the loan was large; but the incident followed another in which £2,500,000 4 per cent. bonds of the Southern Mahratta Railway, guaranteed principal and interest by the Indian Government and therefore an absolutely safe investment, similarly attracted only 10 per cent. in public subscriptions. It brought to mind the offer in our own market, a month ago, of $30,000,000 4½ per cent. bonds of the Chicago, Milwaukee & St. Paul Railway at 99½, which resulted in the taking of only some $24,000,000 by investors. Furthermore, it directed great interest and conjecture to the forthcoming application by the Chinese Government, on the various European money markets, for £25,000,000, and to New York city's offer, on Tuesday of next week, of $45,000,000 new bonds bearing 4½ per cent.

There have been various explanations for this seeming reluctance of the investing public, in this country and in others, to subscribe to such new securities. There are those who believe that the average rate of return on invested capital has permanently risen, in response to well-known economic influences, and that the present market is merely going through a process of adjustment to the new conditions—a process which had been postponed by the recent prevalent recourse to temporary and short-term borrowings. On the other hand, an equally strong consensus of financial opinion holds that governing circumstances in the money markets of the day are altogether peculiar and are not permanent in character. This argument is based on the fact that Europe's investment markets have, through fear of a possible general war, reproduced all the economic symptoms which would have accompanied the war itself. Nations like France and Germany are planning to impose for military purposes, through taxation or new public loans, almost as heavy a burden on capital as would have followed outbreak of hostilities. Meantime, the people of the Continent, either through fear of war or through anticipation of these loans, are still hoarding actual money on a scale perhaps never previously witnessed in our time. With the intimate relations prevailing between the different parts of the modern financial world, such a state of things in Europe inevitably affects the American market also—both because we are thereby cut off from the accustomed participation of Europe in the purchase of our own new securities, and because our home bank resources are actually drawn upon to help out the foreign money centres.

Is the work of extirpating tuberculosis a task primarily for the physician or for the social reformer? A debate on this highly interesting question is summarized by a dispatch from Washington. Dr. W. C. White, medical director of the Tuberculosis League of Pittsburgh, maintained that the chief burden lay with the scientist. The social reformer's activity must be confined to effecting an improvement in housing conditions and food standards, highly important factors no doubt, but by no means the sole factors. Unless we assume that tuberculosis is entirely a disease of poverty, we must still look to the physician for a study of the pathologic elements of the disease—"immunity, heredity, chemistry of lung and tubercle, bacillus, cure, food values, etc." That this is the point of view not only of the man in the street, but of the great body of scientists, is evidenced by the extraordinary interest always aroused by the announcement of the discovery of a "cure" for tuberculosis. Dr. Friedmann may turn out to be all that his opponents think he is. The work of Robert Koch did not realize sanguine expectations. Nevertheless, science is far from denying the possibility of a cure. The search for a remedy is everywhere carried on with unflagging zeal.

Prof. John R. Commons upheld the sociologist's side of the argument. He said:

> Compare a Board of Health with a Bureau of Labor. When a Board of Health determines that smallpox or diphtheria is afloat, it rides over each property right and personal right of the individual. It marks off a dead line of quarantine. It becomes policemen, calls out the militia, declares martial law, sets aside the Fourteenth Amendment. But when a Bureau of Labor finds tuberculosis in a factory or tenement, it comes dead against the vested rights of the owner, the poverty of the occupant, and the Federal Constitution.

And then he went on to suppose the creation of an all-powerful Government bureau for combating tuberculosis, that would "have to go into every home, factory, hospital, and public building," that "would have to touch every prop-

erty and personal interest of the people." The implication is that a Government bureau so empowered would be able to deal successfully with the problem. But what Professor Commons overlooks is that society does not refuse to confer such powers on a public department as soon as it is convinced that their use would show a balance of good achieved over cost. Property interests are not allowed to stand in the way of combating diphtheria and smallpox as soon as there is a clear-cut method of doing it. Let a tuberculosis "cure" be discovered; let it then appear that the specific alone cannot wipe out the white plague, but that social action is essential, and Professor Commons will see the Board of Health or of Labor receiving a free hand in dealing with property interests inimical to the public health.

People may talk scornfully of politicians, but what could we do without them when it came to planning a hall of fame? More than five thousand students and alumni of the University of Wisconsin have been voting upon names of distinguished graduates whose portraits are to be hung where they may inspire others to great achievement. Five of the nineteen chosen are Senators La Follette and Clapp, Gov. McGovern, and ex-Senators Vilas and Spooner. Another is the new Commissioner of Corporations. Literature accounts for half a dozen names also, if under this head may be put the first editor of the *Wisconsin Magazine*, one college journalist, "known for his fight for clean athletics in colleges," and one "orator and dramatist." Indeed, if we reckon in university debating, literature forges ahead of politics. This leaves only three places for athletes, two for physicians, and one for educators—the latter, of course, held by President Van Hise. Wisconsin lawyers of hall-of-fame fame are as scarce as clergymen, inventors, and social workers. The much-heralded relation between this University and the State is thus once more demonstrated.

The Century of the Child is coming on apace. Public school children are on strike in Pittsburgh, in New York, in Boston. A new I. W. W. is among the possibilities of the future—the Infant Workers of the World. The movement was bound to come. In an age that has no interest in the Past, a mere toleration for the Present, and concentrates on the Future, the balance of power must inevitably shift to the only class in the community that is Futurist by definition. It is the final step in a long process of development. Gradually the American parent has transferred his duties and his responsibilities to the schoolmaster. Now that the schools are breaking down, what is there left but for the children to take their fortunes into their own hands? Here and there we find a reassertion of standpat parenthood. The slipper and the palm of the hand are again called upon to assume their ancient regulative functions. But we fear that this is too late. Having tasted of power, the young can never again be expected to remain satisfied with marbles and ring-around-the-rosy. The children are in revolt. Like their elders, they may not know just where they are going, but they are on their way.

The dedication of the Schurz monument in this city adds a rare work of art to the city's treasures. Created by the talent of Karl Bitter, the statue obtains especial significance as the gift of citizens in many parts of the country, who felt impelled to place an enduring memorial to the services of a singularly unselfish and devoted patriot. And it is both natural and proper that Saturday's ceremonies should have emphasized Schurz the German-American. The German Ambassador felicitously quoted Bismarck's saying that, as a German, he was proud of Schurz. We cannot but feel, however, that as time goes on this phase of the man will play a smaller part, precisely as the fact that Albert Gallatin was a foreign-born citizen has been less noted as the decades that separate us from his period of our history have slipped by. Schurz's preeminence as an orator who could speak with equal facility in German and in English, as well as the distinction of his career, made our German-born citizens emphasize their claims upon him whenever opportunity offered. But to study his career is not to feel that he was merely a spokesman of a single element in our citizenship, however useful and valuable that element was. Nor is there the slightest evidence that, after he had really become familiarized with American institutions and our political life, he considered the nation's problems from any other point of view than the American. No immigrant to this republic ever brought greater enthusiasm for it with him or retained that enthusiasm more fervently until the end of his life than Carl Schurz.

In a letter to the directors of the General Electric Company, a stockholder, who is reputed to be a Socialist, asked this question, among others:

> Do you agree with medical and social investigators that overtime and night work are harmful, and therefore interfere with the free pursuit of happiness as defined by the Constitution?

It would be interesting to know where in the Constitution that definition is to be found. But this writer is by no means alone in mixing up the Declaration of Independence with the Constitution. That has more than once been done on the floor of Congress. The framers of the Constitution were far too wise to imagine that "happiness," or even its pursuit, was to be announced as their aim in founding a new Government. What they put to the front was union, justice, domestic tranquility, general welfare, and the blessings of liberty. Those obtained or striven for might or might not result in happiness, but if it is impossible to make men virtuous by legislation, it is folly to think to make them happy by a Constitution.

Exaggerated rumors of a crisis in our relations with Mexico seem to have small foundation in fact. The Mexican Provisional President would doubtless be pleased to get, in full recognition by the United States, a quasi-sanction for the violence by which he climbed to temporary power, but there is no good reason why he should at present have it. Huerta is, of course, recognized by our Government *de facto*. He is at the head of the only Government in Mexico with which we or other nations can do business. That is sufficient for all immediate purposes. To commit ourselves to full acquiescence in the new régime in Mexico might be an embarrassment, since its stability is by no means assured. The conviction is spreading in Mexico and elsewhere that Gen. Huerta's occupancy of the National Palace will not be prolonged.

HOPES BUILT ON A "REACTION."

A chorus of predictions is heard that the enactment of the Tariff bill into law is sure to be followed by a severe political reaction against the party in power. The Republicans in the House freely indulged in the taunt that the Democrats were rushing to their doom. "Yes, you have the votes and can pass the bill, but we warn you that you are only preparing disaster for the country and defeat for yourselves." They might have added that they had known how it was themselves. The McKinley bill of 1890 emptied scores of Republican seats in the House. What the Payne-Aldrich bill of 1909 did to the Republican party, it would be only a renewal of grief to recite. If no such bad luck followed the Dingley bill of 1897, that may have been due to powerful causes operating against the Democratic party at that time—for example, the Bryan currency folly and the Spanish war. With political reaction the general rule, after the passage of a tariff law, why should it not be counted upon as a certainty in the near political future?

We freely admit that it may be looked for. It will not necessarily be traceable to the tariff. All parties newly come to power are subject to the universal law of diminished strength. We invent phrases to explain it—"the swing of the pendulum," and so on—but we all know what the fact is. Party enthusiasm wanes. Dissatisfaction and cliques appear. The country turns its attention to other measures. The Opposition pluck up fresh courage and put forth new energy. The Administration forces tend to crumble. This is the fate which comes to all parties, in their turn, and there is no reason to suppose that the Democrats will escape it. Probably no man less expects that they will than President Wilson. He knows perfectly that even laws which the people demand seldom meet the hopes entertained of them; and that, in any event, popular restlessness, democratic fickleness, the law of change, make against a President or a party in office.

The exact part played by the new tariff in the expected "reaction" will be hard enough to make out even with the facts before us; in advance, no one can be sure. All may be sure, however, that the tariff will be charged with every business misfortune that may occur, in spite of its having nothing to do with it. And it is also certain that if the country should continue to enjoy prosperity, the assertion would be roundly made by protectionists that this is due entirely to other causes. To the scientifically minded and non-partisan student of economics, the great point of interest will be whether the large tendencies at present making business good all over the world—tendencies to which the British Chancellor of the Exchequer referred in his budget speech, and on the strength of which he decided to levy no new taxes—will persist for two or three years to come. If they do, we shall not hear so much, after the event, as we are now hearing before it, about the new tariff prostrating American industry.

Politically, the calamity which the Republicans are confidently forecasting is bound also, they think, to make themselves and the Progressives brothers again. A common disaster is to cause them to fall upon one another's necks—and this time without a knife thrust into the back. Mr. Taft is quoted as being very hopeful that the evil consequences of the Democratic tariff will heal the breach in the Republican party. The Chairman of the National Committee, Mr. Hilles, is stirring; and a conference of Progressive Republicans who refused to be drawn after Roosevelt last year is shortly to be held in Chicago to discuss ways and means of reuniting the party. The "get-together" cry is sounded by many Republican newspapers, in various States, as well as by Mr. Munsey and Dan Hanna, both "angels" of the Progressive party.

It might seem a queer thing to expect the tariff to restore harmony between Republicans and Progressives. The tariff was the rock on which they originally split. The fight of dissenting Republican Senators upon the Payne-Aldrich bill, and their stubborn refusal to vote for it, foreshadowed the larger and more angry division later. If the tariff tore the factions asunder, how can it now join them together? Ah, but that was their own tariff. This is the other party's. They may not be able to agree upon what they would support, but they are heartily in unison as to what they will attack. Such is the theory: the tariff, being passed by the Democrats, is necessarily bad; it will cause distress if not panics; then will follow political upheavals, and of those, we, the Progressives and Republicans, must take advantage in order to make common cause again, and, incidentally, to get back some of the offices. It will certainly be instructive to see how this works out.

THE INCOME-TAX TANGLE.

The income-tax section of the Tariff bill has been adopted by the House with but little change from its original form. Outside the House, it has been subjected to much criticism; but the scheme of taxation which it institutes has met with strikingly little opposition. Although the $4,000 exemption is regarded by many as a serious defect, and although it is realized that a graduated income tax is a new departure in the fiscal policy of the country, it is plain that both these features are accepted by the nation as a whole, including the wealthy classes. Criticism has been directed not against the purpose of the framers of the bill, but against the form in which it has been cast. The defects complained of are of two kinds—one having reference to the draughtsmanship as such, the other to difficulties and objections involved in the requirements of the bill, apart from any question of obscurity or ambiguity. The bill now goes to the Senate. Upon that body will devolve the task of correcting these faults so far as possible. What can be done about the substantive difficulties in the case can only be determined by most painstaking inquiry; but as to the form of the bill, it is just as well to say quite plainly that the only way to make it satisfactory is to recast it altogether.

In presenting the income-tax section to the House, Mr. Hull said:

> Instead of comprising 100 or more pages, containing in detail all the methods of administration, such as European and other laws present, this measure briefly but succinctly prescribes each essential rule and method with respect to the levy, assessment, and collection of the tax, and leaves to be embraced in the regulations to be prepared by the Secretary of the Treasury the manner and details of carrying out the provisions of the law. These regulations will make clear to the taxpayer the scope and application of each feature of the law with respect to every class of taxpayers and business.

Within certain limits this method is quite justifiable. But "each essential rule and method" should be so laid down that there can be no mistake about its

intent on the part of competent persons. Yet in regard to some of the most important of these rules and methods there has arisen great difference of opinion among persons of high expert qualifications and evidently sincere in their desire to get at the meaning of the bill. This is due, we believe, mainly to the extremely involved sentences and paragraphs; matter which an expert bill-drafter could have put in a succession of straightforward sentences dealing incisively with separate points is jumbled together in a tangle of heterogeneous elements. But the trouble is due not wholly to awkwardness of expression, but also in part to want of a clear perception of the matter dealt with.

Throughout the bill there is an attempt so far as possible to "collect at the source" and at the same time to respect the $4,000 exemption. In the case of income derived from interest on corporation bonds it is virtually impossible to combine these two purposes. Accordingly, the bill, as Mr. Hull states in his speech, "requires the tax to be withheld from income derived from interest upon corporate and United States bonds and other indebtedness, even though the income does not exceed $4,000." Yet on the one hand counsel for the Investment Bankers' Association of America, in a brief to the Senate Committee on Finance, say that the language of the bill "seems to us on careful reading to be entirely insufficient for this purpose"; and on the other hand those who do not challenge the interpretation of the language point out difficulties amounting virtually to impossibility in its application. With the question how the engagement of corporations to pay all taxes levied on the principal or interest of their bonds would operate, the framers of the bill do not seem to have grappled at all; and, waiving this point, the question of how the exemption could be made good in the case of coupon bonds obviously thrusts itself forward. Confronted with this upon the occasion of his speech the other day, Mr. Hull floundered hopelessly.

Similar doubts and similar difficulties beset the question of withholding at the source the tax on incomes derived from rents. Here, to be sure, the withholding takes place only in the case of annual rents amounting to $4,000 or more. But owing to the extraordinary way in which a sudden turn of language in the bill is introduced, the question whether or not the bill virtually compels the lessor to disclose to the lessee the particulars of his income appears to be a wide-open one. Mr. Sherley, of Kentucky, who is one of the ablest men in the House, made an energetic effort to find out the true state of the case from Mr. Hull, but the result was far from satisfying. Nor is this doubt the only trouble connected with the matter. The difficulties and risks to which the owner would apparently be exposed through the withholding by tenants of a tax reckoned on the face of the rent have been set forth in a report drawn by the law committee of the Allied Real Estate Interests in this city, and the suggestion is made that "the interests of the Government would be better served if, instead of requiring the income to be reserved at the source, the law required merely that the source shall apprise the Government of the amount of income which it pays its creditor and then require the taxable person to make report which can be checked up with the information received from the debtors." It should be noted that, whatever the merits or defects of this suggestion, the adoption of it would have the advantage that the aid given to the Government by this information would not need to be confined to the case of rents of $4,000 and above, but might extend to all rents, or all above an arbitrarily chosen limit.

However the bill may be improved, there will necessarily be imperfections in its operation and difficulties in its execution. But these imperfections and difficulties should not be permitted to arise at haphazard, but should be the subject of the most painstaking and expert consideration, with a view to reducing them to a minimum. An even more elementary requirement is that the bill be so drawn that the manner of its operation shall be clear. Neither of these requirements has thus far been met. We have given but a slight intimation of the faults which a study of the bill discloses. To remove them, nothing short of a thorough redrafting by the Senate committee will suffice.

IS MANKIND IMPROVING?

Sharer with Darwin in the creation of the doctrine of natural selection, and preserving in extreme old age, with apparently no diminution, the intellectual vigor and the power of forcible expression which characterized him in his prime, it was natural that Alfred Russel Wallace, on the advent of his ninetieth birthday, should be approached by many interviewers, asking him for some message to the world. The message he gave to one of these journalists related to no less a question than that of his estimate of the whole moral and intellectual condition of mankind in the present day, as compared with past ages. And its essential purport was contained in a single sentence. "I have come to the general conclusion," he said, "that there has been no advance either in intellect or morals from the days of the earliest Egyptians to the keel-laying of the latest Dreadnought."

That this was no random utterance was evident enough. In point of fact, he was at the time engaged upon a book, "Social Environment and Moral Progress," which has now been issued, and which maintains the thesis then announced, and more. To attempt to appraise its pronouncements on past and present, and its proposals for the future, would be to pass judgment on all the deepest questions of life and society, of economics and ethics. But the book, like the interview before it, is sure to attract widespread interest; and it seems worth while, therefore, to analyze the significance of his chief proposition and to examine the character of his argument.

In the first place, then, the assertion itself does not mean what many doubtless will take it to mean. When Mr. Wallace speaks of morality not having improved, he refers to no objective standard, but to those "inherent and unchangeable" qualities that constitute what is truly "character," as distinguished from the external acts which we may perform, or from which we may refrain, out of regard to the demands of the society around us, and for the sake perhaps of winning praise or honor or worldly advancement. But with this understanding, we imagine that there are few thinking people who will be greatly startled to hear that morality has made no advance. Not many of us

are in the habit of pluming ourselves on being intrinsically better than our ancestors; we do not flatter ourselves that we are firmer in adhering to the standards of to-day than they to those of their own time and place. If to the red Indian the torture of an enemy is to be imputed as a virtue, if to the account of the mediæval soldier burning and pillage and rape are to be charged as the mere exercise of passions nobody expected to be held in check, if the barbarities of the slave trade are not to be accounted as having been morally worse two hundred years ago than are such evils as happen to-day to excite a corresponding degree of reprobation, and so on all along the line, then most of us will be quite prepared to admit that the world has not progressed morally. From the dawn of history, and before, there were manifested probably just about the same varying degrees of devotion to whatever were the accepted standards and ideals of the time and place, as are witnessed in our own day.

Dr. Wallace's arraignment of existing conditions is, however, by no means confined to the maintenance of this comprehensive but negative thesis. He pours forth denunciation after denunciation, with the fervor and scorn at once of a prophet speaking to a godless generation and of a man of science addressing an unthinking and ignorant world. He goes far beyond the assertion that the world is no better; again and again he declares that it is worse—and worse, too, in no refined meaning of the word, but in its simplest and crudest significance. "It is not too much to say," he declares near the end of the book, "that our whole system of society is rotten from top to bottom, and the Social Environment as a whole, in relation to our possibilities and our claims, is the worst that the world has ever seen." But it is difficult to combine the rôle of the flaming prophet with that of the scientific seeker after truth. If any one wishes to be reminded of the evils that exist in our society, and of our moral shortcomings in dealing with them, he can find them set forth powerfully in Dr. Wallace's pages; but, incredible as it may seem, there is hardly so much as the pretence of an attempt at comparison with the past. It is almost as though one were to find out the dark places of a single city, and, not content with indignation and rebuke, incontinently declare that one has proved this city to be the wickedest and most depraved "the world has ever seen."

The single place in which any serious attempt at comparison is made is in the chapter entitled Indications of Increasing Moral Degradation. How inadequate the statistics cited by Dr. Wallace are to the proving of what he alleges we cannot here undertake to show. But it is instructive to point out one cardinal defect. This may be indicated by taking that one of his three instances which he makes most prominent—the increase of deaths from alcoholism. The figures are very irregular, but let it be granted that they show, in the past half century, an increase from 40 deaths annually per million inhabitants to 65 deaths per million. Dr. Wallace himself admits that the showing is surprising, since "the drinking habit has certainly diminished"; and he proceeds to account for it in various more or less ingenious ways. But there is one way that does not occur to him, and which yet may be the true explanation. Everybody knows that the mean duration of life has been greatly increased during the half century. Is it not at least possible—nay, is it not, in the absence of evidence, highly probable—that these 25 additional drunkards per million who die nowadays of "alcoholism" used to be carried off by all sorts of diseases before they had had time to drink themselves to death? The eyes, as Carlyle said, see what they bring with them the power of seeing; and a passionate desire to find a foregone conclusion may deprive of all efficiency, as an instrument for the ascertainment of the truth, even so fine a mind as that of Alfred Russel Wallace.

THE FLOOD PROBLEM.

The horror with which the news of the floods in Ohio was received was mingled from the beginning with wonder. How could a calamity of such extent happen in this country? Why was there not provision against it in places where it was likely to occur? As the reports from the stricken sections made it more and more clear that the early estimates of the destruction of life and of property were exaggerated, wonder became the dominant emotion, coupled with a determination that all that the wit of man could do should be done to make a recurrence of the disaster impossible. The first step was obviously knowledge of the facts. Just what were the conditions responsible for the overwhelming sheet of water that swept down with such rapidity? How far were our theories of flood prevention tenable? The unusual nature of the catastrophe compelled a reëxamination of the whole question.

Well, it has been reëxamined, and various conclusions have been put forth by authorities of varying weight. An army engineer who went to Ohio at once and made a survey of that part of the Scioto which flows through Columbus, decided that the thing needed was a widening of the channel of the river. He was not impressed with rival suggestions of a system of reservoirs and the construction of a new channel. The river, in his words, was "crowded to death" by the bridges over it, which were too short to be out of the way of the current, and had embankments that formed dams and thus turned a vast stream unnecessarily against the levees. By an interesting coincidence, the National Drainage Congress was scheduled to meet at St. Louis while the happenings in the Ohio Valley were fresh in mind. The divergences in opinion at this gathering are the best commentary upon the state of our knowledge of the causes and remedies of floods. Uncompromising advocates of reforestation as a means of holding back the flood waters at or near their source were faced by unyielding supporters of levees along the lower waters. The hopelessness of arriving at an agreement gave added impetus to the proposal for the creation of a Department of Public Works, whose Secretary should have a seat in the Cabinet. A resolution to this effect was passed, but meanwhile President Wilson and his associates were approving the plan submitted by Secretary Garrison for a commission of engineers to survey the Ohio and Mississippi Rivers, to determine the cause and to devise methods for the prevention of floods in those valleys.

The report of this commission will naturally be looked forward to as giving the signal for the Government to follow. But it is not without suggestiveness that one finds an approach to unanimity of opinion on the part of two

men, one a former chief of the Forestry Service, the other a member of it now. Mr. Pinchot's and Mr. Reynolds's analyses of the situation are striking not so much for their similarity as because they differ from the mass at least of other presentations of the case in consisting, not of a single remedy merely, but of all three of the plans that ordinarily are offered separately. Mr. Reynolds, in an article in *American Forestry*, words them as follows:

> First, to straighten, deepen, and widen the river channels in order to promote rapid discharge, which will lower the peak of a flood.
>
> Second, to build storage reservoirs, which can be filled at high water and drained successively as the river channels are able to carry the flood waters.
>
> Third, to reforest suitable non-agricultural areas, covering as large an area as possible of the drainage basin, particularly on the sources and along the streams.

No one of these methods alone, he insists, can be sufficient. Heretofore we have relied upon improving the channels and protecting the banks by levees. This plan has repeatedly proved its inadequacy, the trouble with it being that the works have to be increased continually to keep pace with the increasing floods, and for this the expense alone would be prohibitive.

The centre of the fight among flood diagnosticians is the question of reforestation. There are those who say flatly, with an anonymous writer in the *Scientific American:* "No competent student of the subject now looks upon the forest as a factor of prime importance." Opposed to them are the experts of the Geological Survey and the Forest Service, who pronounce the opposite verdict: "A direct relation exists between forest cover and stream regulation." The sufferer from floods can hardly fail to be impressed with the wisdom of giving himself and his family and friends the benefit of the doubt, especially when reforestation does not interfere with other preventive measures, and is not urged as all-sufficient. The contention is that reforestation would so reduce the speed and diminish the volume of the "run-off" under all but the most extraordinary flood conditions that the levees could be smaller, and the channel improvements and reservoirs less extensive, than they must otherwise be. Even so, we cannot aim absolutely at flood prevention, but only at flood protection. As Mr. Reynolds says: "No conceivable forest upon the watershed could have completely prevented a flood under the extraordinary conditions of rainfall on this occasion.

ASKING STUDENTS TO DECIDE.

In accordance with a plan adopted a few years ago, the Harvard *Illustrated Magazine*, a journal loosely connected with the college, requests every member of the Senior class to state which undergraduate courses he regards as the most satisfactory. The replies will be made public at Commencement. In the past, the method has not proved very illuminating. The choice was never overwhelmingly in favor of any one course. The courses largely attended naturally received a large number of votes. A vote in the Senior year has revealed little more than could have been dug out of records at the college office. This year, "in order to obtain a fairer test of the permanent value of the courses," the *Magazine* has made similar requests of a class now fifteen years out of college. That the opinions of men in the neighborhood of thirty-six or seven, looking back upon their undergraduate work, are of no value, few would assert. The answers to one question, for example, might be of genuine service. It reads: Did the course best liked "have practical value, or was its effect intellectually stimulating"? If this should rally opinion to the standard of the intangibly useful, and away from the advocates of immediate utility, it would be cause for rejoicing.

This undertaking apparently grows out of a desire to institute a referendum on the curriculum. Though it is carried on without the coöperation of the college authorities, it can hardly fail to have its effect on certain members of the faculty whose reputation is not yet established. The results of the vote are published in the Boston newspapers, and take on the nature of a triumph for the instructor who stands well with his students. To do so, a teacher must often popularize his lectures, and not require much sturdy thinking. He can avoid the appearance of giving a "snap" course by a brave show of collateral reading. But he must be entertaining and to a certain extent adopt the kindergarten method of transforming work into play. Young gentlemen whose time is so much taken up by the outside labors of athletics, clubs, and college periodicals require, to be happy, no small amount of relaxation in the lecture-room. We do not say that there is very considerable yielding to this, not always tacit, demand. Yet at Harvard, as at other large universities, it is well known that the evil does exist; and nothing could serve better to foster it than this ballot which year after year is put in the hands of Seniors.

In point of fact students are far less competent to decide what is good for them than the college authorities. The student body is not different from the world at large, save in the matter of years. It catches up every new fad and unthinkingly lusts for the privilege of controlling its own destiny. In after years it may see the folly of its demands; it is almost sure to appreciate the wisdom of a benevolent tyranny, if a faculty has the courage to maintain one. Here is a problem which has been pressing for a decade or two and which some feel might be solved, or greatly simplified, by concerted action on the part of those in control. How shall the "main show" compete with the "side-shows"—scholastic interests flourish alongside of the craze for athletics? A strict supervision of games is only half of the matter; there remains the question of exalting intellectual prowess. At Cambridge, one evening a year has been set aside, when faculty and students foregather to applaud those who have achieved academic distinction. To not a few the practice has not seemed to be wholly sincere on the part of all present, and even has had the appearance of copying the undergraduates' habit of collecting in a crowd to cheer the "team." Scholarship can never hope to obtain the same manner of approval as that which is accorded to athletics. The boy who has received high grades in his work is not necessarily despised if onlookers are silent.

Not applause for one day a year is needed to restore scholarship to the place where it belongs, but an every-day insistence by the teachers that their intercourse with the students shall rest firmly on an intellectual basis. The former have a student's standing among his fellows much more within their power than is seemingly recognized. If undergraduates are growing more and more worldly in their standards, instruc-

tors, too, have tended in that direction. Among certain of them the fact that members of their classes are prominent socially is manifestly a source of gratification. It is pleasant to be "elected" by boys who are eligible to high position in the world at large. But to a much greater extent than it exists to-day an intellectual aristocracy could be built up in colleges if faculties in their personal dealings with students gave it first place. It is this possibility, indeed, this necessity, which makes such a referendum as that referred to seem rather impertinent.

THE CUSTOM OF THE COUNTRY.

In her latest novel Mrs. Wharton is concerned with a type of American womanhood which might be described as one of the stock figures of the newer fiction, if it were not for the consideration that Mrs. Wharton's Undine Spragg is not a stock figure at all, but is very much alive. The fact that the spending American woman is always turning up in our literature must be taken as a sign that she is to be found in life. Robert Herrick is apparently of the opinion that there is no other kind of woman, if one is to judge from the way she haunts his books. His latest novel is concerned with very much the same type as Undine, allowing for geographical and minor social differences. The fierce determination to "get on" in society; the passion for enjoyment which is more correctly to be described as excitement; the utter lack of concern for the father or husband who finances the process of getting on; and the lack of interest in the sources from which the supporting male procures the sinews of war—these are familiar traits which do not grow stale through repetition. That men shall earn and women shall spend, without intruding upon each other's territory, is the custom of the country as Mrs. Wharton defines it. For the husband to confide his business troubles to his wife would be almost as odd as for the wife to make her husband a repository of her troubles with the dressmaker. It is a division of functions which we have apparently developed to an unrivalled state of perfection.

The custom of the country is, at first sight, all the harder to explain when one considers that, as compared with the firmly established traditions of Europe, we are still a pioneer people. A generation ago we were a pioneer nation in a very real sense. The West, that region from which come the passionate pilgrims of "society" who make the Fifth Avenue shops very much what they are, was then coming under subjection to a race of hard-working Americans whose wives toiled quite as hard and spent quite as little as their husbands. The rigors of pioneer life fall more painfully upon the woman than upon the man. The unending household toil; the bearing of children, as children are born to-day in the new country of the Canadian West, where physicians are scarce and not particularly skilled; the rearing of children under conditions that would make the modern advocate of child-culture stand aghast, are part of the enormous task of motherhood in regions where man is still at close grips with his environment. This was true of the pioneer in the Middle West, as it was true two centuries ago of New England, whose civilization was built up at an enormous expenditure of women's lives. Mere man, for all his natural arrogance, would be the last to deny the equal share taken by his women-folk in the conquest of a continent and the upbuilding of a nation.

If, after a generation, we find that there has been a marked change in the distribution of economic functions; if the daughters of the women who peopled and helped to tame the West have assumed the exclusive function of spenders, leaving it to their brothers to carry on the business of wealth production, the reason is to be found in our rapid emergence from the pioneer stage. The function of distributing money is not altogether assumed by the American woman; it is conferred on her by the male as compensation for what she has suffered and achieved in the past. The sense of protection, of chivalry—if one may use the term so hateful to the emancipated woman—has no opportunity to express itself when the struggle for existence is so bitter as to call for unremitting labor by every one in the family. When economic pressure relaxes it is natural that the women of the family should be the first to feel the relief. This sense of obligation for past services and past hardships may not be consciously present to the mind of the American man. He does not realize his motives so clearly as he does with regard to his children when he determines that they shall miss nothing of the good things of life which their parents had to go without. But unconsciously the same factor enters into his attitude to women. His son, after having his chance, is still to go on with the serious business of life. His daughter must simply have her chance with no questions asked.

That the American male has gone too far in the other direction is partly to be explained by the national temperament, partly by the very suddenness with which we have emerged from hardship into prosperity. If the climb had been more gradual the enjoyment of leisure might have been more evenly distributed. But it would be idle to overlook the inherent difference in faculty between men and women, and an equally apparent difference in adaptability. The aspirations for the softer, finer things of life are stronger in the female of the species. The advent of leisure gives more immediate freedom to feelings long repressed. If prosperity has produced women of the type of Undine Spragg, in all her selfish, unreasoning longing for enjoyment, it is also true that through the women of America such interest as we display in literature, in music, in art, makes itself largely manifest. Here is where their superior adaptability counts. Our men have been much slower in casting off the habit of money-making and in acquiring the habits of a fuller life. To-day we are undoubtedly in the position of having placed woman on a pedestal and left her there lonely and rather dizzy.

NEWS FOR BIBLIOPHILES.

The piece of American writing which has been most often reprinted is, it has been declared, Benjamin Franklin's "Way to Wealth." The late Paul Leicester Ford, in his Franklin Bibliography published in 1889, made an effort to record all separately printed editions, but his list, as he well knew, was far from complete. But neither Mr. Ford nor Mr. Bigelow, nor the latest editor of Franklin's writings, Professor Smyth, seems to have known what apparently is the fact, that the title "The Way to Wealth" was not given to the piece by Franklin, and that the text which the world has generally known is not Franklin's own text, but a garbled and abridged version prepared by some unknown English editor or publisher. Sparks pointed out the fact that two versions existed, but he gave no explanation.

Franklin's own account of the publica-

tion of the piece, as written down by him in 1788 in his "Autobiography," is not quite accurate. After telling how he had "filled all the little spaces that occurr'd between the remarkable days in the calendar with proverbial sentences," he goes on to say:

> These proverbs, which contained the wisdom of many ages and nations, I assembled and form'd into a connected discourse prefix'd to the Almanack of 1757, as the harangue of a wise old man to the people attending an auction. The bringing all these scatter'd counsels thus into a focus enabled them to make greater impression. The piece being universally approved, was copied in all the newspapers of the Continent; reprinted in Britain on a broadside to be stuck up in houses; two translations were made of it in French, and great numbers bought by the clergy and gentry, to distribute gratis among their poor parishioners and tenants. In Pennsylvania, as it discouraged useless expense in foreign superfluities, some thought it has its share of influence in producing the growing plenty of money which was observed for several years after its publication.

Although this "connected discourse" was written and printed in 1757, it was prefixed to the Almanac of 1758. It is there headed only "Preface," and is dated at end "July 7, 1757." If this was the actual date of writing, it must have been written on shipboard, for Franklin sailed from New York on June 5, and arrived at London on July 26, 1757. The Almanac for 1758, the most interesting of the series, probably had a large circulation in Pennsylvania, but at the time of Franklin's writing, thirty years after publication, no separate edition had been printed in Pennsylvania, or, if printed, such editions are now totally lost. Barbeu Dubourg, in his edition of Franklin's writings (Paris, 1773), makes a similar statement as to its influence upon American life, to the effect that it contributed largely to the resolution of the colonists not to buy goods of British manufacture.

The first separate edition of the "discourse" now known to exist was printed at Boston by Franklin's nephew, Benjamin Mecom. It is a pamphlet of sixteen pages with an engraved frontispiece and with the title, "Father Abraham's Speech To a great Number of People at a Vendue of Merchant-Goods; Introduced to the Publick by Poor Richard, (A famous Pennsylvania Conjurer and Almanack-Maker)." The title-page is undated, but the date 1760 appears on a globe in the hand of Father Time at the top of the frontispiece, and this is supposed to be the date of publication. This pamphlet was reprinted by T. & S. Green in New Haven, but without the frontispiece, about 1767, though this edition is also undated.

It was again printed with the same title, but with some additional matter, in Dedham, Mass., in 1807. These three editions with the title "Father Abraham's Speech" seem to have been the only strictly American editions whose origin can be traced to the Almanac itself, and apparently the only ones with Franklin's text complete and unaltered. All later editions, having the title "The Way to Wealth," printed in America, are without question copies of English editions.

The first English edition, and the first to bear the title "The Way to Wealth," was probably printed in 1773. Ford in his Franklin Bibliography says 1774, which is the earliest printed date, but there are evidences, manuscript and printed, which seem to show that the book, with this title, was in circulation a year earlier.

There are three undated editions, each a pamphlet of sixteen pages with the similar title, "The Way to Wealth, as clearly shewn in the Preface of an old Pennsylvania Almanack, intitled, Poor Richard Improved." This title is on A1, and there is no imprint. In one of these three editions the fifth line of the title is "Of an Old," whereas in the two others it is "Of." These two latter (not distinguished by Ford) are from different settings of type and with different printers' ornaments. In the earlier of the two the signature mark on the fourth leaf is "A3" instead of "A4," and the conclusion, "I am, as ever, Thine to serve thee," is in two lines, whereas in the other it is in one line. One copy of this first edition which I have seen has in contemporary manuscript, on the title, "Printed at Pennsylvania 1773," and at the top, in the same hand, "Lady Julianna Penn." The pamphlet, however, bears every appearance of being from an English press.

In a letter from Barbeu Dubourg to Franklin written from Paris on November 25, 1773, he "hopes that the extract from the old Almanac of Pennsylvania will not only be applauded but will bear fruit." It was translated and printed by Dubourg in the same year (1773) in his edition of Franklin's works. It there has the title, "Le Moyen de S'enricher, Enseigné clairement dans la Préface d'un vieil Almanach de Pennsylvania, intitulé: Le Pauvre Henri à son aise." This was evidently reprinted from an English edition with the title "The Way to Wealth," and we may be certain that the piece with this title was printed in England as early as 1773.

As an explanation of the change of title from "Poor Richard" to "Poor Henri," Benjamin Vaughan in his edition of Franklin's Works (London, 1779) has this foot-note: "M. Dubourg, the French translator of Dr. Franklin's Works, entitled this Pennsylvanian Almanack, 'Le pauvre Henri à son aise,' to avoid the *jeu de mots* in case he had written 'Pauvre Richard.'"

The English edition dated 1774 to which Ford gave priority was very probably reprinted from one of the three undated sixteen-page editions described above. It has the imprint, "London: Printed for M. Lewis, No. 1 Paternoster-row. 1774," and has twelve pages only. There is also another undated edition, with eight pages only, without title, but with heading at the top of page [1]. Ford follows Stevens in assigning this to 1775. These five editions fall into one class; they can all be traced to one original, and that original was the first edition to have the title "The Way to Wealth." It may be the undated issue described above with the misprinted signature mark or it may be an edition now lost. But who gave it the title "The Way to Wealth"? Almost certainly not Franklin himself. His name does not appear upon any of these five early editions. That there was or had been uncertainty as to Franklin's authorship is shown by Dubourg's note appended to his translation of the piece printed in 1773. This note begins: "On ne doute point que M. Franklin ne soit l'auteur de cette pièce." Franklin uses the phrase in his "Advice to a Young Tradesman," where he says: "In short, the way to wealth, if you desire it, is as plain as the way to market," and this is very probably the source of the title of the piece.

A comparison of the text of the "Preface" of the Almanac of 1758 with that of the undated editions 1773-1775 shows that Franklin's text has been much condensed and, in a few cases, a trifle altered. About one-seventh of the original is omitted, the largest single omission being in the two preliminary paragraphs, which are almost entirely cut out. The sentences and phrases deleted are almost without exception such as would have been struck out by an editor anxious to cut down the length of the piece. The alterations, too, are those of an editor rather than an author. "Vendue" was changed to "auction" three times and to "sale" twice. "'Tis" was changed to "it is" six times: "won't" to "will not," "can't" to "cannot," "I'll" to "I will," "that's" to "that is," and there are one or two other similar cases. "Great estates may venture more" is changed to "Vessels large may venture more." "All for want of Care about a Horse-shoe nail" is altered to "a little Care," etc. These are the most important alterations in text, aside from the cutting out of words, phrases, and sentences. If these changes were made by Franklin himself it is the only known case in which he altered any of his writings after their first printing, excepting only the little "Parable against Persecution," where five verses were added in the second version.

After the five editions described above as appearing from 1773 to 1775, the next known reprint of "The Way to Wealth" in England was in Franklin's "Works" edited by Vaughan and printed by Johnson in 1779. The publisher adds this note:

> This piece has been printed on a single sheet of paper, of a small size fit for framing, and may be had of the publisher of this work, Price two-pence.

This is evidently the "broadside to be stuck up in houses" referred to by Franklin in 1788. The sheet, which can hardly be called "of a small size," measures 19¾ by 15 inches. It has the heading: "The Way to Wealth, As clearly shewn in the Preface of an old Pennsylvanian Almanack, intitled, Poor Richard Improved, Written by Dr. Benjamin Franklin. Extracted from the Doctor's Political Works." At the bottom is the imprint, "London: Printed by J. Johnson, No. 72, St. Paul's Church-Yard. (Price Two-pence, or Twelve Shillings an Hundred.)"

This broadside edition with Johnson's imprint is probably the first edition of "The Way to Wealth" bearing Franklin's name. It was not seen by Ford, who describes an edition without imprint. It was the progenitor of a series of editions, single-sheet and pamphlet, which, by having the line "Extracted from the Doctor's Political Works," can be put into one class. Ford apparently saw but one broadside edition, his own, without imprint, now in the New York Public Library, though he lists another with London imprint from the British Museum Catalogue and a third with a Canterbury imprint. I have examined six others, all undated: "Salisbury, Printed and Sold by Collins and Johnson."; "Bath, Printed and Sold by S. Hazard."; "London, Printed for and Sold by W. Clarke . . . W. Mason, Printer, ..."; "Printed by J. Rann, Dudley."; and "Printed for the

Benefit of the Public/' besides two other editions without imprint. All but the Dudley edition seem to have been printed from Johnson's edition, and all probably before 1800, perhaps before 1790, the year of Franklin's death. The first American edition, with the title "The Way to Wealth," and the only known edition to appear before 1790, was printed in Lansingburgh, Pa., in 1789.

In France, although "The Way to Wealth," with the condensed text, had been translated by Dubourg and printed in Paris in 1773, the work seems to have attracted no attention until Franklin's arrival there. A new translation, this time with the full text of the Almanac of 1758, was published in 1777, with the title "La Science du Bonhomme Richard, Moyen Facile de Payer les Impôts," and with the imprint "A Philadelphie. Et se trouve A Paris, chez Rualt, Libraire rue de la Harpe. 1777." This translation is said to have been made by Francis A. Quétant, and was probably made with Franklin's knowledge and consent.

Besides "La Science du Bonhomme Richard" (which does not carry Franklin's name), there are three other pieces in the volume: (1) Franklin's "Examination on the Repeal of the Stamp Act," 1766; (2) the "Constitution of Pennsylvania," and (3) "Penn's Examination before Parliament," 1776.

The "Constitution" was translated by the Duc de la Rochefoucald; at least this text was reprinted in the volume of "Constitutions des Treize Etats-Unis de l'Amérique" printed in 1783 and said to have been translated by him. The "Note d'un Ameriquain," explaining the meaning of "liberty" and telling of the two classes in America who are not free, *i. e.*, slaves and bonded servants, was probably by Franklin. The little volume was so popular that five editions were printed the next year, 1778, and another in 1779, besides many later editions. There is, however, no evidence to show that Franklin had anything to do with the printing of it. L. S. L.

Correspondence

THE LIEBKNECHT DISCLOSURES.

To the Editor of The Nation:

Sir: The most amazing fact about the recent sensational disclosures in *Vorwärts* by Dr. Liebknecht, anent the maintenance at Paris and Berlin by German armament firms of publicity and secret agents, has been the conclusion which the press has drawn from it. May I quote from your editorial of April 24 as an example of the sort of deduction a critical and conservative writer has allowed himself to draw from this case? "The publication of this story of increased purchases of guns by France and similarly belligerent articles in the *Figaro* and other Paris newspapers was followed by the extension of the two years' compulsory service in France to three. Thereupon Germany answered with its tremendous war-levy and an increase of its standing army and navy to no less than 870,000 men." Does not this directly state that a few articles in the Paris papers, stimulated (if not solely caused) by paid emissaries of German firms, resulted in the most conspicuous militarist action of recent years? Does it not assume that the statesmen of leading countries of Europe did actually base decisions of the greatest moment, involving the expenditure of millions of dollars and a vital change in the economic and social life of hundreds of thousands of people, on the *unsupported word* of a newspaper editor? "More recently the War Minister has risen in the Reichstag to explain . . . such a great increase in the army. . . . Where do these Krupp revelations leave him? Either he was ignorant of what was going on, or he was helping to conceal the play to coin more money out of the taxpayers' fears which the Krupps were staging so cleverly and masking under talk of the new danger to Germany in the Balkans." Do not these sentences directly charge the German Chancellor with the basest crime of which a man could be guilty or with an amount of ignorance concerning the European situation which would be disgraceful in a private individual, the failure to know that armament was unnecessary?

It seems indeed to be time to apply to the pacifist press a little of that sort of criticism which it has lavished on the subject of foreign politics, to such an extent that it has declared vehemently the most solemn and explicit utterances of kings and statesmen to be of no consequence at all whenever they spoke of danger and the need of defence, and has treated as gospel truth their vaguest phrases about peace.

What, at the most, has been proved, assuming all to be true? That a German armament firm has attempted to sell more guns by influencing the press in France to attack Germany; that another firm has fomented talk of war in the German press and has tried to bribe officials in the War Department in order to procure specifications ahead of its rivals or contracts it would otherwise have lost. Yet, unless the accounts already published are incomplete, no evidence has been exhibited proving that either Government paid the slightest attention to anything the press said; indeed, explicit denials could be quoted from the most exalted quarters throughout Europe that the opinion of the press is regarded by any government as possessing any significance at all upon such questions as the increase of armament; no proof has been offered to show that any articles printed by the papers were published simply because paid for; still less did Dr. Liebknecht attempt to show that *all* the articles printed were purchased by German gold and that none expressed the honest opinion of Frenchmen.

The conclusion drawn is that the "recent war scare" (is it then over?) possessed no other foundation than "the exploiting of the masses by special privilege"; that we should have disarmament and peace if the makers of guns would stop subsidizing the press and Government officials. Is it credible that millions of really intelligent men can be made to spend millions of money for nothing at all, and be brought to the verge of war by "familiar cant and humbuggery," by a few fine words on paper without an atom of proof or a tittle of reality behind? If such is the condition of the public mind, let us cease to rely upon public opinion to control armament and to govern itself; it is merely a reed shaken by the wind. Such a notion of the ability and character of foreign peoples, of the morality and capacity of foreign statesmen, of the methods by which great decisions are reached, staggers with its own absurdity. Such reasoning falls to pieces of its own weight. So to read the situation, is to deny the vital significance of the present crisis, to deny the existence of real danger in Europe. On the contrary, the operations of the unscrupulous plotters depended upon the existence of this fundamentally dangerous situation.

It would be easy to put beside this handsome pacifist edifice an equally solid militarist structure founded upon the well-known personal interest and friendship of the Emperor with the Krupps and others, and show that the agents in Paris were really acting for the Imperial Government and had orders from Wilhelm himself (*via* the Krupps) to precipitate war. Hence the alarm in Germany when all seemed discovered! In reality, the seriousness of the incident to the German officials arose from the fear that there was an extensive leak in the War Office through which something more than specifications might slip. How much of all this is true will in time be revealed, but it will hardly be shown that the alarm in Europe is founded simply on the desire of the gunmakers to sell their wares. Roland G. Usher.

Washington University, St. Louis, May 5.

ERICH SCHMIDT.

To the Editor of The Nation:

Sir: Dr. Erich Schmidt, who died on April 30, was born June 20, 1853, at Jena. He studied at Graz, Jena, and Strassburg, was Privat-Docent at Würzburg (1875-77), Ausserordentlicher Professor at Strassburg (1877-80), Ordentlicher Professor at Vienna (1880-85), Direktor des Goethe-Archivs at Weimar (1885-87), Ordentlicher Professor at Berlin (1887-1913), Rektor of the University of Berlin (1909-10), and Geheimer Regierungsrat. He was the author of works on Reinmar von Hagenau, Heinrich von Müggе, Goethe, H. L. Wagner, Richardson, Rousseau, Lenz, Klinger, Voltaire, Klopstock, Friedrich der Grosse, and Lessing. Of the last he wrote, in two volumes, the most scholarly biography that has ever been published in the German language. He was also co-editor of *Quellen und Forschungen*, and *Palæstra*. His most remarkable work was the discovery of the first form of Goethe's "Faust." His main lectures were generally attended by about eight hundred students, his *seminar*, which was supposed to be small and private, by about one hundred and fifty. He was an uncommonly attractive figure on the platform, an eloquent speaker, and a man of almost inconceivably broad reading. He received his full professorship when twenty-seven, being surpassed, in this respect, by Nietzsche and possibly by no one else. As the successor of Wilhelm Scherer at Berlin, he entered upon his post there in 1887 with tremendous responsibilities; and he met them. He stood at the head of his calling. He had been working for some years on a biography of Uhland.

The attractive features of the man were to be found in his little foibles. He was, for example, extremely handsome—the students dubbed him *Der schöne Erich*. They also said that he resembled Goethe in profile, and that he did not on this account look straight at his audience. This is a myth, such as always grows up around men of his kind. The *New-Yorker Volkszeitung* said of him on May 1: "Er war einer der grössten Gegner für Zulassung der Frauen zum Universitätsstudium." This, too, is a legend; the opposite is more nearly correct. But he did have peculiarities.

One day, in the winter of 1904, an American student visited his *seminar*. Every seat was taken, so the visitor stood. After a while he left. Erich Schmidt thought that was a poor attitude towards science; he sprang from his seat and ran after the fellow, exclaiming: "What do you think this is, a beer garden?" The remarks of the American were made beyond the door and were inaudible. On another occasion, he passed a valuable and rare picture of Kleist around the *seminar*. There were finger prints on it when it returned. Erich Schmidt broke out in dignified abuse such as can be heard but seldom. At the next session, he apologized just as eloquently. This great man imagined that he was a great public reader. Some rôles he could read effectively, others he read very poorly. And when, on a warm day, with the windows open, the guard would march down Unter den Linden by the University, he would try to raise his voice enough to drown the noise of drums. He was generally successful, but always a bit ridiculous. No one who ever heard him lecture can forget his striking use of the word "aber." After a long positive statement, he would bring up with this adversative conjunction in such a way that one could not ignore the contrast. And it was in such connections that he betrayed his enormous reading. While lecturing on "Wilhelm Tell," for example, he would come to the place where Gessler is supposed to appear on horseback. He would say: "Ich bin kein Freund von Pferden auf der Bühne, aber," and then would follow a list of all the noted places in dramatic literature where horses appear on the stage. To listen to the man was to learn things not found in books. That is inspiring.

ALLEN WILSON PORTERFIELD.

Columbia University, May 7.

THE LAW-ABIDING CITIZEN.

TO THE EDITOR OF THE NATION:

SIR: In the *Nation* of May 1 appeared a letter from a Columbia professor on "Outworn Treaties." The general position therein maintained you sufficiently answered, though perhaps with undeserved moderation. There was one point which you passed over, not bearing directly on the matter of treaty-breaking which I hoped would rouse some comment in the next number of the *Nation*. As it has not done so and as it is significant of much in the professor's attitude and of his moral standards in general, I hope you will allow me to draw attention to it. Neither your correspondent's "mistakes in fact" nor his failure to perceive what is "shockingly immoral" to which you refer can be wondered at in the light of the following quotations from his letter:

> The law-abiding citizen either keeps the law or breaks it, and takes the consequences, and the same high moral standard should obtain for the nation.

Now as a definition of the "law-abiding citizen" that is distinctly entertaining. It should seem to indicate that even a McNamara may still be in good standing as a "law-abiding citizen" and only fall short of a "high moral standard" if he fail to get himself hanged. That this is not an unfair inference from the professor's dictum is shown by what immediately follows:

> The English suffragettes may be following a policy wise or otherwise in violating the law and suffering the consequences, but their behavior shows fine moral quality.

First, as to the facts. There is no question as to the violation of the law, but it is a matter of notoriety that these women spend all their energies, when caught, in resisting the consequences. If they had not done so there would have been no occasion for that foolish forcible feeding whereby the English authorities weakly play into the hands of these lawbreakers in their silly assumption of the rôle of martyrdom. This resistance to the consequences of their violations of the law would seem to impair the professor's claim for the suffragettes of "fine moral quality," measured by his own standard. As for this "fine moral quality" the professor's views on the McNamaras and their like would be interesting and to the point. They endeavored by ruthless destruction of lives and property to accomplish certain objects which appeared to them just; and they are taking the consequences. The suffragettes are attempting to accomplish results which appear to them just by a more indiscriminate destruction of property. That they have as yet taken no lives appears to be partly due to accident, and partly to the clumsiness of the criminals.

No, in spite of the professor and his like, who would turn upside down all the laws of ethics, whether Christian or pagan, the behavior of the English suffragettes will appear for what it is, a mixture made up of a total inability to reason sanely proving an utter unfitness to take any part in government; of a determination to gain at once by violence what certainly seems in this country to be winning its way gradually by peaceful means; and lastly, of a malicious desire for indiscriminate revenge for failure to obtain their desires.

WRONG ACCENTS.

TO THE EDITOR OF THE NATION:

SIR: H. M. Kingery's letter in your last issue is a good specimen of the linguistic information supplied to the American public. The stress lies on the first syllable in Magyar and on the penult in Polish. Such being the case, the word *huzar* (Polish form) or *huszár* (Magyar form) would have the stress on the penult in both languages. The acute accent is used in Magyar to designate the length and not the stress.

Literature

MAN AND NATURE.

Human Quintessence. By Sigurd Ibsen. Authorized Translation by Marcia Hargis Janson. New York: B. W. Huebsch. $1.50 net.

That Sigurd Ibsen is the son of the dramatist is a mere matter of curiosity, but that he was formerly an attaché of the Scandinavian Legation at Washington and later Premier of Norway and Sweden bears directly upon his book. "Human Quintessence" is obviously not the work of a closet philosopher, but of a public man who has done his thinking at the vital point where philosophy touches morals, literature, and legislation. With only a very few exceptions, the translation seems to preserve a style of unusual lucidity and charm. One feels throughout in the presence of a mind reassuringly skeptical, as if sobered by experience with the stubbornness of established facts, yet resolutely progressive in temper. To suggest, as the publishers do, that Ibsen has "blazed" a new trail is perhaps misleading. What we find here of chief value and hopeful augury is a sharp criticism of current naturalistic tendencies and a reopening of an older trail.

The great task of the nineteenth-century thought, to speak it briefly, was to put man into nature. The great task of twentieth-century thought is to get him out again—somehow to break the spell of those magically seductive cries, "Follow Nature!" "Back to Nature!" In these days when every educator with a treatise on animal psychology, every criminologist with a handful of cranial measurements, every artist with a lascivious picture, every novelist with a nasty thesis, every citizen with a craving for three wives, appeals to nature, we may discreetly welcome any indication of a counter-revolution. Perhaps what we need is not so much a new philosophy as a new war-cry; for, as a once popular essayist declared, "man lives not by bread alone, but mostly by catchwords."

There are, for example, at least three ways of discrediting the current "scientific monism." The most difficult is to attack it upon purely metaphysical grounds. The most unanswerable is to oppose it with religious intuition. The simplest and possibly not the least effective is respectfully to ignore it. Sigurd Ibsen appears willing to keep the peace with the theory as a thing of great logical cogency. Yet he asserts that the really consistent monist is a "phenomenon we have never seen and never shall see." And in effect he dismisses it as irrelevant to human needs and, indeed, contradictory to human experience. Though he shuns the meta-

physical abyss and professes his inability to climb the heavenly steeps of mystical insight, he is almost at one with the saints in his clear perception of the eternal conflict between the law for things and the law for man.

In the universe known to natural science he discerns no genuine progress, nor conservation of values, nor unity of purpose, but brutal cross purposes, blind chance, and everlasting change. The notion that the Darwinian "survival of the fittest" indicates an "aristocratic" tendency in nature is a vulgar error based upon a confusion of adaptation to environment with conformity to ideal ends. In human society, on the other hand, he detects an "impetus," unique in character, which "urges us to bring our existences and the conditions about us into an agreement with an ideal picture we bear in our hearts." To call this impetus human, as Ibsen does, or to call it divine, as others have done—is this not in the present state of our ideas a tolerably insignificant matter of nomenclature? Certainly, the matter of quintessential importance is to recognize this impetus and to exalt it. For it cleaves the universe in twain as decisively as the fiat that divided the waters which were under the firmament from the waters which were above the firmament.

"What makes a human human," says our author, "is not the impulses we share with other creatures; no, it is a special impetus that stands above these impulses, regulates and modifies them, reshaping and renewing them." The line of progress for human society must therefore be in the direction of this human impetus. It cannot possibly lead "back to nature," but must steadily show a wider divergence from the path of natural evolution. Society is in great part an organized opposition to nature, and it justifies itself only when it maintains its ground. It is irrelevant to approve or condemn this or that possible line of conduct on the basis that it is or is not in conformity with nature It is pertinent only to inquire whether it is in harmony with the constitution and aim of the human organization. It is not according to the tendency of clay to become a pot or of wood to become a table, but is of the very essence of the artisan and the artist to overcome the tendency of wood and clay. It is according to the nature of an animal to preserve its own life and to reproduce its species, but it is of the essence of a man to lay down his life out of reverence for his great-grandfather and to check the impulse to indiscriminate reproduction out of consideration for his great-grandson. The impulse to refrain thus indicated we can find nowhere in nature. It is part of the pattern or design of human society that lies in the heart of man.

The application, then, of biological terminology to human institutions is fraught with confusion and illegitimate inferences. Society is not, after all, an organism but an "organization." It is not determined wholly, like organisms, by environment and previously existing forms of society, but partly by forms that have never existed and by a passion for approximating them. It is not unfolded naturally and spontaneously, but artificially and by contrivance. Its laws are not statements of observed relationships among forces; they are the forces themselves—the shaping, creative energy of the special human impetus, stemming the tide of natural impulse, and saying, "Here and there thou shalt go, and no farther." Yet we speak of the evolution of society and the evolution of animals as if polar bears and political constitutions ran on all fours, had begun to trouble the womb of chaos at much the same epoch, and had been delivered to a passively expectant world by a similar spasm of vital energy. Hypnotized by the passes of a facile monism, the consciousness of man sees itself playing but a cognitive and spectatorial part in history, accepts the universe as it would accept an avalanche, and lies down in a deep paralysis of the will to await what the morrow may bring forth.

Looking backwards under the "confusing influence of the accomplished fact," the naturalist is persuaded that whatever has been had to be; and this conviction carried into current affairs results in an unhuman acquiescence in things as they are, in an unhuman submission to natural "law," particularly in the fields of politics and economics. Art, the model human enterprise because the freest from the constraint of brute force, achieved long ago in Grecian marble some of its ideal forms. Technical progress, though still far from its ultimate goal, yet keeps pace with the vision and invention of man. But politics and economics lag far behind—not merely the vision of exceptional individuals—behind the general "culture consciousness." "Let one attempt," exclaims Ibsen, "to congratulate a poet or a scientist by saying his work is an expression of common-sense: I surmise that he would take it as a doubtful compliment." Yet, "as every newspaper reader knows, one of the best testimonials to a political act is to say that it accords with this common-sense." This hitherto is the very summit of our political achievement. And in the sphere of international politics how humiliatingly far we fall short of it! The common-sense of the whole world cries out for a suspension of the mad international rivalry in armament, cries out that the arbitrament of international differences by shedding of blood is an insufferable and outrageous archaism. Yet Senators gird on their swords when they enter the council chamber; yet Secretaries of State sleep with their fingers on the trigger. There is a clank of steel in California, a smell of powder in Panama; what in the Balkans?

A war which is thought to be demanded by hard necessity may pass; but it is monstrous that four or five great states and several hundred millions of civilized human beings should be forced into a struggle which does not coincide with their interests. And we live under conditions where such a thing may happen at any time. It is a fact that in foreign affairs we are subject to the power that we call "the situation," and we are so used to it that we take it as a necessity without thinking how uncharitably it reveals the insufficiency of our political machinery.

Economically, continues Ibsen, society lives in "mediæval irregularity." And it is not reassuring to observe that he finds the most striking evidence that might is in the saddle riding mankind in the United States. "A man is fined if he empties water from his window into the street, but the same man, unhindered by law or established custom, can cause a bank failure, a strike, or a lockout which brings confusion to the interests of thousands of people. . . . He can become a member of a monopoly and as such can help to levy a contribution on a whole community with impunity." These conditions are absurd, he declares, even to the understanding of a child. They are the consequences, indeed, of the operation of natural laws, but they are "opposed to the culture-consciousness deep down in us which wishes to attain order in things everywhere, a just and expedient regulation of human conditions."

All this is familiar enough, but it comes with an access of weight and persuasive power from the philosophic temperance and critical balance of the speaker. Ibsen does not follow up his arraignment of existing conditions with a ready and convenient plan for establishing a new commonwealth. He has drawn from his reading of history a tincture of sobering and really tonic cynicism. He will admit with the reddest radical that "at all periods, legislation has been an exponent of the conceptions of society held by those in power and has been used by them as a means of protecting their special interests." He will point out that "if the weak are protected nowadays, if their interests are not left out of consideration either, it is because they, in reality, are on the point of becoming strong." But then he adds, as a cooling purge for unreflective democratic or socialistic enthusiasm, "We can be sure that the day the masses should attain an absolute victory, *they would advance the unadorned interests of the common people just as partially* as the earlier

ruling classes have supported the privileges of birth and wealth."

Not the redistribution of brute power, but the gradual abrogation of it, marks for the philosopher the progress of society; not the extension of suffrage, the multiplication of hands on the reins, but the ability "to rise to a position of self-government and to obeying only the inner voice, that voice that is within us and at the same time above us." Meanwhile, that external government is most beneficent which resists most effectively the stress of natural forces, and which impresses most deeply upon the consciousness of society the validity and sanctity of human conventions, and the desirableness of continuing to work out in the world that ideal pattern which lies in the heart. If this is true, then the most progressive society will be likewise the most conservative, the most reverent of traditions, the most critical of hasty innovation, the most reluctant to entrust its destiny to the gusty and transitory passions of the hour. Haunted by dim memories of cataclysmic floods and tragic forebodings of fiery ruin, it will not look for its eternal and unchanging sanctions in the weltering flux of natural phenomena; not seek in nature for the order, stability, justice, gentleness, and wisdom that only man has ever desired or sought to create. It will permit its scientists to return to nature, for that is their business; but it will urge its educators, its moralists, its artists, and its lawmakers to return to man and follow their pattern.

CURRENT FICTION.

John Cave. By W. B. Trites. New York: Duffield & Co.

Barbara Gwynne. The same.

The author of these novels is an American who first found a publisher and an audience in England. He is now introduced to his fellow-countrymen with a chorus of imported praises which fill a dozen pages at the back of each volume. We learn what the *Daily Graphic*, and the *Glasgow News*, and the *Bristol Times and Mirror* think of the new writer. The *Athenæum* says that his work is "vivid and pulsating life." The *Book Monthly* says that it is "as well-written as it can be." The word "masterpiece" is heard from various quarters, with or without apology. One American, at least, did not have to wait for the American imprint, since Mr. Howells spoke some months ago of the "two very extraordinary books" by Mr. Trites, which "are now making him known in England for the mastery of his treatment of local phases not before studied."

Mr. Howells's favorable comment suggests the camp to which the new writer belongs. The weakest aspect of his realism is that, like the realism of the late Frank Norris, it shows too clearly a French influence, not only upon its matter, but upon its style. The work of Mr. Howells himself is akin to that of the French and Russian naturalists he so ardently admires. But they are not his models; not a trace of foreign manner, far less of idiom, in his pages. The chief merit of "Silas Lapham" is that it is so plainly indigenous in substance and style. If local phases of American life are to be profitably interpreted by Americans, they must be handled in terms of American thought and speech. If Frank Norris had lived, he might have cast off his traces of Gallic costume, as, in time, do the graduates of the Quartier; perhaps Mr. Trites will; but it is not the best way to have begun. In substance, so far as substance means "plot," the earlier story is the more original. Barbara Gwynne is, *mutatis mutandis*, another Sister Carrie; and the hero to her, Jerome McWade, is, in his different setting, the hero of "Tono-Bungay." John Cave is a central figure such as only a conscious disciple of realism could choose. The nearest resemblance one thinks of would be to hapless young Gourlay of "The House with the Green Shutters." "Having, through drunkenness, at the age of twenty-four, lost his place as a reporter on one of the newspapers of Chicago, John Cave returned to the East." So he is introduced to us; we leave him dead drunk in a marsh. He has ability; he is not without aspirations. All that he lacks is character—no drawback to your painter of "real" life. And, indeed, though by no stretch of the fancy heroic or tragic, he is, up to a certain point, an appealing figure. Beyond that point, he is merely unpleasant and unmeaning. The two women with whom he is involved yield a similar effect of anti-climax. One of them is a prostitute and an opium victim, who at last, a long last, dies of her excesses. The other is a beautiful and aristocratic maiden who marries Cave for love, and presently, after imitating his shabby infidelities to their mutual vows, leaves him for good in both senses:

> Her desertion caused him intolerable pain. It seemed altogether unnatural, like a mother's desertion of her child. She knew how much he needed her. . . . He made a gesture of despair, and to escape his thoughts, he summoned the fat man to a game of cards.

We leave him helplessly failing to put an end to his wretched existence—not dead, but drunk, and destined to die of nothing but the slow torment of drink.

"Barbara Gwynne" (published in England under the ambitious title "Life") is less defiant, less youthful, in its pessimism. Barbara and her Jerome, beginning life in the same village, diversely achieve fame and fortune. She becomes a queen of the stage, he becomes a capitalist. Such things happen sometimes in life and commonly enough in fiction. But the detail of the narrative, the atmosphere of it, above all the skill with which is indicated the slow convergence of the pair towards a union at which we do not actually assist, but which we discern to be inevitable and vaguely right—all this gives freshness to the familiar types. And Jerome and Barbara both have what Cave lacks, a reserve of character, of dignity and even of nobility, behind the showy or vulgar surface of their conduct. Like so many of his school, this writer is a trifle conscious of his merit in giving spades their right name. Crude sex, sordidness, squalor, fascinate him overmuch. But of the essential sincerity of his intent there is no doubt. And we believe one English critic is right in saying that his work is "not written for a market, but to reveal a man's original vision of the world."

The Adventures of Miss Gregory. By Perceval Gibbon. New York: G. P. Putnam's Sons.

Often enough Perceval Gibbon arouses great expectations; almost as often he disappoints them. His is an unusual talent for unveiling flashes of exotic mystery, and showing life as reckless and futile as a gambler's game. His "atmospheric effects" are sometimes very fine, and he knows the quality of light and shade in many strange places. Swiftly and surely he can put you on board a shabby Portuguese steamer plying the east coast of Africa, or in a plague-stricken Arabian town, or among the inmates of a pension in Brussels which "offered a roof and a refuge to damaged reputations of all varieties." But in the choicest haunts of danger and disreputability invariably to find one's self preceded by a middle-aged British Providence in petticoats—it is too much! What came we out for to see? Certainly not a stout English lady in tweeds, affably introducing herself by card as Miss Gregory, of Addington Hall, Kent. Not an autocratic "woman of the world," looking for slices of "real raw life" to put into the book she has in mind to write; not an Amazonian member of the best English society triumphantly imposing the standards of her class upon the degenerate inhabitants of the tropics. There is something very maudlin about the deference Miss Gregory is represented as inspiring, something very prudish about most of the totally depraved that she encounters. But the worst of her is that her very presence suffices to turn dramatic situation into the theatrical. If she had contented herself with merely delivering creatures of English origin out of

foreign dilemmas it would not have mattered so much, but such is her aplomb and intrusiveness that she is to be found in Africa managing the last act of a Portuguese amour, and in Russia rewarding virtue by an official appointment. So that in the course of her travels she and the author between them manage to spoil several good stories.

ROMANCE FROM BENGAL.

Gitanjali (*Song Offerings*). By Rabindranath Tagore. A Collection of Prose Translations Made by the Author from the Original Bengali. With an Introduction by W. B. Yeats. New York: The Macmillan Co. $1.25 net.

The gilded Grub Street of present-day London, with its opulent Socialists and intellectual mountebanks and loose-living saviours of society and propounders of radical-tory paradoxes and Celtic moon-dreamers and hysterical feminists, is not altogether a wholesome or inspiring spectacle. Were it not for a dizzy St. Elmo's fire of cleverness playing over it all, it would, indeed, be almost contemptible. There are serious scholars and solid writers in England, but the noisy circle that stands preëminently for letters and emits its fads and enthusiasms into London and the English-speaking world, is not a thing to be regarded with entire equanimity by any one who has at heart the dignity and proper influence of literature. And so we draw in our breath when we come upon a little book of Hindu religious poems introduced by Mr. W. B. Yeats with ecstatic wonder and such ambiguous adoration as this: "Lovers, while they await one another, shall find, in murmuring them, this love of God a magic gulf wherein their own more bitter passion may bathe and renew its youth." Nor are we quite assured about this new fancy of the London circle when we read Miss May Sinclair's sibylline utterances sent over to an American magazine:

> It was not many weeks since I had heard these poems for the first time, that evening when Mr. Yeats turned Mr. Rothenstein's drawing-room into a holy temple by reading a dozen or more of them to about a dozen people. Even now, though they would all, of course, agree that what had happened was, for Literature, an event of supreme importance, they are probably no nearer than I am to knowing precisely what it was that happened to *them*. . . .
>
> In the Bengali poems of Rabindra Nath Tagore you will find that common emotional appeal united, in a music and a rhythm many degrees finer than Swinburne's—a music and rhythm almost inconceivable to Western ears—with the metaphysical quality, the peculiar subtlety and intensity of Shelley; and that with a simplicity that makes this miracle appear the most natural thing in the world. As far as I know, no Western poet yet born has done precisely this. Not Milton; he is far too grandiose for the human heart. Not Wordsworth; he is at once too subtle and too ponderous. And not the great mystic poets of the West, for they are the poets of mystics, as Shelley is the poet of poets; not Crashaw and not Francis Thompson, nor Henry Vaughn nor Blake at his simplest. Not even Dante and St. John of the Cross, though they stand nearest (they are very near) to this great mystic poet of Bengal.

We quote these intoxicated paragraphs because they are characteristic of the inner shrine of London literature today, and because they explain very clearly the wave of enthusiasm that has met the publication of Mr. Tagore's prose lyrics. Of the rhythm and grace of these poems in the original Bengali we can say nothing. In their English dress they are purely idiomatic and rather finely rhythmical; so far as the language goes they might have emanated from some London *cénacle* that had no taint of Celtic diction. And in spirit they are the same. They are lauded by Mr. Yeats for the good reason that they somehow belong to the same trailing end of the romantic movement as do his own sweet mysticisms. Their parentage goes back, by what channels or concealed sympathies we do not know, to the source from which come Maeterlinck's reveries and the *théâtre de l'âme*. Thus, in this dialogue between the singer's soul and the hidden soul of the universe there is the familiar note of absorption in nature:

> This is my delight, thus to wait and watch at the wayside where shadow chases light and the rain comes in the wake of the summer.
>
> Messengers, with tidings from unknown skies, greet me and speed along the road. My heart is glad within, and the breath of the passing breeze is sweet.
>
> From dawn till dusk I sit here before my door, and I know that of a sudden the happy moment will arrive when I shall see.
>
> In the meanwhile I smile and I sing all alone. In the meanwhile the air is filling with the perfume of promise.

There is again the familiar humanitarianism that appeals so piquantly alike to the delicate æsthete and the prosperous iconoclast:

> Here is thy footstool and there rest thy feet where live the poorest, and lowliest, and lost.
>
> When I try to bow to thee, my obeisance cannot reach down to the depth where thy feet rest among the poorest, and lowliest, and lost.
>
> Pride can never approach to where thou walkest in the clothes of the humble among the poorest, and lowliest, and lost.
>
> My heart can never find its way to where thou keepest company with the companionless among the poorest, the lowliest, and the lost.

But it would be uncritical to identify Mr. Tagore too completely with the *cénacle* who introduce him to the Western world. Though his poems show none of the virile quality of the older Hindu mysticism, and essentially have more the flavor of modern Paris than of ancient Oudh, yet they are haunted by emotions and images, ghostly thin no doubt, of the past. After all, this poet who dreams so prettily in modern style of the soul of the universe speaking through stars and flowers belongs also to the ancient race. Here, for instance, is one of the traditionary forms of worship translated into something strangely modern and elusive and, in its way, lovely:

> On the slope of the desolate river among tall grasses I asked her, "Maiden, where do you go shading your lamp with your mantle? My house is all dark and lonesome—lend me your light!" She raised her dark eyes for a moment and looked at my face through the dusk. "I have come to the river," she said, "to float my lamp on the stream when the daylight wanes in the west." I stood alone among tall grasses and watched the timid flame of her lamp uselessly drifting in the tide.
>
> In the silence of gathering night I asked her, "Maiden, your lights are all lit—then where do you go with your lamp? My house is all dark and lonesome—lend me your light." She raised her dark eyes on my face and stood for a moment doubtful. "I have come," she said at last, "to dedicate my lamp to the sky." I stood and watched her light uselessly burning in the void.
>
> In the moonless gloom of midnight I asked her, "Maiden, what is your quest holding the lamp near your heart? My house is all dark and lonesome—lend me your light." She stopped for a minute and thought and gazed at my face in the dark. "I have brought my light," she said, "to join the carnival of lamps." I stood and watched her little lamp uselessly lost among lights.

Forget the thaumaturgic Mr. Yeats turning Mr. Rothenstein's drawing-room into a holy temple, forget that this is the supreme event of literature, and you will find in the "Gitanjali" a true flower of the autumn of romance, with hints of the everlasting faith:

> You came down from your throne and stood at my cottage door.
>
> I was singing all alone in a corner, and the melody caught your ear. You came down and stood at my cottage door.
>
> Masters are many in your hall, and songs are sung there at all hours. But the simple carol of this novice struck at your love. One plaintive little strain mingled with the great music of the world, and with a flower for a prize you came down and stopped at my cottage door.

Japan and Japanese-American Relations. Clark University Addresses. Edited by George H. Blakeslee, Professor of History, Clark University. New York: G. E. Stechert & Co. $2.50 net.

There is no doubt that the campaign waged during the past half-a-dozen years by certain journalists and politicians, determined to place a sinister aspect on Japanese acts and policy, has in a measure effected its object and poisoned

the public mind. Mutual suspicion has been aroused, and the most innocent transactions are constantly misinterpreted. As the years go by, the relations between the United States and Japan are likely to be close, with keen competition all over the Pacific. It is the object of the promoters of the annual conference on international problems at Clark University to reduce causes of friction between nations by presenting the exact truth before the community at large. With this hope they have published in book form twenty-two addresses delivered in the conference of 1911, when subjects connected with Japan were discussed.

About one-third of the articles are from the pen of Japanese; the rest are by Americans who either deal at first hand with their subject-matter, or are experts. Particular value attaches to some of the Japanese papers. Indeed, it is difficult to find within the same space so illuminating an article interpretative of modern Japan as Professor Asakawa's "Some of the Contributions of Feudal Japan to the New Japan." He traces with remarkable acuteness and ability the causes which have operated in evolving a united nation, able to assimilate the best in our civilization. At the close of the Tokugawa period, half a century ago, there were two great social classes which had "grown so separately and acquired such distinctive characteristics from each other, as to seem almost to be castes. Their views of life were divergent, and their interests were largely independent and in part even antagonistic. Hence, there was in Japan no 'nation' in the strict sense of the term" (p. 91). But to-day, by an amalgamation that speaks highly for the administrative ability of its rulers, "the Japanese people are to a remarkable extent homogeneous." Professor Asakawa regrets the creation of a new nobility, and the introduction of a distinctly bureaucratic spirit among officials; but he mentions with satisfaction the admirable system of national education; the compulsory military training, "practical schools where class distinctions are ignored," as he calls them (p. 93); and the growth of national wealth and of the general economic life of the people.

In the article entitled "The Foreign Trade of Japan," Mr. Ichinomiya, manager of the New York branch of the Yokohama Specie Bank, deals summarily with the oft-repeated fable that the Japanese have to rely on the Chinese for their banking system, so deficient are they in commercial probity and in financial ability. Here are the facts:

> Out of 2,137 Japanese banks in Japan, not one has ever employed a single Chinese, with one exception, the Yokohama Specie Bank, Limited. This bank, it is true, did formerly employ a few Chinese in its Yokohama and Kobe offices, and for the one and only reason that those offices are engaged in the business of foreign exchange, especially in relation to business with China, but the bank has since discontinued the employment of Chinese, and no Chinese to-day [is] employed by any bank or commercial concern in Japan (p. 129).

Theodore Richards, managing editor of a Honolulu paper, contributes an article that will be read with interest on "The Future of the Japanese in Hawaii." He tells the story of the immigration, which began in 1868, fell off almost entirely in the later seventies, and was resumed in 1884, 28,000 Japanese applying for passage in the year 1886. Now there are nearly 80,000, and "it is conservatively estimated that in another census period fully one-half of the Japanese population will be native-born." Mr. Richards admits "that in general the effect of plantation life upon the Japanese in Hawaii has not been beneficial to them in matters of morals and manners." They have shown as yet little disposition to own land. "It is probable," he remarks, "that there will be much greater investment on the part of the Japanese in island homes" in the near future. He touches on a point that might well have furnished the topic for a separate paper, the race classification of the Japanese. "It isn't out of the range of probability," he remarks (p. 310), "that, with sufficient pressure, the term 'white' may be big enough to include the Japanese on questions of naturalization as on all other points." Mr. Richards advocates the removal of all bars "to affiliation and fraternity between the so-called 'white' and 'yellow' race." His article, while full of interesting details, lacks balance and finish; is, indeed, a mere journalistic compilation rather than a piece of literature.

Dr. Honda, editor of the *Oriental Review*, has an excellent paper on "The Evolution of Japanese Diplomacy." He traces the beginnings of French influence in military matters, at one time paramount, to Japanese fear of British aggression. It is his view that Japanese diplomacy was at fault in 1895, at the termination of the war with China. "Through her failure in diplomacy," he declares (p. 229), "Japan realized the need of political allies and friends in Europe and America, for, after all, Asia was not strong enough to be independent of European politics and the European balance of power."

Other articles to be noted are "The Family of Nations Idea and Japan," by Prof. George Grafton Wilson, of Harvard; "Geographical Environment and Japanese Character," by Prof. Ellsworth Huntington, of Yale; "The Secret of Japanese Success," by Prof. Garrett Droppers, of Williams College, a worthy complement to Professor Asakawa's article; and "Japanese-American Relations as Affecting the Control of the Pacific," by Prof. Edwin Maxey, of the University of Nebraska. The revising and editorial supervision in general leave much to be desired. There is no index, which would have added a much-needed element of unity to somewhat heterogeneous material. Blunders and omissions are altogether too frequent.

Notes

We may expect next week from the press of Houghton Mifflin the following titles: "Time and the Woman," by Richard Pryce; "Justice and the Modern Law," by Everett V. Abbot; "Stowe Notes: Letters and Verses," by Edward Martin Taber; and "Michelangelo; A Record of his Life as Told in his Own Letters and Papers," by Robert W. Carden.

Mrs. Lilloe B. Chace Wyman is the author of two little volumes which the W. B. Clarke Company is publishing—"Interludes," a book of verses, and "American Chivalry," which contains sketches of several notable figures in the anti-slavery movement.

Miss Lilian Whiting has placed with Little, Brown & Company for publication in the autumn a book of travel, entitled "Athens, the Violet-Crowned."

Dr. Lewis Gaston Leary has in preparation "Syria, the Land of Lebanon." The book will be issued in the autumn by McBride, Nast & Company.

Amelia E. Barr, the author of many novels, will bring out this month, through Appletons, her Autobiography. Mrs. Barr is also at work on a new novel entitled "John Wesley's Love Passage."

"A Prisoner in Fairyland," a novel by Algernon Blackwood, is a forthcoming book in Macmillan's list.

The first of a series of four volumes by the Rev. Josiah Strong is announced for publication in May by Doubleday, Page & Company under the title "Our World, the New World Life." The other volumes will deal with Christianity, scientific principles, and the relation of America to the huge problems brought about by new conditions.

The same house promises shortly "Crowds," a book of essays by Stanley Lee, and "Efficiency Studies in House Management," by Mrs. Christine Frederick.

"The Case Against Socialism," by Edward F. Adams, is in preparation by Paul Elder & Company.

The Manchester University Press is bringing out, in two volumes, "Ireland Under the Commonwealth," a selection of documents, edited with notes and introduction by Robert Dunlop.

Mr. Unwin publishes this week "The Early Correspondence of Lord John Russell (1805-40)," edited by Rollo Russell, Lord John Russell's son; and "The Economics of Land Value," by Harold Storey.

"The Truth about the Titanic" (Kennerley), by the late Col. Archibald Gracie, falls into two parts. First is the author's account of his personal experiences, beginning with incidents of the last day aboard ship; proceeding to what he saw and heard and did on the doomed boat following the

striking of the iceberg; and concluding with his escape when the ship sank, by swimming until he got on the upturned collapsible, and finally by being taken on to the Carpathia. The remaining two-thirds of the book is the story of the disaster as he has pieced it together from conversations, letters, and the official inquiries. This portion of his record is not woven into a skilfully constructed whole, but is rather a series of separate versions and phases of the event, which are evidently meant to speak for themselves. The tale is not told with any unusual gift of narration. Nevertheless, the author's cool-headed observation and clear memory, coupled with his careful sifting and judicial weighing of conflicting evidence, make the volume an authoritative record of the greatest and most affecting catastrophe of our time.

Senator Robert M. La Follette's Autobiography, or "Personal Narrative of Political Experiences," having run its course through a magazine, is now published by his own company in book form. Much of it deals with issues that are still in solution, and this fact adds to its interest, particularly since its author is playing an active part in reference to them. One can trace here better than anywhere else the rise of the spirit of Progressivism in the Senate, which has been one of the most significant political phenomena of recent years. A little oddly, Mr. La Follette invariably writes of his own group of Progressives with a capital P, so that one not familiar with the developments which he is describing would easily be led into misconceptions. For example, the first gathering of Progressives in the Senate for concerted action on legislation had, as two of its four members, Senators La Follette and Dixon. How different were the relations of these two in 1912! Here is the Senator's analysis of his most eminent rival Progressive:

> Roosevelt is the keenest and ablest living interpreter of what I would call the superficial public sentiment of a given time, and he is spontaneous in his response to it; but he does not distinguish between that which is a mere surface indication of a sentiment and the building up by a long process of education of a public opinion which is as deep-rooted as life.

Again and again does La Follette insist that half a loaf may often be worse than no bread, since it may take the heart out of the fight for the main part of the reform sought. This tendency to preach as he tells his story is allowed excessive indulgence, reaching its most glaring illustration in the reprinting of the thirty-five pages of his fatal speech at the publishers' banquet in Philadelphia. Through it, however, one is helped to a picture of the man, self-confident, intense, inclined to arrogance, undaunted by repeated failure, bitterly hostile to whatever appears to him as privilege. To this might be added his own words about Garfield, "the first leader to impress me." Of a speech delivered by the Ohioan, Mr. La Follette remarks: "I do not remember a suggestion of humor." The earlier chapters of the book, containing the account of the struggle in Wisconsin which in the end placed that State in the forefront of railway and other industrial regulation by government, have a dramatic interest that is equal to their political value as a first-hand record of one of the most characteristic and instructive upheavals of this generation.

Mr. J. H. Higginson's "Tariffs at Work" (London: P. S. King) embodies the results of an inquiry by a student and prizeman of the University of London. The title is more ambitious than the contents warrant. The thin volume gives very general accounts of tariff systems—conventional, maximum and minimum, preferential, and so on—of ad valorem and specific duties, bonded warehouses and free ports, drawbacks, and the like. The Appraisers' Stores in New York are briefly described, and so is the free port arrangement at Hamburg. The volume, though published in 1913, evidently was prepared earlier, since the writer speaks of the United States Tariff Board, which disappeared in 1912, as if it were permanent. The treatment hardly rises above the level of good newspaper articles, and contributes nothing of significance for the special student of tariff questions.

It is indeed a brave man who brings out at this time a book entitled "The Coming Mexico" (A. C. McClurg, The World To-day series). We look in vain for any suggestion in regard to an answer to the riddle of Mexico's future. Mr. J. K. Goodrich's book joins the company of the hosts of adequate but unnoteworthy contributions to the history and the conditions of the Latin-American countries. There is a surprising omission of the name of Benito Juárez in the list of the heroes of Mexican independence. There is a very good bibliography which has evidently been used sparingly by the author. The illustrations are good, but there are no references to them in the text.

Sir Clements Markham does not attempt in his "Conquest of New Granada" (Dutton) to do for Colombia what Prescott did for Mexico and Peru. The similarity, however, of the titles leads one inevitably to think of the earlier works and to compare them with the present history of the Spanish occupation of northern South America. Like all of Sir Clements's work, the book is entertainingly written. When one compares the relative number of Spanish sources on Peru and Mexico with those on New Granada, the present book can be said to be in every way a distinct contribution to the history of the Chibchas and the story of their conquest by Quesada and his followers. As the author states in his introduction, the object of the book "is only to stop a gap in English literature until such time as it may be worthily filled by another more detailed work from the pen of some one who is intimately acquainted with all the localities, as well as with all the original sources of information, some of which are still undiscovered."

Andrew Lang's "Short History of Scotland" (Dodd, Mead) is an abridgment of the author's four-volume "History of Scotland from the Roman Occupation." What was said of the larger work must be said of this smaller one, namely, that while the style is characteristically easy and vivacious, the work is one of information rather than scholarship. As a rapid sketch of externals, however, it merits a generous recognition.

"Papyri Græcæ Berolinenscs, Collegit Guilelmus Schubart, fifty plates in collotype, with appendix" (Oxford: Parker & Son), contains a selection of documents and literary papyri from the Berlin Museum. There are facsimiles of eighty-one papyri, either complete specimens of short documents or portions of longer texts with an appendix containing brief descriptions of each and a transcription into ordinary Greek of a few lines or the whole selection. They are arranged historically, beginning (No. 1) with the oldest MS. of a Greek book, the "Persæ" of Timotheus, ascribed to the fourth century, B. C., and (No. 2), containing a *pactum dotale* especially valuable as giving its own date, the seventh year of Alexander, son of Alexander the Great (*i. e.*, 311 B. C.). The collection gives admirable material for the study of palæography from these earliest specimens down to the eighth century after Christ. In addition to this main purpose, care has been taken to select with especial reference to the value of the contents. They include, for example, in addition to specimens from well-known authors, letters (*e. g.*, a Greek version of a letter by Hadrian); notices of gifts; sales; renting of estates, houses, etc. It is of interest in connection with the "Fragmenta Tragica Papyracea," just issued in the Clarendon Press texts, that specimens are here given of two of these fragments; the "Achæorum Conventus" of Sophocles, and the "Cretes" of Euripides (both papyri being assigned to the second century after Christ).

The plates are carefully prepared under W. Schubart's able supervision. The explanatory matter in the appendix contains the absolute essentials for the help of students, but the value of the book would have been enhanced for students and even for teachers, remote from larger reference libraries, if the size of the appendix had been doubled by giving many details of great interest which only the fortunate few are in a position to cull from scattered sources. This could not be demanded of the editor of a work intended specifically for palæographical study, but it would have assisted in stimulating inquiries that should be raised and answered. The book is a valuable addition to the apparatus for Greek studies.

The third volume of Professor Vinogradoff's "Oxford Studies in Social and Legal History" (Clarendon Press; Frowde) consists of two monographs of rather more general interest than those in the earlier volumes. In the first monograph, "The Estates of the Archbishop and Chapter of St. André of Bordeaux under English Rule," Miss E. C. Lodge, on the basis of careful researches in the archives at Bordeaux, describes the economic organization of certain lands in the Bordelais. This was part of the region which the English acquired through the marriage of Henry II to Eleanor of Aquitaine and which they kept until 1453. Vine-growing was early an important occupation, and became steadily more important as commerce widened towards the close of the Middle Ages. The Archbishop received his rents in wine and paid his officials in the same liquid coin. Next to the vine-growers themselves the most numerous social class was the barrel makers. So much wine was grown to the exclusion of other produce that wheat was imported from England. This fact, that viticulture, not agriculture, was the dominant interest in the Bordelais, reveals important contrasts

between the hitherto unknown economic organization which Miss Lodge has laid bare and the ordinary self-sufficing manorial groups so well known in mediæval England, Germany, and Northern France. The estate of St. André was far more modern than the ordinary agricultural village of the feudal age. Serfs were relatively few in number; there were a great many small free rent-paying or profit-sharing tenants bound to their ecclesiastical superiors by ties of money rather than by bonds of allegiance. Services and dues were early commuted into money payments. In short, it was a commercial, individualistic, and modern kind of economic life in contrast to the manorial village with which economic historians are usually familiar.

In the second monograph, "One Hundred Years of Poor Law Administration in a Warwickshire Village," Mr. A. W. Ashby begins with an excellent history of the economic structure of the village of Tysoe from the time of the Domesday Survey down to 1796, when Enclosure Commissioners readjusted the holdings by throwing scattered strips together. By taking the concrete case of this single village and by a couple of maps, he succeeds in giving a clear example of the complicated process by which millions of acres were enclosed under acts of Parliament between 1760 and 1830. Having explained thoroughly the economic conditions, the author gives an admirable detailed account for Tysoe of the workings of the vicious English Poor-law system, which encouraged bastardy, thriftlessness, and degradation among the working classes. An unmarried woman was better off with a child than without. For every poor woman could claim a pittance from the parish when unemployed. If she remained unmarried and bore an illegitimate child her pittance was increased. If she could fix the paternity upon some man she might hope to get a husband, since the parish authorities would use all their power to make him marry her, and thereby relieve the parish of the cost of supporting a bastard. "There can be no doubt that the greatest cause of looseness among the women was the hope of finding a husband." These evils became far greater in the era which coincided with the spread of the Industrial Revolution. The changes accompanying the enclosures and the introduction of drill-planting deprived many women of their former agricultural employment of weeding broadcast-sown corn. This happened also to be an era in which the price of food rose far more rapidly than the price of labor; men and women who had just managed to earn an honest and independent living were no longer able to do so; they were forced downward into the reckless and dissolute habits of wanderers. The rich statistics which Mr. Ashby gives for this single village afford much justification for the doctrines of Malthus.

That the world stood in need of a literary version of "Romantic Trials of Three Centuries" (Lane) is not to be asserted with confidence. That this version will add greatly to the world's sweetness and light may be questioned; but there can be no doubt that so many of the world as read it will be entertained. Most of the dozen trials here recounted are inherently interesting. Some of them have been made fascinating by the literary skill of our author. It has been said of Blackstone that he was the first to make the law speak the language of the gentleman. Mr. Hugh Childers makes it speak the tongue of the *littérateur*. If any one doubts this, let him compare the first chapter of this volume with a recent article on the same theme by an eminent teacher of law. Prof. C. S. Kenny, writing in the *Law Quarterly Review*, under the title of "The Mystery of Elizabeth Canning," tells lucidly the story of this extraordinary trial, and discusses with judicial impartiality the contradictory evidence as well as the mystifying conduct of various persons connected with the case. From the trial he draws the lesson "that it is dangerous to permit judicial proceedings to be influenced by mob violence or even by party feeling—a lesson," he declares, "increasingly necessary in our days of sensational newspapers, a widespread franchise, and a plastic House of Commons." Mr. Childers entitles his chapter The Great Alibi; deftly selects from the vast mass of evidence given at the trial and from the many pamphlets inspired by it such parts as suit his purpose, and weaves them into a drama of unusual power. He draws no lesson from the trial. He makes no attempt to instruct the lawyer or to act the part of the moralist. His story is offered as a work of art.

This is true of each of Mr. Childers's stories. Take, for example, The Trial of Disraeli. In fact, there is no trial. Disraeli was indicted, it is true, for criminal libel, but he "allowed the proceedings to go by default, and submitted himself to the court's judgment." He admitted that he had been mistaken in thinking that Mr. Austin, whom he had libelled, had used the language attributed to him; withdrew the libel in terms of ample apology, and no sentence was imposed. Small substance here for a legal disquisition, but material enough for a clever character sketch of the handsome young novelist and political free lance, who was destined to be Prime Minister. With equal skill Mr. Childers discourses of the trials of The Lowestoft Witches, of William Penn, of Tom of Ten Thousand, of Beau Fielding and the Duchess of Cleveland, of the Macaroni Parson, of the Robbers of the Lyons Mail, of Jean Peltier, of Abraham Thornton (which led to the formal abolition of the wager of battle), and of Lord Cardigan for duelling.

In a sketch covering 77 concise pages, Prof. H. S. Canby presents a fairly comprehensive and not uninteresting "Study of the Short Story" (Holt). The development of the short story is recounted from the Middle Ages to the present. Following the text are eleven representative examples—two from Chaucer and from Poe, one each from Addison, Johnson, Scott, Hawthorne, John Brown, Stevenson, and Kipling. The book is intended to displace the author's "The Short Story," and to serve as a complement to his larger work, "The Short Story in English."

"The Science of Etymology" (Oxford), by the late Rev. Walter W. Skeat, sets forth clearly the principles of etymology in general and of English etymology in particular, and includes entertaining chapters on certain words and on linguistic errors. The book is equipped with a full table of contents and an index of words, arranged according to language.

"Public Speaking: Principles and Practice" (Macmillan), by Prof. I. L. Winter, of Harvard University, is a substantial volume of four hundred pages, containing a brief discussion of the main principles of platform delivery and a large number of selections suitable for five-minute presentation. The selections are arranged in two groups, those for use in "technical training" and those for use in "platform practice," and each of these groups is divided further. The after-dinner speech, the occasional poem, and the anecdote receive considerably more attention than is usual.

The Rev. Leander Trowbridge Chamberlain, D.D., died at Pasadena, Cal., on Friday. He was born at Brookfield, Mass., in 1837, and graduated from Yale and from the Andover Theological Seminary. For several years he preached in Chicago and later in Brooklyn. He was active in evangelical work and in political reform, and was connected with philosophical and scientific societies. Among his writings are "A Short History of the English Bible," "The State, its Origin, Nature, and Functions," "The Colonial Policy of the United States," "Patriotism and the Moral Law," "The Evolutionary Philosophy," and "The Suffrage and Majority Rule."

Francis Fisher Browne, since 1880 editor of the *Dial*, which he founded, died on Sunday at Santa Barbara, Cal. He was born at South Halifax, Vt., in 1843. During the war he served in the Forty-sixth Massachusetts Volunteers, and later studied at the University of Michigan. He was the author of "Every-Day Life of Abraham Lincoln" and a book of poems, "Volunteer Grain," and edited several collections of verse

Science

The Interpretation of Dreams. By Sigmund Freud. Authorized translation by A. A. Brill. New York: The Macmillan Co. $4 net.

Professor Freud's work in psychotherapeutics, and the effective results gained in connection with his "psychoanalytic method," have attracted wide attention among psychiatrists and the medical fraternity. This method consists in inducing a patient to avoid all attempt at guiding his thoughts, and to report the images and ideas which spontaneously appear to him under these conditions. Many of the images, etc., which thus arise in the patient's mind evidently relate to experiences long since forgotten, which the practitioner is able to recall to the patient by skilful questioning. Our author and his followers hold that we are able by this method to discover the basis of certain obsessions and phobias, the evil effects of which may be removed by what may be called a cathartic treatment. In the course of his many psycho-analyses Freud has been much impressed by the important fact that the forgotten experiences resuscitated by this means bear a striking resemblance to the con-

tent of dream life, and this has led him to adopt the theory of dreams presented in the work before us. The drift of the author's argument is far from clear, being obscured by great diffuseness and occasional elusiveness of statement. Readers are therefore in danger of being led by his abounding self-confidence and enthusiasm to accept without question his clever interpretations which are given with great wealth of detail, and to accept without due criticism the dream theory which these interpretations are supposed to substantiate.

Stripped of all illustrative material, the theory may be stated as follows: Our author's main interest is centred upon the thesis that every dream is the fulfilment of an unconscious wish. He conceives of this wish as an active entity which strives to rise into full consciousness and to effect its realization, this being thwarted by the action of another entity which he designates as the "censor." "The psychic activity in dream formation resolves itself into two functions—the provision of the dream thoughts" which are unconscious, "and the transformation of these into the dream content." This latter activity is "peculiar to dream life and characteristic of it, . . . something qualitatively altogether different from waking thought, and therefore not in any way comparable to it. It does not, in general, think, calculate, or judge at all, but limits itself to transforming. . . . This product, the dream, must at any cost be withdrawn from the censor" (p. 401 f); this being accomplished by a variety of devices. The dream under his view would not occur unless it had a special function, which is thus described: "The dream has taken it upon itself to bring the liberated excitement of the unconscious back under the domination of the fore conscious; it thus affords relief for the excitement of the unconscious, and acts as a safety valve for the latter" (p. 457 f.).

Before examining this theory in detail we may well call attention to two contributions to psychology made by Professor Freud in other works, and brought into prominence in the book before us. It is, of course, no discovery of his that there exists an elusive psychic field, commonly spoken of among us as "subconsciousness," which is quite beyond the limits of awareness, and which has its influence upon the psychic field of which we are aware (our author's "fore-consciousness"); but this fact has only of late years gained adequate attention from psychologists, who, in the face of the phenomena brought to view by Freud's investigations, can no longer ignore its significance. His results also force upon our notice the fact, of which again, however, he is not the discoverer, that consciousness is a complex system of psychic systems, even as the nervous system whose activities correspond with consciousness is a complex system of minor nerve systems. Here again psychologists must acknowledge that the emphasis laid upon the "unity of consciousness" has led them to overlook facts which our author's studies compel them to take account of.

This latter point leads us at once to the consideration of the doctrine of the "censor" to which our author gives so great prominence. This "censor" is spoken of as a psychic system or clever psychic entity which resists the "penetration to consciousness of the dream thoughts" (p. 409), and which our author likens (p. 419) "to the Russian newspaper censor on the frontier, who allows to fall into the hands of his protected readers only those foreign journals that have passed under the black pencil." When the censor fears that the dream thought will escape his vigilance he resorts to all sorts of artifices to forestall its persistency. He changes the dream so that it becomes repugnant rather than attractive (p. 135). He moulds the dream by distortion (p. 226); by displacement and condensation (p. 286 f.); by substitutions (p. 314); by the suppression and inversion of pleasure-pain and emotional reactions (p. 375); by making it appear foolish and disconnected (pp. 339 f., 419 f.); by forcing us to forget it upon awakening (p. 410 f.). Never, indeed, should we have a dream but for the fact that "the sleeping state makes dream formation possible by diminishing the endo-psychic factor" (p. 416).

The layman certainly must see in this conception much that will appear to him fantastic, if not absurd. The psychologist must see in it the building of a huge structure upon a very slim and unstable foundation. It is to be agreed, of course, that the psychic system of which we are aware in waking life, moulded as it has been, and is, by the social influences that surround us, prevents the fruition of desires and frustrates the development of thought trains which are inimical to our welfare as social beings. But this acknowledgment does not warrant us in holding that this wide-awake consciousness is an entity so separate and diverse from the other psychic systems within us as our author would have us believe. All the evidence before us leads to the view that consciousness is fundamentally of the same nature through and through: that differences of systemic form occur within it; but that these are always in some measure correlated and are constantly more or less influential in determining the nature of that field of consciousness of which we are aware: this being quite compatible with the fact that when we feel consciousness to be less than fully alert prominence is gained by other psychic systems than that which is evidenced in moments of full alertness.

Passing over the final labored and obscure elaboration of this censorship (p. 426 ff.), which points to another censor governing "the transition from the fore-conscious to the occupation of consciousness" (p. 490), we may turn to the main thesis, viz., that "the content of the dream is the fulfilment of a wish; its motive is a wish" (p. 100). This thesis is based on the author's analysis of dream contents which, if allowed to develop, very frequently, if not usually, bring into prominence some wish which in the dream is felt to be realized. This fact none will deny, but question at once arises whether this is a special characteristic of dream consciousness. It surely is true that the development of the thoughts which arise in everyday wide-awake life also constantly yields wishes that are immediately followed by pictures of the consequences of their imagined fulfilment. In this characteristic of dream life we therefore find no unique psychic functioning.

But in dream life, as in wide-awake life, there are many cases where wishes are not observable. This fact, however, does not balk our theorist, who warns us that his "doctrine does not rest upon the acceptance of the manifest dream content, but has reference to the thought content which is found to lie behind the dream by the process of interpretation" (p. 114). And here he displays extraordinary ingenuity in ferreting out dream wishes where none at first appears, by methods which, by the way, would yield very similar results if applied to normal waking consciousness. In his other writings our author has given evidence of a morbid tendency to over-emphasize the potency of erotic influences in all of experience, and in the field here considered the results of this preconception are conspicuous, leading him to improbable and revolting explanations. It may be true that these influences are very powerful in our adult lives; true also that they have been powerful in infantile life, and by their early activity have resultants which are felt as we come to mature. It is to be noted, however, that the traces thus left are likely to appear in wide-awake life when we allow our thoughts to flow without restriction, as well as in dream life, which latter is so closely allied with our uncontrolled waking states that we are led to speak of the latter as "day dreaming." All this may be granted, however, without forcing us to follow our author in his insistence that virtually all such dream wishes must have this origin. The illegitimacy of his method is evidenced in many directions; notably, for instance, in the interpretation of dreams of "dental irritation" (p. 234). It may

be illustrated by reference to his explanation of dreams which picture the death of beloved parents. He is unable to "use the dream as a proof that" the dreamer "wishes them dead *now*. The theory of dreams . . . is satisfied with concluding that the dreamer has wished them dead—at some one time in childhood" (p. 211). The antagonism of children to parents who punish them is thus made to explain certain of these death dreams; but the largest proportion of them he would account for as due to infantile erotic influences (p. 216 ff.). The man dreams of the death of his beloved father because in childhood he had felt sexual attraction towards his mother, and had wished for the death of his father who was his effective rival. Apart from the forced and repulsive nature of this explanation it can evidently apply only to dreams where the dead parent is of the same sex as the dreamer, and is negatived by the fact that these death dreams frequently refer to parents of the opposite sex. He agrees that this sometimes happens, but contends that it is exceptional, without attempting in any way to substantiate this claim.

Finally, when we turn to our author's thesis that the dream has a special function, we find ourselves naturally led to assume a skeptical attitude by the fact that throughout the whole of his studies evidence constantly appears which leads us to note the closest of relations between our wide-awake and our dream consciousness. This our author accepts or denies as occasion requires. He agrees "that all the material composing the content of the dream in some way originates in experience" (p. 7); that "the experiences of the previous day furnish the immediate material for its content" (p. 192); that the dream thoughts "are usually found to be a complex of thoughts and memories of the most intricate possible construction, and to possess all the properties of the thought processes which are known to us from waking life" (p. 289); and even goes so far as to say that Aristotle was correct in holding that "the dream is a continuation of thinking in sleep" (p. 436). Yet, as we have seen above, he bases his theory upon the assumption that there is an activity in the transformation of dream thoughts into dream content which is "something qualitatively altogether different from waking thought, and therefore not in any way comparable to it," and he finally asks us to believe that "it is quite impossible to explain the dream as a psychic process" (p. 405).

One cannot close this book without a sense of depression. The author is a man of great ability, who has won distinction in connection with his use of the psycho-analytic method, and who is believed to have done great service in his special field by a large group of his professional brethren, not all of whom, however, agree that his theoretical positions are valid. But his mode of thought as displayed in this book is indicative of a total lack of the characteristics which lead to scientific advance. In it he portrays himself as one whose scientific judgment cannot be trusted, and this must lead even his most enthusiastic followers to question whether they are not overestimating the value of his work in other directions. He presents an example of the dangers connected with the extreme specialization characteristic of the educational systems of our day, which fails to strengthen the sense of logical values so important to the development of a true science. Their appreciation would have led our author to use caution in the adoption of doubtful hypotheses, and to hesitate to take the attitude of a special pleader who emphasizes all evidence favorable to the hypothesis adopted, and minimizes, if he does not overlook entirely, all evidence that is unfavorable. The value of his practical work in relation to hysteria and kindred problems will be remembered long after his theory of dreams has been forgotten.

"Air Resistance and Aviation," a book announced by Constable, is a translation from the French of G. Eiffel, who has an experimental laboratory at Auteuil.

Macmillan has in press "Travers' Golf Book," by the present national champion.

Following an ingenious paper by Watts in 1903, in which the ledges of ancient rocks in Charnwood forest, emerging from the lowlands of central England, were shown to be parts of a long-buried and recently uncovered desert landscape, T. O. Bosworth has lately published the results of eight years' minute investigation, under the title "The Keuper Marls around Charnwood" (Leicester), which fully confirm Watts's conclusion and add many new details. It appears to be demonstrated that this now humid and fertile district was a desert in Triassic time, and that the wind-carved rock surface of that period was gradually buried by the accumulation of stratified deposits under an arid climate, where evaporation greatly exceeded precipitation The direction of ripple marks in some of the sandstone layers, probably the deposits of temporary shallow lakes, indicates that the prevalent winds were from the southwest, as they are now; but a strong mountain range must then have enclosed the Charnwood district from the moisture of the Atlantic.

"Industrial Chemistry: A Manual for the Student and Manufacturer" (Van Nostrand), edited by Allen Rogers and A. B. Aubert, in collaboration with thirty-four specialists, is well printed, excellently bound, and carefully proof-read. It is a composite treatise, being made up of a series of chapters written by various chemists and engineers on a great variety of subjects, all, on the whole, ably presented; but there is a decided want of uniformity in scope and a marked variance in the method of presentment. The book does not meet the needs of the manufacturer, but, on account of the excellent treatment of principles, it is well suited as a student's manual, and as such will be welcomed by teachers of applied chemistry. In some of the chapters—as, for instance, in T. T. Gray's excellent account of The Petroleum Industry—the literature of the subject is freely referred to, while in others—as in that on The Destructive Distillation of Wood—no authorities are cited. The editors did not adopt the official abbreviations of the American Chemical Society in the case of periodicals; in fact, they failed to preserve any uniformity at all, and, as a result, the reader may be puzzled by some of the references, as that on p. 826, namely, "J. Soc. Chem."

At the recent annual meeting of the Naples Table Association for Promoting Laboratory Research by Women, the use of the Table supported by the Association at the Zoölogical Station at Naples was granted for the coming year to Dr. Rhoda Erdmann, of Berlin, Germany, and Dr. Caroline Thompson, professor of botany at Wellesley College. The Ellen Richards Research Prize of $1,000 for the best thesis written by a woman on a scientific subject embodying new observations and new conclusions based on independent laboratory research in biological, chemical, or physical science, was awarded to Miss Ida Smedley, London, England, D.Sc., London University, who has been working for the past four years in the bio-chemical laboratory of the Lister Institute of Preventive Medicine. The subject of the winning thesis was: "An Investigation into the Methods of Formation of Fatty Acids from Carbohydrates in the Organism." Ten theses were submitted in competition.

Dr. Louis Adolphus Duhring, an authority on skin diseases, died last week at his home in Philadelphia, aged sixty-seven. He graduated in 1867 from the University of Pennsylvania, in which institution he was later made professor of dermatology. He was the author of "Atlas of Skin Diseases," "Practical Treatise on Diseases of the Skin," and "Cutaneous Medicine."

The death is reported, in his fifty-ninth year, of Prof. Fritz von Bramann. From 1887 to 1890 he was assistant to Bergmann at the Berlin Klinik, which he left to become director of that at Halle.

Drama and Music

An authorized translation by Mrs. Emil Pohli of Arthur Schnitzler's latest play, entitled "Professor Bernhardi," is announced by Paul Elder & Company.

Of the three pieces in the second series of plays by John Galsworthy (Scribner), "The Eldest Son," "The Little Dream," and "Justice," the first two have been the subjects of comparatively recent notice and do not call for further comment at this time. The third, "Justice," which was played some months ago in London with only moderate success, is worthy of the author's reputation, in respect of literary and theatrical craftsmanship and realistic characterization, but is too plainly a case of special pleading to carry conviction with

it as an arraignment of the judicial system against which it is directed. The theme is the irretrievable ruin which is too often the fate of a first offender—of a moral weakling betrayed into unpremeditated crime by stress of circumstance or sudden temptation—for the lack of reasonable opportunity of reformation. It is a lamentable fact, doubtless, that the way of the penitent transgressor is often made unnecessarily hard. But in the special instance used as a typical illustration by Mr. Galsworthy, two points instantly suggest themselves. The first is that the offence committed by the young clerk, Falder, was not only forgery, but a double forgery—which he must have known would excite suspicion against an absent and innocent acquaintance—and the second is that after conviction, imprisonment, and release, almost the first use he made of his liberty was to forge papers in order to procure employment. It may be admitted that the conditions surrounding him were of a most distressful nature—Mr. Galsworthy, of course, has taken good care of that—but the fact remains that his conduct throughout is indicative of innate degeneracy rather than impulsive, amorous folly. His melancholy story is told with plausible and poignant simplicity, and provokes compassion, but it is difficult to escape the reflection that his sufferings and tragic end—for he kills himself at the last as the easiest way, perhaps, out of a dramatic dilemma—were quite as much the logical result of his own defective character as of any process of law. Such an impression is necessarily fatal to a thesis play of this kind, especially when the legal action is represented with the scrupulous moderation and accuracy which are characteristic of nearly all Mr. Galsworthy's work. The chief trouble with him, as with many other philanthropic enthusiasts, is that in his zeal for the reform of existent social wrongs and abuses, which, however undeniable and deplorable, are steadily if slowly diminishing before the growth of education and enlightenment, he is apt to overlook the necessities of social order.

"The Chaperon," by Jocelyn Brandon and Frederick Arthur, which is said to have made a hit at the Strand Theatre in London, appears to be an irresponsible farce, not too delicate in texture. A member of Parliament, entertaining a famous actress, is surprised by his wife, and gets out of the difficulty by introducing the lady and a casual acquaintance as Mr. and Mrs. Jones. The wife is charmed with her new friends, and insists upon taking them home to dinner. Unforeseen accidents lead to highly embarrassing situations, which are solved in theatrical fashion. Ethel Dane, as the actress, repeated the success which she made some time ago in "The Glad Eye," and Cyril Keightley enacted the Chaperon with humor and veracity.

The governors of the Memorial Theatre at Stratford-on-Avon realize that the endowment fund will have to be substantially increased if the annual Shakespearean festivals are to be maintained hereafter upon the same scale of artistic excellence and comprehensiveness which has characterized them during Mr. Benson's administration. The hope of keeping the company up to its present high standard lies, the governors have concluded, in the possibility of sending the players on tour to America and South Africa. Success abroad would serve not only to raise necessary funds, but to advertise the festivities at Stratford.

Young singers of merit have no difficulty in getting engagements. The place hunts for them. Speaking of Covent Garden, Mr. Legge, of the London *Telegraph*, writes:

The singers are collected from practically all parts of the world. The Royal Opera syndicate have agents in every likely, and in some unlikely, spots, whose duty it is to report on the rising of any bright, particular star, and when the report comes, then off goes Mr. Henry Higgins, the chairman of the syndicate; Baron D'Erlanger, a member of it, or Mr. Percy Pitt, the musical director, any one of them, or all three—off to hear if the report is well founded. In this way are new stars brought to earth.

Wolf-Ferrari, whose "Secret of Suzanne," "Donne Curiose," and "Jewels of the Madonna" have been sung at the Metropolitan, is said to be putting the finishing touches to a light opera based on Molière's "L'Amour Médecin."

Paris is still talking about a wonderful performance of "Rigoletto," in which Melba sang, with Caruso and Renaud. That was four years ago. Two weeks ago Mme. Melba reappeared in Paris, this time as a concert singer. Her voice was found to be "as rich and flexible as ever."

Forty-seven composers, including three Americans, figured on the programmes of the Boston Symphony Orchestra's home concerts during the season just ended. Beethoven was represented thirteen and Wagner nine times. Mozart and Brahms each had five hearings, while Liszt, Schubert, and R. Strauss had four each. The number of pieces played was 101. The complete list of composers follows:

Bach, C. P. E., Bach, J. S., Beethoven, Berlioz, Bischoff, Borodin, Brahms, Bruch, Bruckner, Chabrier, Chadwick, Charpentier, Debussy, Dukas, Dvorák, Glazounoff, Gluck, Goldmark, Haydn, Holbrooke, Klughardt, Lendvai, Liszt, Loeffler, MacDowell, Mahler, Marcello, Mendelssohn, Mozart, Mraczek, Pfitzner, Reger, Rimsky-Korsakoff, Saint-Saëns, Schubert, Schumann, Sgambati, Sibelius, Sinding, Smetana, Strauss, R., Strube, Tchaikovsky, Vivaldi, Volkmann, Wagner, Weber.

During the past season in Boston sixteen Italian operas, including the operas of Mozart and Wolf-Ferrari, had sixty-four performances; nine operas by French composers have had twenty-seven performances; three German operas, eleven performances. Puccini had four operas to his credit and seventeen performances. Verdi was represented by five operas and nineteen performances. Wolf-Ferrari was represented by two, the remainder by one each. The complete list follows:

"Aïda," 6; "Barber of Seville," 2; "La Bohème," 5; "Cavalleria Rusticana," 4; "Tales of Hoffmann," 5; "Coppélia," first act, 2; "Djamileh," 1; "Don Giovanni," 3; "Faust," 3; "La Forêt Bleue," 3; "The Jewels of the Madonna," 7; "Girl of the Golden West," 4; "Hänsel und Gretel," 5; "Louise," 5; "Lucia di Lammermoor," 4; "Madama Butterfly," 3; "Martha," 2; "Otello," 3; "Pagliacci," 4; "Pelléas et Mélisande," 2; "Rigoletto," 3; "Samson et Dalila," 1; "Secret of Suzanne," 4; "Thaïs," 3; "Tosca," 5; "Traviata," 4; "Tristan und Isolde," 4; "Trovatore," 3.

The late Joseph Bayer, director of ballets at the Imperial Opera in Vienna, was in a special sense, as a correspondent writes, a Viennese composer; he had gauged with accuracy the Vienna taste, and by his composition of the ballets "Puppenfee" and "Wiener Walzer" he made his name famous far beyond the limits of the Austrian Empire. Numerous other ballets and operettas owe their origin to him, all having the same peculiar Bayer physiognomy and original coloring, and all bearing the unmistakable stamp of their composer. Bayer was one of the quickest musical writers imaginable; what he composed was written on the spur of the moment, and, when in his instrumental mood, the most experienced copyists could scarcely keep pace with him.

Bach's widow died in the poorhouse, and in the last years of his life Bach had been obliged to sell the copper plates of some of his compositions for which there was no demand. A few weeks ago the MS. of his "Well-Tempered Clavichord" was sold at auction in Berlin for $5,000. At the same sale the sum of $600 was paid for the MS. of Gluck's "J'ai perdu mon Eurydice." The fragment of Wagner's juvenile opera, "The Wedding," brought $3,000, while $600 was paid for his pianoforte sketch for a second symphony.

A German opera by H. W. von Waltershausen has been produced in London. It had previously been staged at Frankfurt. Its name is "Oberst Chabert," being an adaptation by the composer himself of Balzac's "Colonel Chabert." The London *Times* welcomed it as "a sincere and skilful work containing moments of strong feeling and some (rather too few perhaps) of distinctive beauty. It is the work of a man who knows the stage apart from the opera house."

In memory of the late William F. Apthorp, formerly Boston's leading musical critic, the Cecilia Society of that city at its last concert sang Palestrina's "Tenebræ factæ sunt." Elgar's new choral work, "The Music Makers," had its first Boston hearing on this occasion, under the direction of Dr. Arthur Mees, who goes from New York to Boston regularly to conduct the St. Cecilia's concerts.

Art

THE ROYAL ACADEMY.

LONDON, May 1.

There is no better exponent than the Royal Academy of the official art that has helped to drive artists to Cubism and Futurism and other foolish excesses. Officially, its summer exhibition is the most important given in London; artistically, it continues to be the least representative. Whatever change there may be within the Academy in its membership, whatever change without that body in the tendencies and movements of the day, the exhibition at Burlington House never rises above its dull standard of mediocrity. One after another the Academicians who were the great popular masters of a quarter of a century ago, when I first went to an Academy, have died and their place has been taken by the younger men, but the exhibition in quality seems neither to have lost nor profited. Artists, once the leaders of opposition and revolt, are gathered in the fold, promptly swallowed up

in it, to disappear, as far as any signs of their influence can be found upon the Academy walls. Other galleries may be all astir with new experiments and new departures, the Academy calmly continues to uphold its old exhausted conventions and formulæ, to persevere in its old system of hanging and arrangement. Lately, attention—a good deal for England—has been given to mural decoration, but never a hint of the fact would be gleaned from a visit to the Academy. There is what the dealers call a "boom" in etching, there is a vigorous revival of lithography, and in the Black-and-White Room the selecting and hanging committees would seem to have been preoccupied with nothing but to preserve uniformity in the neat gilt frames. Monuments are wanted for the heroes of the day, and in the Sculpture Galleries the same listlessness reigns as in the others. Really, at the press view yesterday I rubbed my eyes and looked again and again, wondering whether this was the twentieth century or whether I had been somehow carried back to the late eighties and early nineties of the nineteenth. Constancy in a better cause would have its virtue.

My friend, the critic, who used to search the Academy for one picture that amused him, and, having found it, hastened away, saying his article was written, would this spring look in vain for the one peg worth hanging his criticism on. Sargent for long could be relied upon to send a portrait, or a portrait group, or a fragment of his decorative series for Boston, that would arrest you as you passed, force you to look at it, to study it carefully. Sargent, however, is now content to exhibit only four fairly small studies. One, Rosa Maine, is a half-length of a girl, her face fresh, alert, alive, so that in her presence the near large and labored portraits fade into lifeless shadows, into mere pigment. It is always this suggestion of life, this vitality, that seizes you in Sargent's work when seen against the inanimate Academy background. It is more insistent still in a vigorous, brilliant sketch of the picturesque Hospital at Granada. The sunshine flooding the loggia is full of life; the patients lying or lounging there are alive in their suffering and their pain, in every pose, every turn, every movement of their poor, tortured bodies; there is life in the very quality of the plain whitewashed walls and the old, dark paintings hanging upon them. Apparently, Sargent painted just what he saw when he looked down the long perspective of the loggia, for his work, whatever subtlety of design may be concealed in it, always gives the effect of a direct, rapid transcript from Nature, but one that, if rapid, retains the essential, the vital spark that the mechanical snapshot, supposed to be the most accurate, because the most rapid and direct, period of all, never can capture. He has a third study, abounding in the same animation, and the same rapidity and sureness of touch, of a group of Spanish Gypsies, their low white houses brilliant, dazzling, in the hot Spanish sunlight, the yellow shawl of a gypsy girl who crouches by the roadside singing out riotously, shamelessly from the decorous Academy walls.

It is astounding how this one small sketch can overpower the surrounding canvases, twice, four times, ten times, its size. For example, a painting by Charles Sims, the R.A.-Elect, who has been straying for his motives into the woods and the wilderness beyond the World, hangs close to the Sargent, but the light that never shone on sea or shore, as he imagines it, is tame and dead compared to the blinding radiance of Sargent's Spanish hillside. These sketches are not great masterpieces; they might not tell at all in the salons or in many an exhibition given in the old days by the International, but they are the work of a man who can see for himself, who can paint for himself, and this is the reason why they stand out so strikingly in the midst of the feeble, anæmic reëchoes and the patient repetitions of old time-honored formulæ that jostle one another on the Academy walls.

In size, at all events, Lavery has attempted to rival Sargent's earlier achievements, and he has been commissioned to paint royalty—though not by royalty—which is the height of most Academic painters' ambition. Indeed, he has been quick to arrive officially since his election as Associate a couple of years ago. This year he has the largest picture in the Academy, and it hangs in the chief centre of the chief gallery (No. III)—it has been approved by royalty, it has been presented by its owner to the National Portrait Gallery. But to arrive officially is not usually to conquer artistically. Royalty seems to have oppressed Lavery, as it has many other British painters for whom it has condescended to sit. In this case the sitters are the King, the Queen, the Prince of Wales, the Princess Mary; and the first impression the canvas gives is that he has been sorely puzzled to know how to group them. He has never before undertaken a large important group, and it is clear that his talent does not lie that way. A photographer might have hit upon a happier arrangement. The Queen sits in one corner of a sofa drawn up across the foreground of a large, spacious room, presumably at Buckingham Palace, the Princess is on a low stool or ottoman at her feet, the Prince of Wales stands behind the sofa, and at its other end stands the King, in admiral's uniform, staring straight out of the canvas, his pose as wooden as a mannikin's. The difference of planes hardly accounts for the scale of the figures; one trembles for the King and Prince, hopelessly dwarfed as they would be, were the Queen and the Princess to rise. The difficulty of covering the enormous canvas has evidently been no less serious a problem to Lavery, and he seems to have turned for help to the scene-painter, though he might have learned from Velasquez that the secret of making a room look big is to fill it with atmosphere, and that the modelling of the heads need not be coarse nor the draperies put in with too heavy a brush in order to give the figures their right proportions in it. Nor is the color, a dingy gray, of the background pleasant, though architectural dignity is given by the perspective through an open door to an apartment beyond, and still beyond to a blue vista. The way this blue is repeated in a touch here and there on the uniform of the King, the dresses of the Queen and Princess, and the decorations of the Prince, suggests that Lavery had a definite design, a definite scheme of color. But he has not known how to carry it out; and the result is another proof of the timidity of the modern painter when facing the subject that inspired some of the greatest masters of the past to their greatest triumphs.

Few other portraits reach even the level of Lavery's. There is the usual array by Academicians—by Herkomer and Ouless, who mistake coarseness or brutality for vigor; by Dicksee, who thinks to achieve delicacy by vapidity, and whose women have about as much flesh-and-blood reality as the beauties of the handkerchief and chocolate-box cover; by the president, Poynter, who hopes to attain genius by industry in detail. Already Orpen seems to be chastened by his Academic dignity, and his one Portrait—of a woman—has but the greater vivacity in the rendering of a curtain behind the figure and the orange-hued flower at her waist to serve as reminder of the days when he was accepted as a prophet from whom un-Academic things were expected. Another sitter as strong in character as Phil May would be the best of tonics to J. J. Shannon, who betrays his weariness in his painting of women. There is a charm of pose in his Mrs. E. Wynne Chapman seated under an eighteenth-century tree, but his interest in the sitter herself, as in his others, seems light and languorous. The one really animated passage in all the five portraits he shows is a pot of flowers in the background to his Mrs. Hope, the textures and the color so directly and dexterously expressed that you almost feel his relief when he found himself painting it.

George Henry has gained no more than Orpen from Academic honors, and his portraits grow prettier in conception and sleeker in execution. This year he varies them with an outdoor group that,

at a glance, has a delightful gayety, as if the painter were rejoicing in his escape from the studio and studio properties into the open air. But it is the gayety more appropriate to the hoardings than to a picture gallery, and it does not stand over-well a closer study, for it is impossible not to see how artificial the composition is, strive as the painter may to pass it off as a piece of realism. Three girls are grouped immediately in the foreground, so immediately that little more than their heads and shoulders are seen. Above them is a vast expanse of sky, a long white cloud fills one side of it, and is balanced on the other by a tall tree. The three heads are put in with spirit and sympathy; the tenderness with which the light falling on cheek or chin gives the modelling is happily found. But the placing of the figures so low on the canvas is deliberately eccentric, and unpleasant, too, for they seem to be falling out of the picture, and make you long to push them well up into it again; the cloud is nearly as solid as the tree; the lines are too rigid for rhythm or for nature. It is the note of gayety where gayety is at a discount—even if it be the gayety of the poster—that is the charm of the canvas. The only other portraits that need be mentioned are a cleverly modelled head of a woman by Clausen and a vivacious presentment of a girl in Spanish costume by Lambert.

The landscapes explain as eloquently as the portraits that gayety, vivacity, is usually the last quality the British painter seeks in nature. Those sent by Academicians are as ponderous as the Academicians' portraits, with an occasional exception. Painters like Hughes-Stanton and Bertram Priestman can build up a composition on large, effective lines out of a motive found in the dunes of France or the hills of Yorkshire, but they cannot quite conceal the bones of the construction. Arnesby Brown knows how to place his train as it creeps—if it does not stand still—through a flat countryside or his group of cattle in rich pastureland. Mark Fisher is never uninteresting, though of late he has done little more than repeat his earlier themes. Here and there the sweep of a passing cloud or the golden glow of the sun low in the heavens may redeem an otherwise commonplace arrangement. But, all told, the exceptions are few. Among the few I may note George Clausen's impressions of London on a frosty morning. Probably no effect is more difficult, more elusive, and I cannot with truth say that Clausen has been entirely successful. He has seen how the London atmosphere can transform London ugliness into beauty, can give mystery and tenderness even to so prosaic a motive as the low grimy walls separating one little London garden from another as, looked down upon from a high window, they form a succession of rhythmical lines, one beyond the other, until the farthest fades into the mist; he has seen the dim splendor of the winter sun trying to break through this mist, in the effort tinging it with rose and gold and making a space of pale gold here and there on a homely roof; he has seen, too, the delicate pattern of the bare branches of the London trees silhouetted against the low sky. Any one who knows the loveliness of just such frosty mornings in London, and has watched the sun struggling through the thick atmosphere, can understand the impression Clausen has endeavored to put down on his canvas, and this power of understanding throws a glamour over the canvas. But his harmony is disturbed, as it never is in nature, by the little pin-points of frost glinting on walls and in gardens, and in one painting a discordant brown tree, rising straight and tall in the foreground, must be forgotten before the harmony is discovered.

The old Academic performances, archæological, mythological, historical, to which Leighton and Tadema and Long gave so great a vogue, have for the moment gone out of fashion. Even the old-fashioned subject picture is rare, though I have an idea the crowd will gather in front of Edgar Bundy's Finance, which represents a group of men, mostly Jewish in type and reeking of the City and the Stock Exchange, sitting over their cigars at an elaborately and richly decorated dining table. The attraction is not any special merit in the painting, for I could find none, except, in a lesser degree, the merit of the big Salon machine, it is rather, now that Marconi rumors and Marconi inquiries are always with us, the meaning each person in the crowd will read into the group—a meaning that has nothing to do with art. That such a picture should be noticed at all explains the curious lack of invention, the distressing inability of painters to find anything to say for themselves, characteristic of an Academy exhibition. The schools are turning out an army of men and women with a fair amount of technical knowledge and skill, but without an idea as to what use they are to make of it. It is pathetic, the way the achievements of the successful man are frankly imitated.

In the Sculpture Galleries I was impressed chiefly with the absence of Alfred Gilbert. The Academy should have made every effort to retain a member who added so greatly to its distinction. There is plenty of efficient work, but nothing very distinguished. I confess frankly that I do not know what little masterpieces may lie buried in the Water-Color Room, but to look for them on walls and screens plastered from top to bottom with small frames packed in as tight as they can fit, would be more hopeless than hunting for the proverbial needle in the haystack. Strang and Cameron and Short contribute to the Black-and-White Room, the chief end of which seems to be, however, as it ever has been since I have known the Academy, to give the least possible idea of what is actually doing in illustration, etching, lithography, and engraving. Some schemes in the Architectural Room are of public interest; for instance, Sir Aston Webb's design for the new façade to Buckingham Palace, and C. E. Mallows's plan for the improvement of South London. Nothing could be worse than the east front of the palace as it is, so that at least the proposed pseudo-classical façade will not mean the destruction of old beauty which was the price paid for the refashioning of the Mall. The plan for South London includes an Embankment on the south side of the Thames from Westminster to Blackfriars and further. But the old works and breweries and shot towers and chimneys that now border the riverside are not without their value in the London atmosphere, and hitherto London has owed whatever beauty it may have to chance rather than design.

N. N.

An interesting discovery is announced from Greece, where Lieut. Bakopulos, while carrying out military observations, remarked on the sea bottom, to the east of the Island of Lemnos, some ancient ruins which were perfectly visible and prove the existence of a town of about three miles in circumference. The exact spot is that marked on the British Admiralty charts under the name of the Pharos Bank, the depth being from five to twenty-five metres. Orders have been issued by the Ministry to carry out scientific researches on the spot.

The Egyptian collection of Prof. W. M. Flinders Petrie, which has been exhibited on loan for a number of years at University College, London, is now offered for sale to that institution for $29,925. The option to purchase the collection expires in June of this year, and if University College is not in a position by then to accept Professor Petrie's offer, it is possible that the collection may find a home elsewhere. The collection, though it contains few important specimens of the higher arts, is asserted to be the best teaching collection in England. It is especially strong in the branches of pottery, beads, and scarabs. It also contains a fine selection of prehistoric objects and an interesting series illustrative of the technical arts of ancient Egypt, such as glass-making, weaving, stone-working, metal-working, casting, building, etc. Among others may be mentioned an architect's drawings for a shrine, giving the elevation of the front and side. There is also a general collection of statuettes, stone-work, amulets, and textiles dating from various periods.

The interest which has of late been taken in Hittite research is again illustrated by a course of lectures on "The Hittites"

given at the Royal Institution in London by Prof. J. Garstang, of the University of Liverpool. A general review of the researches made in Asia Minor and Syria during recent years was given, with special reference to the three excavations that have been recently made on Hittite sites—at Boghaz-Keui, in Central Asia Minor, by Dr. Winckler; at Carchemish, upon the Euphrates, by Mr. Hogarth and Mr. Woolley; and at Sakje-Geuzi, in North Syria, by Professor Garstang himself.

Sir Coutts Lindsay, artist and founder of the Grosvenor Gallery, died a week ago in London. He was born in 1824, the son of Lieut.-Gen. James Lindsay, and was a captain in the Grenadier Guards, 1846-50. He was a patron of the arts, and numbered among his friends the founders of an important art cult. It was this cult which was satirized in the Gilbert and Sullivan opera, "Patience." The Grosvenor Gallery lost much of its vogue when Burne-Jones ceased to exhibit there, sending his work instead to the New Gallery, in Regent Street.

Finance

CONJECTURES.

For most of the past week, the stock market, to whose upward or downward fluctuations the American business man has the habit of looking for a hint as to how events are moving, has absolutely ceased to move. On several of those days, hardly as many shares changed hands as are dealt in on a midsummer Saturday, or on the eve of the Fourth of July or Labor Day. In this negative expression of complete uncertainty, of belief in an even balance of good influences and bad, the Stock Exchange may be said to have expressed the feeling of the business community.

Yet even in that community itself, one must judge by averages. Wall Street is "bearish"; it talks gloomily, shakes its head over the "slow bond market," over Union Pacific's troubles with its Southern Pacific holdings, over the "tariff unsettlement," over "Rumely," over the gold exports to France. But what perplexes, and may almost be said to irritate, the speculative community, is the irrepressible optimism of the Western and Southern visitors at this market, who not only keep harping on the grain crop outlook and the railway traffic, but who persist in smiling incredulously at the gloomy diagnosis of Wall Street, and who, at the moment when all the evidence of evil has been carefully recited, answer by patting the narrator on the back and bidding him cheer up. It is quite within the possibilities that Wall Street is right and "the interior" wrong; but such mutual attitude at least makes it troublesome to feel sure.

From one point of view, the present position of affairs, in American finance in general and in the Stock Exchange in particular, might be described as a blockade of the machinery. Such lack of facilities might arise from the general public's refusal to buy securities on the usual scale at a given time. It might arise from the fact that banking institutions were already so well "loaned up" that people with plans of aggressive business expansion in their minds were obliged to cut down their requests for capital, even where circumstances of their trade would fully warrant the outlay.

In either case, the explanation of those conditions would go far towards clearing up the financial and industrial situation generally. In years like 1910 and 1906 and 1903, when somewhat similar conditions prevailed, the explanation was not difficult to find; it was found in the extravagant overdoing of a financial and industrial boom, particularly in the United States.

But it is precisely because that familiar explanation does not fit our present case at all, that the existing situation so greatly puzzles the most experienced observers. It is because it does fit Europe's case—especially when a period of prolonged expansion has coincided with such fear of war as has caused an almost unprecedented lock-up of cash and capital owned by private European citizens—that the general drift of opinion in America has been that the embarrassments in our own situation are directly caused by the state of affairs in Europe, and not by those at home. Even the gold export from New York to Paris, occurring at a time when gold was not normally moving out of the United States, owing to redundant currency or business stagnation or an adverse balance of foreign trade in merchandise, only serves to illustrate again the fact on which European economic critics have for months been laying stress—that this has been a season in which the New York market was in the strongest position of any market of the world, and in which it was therefore called upon to help out hard-pressed financial Europe.

But it is not always either comfortable or convenient to be required to give up money resources, which we could use at home, in order to get other money markets out of a present scrape. The result in such cases is apt to be that the stronger market is pulled down in proportion as the weaker market is raised up. At a given point, the market which is extending such continued help under these conditions may find its own condition troublesome. It also usually follows that any unpleasant event or possibility is regarded, under those conditions, with more attention than the agreeable incidents of the day.

It is not unnatural that, under such circumstances, the tariff should hold the centre of the stage. Whatever any one's economic views may be, the reduction in the duties is necessarily an experiment; the delay in deciding finally, just what the new rates are to be, is necessarily disconcerting to business plans. Furthermore, our people, who are subject to financial and business traditions as few other communities are, cannot be wholly blamed for thinking occasionally of the revision of 1894.

Yet, when this is said, the simplest and least experienced observer cannot have failed to notice that the underlying situation, as the trades confront the new tariff regulations, is altogether different and vastly more propitious for the experiment than at any other corresponding period in the life of the present generation. There will be inconveniences and difficulties. Some industries will probably have to change their general methods; it is not impossible that a few lines of trade will be curtailed, if not abandoned. But that this will occur on any really extensive scale is a probability by no means uppermost in the mind either of home producers or of their foreign competitors. Mr. Underwood's veiled threat to look into concerns which shut down needlessly was in some ways a trifle absurd, but it was also probably superfluous. Manufacturers might conceivably go out of business purely because of irritation that the tariff had been reduced. But if so, they would present some faint analogy with the legendary rich man who gave away all his property because of the pressure of the income tax.

Whether the financial community has before it also a Congressional season of extravagant agitation, eccentric legislative proposals, and excited oratory, is a question somewhat more undetermined than one might have supposed, a little while ago, that it would be at this time. The legislative sessions in the States have certainly suggested the presence of influences making for such commotion at the national capital, and yet the course of events to date has seemed to show that the unruly elements at Washington have been surprisingly well held in hand.

It is an interesting experiment, under interesting general circumstances. The course of political agitation has been known to take sudden and unexpected turns on past occasions of the sort, and sometimes the surprise has consisted in a quite unpredicted return to everyday common-sense. At any rate, the explosive fancies of excitable public men have had for a year the kind of vent which often relieves the pressure. The statesmen who, in the paraphrase of an ingenious wit, stand at Armageddon and battle for the Lord knows what, will sometimes take a rest from their own sheer exhaustion or the exhaustion of their audiences. But, of course all

that remains for the not very distant future to determine.

The Confessions of a Tenderfoot

By RALPH STOCK

With 50 illustrations from photographs by the author, $2.75 net.

A true and unvarnished account of the wanderings of a cultivated tenderfoot in the Canadian Northwest, the western lumber camps, San Francisco shortly after the earthquake, and the South Sea Islands.

Henry Holt & Co., 34 W. 33 St. New York

New Comedies

By LADY GREGORY

Author of "Irish Folk-History Plays," etc.

12*mo*. *With Photogravure Portraits.* $1.50 *net*. *By mail* $1.65.

The volume contains five plays—The Bogie Men, The Full Moon, Coats, Damer's Gold, and McDonough's Wife. The plays have been acted with great success by the Abbey Company and have been highly extolled by appreciative audiences and an enthusiastic press. They are distinguished by a humor of unchallenged originality.

New York G.P. Putnam's Sons London

The Price of Inefficiency

By FRANK KOESTER

This book lays bare national evils due to inefficiency, and largely responsible for the high cost of living, and suggests remedies. Comparisons with other countries give point to the criticism, which is constructive as well as destructive.

Octavo. $2.00 *net.*

The Education of To-morrow

By ARLAND D. WEEKS, M.A.

A vigorous overhauling of educational ideals to show what sort of curricula are best for an economic democracy. It contends for a closer relation between education and the life interests, if not the vocations, of the community. 12*mo*. $1.25 *net.*

A Noteworthy New Novel *By the author of "Queed"*

V. V.'s Eyes

By Henry Sydnor Harrison

How the Girl, fascinating and clever, a social favorite, yet, above all, worldly, is brought to the realization of life and her truer self by the appealing influence of one of the quaintest of characters, V. Vivian, "slum doctor."

Mr. Harrison has devoted the two years since the publication of "Queed" to writing "V. V.'s Eyes," which is superior even to "Queed," superior in its literary workmanship, in its absorbing plot, in its portrayal of character, and, above all, in its masterful human appeal.

(Ready May 24.) With pictures by R. M. Crosby. $1.35 *net.*

OTHER NEW FICTION

GETTYSBURG

By ELSIE SINGMASTER. "Miss Singmaster is an unusually fine writer of battlefield stories, and she has infused into her little volume a spirit that can but cause it to be reckoned as a war classic."—*Richmond Times Dispatch. Illustrated.* $1.00 *net.*

THE CANDID ADVENTURER

By ANNA COLEMAN LADD. "A novel no less delightful in its intimate and ironic revelation of Boston life, with its clean fragrance and reticent austerity, than in the glimpses given of a care-free existence among Roman studios."—*Milwaukee Free Press. With frontispiece.* $1.20 *net.*

THE INVADERS

By FRANCES N. S. ALLEN. "It is really a delightful story, and one which will appeal to many classes, the people are so genuinely human and generously sweet, all ages and classes."—*Lexington (Ky.) Herald. With frontispiece.* $1.30 *net.*

"O PIONEERS!"

By WILLA S. CATHER. A brilliant and intensely dramatic story of the Scandinavian and Bohemian pioneers of the Middle West. *(Ready in June.) With frontispiece in color.* $1.25 *net.*

AUTOBIOGRAPHY, OUTDOOR AND TRAVEL

MY BOYHOOD AND YOUTH

By JOHN MUIR. "There is a freshness and truth and simple sincerity about it that go far toward making it one of the great pieces of writing of its kind."—*The Dial. Illustrated.* $2.00 *net.*

IN BEAVER WORLD

By ENOS A. MILLS. "The author's deep love of every wild thing permeates his book and makes a part of its charm."—*Chicago Record-Herald. Illustrated.* $1.75 *net.*

CALIFORNIA COAST TRAILS

By J. SMEATON CHASE. "This book is a charming account of a horseback ride along or near the coast of California, all the way from Mexico to Oregon."—*Baltimore Sun. Illustrated.* $2.00 *net.*

A WAYFARER IN CHINA

By ELIZABETH KENDALL. "Miss Kendall . . . adds to the zest of the wanderer the trained mind and sympathy of the scholar, . . . consequently her book is a simple lively account with authoritative observations which just now are peculiarly timely."—*Oakland Enquirer. Illustrated.* $2.50 *net.*

The Nation

NEW YORK, THURSDAY, MAY 22, 1913.

The Week

Much has been said about the failure of President Wilson's trip into New Jersey, and it is unquestionable that it is not yet clear just what will be the outcome of his appeal for the new jury law he desires. But one thing stands out very prominently, and that is the defeat in the Jersey City primaries of Assemblyman Walter L. McDermott. This is the man whom the politicians confidently expected to win. He is also the man who assailed and attacked Mr. Wilson when the President met some of the New Jersey legislators to talk over the situation. The only inference is that the people of Jersey City have a very thoroughgoing belief in the rectitude of Mr. Wilson's position. It was a personal tribute to him of which he may well be proud. Aside from this, the most striking fact of the election for Commissioners is that the candidate who made the best run in the primary was ex-Mayor Fagan, Progressive Republican.

Among the records already broken by the present Administration must be that of the number of Legislatures addressed by a member of the Cabinet during his first three months in office. Capitals as far apart as Harrisburg, Springfield, and Sacramento have heard the voice of the silver-tongued Secretary of State within the past ten weeks. And with all this oratory, Bryan the Dictator is still below the horizon. It is a mellowed agitator that now philosophizes to his fellow-citizens. The Chautauqua platform has done its perfect work upon one of its most prominent representatives. "When I was a young man," remarked Mr. Bryan at Harrisburg, "I was impatient. I thought because a thing was right it ought to be secured at once. But I have learned to be patient. I have found that only those who are in error need to win at once. Those who are right can wait." These most amiable sentences the speaker illustrated by the triumph of the amendment for the direct election of Senators. They should be worn as a frontlet by all persons who are trying to make the world better.

The recommendation in favor of Government construction, ownership, and operation of railways in Alaska, made by Secretary of the Interior Lane, will carry weight. It is in line with the position taken by his predecessor, Secretary Fisher, with the approval of President Taft, though it goes further and is more unqualified. So far as regards the construction of one needed line of railway at least, there is little room for doubt that the Government must undertake this to meet the circumstances existing in Alaska. As for the question of the construction, ownership, and operation by the national Government of an entire railway system for the Territory, it is too large to be disposed of without the fullest consideration. For one thing, it affords a better chance than can be had in any other way for experimenting with the possibilities of Government ownership of railways under our system; the difficulties in the way of it would be at a minimum in Alaska, and the considerations in favor of it at a maximum. The subject should receive early and serious consideration at the hands of Congress.

The people of Columbus, O., have declared by a vote of three to one in favor of the drawing of a new charter, looking towards greater freedom of self-government. That is one way of putting it, and a way quite in harmony with the prevalent idea that the masses are today filled with a firm determination to rescue the agencies of government from the few and take them into their own hands. But another possible statement of the same fact is that the masses of Columbus voters demonstrated, by staying away from the polls, that more than three in every four felt no serious concern whatever as to whether the city should have a new charter or not. Though the city papers ardently promoted the movement in the name of Progressivism, barely ten thousand votes were polled from a population of considerably above two hundred thousand. And now the same papers, possibly chagrined by their own inability to call into being an interest that did not exist, are proposing dire legal penalties upon the citizen who does not go to the polls whenever the privilege is offered to him.

The experience of Columbus is only typical of what is occurring in all the States which have recently smoothed the way to a multiplicity of popular votes on matters in which there is no popular interest. The only ballot from which we are entitled to a good hope is that which expresses a real interest, and such an interest must exist before it can be expressed. If the laws of Ohio had required a really significant vote in order to make the result valid, the various individuals and groups desiring a new charter for Columbus would have been forced by the danger of failure into making a preliminary campaign of sufficient vigor to develop and crystallize a genuine public sentiment on the question. As it is, the drafting of a new charter has been ordered by a comparatively insignificant minority of about one voter in six, and the chances are fair that the document when drawn will be adopted in much the same manner. And this is what one brand of "Progressivism" has to offer to the American voter under the guise of government by "the people." It is obvious that shrewd demagogues on the one hand and "special interests" on the other will have fine opportunities for "slipping things over" with machinery of this kind at hand.

Gov. Ferriss of Michigan ought to be an impartial witness on Republican and Progressive relations in his State. His intimation, therefore, that he will not try for a second term, because the chances of a Democrat are now lessened by the drift of Progressives back to the old ship, is of genuine interest. He is quoted as giving figures to sustain his belief. As many as seventy-five per cent. of the third-party volunteers, he says, will be found voting the Republican ticket next year. Here is his diagnosis of the trouble: Most of the Progressives joined the party "because they thought they saw a chance to win, and when this did not materialize they went back to their party." This is saddening, but

not altogether surprising. We remember that the turning to Roosevelt was justified on the ground that the Colonel, unlike any of his progressive rivals, was a "winner." Even more significant, perhaps, of the Progressive state of mind just now is the position of the Chicago *Tribune*. Far from protesting that reunion of the Republican party is impossible, this organ holds that if a Republican convention meets, eliminates "the corrupt bosses," and selects "leaders of advanced thought," these leaders and leaders of the Progressives "can take counsel together how best to promote the general welfare." And it adds this pointed remark: "The natural tendency of multitudes animated by the same purposes to work together will be stronger than the efforts of individuals to hold them apart."

The revived movement in the Florida Legislature looking to a division of the State reflects a strong though local public feeling. Ever since Florida was brought into prominence as the seat of military concentration for our movements against Spain in Cuba, there has been a vigorous campaign in favor of a division, with the Appalachicola River as the boundary line. The seven counties west of the river have not developed as have the thirty-eight east of it, and have resented the domination of the more prosperous section. Geographically, as well as economically, the westernmost counties belong rather to Alabama than to Florida, and the former State would welcome their annexation, with their gulf harbor of Pensacola, if eastern and central Florida would let them go. Bound up more or less with the division movement has been the question of shifting the capital of Florida from Tallahassee, which, after enjoying the dignity for ninety years, is to-day the smallest incorporated town in the State, to Jacksonville, which is the largest and still growing. Tallahassee is in Leon County, as nearly in the centre of the State as possible, if we measure from east to west, while Jacksonville, though near the Atlantic Coast, is more truly central by virtue of its position in the angle between the western and the southern extensions.

The days pass and leave Mr. Gaynor a sadder man, as he reflects on the deplorable obstinacy of the human race in fixing its attention on the trivial and the temporary to the exclusion of the permanent and the universal. Take his recent letter in reply to an inquiry from an out-of-town manufacturing establishment which is short of labor:

> The entire population of this earth, if brought into the city of New York, could be given two feet square each, which would enable them at least to stand up here. And if they were brought to Texas they could be given three acres each. And yet as small as the population of the world is, compared to the area of the earth, we have congestion of the population in some places with all the evils thereof. The question is a great one, but very few are thinking of it. It does not excite as much attention here as the case of one policeman who takes graft.

Such is the weakness of human kind. It will go on reading about graft without giving a moment's thought to the fact that the Irrawaddy River rises in the highlands of Assam and flows into the Bay of Bengal. It will grow excited about the exploits of a handful of East Side gunmen and show no interest in the fact that light travels at the rate of 192,000 miles a second. It will display vulgar curiosity in the doings of grand juries, while all the time about us any two sides of a triangle are persistently longer than the third side.

The fight against unnecessary noise has been taken up in Chicago, where the Health Committee of the City Council has been instructed to report an ordinance dealing with the suppression of this nuisance. The chairman of this committee, who introduced the resolution, put the matter in a most serious light. Not only was industrial efficiency reduced by unnecessary noises, in his opinion, but the public health was injured through their effect on the nerves. Nor was his presentation wanting in definiteness. Steam whistles, factory, marine, and locomotive, came in for criticism, along with engine bells, street-car gongs, and "flat wheels," rattling of wagons over rough pavements, automobile horns, roar of elevated trains, and vibration resulting from careless packing of heavy or metallic merchandise, and from poor anchorage and adjustment of machinery.

One would say, offhand, that there was no important relationship between scholarship and shoes; but that would merely reveal one's limitations. To the Bureau of Business Research at Harvard, the relationship is sufficiently close to justify the expenditure of considerable time and effort; and, as any one might have foreseen, the outcome is an official decision that the cure for the ills of shoe-selling is more scholarship. Who would have prophesied even a few years ago that the humble college professor would one day dare to lift up his voice in criticism of the haughty American business man? Yet the very bookkeeping of shoe-salesmanship was found to be so haphazard that one of the first things the Bureau did was to devise a system which bears the proud name of the Harvard System of Accounts for Shoe Retailers. This invention was not sold, but offered as a bribe to dealers in shoes, in return for information about their business. Such is the prestige of scholarship in our era that this arrangement worked like a charm. Figures regarding every phase of the trade poured in upon the canny professors, who have now made them public, with the warning that other businesses are under investigation. In this way, business will be kept so busy applying the principles of scientific management to itself that it will have no time to urge its application to universities.

Scientific management is almost invariably taken to mean the scientific management of the worker. Mr. George P. Brett, in the *Outlook*, argues that there is need of applying scientific management to managers. Taking the probable effect of tariff reduction on business as a text, he maintains that one way of preparing ourselves for a renewal of competition with the outside world is by eliminating waste in high places. It is not the bricklayer alone who makes too many motions. The man who finances the making of the brick, the man who advertises it, the man who sells it, the men who market the brick in its final form as the component part of a skyscraper, all need attention. Our industries, Mr. Brett argues, are overburdened with high-priced managers and high-priced salesmen:

> There has arisen in the business world a tendency to extravagance and lavish and unnecessary expenditure in the sales departments of business concerns, and a tendency to overload corporations with ornamental officials. . . . It is even claimed in certain business circles that a company's

officials may best serve its interests by spending the major part of their time at meetings of directors of other corporations, or in participating in public affairs and attending banquets.

It is the fallacy, in other words, which regards "bigness" as the mark of success, without regard to the enormous cost at which bigness is attained. It is the blind adherence to the new gospel of economy by concentration, which results in a hatred of the very idea of competition, and which leads a railway, for example, to stifle competition by taking losses greater than competition would have involved.

Recent developments in the magazine field might have been cited by Mr. Brett in support of his case. It was the fight over the proposed withdrawal of second-class mail privileges from the magazines that first drew general attention to the fact that many of our popular monthly and weekly publications were not the gold mines they were supposed to be. Mr. Hitchcock forced the magazines into virtually asserting that only the favor of the Post Office stood between them and ruin. To a foreign publisher, accustomed to moderate circulations and advertising rates, it must have seemed puzzling that publications enjoying a circulation well beyond the half-million mark should find difficulty in making both ends meet. The explanation, of course, was in the enormous scale of operating expenses. Huge subscription lists were built up only by means of huge commissions to subscription agents. The advertising solicitor ate up a large portion of the gross income from advertising. While boom times lasted, even such extravagance paid a dividend.

The third President of the Republic of Cuba has taken office in the person of Gen. Mario Menocal. He was the candidate of the Conservatives. In his own character and, apparently, that of his Cabinet, the soberer, better educated, and more prosperous elements of the Cuban people find representation. Gen. Menocal's inauguration, to that extent, marks a political overturn. His predecessor came into office as the leader of a successful revolution and leaves office under a cloud. The Gomez Administration has certainly not been a very economical Administration and has generally been accused of being something worse than that. Allowing for the exuberance of the sub-tropical political imagination, it is undoubtedly true that practical politics were very much to the front under Gomez, and that graft was not far away around the corner. On the other hand, it is only fair to say that Gomez himself came into office as the leader of the democratic masses of Cuba, with whom the feeling was widespread that they had borne the toil and dangers of the long war against Spain, only to see the reins of government under the new republic pass into the hands of the Conservative classes under Estrada Palma. One has only to recall the fierce party animosities of our own first years of independence in order to make allowance for much that has happened in Cuba during the Gomez Administration.

At the time of this writing the point of the protest of the Japanese Government against the measure signed by Gov. Johnson of California, and the reply of our State Department, are not known, and it would be foolish to say that the question is in an "acute" stage. The whole difficulty may be resolved by friendly representations and by patient diplomatic negotiations. Meanwhile, it is not a little amusing to note that Gov. Johnson seems to be afraid that a dose of his own medicine will be given him. We mean a referendum on the anti-alien law. This act will, by its terms, not go into effect for three months, and in the meantime may be suspended if 5 per cent. of the voters sign a petition to have the whole matter referred to the people. This referendum provision is one of the features of the new California Constitution which nobody has more highly lauded than Gov. Johnson himself. The Legislature might make a mistake. It might pass a law inimical to the best interests of the State. But here was a remedy placed in the hands of the citizens. They could come forward with their referendum petition and automatically prevent the law in question from going into effect until it had been approved by the voters. Well, it is proposed to apply this Progressive device to the anti-alien law, but Gov. Johnson cries out in alarmed protest. "No man," he declares, "who really wishes an anti-alien law will sign a referendum as to this law." And then he points to the horrible alternative: "To tie up the present law means no law until November, 1914"! But we fancy that California could survive for a year.

A new American college is to be established in Turkey. And the impulse for the institution comes as much from the natives of the region affected as from the missionaries who have been laboring there. The district concerned is in the extreme eastern part of the empire, with its centre in the old city of Van. Here for some years has been a high school, now having an attendance of nearly a thousand pupils. The inhabitants of the district, instead of opposing this alien educational activity, have been asking more and more insistently that the school be erected into a college, the present arrangements to be continued under the form of a preparatory institution. There is no college within ten days' journey of Van. A commodious site has been obtained, ample, it is thought, for twenty years of growth, and a building to be used for the central administration has been completed.

Nicholas of Montenegro began the war in the Balkans almost exactly half a year ago. His acquiescence in the decision of the Powers with regard to Scutari marks the passing of the last chance of war in the peninsula. Draft treaties are already in preparation in several capitals of Europe. The guns are silent, but there is no rest for the diplomats. Only the hard work that awaits them will be carried on under no such tension as they have experienced the last six months. There will be bickerings and disagreements, but the shadow of a general war has passed away. Two men among European statesmen have rendered true service to humanity by their labors to avert a murderous struggle among the Powers. Sir Edward Grey has deserved well of his fellow-men, but his efforts, being in the open, are more easy to estimate than the part played by the Kaiser. Of William II it may be said at once that he has once more given proof of the sincerity of his contention that the maintenance of peace lies closest to his heart. It is a subject to which it will be worth while to return, this transformation of the ardent young War Lord of Germany into a ruler solemnly conscious of his responsibilities.

THE TARIFF IN THE SENATE.

Washington dispatches differ rather strangely in their forecasts of the outlook for action on the tariff by the Senate. Some of them predict a long-drawn and dubious struggle. Others prophesy a speedy collapse of the Republican opposition and the passage of the bill by the Senate, doubtless with many minor amendments, before the end of July. The latter prediction will prove, in our opinion, nearer to the fact. This judgment is based upon the vote in the Senate of last Friday. Its full significance has not been widely perceived. It was, in appearance, merely a vote on the question whether the Finance Committee of the Senate should hold an indefinite series of public hearings on the Tariff bill. But in reality it was a test vote going to the very marrow of the party situation in the Senate. And by it the Democrats showed conclusively that they are going to act together with almost complete solidarity, and that the party majority may be counted upon with certainty to put through the tariff bill upon which the party has agreed.

So clear was this to all on the spot that Senator Clark, of Wyoming, frankly stated, as a Republican, his conviction that the Underwood bill was to all intents and purposes already a law. He deprecated this, of course, but said that the fact might as well be faced. And Senator Clark had also some hard things to say of those Democratic Senators who were going to submit to the "edict" of the party managers and vote for many items in the bill to which they were at heart opposed. But this kind of attack was plainly nothing else but a confession of the invincible position of the Democratic majority. And that was what the crucial roll-call, 41 to 36, completely demonstrated.

No one supposed that the Republicans really cared anything about more public hearings on the tariff. To give them has not been the custom of the Senate. There were no public hearings before the Senate Finance Committee on the Payne-Aldrich bill. Neither were there on the Dingley bill, the Wilson bill, or the McKinley bill. The move this year to procure them was purely tactical. Senator Penrose offered the amendment obviously in the hope of embarrassing and dividing the Democrats. Speaking of embarrassments, it is pretty awkward for the Republicans that they have to put themselves, in the tariff fight, under the leadership of Penrose. As the ranking member of the Finance Committee on the Republican side, it falls to him to make the motions against the plans of the majority. It must be hard for many Republicans, especially the Progressive Republicans, to march behind the Penrose banner, yet they did it to a man—with the exception of Senator Poindexter—last Friday. Bristow and Clapp and Cummins and Borah and even La Follette supported the Penrose amendment, with what inward feelings may be imagined. For there was pressure upon Republicans as well as upon Democrats in the party alignment of that day. Penrose's strategy was thought to be the one chance of weakening and breaking up the Democrats at the very beginning. This is why the plan was so earnestly debated and pressed for several days, and why the final vote on the proposal is to be regarded as definitely foreshadowing the final result. It is now the accepted fact in Washington that the Tariff bill is to be made law as a party measure, and that the Democrats both have the power to do it and are willing to take the responsibility.

This conclusion is now so unquestioned that Republican Senators are understood to be disposed to reach the end as quickly as possible. They are no more fond of Washington in hot weather than other people. All that they think it necessary to do is to put themselves formally and officially on record as opposed to the Tariff bill, root and branch, and then yield to the inevitable. There will be, of course, a good deal of violent speechmaking and dire prediction of ruin to a beloved country; but even the Senate cannot forever prolong consideration of a bill which it is known will surely pass.

There is, however, one qualification that should be made in predicting the wind-up of tariff legislation before August 1. It will depend very largely upon the possibility that a currency bill may also be brought forward in the extra session of Congress. If that is done, and the Republicans in the Senate make up their minds that it will be good party tactics to oppose it, they will be likely to begin by holding up the Tariff bill. This would be a way of setting up a general blockade. In consequence of it, the passage of the Tariff bill might be much delayed. But these are at present only possibilities. The certainties just now are that a united party is at the service of President Wilson in carrying out his pledge of moderate and cautious tariff reduction. His positive declaration last week that he should admit of no compromise on any of the vital points of the bill as it passed the House, had something to do with strengthening the backbone of a few vacillating Senators, and gave the country definitely to know that President Taft's unconscious signing of his own political death-warrant, when he signed the Payne-Aldrich bill, is not to be imitated by Woodrow Wilson.

GOVERNMENT AND INDUSTRIES.

Certain recent statements by Mr. Underwood and Secretary Redfield, if regarded as deliberate announcements of a clearly thought out policy, would justify severe criticism. They have very much the sound of a design to assume for the Government the power to pass judgment on every kind of ordinary business enterprise and to put it under the ban if found wanting as an instrument of social service. We can find no fault with the *Tribune*, as a protectionist paper, for wishing to make the most of the matter; though it is obviously going too far when it likens the procedure indicated by Mr. Redfield not only to a boycott, but even to that form of it known as the secondary boycott, against which, as used by the Federation of Labor, the Supreme Court has passed its decree.

If we are not inclined to take the matter quite so seriously, this is owing to two or three circumstances which put it in a different light. In the first place, it is evident enough that the Democratic leaders regard themselves as being very much in the position of the player in a game of which the outcome turns largely on the question of greater or less success in a competition of bluff. They think—whether rightly or wrongly—that the protected manufacturers are going to play the cards they hold, or can make the country think they hold, for all they are worth, and more. The biggest card is that of wage reduction. Mr. Underwood and Mr. Redfield may be thinking more of the threat of wage reductions as a club by means of which the protected interests may expect to

strengthen the position of the recalcitrant Democratic Senators, whose vote is necessary to the passage of the Tariff bill, than of actual wage reductions after the bill is passed; and over against the vague terrors which the manufacturers hold out, the Democratic leaders place the equally vague possibilities which lurk in the Government's investigating powers. In the one case, as in the other, the bark may be worse than the bite; but in the one case, as in the other, it is the bark that counts just now, the actual fierceness of the bite being left open to the play of the imagination.

Another element that enters most significantly into the case is the historic relation of the tariff question to the wage question in this country. Whatever Mr. Redfield may have said in an *obiter dictum*, it is fair to assume that essentially what he had in his mind related not to manufactures as such, but to manufactures as presenting claims to tariff favors. The one predominant reason by which protection has been justified to the American people by its advocates, these fifty years and more, has been that it inures to the benefit of the wage-worker—that without it payment of the American scale of wages would be impossible. When, therefore, the cutting down of the tariff is instantly made the occasion of a cut in wages in any given industry, this must necessarily be regarded as an assertion of precisely that necessity for the protective duty which had all along been the professed ground of its imposition. But this is a question not of private business only, but of private business in its relation to a specific governmental policy; and if the facts do not sustain the claim put forward by the parties affected, it is a legitimate exercise of governmental activity to establish the truth in regard to them. Intelligent self-interest should dictate to manufacturers—and we believe it will, in the great majority of cases—the wisdom of not attempting to reduce wages except in cases of unmistakable necessity; but it is not impossible that the temptation so to do, in the first flush of ill humor at the diminution of a long-standing privilege, might prevail in many instances. By way of check to that impulse, as well as to any more sinister purpose such as Messrs. Underwood and Redfield seem to have in mind, the promise of searching investigation into industrial facts may serve a useful purpose.

Finally, there is a consideration which is not at all in the nature of a justification, but which is nevertheless a reason for not getting too solemn over the affair. A certain looseness of language is the fashion of the time. Men in the very highest places of government and politics are given to making sweeping assertions and declarations on large questions. Perhaps this is a natural incident of a time of rapid change. Perhaps the caution which was formerly observed as a habit by high officers of government and by the leading representatives of political parties was in some sort a reflection of the prevailing conservatism. In that case, it may be said that it would have been a good thing if the talk of our statesmen had been somewhat bolder and more unrestrained in those days of general inertia, and that it would be a good thing if their outgivings were more circumspect, more accurate, in these present times of general flux. Certainly there is to-day a splendid opening for the man who, while able and courageous and progressive, should steadily cultivate the virtue of careful and well-weighed utterance. So accustomed is the public ear to the shriller and louder sounds which are the vogue of the time, that a firm and accurate and quiet note would have all the impressiveness that contrast could give it.

LABOR AND THE LAW.

The conviction of Patrick Quinlan, the I. W. W. agitator, by a Paterson jury last week, was followed by the usual outcry among the members of that organization. So far as their avowed grounds of protest are concerned, the issue they raise turns on a question of fact. The indictment charged that Quinlan on the opening day of the silk strike last February made a "motion" in a meeting of strikers that they should "go to the silk mills, parade the streets, and club the workers out of the mills—drag them out, no matter how they got them out." On the question of fact, the jury pronounced its verdict when it found Quinlan "guilty as charged in the indictment." His I. W. W. associates declare, with all possible vehemence, that he said nothing of the kind, that the whole thing is a "frame-up." With this sort of thing all the world is familiar in every criminal case that touches on a great public interest. The police officer Becker's friends here in New York said the like. The four "gunmen" sentenced in his wake were not without defenders who made the same protest. "I know Quinlan is innocent," says Elizabeth Gurley Flynn; "I can swear it with my life if necessary."

But everybody knows in his heart that the matter really at issue is not a question of conflict of testimony as to facts. Whatever the facts might have been, the conviction of an I. W. W. leader for incitement to violence would have been followed by precisely the same kind of outcry, the same kind of accusation, the same kind of threatenings of vengeance. "This verdict is a class verdict," says Miss Flynn. "They shout for law and property," cries Tresca, "but for human life they say nothing. It is an outrage, an outrage; that is what it is." Does any one imagine for a moment that their attitude is in the least affected by the question whether Quinlan did or did not incite to violence? Does not everybody know that they believe violence to be justifiable, that they welcome it whenever it can promote their purposes? The issue really before the people of New Jersey is not whether Quinlan is guilty, but whether the law is supreme. From the jury's verdict, from the Judge's sentence, there will be an appeal to higher courts; but an appeal to public sentiment is made at once, and upon that appeal it is possible for public sentiment to pass immediate and peremptory judgment. It should be made as clear as possible, through every channel in which that sentiment expresses itself, that there will be no trifling with the power of the law, no concession to the mouthings or the threats of revolutionists.

What is true of Paterson is equally true of many other places in the country. Nor is there anything new about this necessity for the law-abiding citizenship of the country to assert itself. It existed, on a gigantic scale, at the time of the railway troubles of 1877. It rose to extraordinary dimensions during the disorders of 1894 which had their centre at Chicago, and which at one stage seemed to menace the peace and security of the whole country. View-

ed from the standpoint of external magnitude, there is nothing apparently in prospect now that is at all comparable to those experiences. But there is one respect in which the present situation offers new and serious ground for solicitude. The movement for far-reaching legal and administrative changes bearing upon labor conditions has been accompanied by a widespread relaxing of fundamental convictions concerning the status of the law itself and of the instrumentalities for its enforcement. With this great movement, on its broad lines, we are in hearty sympathy; but the confusion of thought and the weakening of civic *morale* that have so largely gone with it constitute a serious danger. Before this has gone to any extreme length, the sound sense of the people and their well-grounded loyalty to the basic institutions of the country will, we are confident, triumphantly assert themselves; but in the meanwhile much mischief may be done.

To what a pass a nation may be brought if the law, whether through the unfaithfulness or the impotence of the Government, fails to assert its supreme power, the plight of England in the face of a handful of "wild women" affords a sufficient warning. Whatever underlying differences there may be in the two cases—and there are many—there is one essential point that is common to them. The suffragettes' power for mischief is what it is because they do not recognize the right of the law to control them and because as a matter of force the law has thus far been powerless against them. The labor agitators of the I. W. W. type have not a particle more of respect for the law than have the "wild women" in England; and the only possible check to their capacity for mischief resides in an inflexible upholding of the law whenever they violate it. This is what gives its greatest importance to such a question as that involved in the Sundry Civil bill rider. Of the Representatives and Senators who voted for it, very few, we are sure, would subscribe to the abstract doctrine that it may occasionally be right to decree, by indirection, that one class of citizens shall be exempt from the operation of a general law; they have merely weakly sanctioned what they regard as a harmless little concession to the feelings of the labor people or the farmers. But in that broad legislative issue, as in the more specific issue arising whenever law and lawlessness come into conflict in connection with a strike, there is involved nothing less than the fundamental question of the supremacy of the law and the safety of the nation.

A QUESTION OF AMERICANISM.

The Tap Day happenings at Yale last Thursday are of an importance far transcending those of the usual undergraduate activity. A gratifying spirit of revolt against the senior societies has been abroad in the land of Eli all the winter, and the results were plainly visible. The pomp and glory of the old Tap Day disappeared; the faculty weaned itself from the spectacle, and, having nothing else to do, went to a thrilling tea in the Forestry Building—faculty teas are always thrilling. The insurgent sophomores who have been making things warm for the senior societies boycotted the whole affair, and went out to play baseball. A few curious freshmen looked on from dormitory windows, and, worst of all, not a girl was present to witness the joy of the tapped and the breaking of the hearts of the untapped. Altogether, it was a great day for Yale and for the democracy of our American colleges.

To appraise the credit for this breaking away from a senseless tradition is not altogether easy. The insurgent undergraduates are highly to be commended; that these underclassmen have publicly demanded changes is the healthiest sign of all. No outsider can, of course, estimate the extent of the quiet influence exerted by the faculty, in which Dean Jones has been an outspoken leader. The great fact is that here is one college community which has taken in hand one of the serious problems of our American college and university life—the controlling of the spirit of luxury which, in the East at least, tends to separate the institution from the better life of the nation. It was precisely along these lines that Woodrow Wilson fought at Princeton, and it is the same evil situation at Harvard which led President Lowell to take the lead in the establishment of the freshman dormitories. The protest of the sophomores at Yale went straight to the point in that they denounced the Tap Day elections because the successful were chosen in the main for wealth or social position. And this same state of affairs has arisen, or has threatened to arise, whenever the undergraduate societies have been permitted to flourish in unchecked license.

As one looks back the wonder grows that trustees and faculties have been so blind as to what was coming. Take Harvard, for instance. The growth of the "Gold Coast" of luxurious dormitories was gradual. It did not come overnight. But faculty and overseers did nothing. No effort was made to compete by modernizing the college dormitories, and no special campaign was made to induce the graduates to erect new ones. The attitude assumed was one of hopeless impotence. If capital *would* invest in Cambridge, and parents would pay the high rents—why, what could the president or any one else do? It never occurred to them that they might check the whole thing by building proper dormitories themselves, and by refusing to permit students to reside in buildings whose appointments were not in keeping with the best traditions of our universities. With despotic power in their hands, trustees have not dared to use it, and when things went wrong the blame was passed around the circle of trustees, faculty, graduates, undergraduates, and outsiders, each group pointing accusing fingers at the next. There is Williams College. Her beautiful street is adorned by an ideal president's house, exquisite in its colonial simplicity and dignity, but grievously marred by a row of chapter houses usually hideous in taste, and at best without architectural relation to the beautiful Williamstown country, or to the spirit of the college itself. The dignity and good taste of the president's house have been flouted by houses that would look out of place in many a city.

The explanation offered for this ill taste is that the rich graduates did it. What would you? At Lafayette College, at Easton, the offending has been worse, and the excuse is the same. There, in this small rural college, to which come chiefly sons of farmers and small professional men, the finest buildings on the campus are those of the Greek-letter societies. In these live many undergraduates relatively as luxuriously as Fifth Avenue clubmen, in a state of comfort far surpassing that from which

they have come and to which they must, for a time at least, return. And always it is the rich graduate and his friends on the board of trustees one hears blamed. The best places on the campus have been freely given way, and no one has dared, apparently, to suggest that something better could be done, such as the raising of the $2,400 professorial salaries and providing teachers with adequate homes and working quarters.

Now the responsibility for all this—it is merely another phase of the same disease they began to cauterize at Yale last week—cannot be shirked by trustees and faculty. Their power is too evident; their shortcomings of the past too clear. The day cannot be far off when enlightened public sentiment will compel these gentlemen to move, if their own consciences do not. The side-show, to use President Wilson's expressive phrase, must not be allowed to overshadow the circus; it is no excuse to say that our colleges are but cross-sections of the nation's life. They were not created and are not maintained for that purpose; but to uphold the standards of simple living, free from snobbery and luxury, which are inseparable from scholarship and the truly intellectual life.

THE FULNESS OF EXISTENCE.

If the task of writing the biography of Samuel June Barrows had fallen to any one else but his wife, it is not at all likely that the writer would have hit upon the title which Mrs. Isabel C. Barrows has chosen. Such a writer might have called his book "A Useful Life," or "An Intense Life," or "A Noble Life," instead of "A Sunny Life," which the memoir now bears. It was chosen with intention. It was the writer's expressed purpose to show that a career filled with struggle, with never-ceasing endeavor, and with notable achievement, carried with it nothing of the bitter price of narrowed sympathies and of hard disillusion which must so often be paid for success. It is the story of a career which revealed an astonishing capacity for labor, with an exceptional capacity for happiness; of a nature which grew in three directions—upward and outward and inward; of one who knew how to do the work of the world, and at the same time to nourish the life of the spirit.

But in a very real sense the title of Mrs. Barrows's book is even more appropriate than she could have imagined. It is indeed the chronicle of a sunny life, but not of the life of Samuel June Barrows only. His wife and historian has written herself into the book, and it is from the frank and fervent account of their mated lives, illumined by love and perfect comradeship and sympathy, that the quality of sunshine emerges. To have faced the world together in defiance of the prudential reasons that a newer generation finds so hard an obstacle in the way of marriage; to have worked side by side for the individual development of both; to have realized, each with the loyal aid and by the sacrifice of the other, their temporary purposes; and, their separate educations completed, to have devoted, in faithful coöperation, their talents and opportunities to the service of the community—this is a record which we have grown so accustomed to associate with the ideal life which is portrayed in "books," that one experiences a shock of surprise at finding it set down in a real book as the history of something not imagined, but lived and enjoyed. The story deals with people of an old-fashioned outlook upon life, but it might very well be used as a textbook for the New Man and the New Woman.

Samuel June Barrows was that rare person, a native of Manhattan Island. He was born in 1845, on Columbia Street, on the lower East Side. It requires imagination to picture the East Side of seventy years ago. There were gardens on Columbia Street then, and Baptists. The boy was three years old when his father died. When he was seven or eight a serious illness incapacitated him for school work, and he found employment in the Hoe printing-press works, the owners of which were kinsmen. Blood relationship may account for the fact that, with time, he rose to a salary of two dollars a week for fifty-nine hours. The religious spirit was strong in the Barrows family, and as a mere lad Samuel June gave all of his leisure time—twelve hours on Sunday and five evenings—to church work and the missions. He negotiated a loan of two dollars with a member of the Hoe firm and bought a textbook on stenography. At eighteen he entered upon his new profession. The work was exhausting, particularly as he had lost the use of one eye through an accident. At the end of a year he broke down, and went to take the water-cure at Dansville, in western New York. He remained there a year and a half, and when he left he was betrothed to Isabel Hayes Chapin. They were married in 1867.

Newspaper work in New York city was followed by an offer of the post of private secretary to William H. Seward, Secretary of State. Mrs. Barrows had been studying medicine. Her husband now insisted that she should spend a year in the University of Vienna. "You must go," said young Barrows, "if I have to live on pea soup and sleep in a coal-box." Mrs. Barrows and Mary Safford were the first women to attend the medical courses in Vienna. On her return she took up practice in Washington, and then it was her husband's turn. All his life he had been looking forward to the ministry. In 1871 he entered the Harvard Divinity School, for which he had been preparing by special courses in Latin, Greek, and philosophy. His religious views had broadened. Before he left Harvard he was well on the way towards Unitarianism. At Harvard he earned his way by working as private secretary to Agassiz and by newspaper correspondence. In vacations he travelled for the *Tribune* in the Far West, and saw Indian fighting. In 1875 the family went to Leipzig for a year, where Mr. Barrows took courses at the University. Then news came of a bank failure and the loss of the family fortune of three hundred dollars. Mrs. Barrows had already sailed for Scotland on a visit to relatives. Barrows had only money enough for a steerage ticket to Leith.

It would be impossible here even to trace the entire career of the man—his four years' ministry at the First Church, Dorchester, where, 240 years before, Richard Mather had been installed; his sixteen years' work as editor of the *Christian Register*, which was less an editorship than an active participation in many fields of humanitarian effort—negro education, prison reform, charities, international amity, duties which took him on many journeys in this country and to Europe; his sojourn in Washington in 1896-98 as that rare specimen, a clergyman-Congressman; and, finally, his crowning work as secretary, for ten years, of the Prison Association of New

York, the P. A. N. Y., or "Panny," as it was affectionately known in the family. It is a record of labor carried on with high courage and in high spirits. The specialist never crowded out the man. His hours were portioned out, but to an astonishing variety of uses:

> Seven he devoted religiously to sleep, one to dinner, half an hour to luncheon. . . . The day began with an hour of Greek—Homer or the tragic poets for week days, and Plato for Sunday; then a little German, French, or Spanish, till eight o'clock; then practice on the organ till time to open and answer his mail.

A full life, such as we have learned to look upon as impossible in an era that calls for concentration, and a joyous one. The pages are alive with laughter.

To a great many people of New York, of different race and creed, who now live in the very streets where he was born and spent his boyhood, the memory will always be vivid of what Samuel June Barrows and his wife did for the cause of Russian freedom during the dark years following the collapse of the late revolutionary movement. When Nicholas Tchaikovsky and that valiant martyr of freedom, Madame Breshkovsky, the "little grandmother," were cast into prison, the Barrowses began a campaign in their behalf in this country. Tchaikovsky was released on bail. "But Babushka (the little grandmother), dear Babushka, was still fast in the dreary fortress, and word came secretly that she was failing, and likely to die." So Mrs. Barrows sailed for Russia to intercede with M. Stolypin. She failed in her mission. While she was in Russia, death came to her husband. From her Siberian prison Babushka has written: "I am happy and proud to have known even a little of the blessed soul of Samuel June Barrows."

FRENCH FICTION.

PARIS, May 9.

"La Maison brûle" (Plon; 3.50 francs), by Paul Margueritte, is the fifteenth novel produced by this indefatigable author since he ceased writing in collaboration with his brother Victor. Together these two sons of Gen. Margueritte, a hero and victim of Sedan, who had himself written books on his military experience, published twelve novels and ten other works. Their series of four books, from "Le Désastre" to "La Commune," is of lasting historical importance; and Victor Margueritte last season added to these a novel of his own, "Les Frontières du cœur"—the tragedy of a French woman whom war found married to a German man. Besides his novels, Paul Margueritte has also to his own credit fifteen other books—short stories, plays, impressions, and remembrances. Thus he occupies a large space in recent French literature, and an honorable one.

His present novel strives, by sheer force of example, to drive deeper an idea which he has long tried to impress on his countrymen. His hero is imbued with the immemorial French tradition that the individual owes sacrifice of self to family and respect to the laws and customs and principles of the community. He has taken to himself a woman from an inferior social condition, with none of his instinctive feelings; and she proves a faithless wife and bad mother. How long shall he endure, for her own and for their child's sake and for the family name? And how shall he procure a legal right to rid himself of her and safeguard their child? For his scruples and compassion have put the evidence against her out of his hands, and she holds him in the grip of the law with the tenacity of a woman fearing the end of her career of ruthless self-indulgence. She consents to the loss of husband and child, which she has risked so long and wilfully, only after her conquest of a Parisianized American who gives her his name and the enjoyment of his riches. And then, just as the heavens brighten for him with new love, fate blasts for ever the chances of happiness of this French husband who for so long has watched his house as it burned.

All this "downfall without remedy, this unjust and abominable fatality," is told with the sharp and swift economy of words, and of all ideas but those needed to tell the story, which constitutes the cutting, powerful style of the writer. He has used it once more to attack a grave problem of the modern family, at least wherever the progressive obliteration of Christian religion renders Christian marriage laws illogical and unpractical. In particular, it enters into the two brothers' campaign to make marriage dissoluble in France at the reasonable demand of one only of the parties and in the teeth of the other's unreasonable opposition. The present law only allows the twain together to agree for a last time in demanding the dissolution of their contract. When this last irksome restraint of the new French divorce law was first discussed in the living persons of Paul Hervieu's cruel play, "Les Tenailles," its fast hold on the guilty husband excited approbation. Here the innocent husband suffers from it—until it is too late. Paul Margueritte does not reason—he cinematographs and phonographs a tragic fact, which holds us no matter how we reason about it, and which must be taken into account in any morality of law.

"Filles de la pluie" (Bernard Grasset; 3.50 francs), by André Savignon, won the Goncourt prize of the year. It fulfils the curious tradition of that literary prize, that language shall serve for the portraiture of particulars of life. It is easy and even reading, like Pierre Loti's seaport stories, but with less sentiment. Like them, the book might be difficult to accord with English reading morals, though its stories are told without passion, and we, too, of late have broken down many moral barriers. These "daughters of the rain" are women of the island of Ouessant (Ushant), which has been notorious from all time in the route of vessels skirting the dangerous Atlantic Coast. Their loves and marriages in their age-long isolation have kept much that is prehistoric; and these stories show lamentable combinations with the modern world represented by colonial troops stationed in barracks on this ocean-swept island where nothing ever happens except to individuals one by one.

"L'Ordination" (Emile-Paul; 3.50 francs), by Julien Benda, lost the coveted prize by a casting vote of the president of the Goncourt Academy—with no little heart-burning as a consequence. It is the work of a pure *intellectuel*, that is, it realizes in language a purely abstract conception of present-day society, with none of the shades of thought and feeling and instinctive moral sentiment which the French child derives as a part of its being from immemorial family traditions and mental habits. This lack is characteristic of not a little cosmopolitan literature in the French language in these latter days; and the French, who are sensitive to their heredity, might well apply to it the touching New England phrase—it is not of "our folks." This is the reason why many brilliant works become better known to foreign readers of French than at home in France. Such is the long series of Romain Rolland's "Jean-Christophe," which is now finished, and the plays of Henry Bataille and Bernstein.

"Le Duc Rollon" (Calmann-Lévy; 3.50 francs), by Léon de Tinseau, is likely to be a "good-seller" in French (there is a simultaneous English edition). Like the forty other books which this author has been writing for thirty years, the story is told in language worthy of a gentleman and scholar and man of the world of to-day; and it may be read *en famille*. In fact, Count Léon de Tinseau is descended from the last governor of the "free and imperial" city of Besançon, before Louis XIV annexed it to France with the rest of Burgundy and Franche Comté. He was himself a subprefect in French administration during the years when the Third French

Republic was conservative. The present prophetical romance begins in the year 2000 in Washington, with the fiftieth anniversary of the "Columbian Empire."

"C'était à Berlin" (Pion; 3.50 francs) has a married *jeune personne* for its heroine. She is a refined young Parisian who accompanies her husband, a portrait painter, to the German capital, where he loses his head to more than one of his fashionable sitters. There follow scenes of Berlin flirting, which have at least the local color to which a French eye is sensitive:

> At Berlin she had learned to know treason and tears—and yet she had found there nobility and goodness.

"L'Inde éblouie" (A. Colin; 6 francs), by Judith Gautier, is at once history and romance. It takes up the story of those adventurous Frenchmen of the eighteenth century who all but succeeded against England in founding a French empire in India—Dupleix and De Bussy and La Touche. Parts of it have appeared in two previous publications, but it now forms one handsomely printed and illustrated volume of lasting interest. As is to be expected from the experienced daughter of Théophile Gautier, there is abundance of local color; and, as in her other Oriental books, a sympathetic part is given to native characters. The book is strongly romantic; but it also lights up an important drama of real history which is little known compared with its incalculable effects on the course of the world.

"Les Chauffeurs de l'An VIII" (Flammarion; 3.50 francs), by Goron, former chief of the French detective service, has for a sub-title "l'ancienne manière." This is because its publication was timed with the trial of this and last year's bandit chauffeurs. Those of First Consul Bonaparte knew not automobiles, but were simply brigands left over from the seething of revolution. Their name came from their heating their victims' feet, to extort money. The story is very French in conversation, scene, police detection. And it may serve a more important use than amusement if it calls attention to this existence in the subterranean world of an obscure army of men and women leading violent lives parallel with the changing civilization of the surface. In them is the explanation of some of the direst problems of French revolutionary history; and it has been too little studied.

The advance sheets of the new novel of Marcel Prévost, "Les Anges gardiens" (Lemerre; 3.50 francs), show the emigration of this Dreyfusard, who has the credit of converting Zola, to the new Nationalism which is now blazing so fiercely. It portrays the inconveniences resulting to French families in their genuine spirit and comfort from the introduction of foreign governesses and teachers into their daily life and intimacy. No doubt, the French race has a hard fight on its hands to keep sacred its inmost shrine, which has always been the family, as that of Englishmen has been their home. The fear of a loss of political independence before an aggressive Germany can only strengthen this temper, which should not be set down too lightly to reaction. In any event, this writer about ultra-modern French young women now appeals with more honest passion, if not so divertingly, to French mothers. The book is but one of many signs of the times, arising directly from a personal element in passing literature—but the temper may not pass so soon. S. D.

NEWS FOR BIBLIOPHILES.

The third portion of the Huth Library, E to H, comprising 1,335 lots, will be sold in London, by Sotheby, Wilkinson & Hodge, June 2 to 6 and 9 to 12. This part contains a wealth of English poetry and drama, early German and Spanish books, Americana, and a long series of Books of Hours, manuscript and printed. Among the few Continental Incunabula, or books printed before 1500, are a fine copy of the first edition of Homer (Florence, 1488), with all the preliminary leaves; two books of Wolfram von Eschenbach, the "Partzifal" and "Tyturell" (Strasburg, 1477); the first edition of Euclid (Augsburg, Ratdolt, 1482), and the first edition of the "Gesta Romanorum" (about 1472). A series of editions of the "Eulenspiegel"; two editions of Escobar's "Quatrocientos Repuestas"; two editions of the "Toison d'Or" (1517 and 1530); a collection of the editions of the works of Erasmus; and the first Aldine Horace (1501) are other notable items from Continental presses.

The English books begin with Gower's "Confessio Amantis," printed by Caxton, in 1483, but with fifteen leaves in facsimile. Of about the same date is the St. Albans Chronicle "Fructus Temporum, or the Fruit of Times," the first edition, and the only copy known printed on vellum. These are followed by the first editions of Hilton's "Scala Perfectionis" or "Ladder of Perfection," printed by Wynkyn de Worde in 1494, and the same printer's edition of Higden's "Policronicon," printed in 1495. The first of these contains an account of the book, in verse, of which the following are the most interesting lines:

> Infynite laude wyth thankynges many folde
> I yelde to god, me socourying wyth his grace
> This boke to finysshe whiche that ye beholde
> Scale of perfeccion calde in every place
> Wherof thauctor Walter Hilton was,
> And Wynkyn de Worde this hath set in prynt
> In Willyam Caxstons hows so fyll the case.
> God rest his soule.

Among other books from De Worde's press are Hawes's "Example of Virtue" (1530), several of Bishop Fisher's sermons, and a unique poetical piece, "The Four Leaves of Truelove." The first edition in English of Froissart's "Chronicles" has both volumes from Pynson's press and is described as a fine large copy. The first edition of Foxe's "Acts and Monuments of these Latter and Perillous Dayes, touching Matters of the Church" (1563), generally known as the "Book of Martyrs," is a book of the greatest rarity when perfect, though imperfect copies are readily come by. The Huth copy lacks no leaves, though two of the separate woodcuts are slightly defective. John Heywood's "The Spider and the Flie" (1556) and the same author's "Works," editions of 1576, 1587, and 1598; a series of first or early editions of the writings of Robert Greene, Gabriel Harvey, George Gascoigne, Abraham Fraunce, and Stephen Gosson and the first editions of the Chronicles of Grafton, Hall, Harding, and Hollinshed are notable sixteenth century English books. The Huth copy of George Herbert's "The Temple" is one of two known examples with a specially printed title-page, without date, perhaps prepared for presentation. Herrick's "Hesperides" (1648); Hookes's "Amanda" (1653); Hannay's "The Nightingale Sheretine and Mariana" (1622); Fletcher's "Purple Island" (1633), on large paper; Gordon's "Famous Historie of Robert the Bruce" (1615), and several early editions of Chapman's Homer, are a selection from many important volumes of English verse.

Many notable items of Americana are included in this sale, chief among them the original quarto edition of Thomas Hariot's "Briefe and True Report of the New Found Land of Virginia" (1588), the first book in the English language relating to any country comprised within the present United States. There are two copies in this country, one in the New York Public Library, the other owned successively by Kalbfleisch, Lefferts, and Church, in the Henry E. Huntington collection. "A Relation or Journall of the Beginning and Proceedings of the English Plantation Settled at Plimoth in New England" (1620), generally known as "Mourt's Relation," is slightly less rare though scarcely of less interest. Higginson's "New Englands Plantation" (1630); Hubbard's "Present State of New England" (1677); "A Good Speed to Virginia" (1609), attributed to Robert Gray, and Hilton's "Relation of a Discovery lately made on the Coast of Florida" (1664), actually the first book on South Carolina, are other thin volumes which are now much sought after by the Americana collectors. Older books of importance are the "Globus Mundi" (1509), Enciso's "Suma de Geographia" (1519), and Hakluyt's "Voyages," editions of 1589 and 1599-1600.

Correspondence

THE SANCTITY OF CONTRACTS.

To the Editor of The Nation:

Sir: There is a deplorable tendency in our country to minimize the importance of strict observance of treaty obligations. In the current discussions of the Panama tolls and the Japanese land questions this tendency is all too plainly observable. There are some who would have us look only to our own self interest in determining whether we shall keep our treaties or not. That we should comply with demands made upon us by other nations to carry out the provisions of treaties seems to such persons a yielding of our proper independence and self-respect. Furthermore, it has become fashionable among certain writers upon international law to regard international

contracts as binding only in a loose and limited sense. This arises from the fact that treaties possess no sanction. There is no overruling power to give them a force not their own. While granting this, we may nevertheless insist the more firmly upon the moral sanction. It can be asserted without fear of contradiction that a state which executes its contracts to the letter will be more trusted and honored internationally than one upon whom its obligations sit lightly.

Hall, in his work on International Law, lays down the principle which ought to guide nations in the voiding of treaties. "Neither party to a contract can make its binding effect dependent at his will upon conditions other than those contemplated at the moment when the contract was entered into, and on the other hand, a contract ceases to be binding so soon as anything which formed *an implied condition* of its obligatory force at the time of its conclusion is essentially altered." The implied conditions mentioned are, first, that the treaty shall be observed in its essentials by both parties to it; secondly, that the treaty shall remain consistent with fundamental rights of independence and self-preservation; and, thirdly, that the circumstances and conditions under which the treaty was made shall remain substantially unaltered. The altered circumstances and conditions which would void a treaty include the extinction of a state, its subordination to another state, or its entrance into a confederation. If these tests be applied to the treaties at present under discussion, it will be found that neither of them is in the least susceptible of being voided either in whole or in part.

In the case of the Japanese treaty a conflict is at present imminent between that treaty and a law of the State of California. It may be asked whether such a conflict would constitute an altered circumstance or condition which would justify the United States in voiding the treaty. The reply must be in the negative. That conflicts between treaties and the laws of States were possible was understood at the time the treaty was made, and always has been understood by states who have made treaties with us. Yet no state has ever admitted, or ever will admit, that on that account we can be forgiven for laxity in keeping faith. A state which is limited in its power to make treaties or which, having made treaties, finds itself unable to enforce them, lacks an essential element of sovereignty. In order that a state may stand on an equality in negotiation with other states, it must possess adequate powers of contracting and enforcing its contracts. Is it true that the United States as a contracting party is deficient in this respect? We think not. Whenever the Supreme Court has spoken upon this point, it has left no doubt that treaties are to be taken as paramount over the laws of States. In the treaty of 1783 with Great Britain it was agreed between the parties that "creditors on either side should meet with no lawful impediment in the recovery of hona fide debts heretofore contracted." The States of Virginia and North Carolina had passed laws during the Revolutionary War sequestrating and confiscating respectively such debts. In the cases of Ware vs. Hylton (3 Dall, 199) and Hamilton vs. Eaton (2 Martin's N. C. Reports, 83) the Supreme Court of the United States in the one case and the United States Circuit Court for North Carolina in the other asserted the supremacy of treaties over legislative acts in no uncertain terms, even to holding that the effect of the treaty of 1783 in rendering null and void acts of States repugnant to it, was retroactive. Only a sentence or two from Ware vs. Hylton can be quoted:

It is the declared will of the people of the United States that every treaty made by the authority of the United States shall be superior to the Constitution and laws of any individual State, and their will alone is to decide. If a law of a State contrary to a treaty is not void, but voidable only, by a repeal or nullification by a State legislature, this certain consequence follows—that the will of a small part of the United States may control or defeat the will of the whole.

To the present situation in California, this language is especially applicable. All questions are subsidiary to the one whether a State, by its acts, may bring the United States into disrepute because of violation of faith with a foreign state.

That there are evils connected with the Japanese ownership and leasing of land may be quite true enough, although the facts have been grossly exaggerated. It is agreed by jurists and writers on international law that treaties are to be interpreted according to their tenor and spirit and not by the literal rule, as in the case of statutes. We must look to the end to be accomplished by the treaty rather than to the mere wording of it. Judged by this rule, the act of the California Legislature is still in violation of our treaty obligations to Japan. On both constitutional and moral grounds, the country has a right to demand that California give way. The Union of States cannot sacrifice peace and honor at the behest of a single State and an extreme faction within the State at that. The main question, I repeat it, is one of keeping faith.

FRANCIS W. DICKEY.

RECOLLECTIONS OF EDWARD DOWDEN.

TO THE EDITOR OF THE NATION:

SIR: Mr. Yeats's recent letter on Edward Dowden (*Nation*, April 24) was a striking reminiscence of a most attractive man—one whose hospitality under the apple trees at No. 1 Appian Way, Dublin, on a Sunday afternoon, will be counted by many a student and stranger as among the unforgettable privileges of his life. One could not forget the impression he made of subtle and modest greatness that was warm with a humorous quality and an almost yearning sympathy.

In his home circle his playful humor was of the delightful kind that gets much enjoyment out of simple things. I recall sitting at the table with his family—his son and daughters and dog "Lord Randolph Churchill"—and what delight he took in tossing tidbits to the insistent "Randy," who clamored for sweetmeats, much to his own future detriment, for he grew almost as broad as he was long and was threatened with early death through luxurious living. The political affiliations of Professor Dowden at the time of my visit years ago were shown by Randy's little trick of contemptuously turning his head away from a juicy piece of roast at the word "Parnell," but at the sound of Balfour's name of snapping it up in the twinkling of an eye. In a letter expressing my appreciation of Professor Dowden's innumerable courtesies, I enclosed a few lines to Randy, who had become my fast friend, and his master replied that they could never reach him:

They allege that I am guilty, and I cannot deny that I indulged myself in indulging his love for things sweet. Randy grew a very portly gentleman, and then for months was affected with a dreadful cough, and then with attacks like temporary paralysis, and a drop of prussic acid was the end of all.

In this letter also he refers to a favorite cat:

The cat's politics, I think, are those of a mugwump. (I forget what a mugwump is, but if it means one who sits on a fence, Dodo could certainly play the part.)

Professor Dowden took personal interest in following closely every change or achievement in your intellectual life, as is well exemplified in one of his letters:

Since you were in Dublin I have had students from the University of Lille. One of them is now undergoing a year's soldiering in France. Another will be a professor, and I hope a distinguished one. He is writing on S. T. Coleridge and translating into French Shakespeare's sonnets.

In speaking of his own personal work, he wrote from Trinity College, Cambridge, where he was giving a series of lectures as the Clark lecturer in English literature:

I am now half through my little course of lectures. They have given me spacious old oak-panelled rooms with a great carved chimney-piece and a ceiling decorated with emblazoned arms of the Harcourt family. This decoration was done by Sir William Harcourt when he occupied these rooms. My audience is larger than it was in October, and I am more at home with them. This Sunday morning, instead of going to church, I sat in delicious air at the back of Trinity and listened to the wood-quests cooing. The spring foliage is exquisite, and the flowering shrubs are in great perfection, especially in the beautiful Fellows' Garden of King's College. This afternoon I go to service in King's College Chapel. Last night there was a dinner at the Master's, and Archdeacon Farrar and Sir John Seeley were among the guests.

In the last letter I received from him, dated February 20, 1912, he incidentally mentions his critical work on Shakespeare, which has done so much to deepen a love and appreciation of great dramatic literature:

I think Shakespeare study has taken a turn away from my line of criticism, but still the old point of view shows important things, and I hope I did some service.

When, years ago, I said good-by to Trinity and Dublin, W. Macneile Dixon, one of Professor Dowden's favorite students, who is now professor of English literature in the University of Glasgow and the author of "English Poetry from Blake to Browning," put into my hand William Sharp's little anthology, "Sonnets of This Century," in which I found a sonnet by Edward Dowden that shows the high confidence of his attitude towards death and his essential quality as a poet:

BROTHER DEATH.

When thou would'st have me go with thee, O Death,
Over the utmost verge, to the dim place,
Practice upon me with no amorous grace
Of fawning lips, and words of delicate breath,

And curious music thy lute uttereth;
Nor think for me there must be sought-out ways
Of cloud and terror; have we many days
Sojourned together, and is this thy faith?
Nay, be there plainness 'twixt us; come to me
Even as thou art, O brother of my soul;
Hold thy hand out and I will place mine there;
I trust thy mouth's inscrutable irony,
And dare to lay my forehead where the whole
Shadow lies deep of thy purpureal hair.

"THE DISCOVERY OF THE FUTURE."

TO THE EDITOR OF THE NATION:

SIR: You have permitted so much discussion of Wells's "The Discovery of the Future" that I hesitate to encroach upon your space.

That the essay had been published in the Annual Report of the Smithsonian Institution for 1902 and in the London *Nature*, as stated in John P. Lamberton's generous letter in your issue of May 1, was new to me.

This is how I came to publish it: An Indiana University professor ran across the essay in two old numbers of the *Scientific American Supplement* and brought it to the attention of Mr. W. K. Stewart, a cultivated bookseller of Indianapolis, who, with gratifying intelligence, promptly told me of it. Mr. Wells agreed to revise the essay, which is now published with his authorization and to his profit. Thus it has been rescued from oblivion and is obtainable in convenient form and at a cost lower than that of the back numbers in which it appeared.

B. W. HUEBSCH.

New York, May 13.

"BUSINESS AND WAR."

TO THE EDITOR OF THE NATION:

SIR: In an editorial entitled "Business and War," in the *Nation*, April 24, the statement is made: "The publication of this story of increased purchases of guns by France and similarly belligerent articles in the *Figaro* and other Paris newspapers, was followed by the extension of the two years' compulsory service in France to three. Thereupon Germany answered with its tremendous war-levy and an increase of its standing army and navy to no less than 870,000 men."

In justice to the *Figaro* and to France, and in fair play with regard to Germany, I respectfully think this statement should be modified. First, the editor of the *Figaro*, M. Gaston Calmette, has challenged any one to find the least trace of such articles in that newspaper. Dr. Liebknecht, whose speech in the Reichstag had been inaccurately reported, has very loyally declared that he did not state the *Figaro* had published the article in question, but simply that in the "instructions given to the Paris agent" the *Figaro* was named as a desirable newspaper to persuade to print such an article. The telegraphic agency which made the report has corrected it.

Secondly, the publication of "similarly belligerent articles" could not have been "followed by the extension of the two years' compulsory service in France to three." The Government bill asking for such an extension is not yet before Parliament, and is not even out of committee. Consequently, it cannot be true that "thereupon Germany answered with its tremendous war-levy, etc." In point of fact, when Germany announced its increased armaments, no one having the slightest political authority or influence had yet spoken of "extending the two years' compulsory service in France to three."

War Minister Millerand, at the end of 1912, when asked about the extension of service in the cavalry, where its need has long been recognized, answered that there was no question of it. And there was no question of bringing back anywhere the three years' compulsory service, which was reduced to two only in 1905, whether in Government or Parliament, or in any influential part of the political press, until after Germany had published to the whole world her determination to make her "tremendous war-levy." That German newspapers should have tried to justify this increase in armaments before the people by throwing the blame on France is true; but American newspapers which have not that reason should certainly publish the facts in the order of dates—particularly in a matter concerning so deeply, not only the good name of France, but the lives and happiness of the French people as well.

STODDARD DEWEY.

Paris, May 5.

THE POPULARITY OF COURSES.

TO THE EDITOR OF THE NATION:

SIR: I have read with interest the article in the issue of May 15 entitled "Asking Students to Decide." You say that a vote by the senior class to determine the most satisfactory course is an influence to make instructors popularize their courses at the expense of the standard of scholarship and the amount of work done by the students. It is true that where the broad elective system exists the courses must compete in attractiveness not only with one another, but with extra-scholastic activities. But it is not true that the easiest courses to pass are the most popular. The subject, the treatment of it, and the personality of the instructor most of all, are what determine the genuine popularity of a course. The amount of work required is not a consideration with four out of five students. If it were they would not take thesis or laboratory courses.

If a teacher prepares his lectures, delivers them well, and doesn't repeat himself, the morale of his class will be high, and his students will work hard, and it will seem like play. But if he comes unprepared, delivers his lecture in incoherent bits addressed to the walls or his own whiskers, or repeats constantly, the morale will be low and whatever work is done is done grudgingly. Here at Harvard we are subjected to a lot of abominable lecturing, and I suppose it is the same elsewhere. Frequently lecturers do not prepare, but read from their own textbooks as a guide to a disjointed and careless lecture. Often lectures are filled with facts, but they are so incoherently arranged as to be impossible to note in a satisfactory way. Occasionally an instructor knows so much about the subject that he cannot decide what to talk about in the short space of an hour, and a vacuity results. There are lecturers whose speech is so poor that they cannot be heard beyond the fifth row. These men demoralize their classes after the third week. If the standard of work in colleges is to be raised, the standard of lecturing must be maintained upon a scholarly plane.

MURRAY T. QUIGG.

Cambridge, Mass., May 16.

"SABOTAGE."

TO THE EDITOR OF THE NATION:

SIR: The writer of one of the editorials in the *Nation* of May 8 seems to me to have misused strikingly one of those words of mushroom growth which, after pervading the columns of the French journals, have been adopted by the American press. The word in question is the French noun *sabotage*.

Now, when a people has taken a foreign word, and assimilated it more or less thoroughly, there must have been a very well-defined gap for it to fill. Should not such a word, then, preserve its full identity? Does it seem well to say "to sabotage a mission" when that expression must inevitably suggest, to a person familiar with the French papers—and there is an increasing number of these in the United States—the astonishing locution "to wanton destruction" it?

MILDRED R. BISHOP.

Detroit, May 13.

THE AMERICAN WOMAN.

TO THE EDITOR OF THE NATION:

SIR: Will you allow me to raise a word of protest against the implied slanders of American women which are contained in your article on "The Custom of the Country" in the *Nation* of May 15? I have no doubt that the kind of woman which is described in Mrs. Wharton's latest novel, and which your article seems to regard as typical of America, exists. If she does exist, however, it must be in the conspicuous but fortunately not very numerous class of parvenus displaying their crudity and vulgarity in New York and other large cities. I am sure that no one conversant with life in the cities of moderate size and in the country districts of America would recognize the type as anything but an exception. Undoubtedly, there is a large class of women whom unfortunate social and economic conditions have torn away from their moorings. Some of these find a substitute for a real life work in various sorts of more or less useful, but also often mere sham, activities, in women's clubs, suffrage associations, and similar organizations. In addition to them, there are a number, and perhaps a large number, of wives and daughters of men who have recently become wealthy, who find themselves without other occupation than that of "spending." But the overwhelming majority of women to this day have real work to do in managing their families and homes, and if Mrs. Wharton can find anywhere in the world a more efficient and reasonable type of woman it would be interesting to have her describe it.

The hardships of what you call "the pioneer woman" of the last generation probably look far greater in the eyes of a well-to-do New Yorker than they ever did to those persons who had to undergo them, and I can assure you that the great majority of women in the United States still do sub-

stantially the same work that those women of the West of "a generation ago" did cheerfully and efficiently. The actual physical hardships may have been mitigated by the progress of economic development, but in this servantless country it is nothing short of a slander to say that American women merely spend what their husbands have earned and contribute nothing to the actual life work of society.

Literature

MODERN GERMANY.

Germany and the German Emperor. By Herbert Perris. New York: Henry Holt & Co. $3 net.

Pan-Germanism. By Roland G. Usher, Ph.D., Associate Professor, Washington University, St. Louis. Boston: Houghton Mifflin Co. $1.75 net.

Mr. Perris's book is an interesting example of the impressionistic way of discussing historical topics now so much in vogue. He gives us a series of observations on such loosely connected subjects as The Four Regions (a geographical and ethnological survey of Germany), The Rise of Prussia, The Free-Trade Basis of Modern Germany, The Bismarckian Transformation, The Unconquered Church, The Red Peril, Hohenzollern Ideals, England and the Alliances, The Bagdad Railway, The Tariff and the Trusts, and The Next War. Various kindred topics are touched upon, and between the political chapters—to the detriment of the whole—there is a superficial sketch of A Tragic Cycle of German Genius (why tragic?), dealing with German philosophy from Kant to Nietzsche, literature from Lessing to Hauptmann, and music from Handel to Wagner. On his main theme Mr. Perris writes with considerable knowledge and, on the whole, with good judgment, though not wholly without an English bias. He pictures, occasionally with Carlylean touches and epigrammatic antithesis, the social conditions which produced political upheavals in the past or seem to presage them in the future. He frequently contrasts Germany and England, without striking a decided balance between comparative good and evil. The reader, now swayed to one side, now to another, by the author's rhetorical skill, is left to draw his own conclusions. This peculiar method can best be illustrated by a few quotations. Thus, after passing rapidly over the two centuries between Luther's death and Napoleon's birth, Mr. Perris, turning to the period of transition from German feudal particularism to parliamentary representation, remarks:

> Prussia, which had given the world the most elaborate expositions of the world of pure thought, was an infant school in affairs political. An earnest and widespread demand undoubtedly existed for parliamentary institutions as a reward for the sacrifices of a devoted nation. But nobody seems to have known exactly what parliamentary institutions were, or how they were to be obtained. In literature strong impulses had reached Germany from England; in politics, none at all.
>
> Thirty years later Germany was still divided by religious and class antagonisms into many small and widely scattered groups, each with its peculiar standard of civilization. England presented a striking contrast.
>
> Without the stimulus of a hundred little culture-centres, without any system of state instruction, her activities swept powerfully along in a few great channels. Every constituency offered a ladder to the supreme height of the House of Commons; every political association would carry its platform, if need be, into Hyde Park. Lancashire and Yorkshire concentrated the inherited skill of a million operatives upon two or three industrial processes, building up not only a world market, but a system of democratic combination. With ships upon every sea, and continents crying for the spade, opportunities and rewards, if unequal, were abundant, and all the horizons were open to the poorest man. It was a universal premium on initiative and bold personality, if also on the smug ethic of Mr. Samuel Smiles. In Germany the level of instruction must have been immensely higher. Literature and philosophy, just because they offered the sole fields for the play of wits, exercised a wider influence upon the popular mind. No sudden plunge into machine industry forced the pace of political development.
>
> The appearance, in the political arena, of Otto von Bismarck gave a new impulse to German thought and character: "Woe to doctrinaires and weaklings who cross the path of this man in the days that are coming." The call comes to him as it came to Cromwell, "the call, however, of tyranny, not of freedom."
>
> Bismarck was, indeed, as Mr. Perris says, the most powerful individual agent in the transformation of the Germany of Goethe into the Germany of to-day. But if his triumphs were great, no less so were his defeats. As summarized by the author:
>
> He went out to humble the Roman Church, and within eight years had to acknowledge a humiliating defeat at the hands of that shadowy power. By maiming the liberal spirit which is the strength of progressive states, he stimulated the growth of a revolutionary Socialism; and, when he turned his instruments of repression against this extremer foe, he only hardened the resistance of what has become the largest and strongest of German parties. He invented the protective tariff to meet the state's share of the cost of his other creation, the militarist system. Which represents the greater oppression it would be hard to say.

The author is at his best in the chapters dealing with the modern economic changes in both Germany and England and with the movements from country to city life. The transformation, as regards Germany, is expressed in the simple fact that in 1876, when the population of the empire was forty-three millions, three-fourths were still engaged in agriculture. To-day, of sixty-four millions, only one-fourth depend upon the land. His comments on the educational differences between the two countries are sane and illuminating. He concedes that Germany is still ahead of England in the number and equipment of her admirable technical institutions, and that "the whole school system is more homogeneous, and commands a more single-minded loyalty. England has made great strides forward in the last twenty years, especially in secondary education; and in the elementary schools she has an advantage in the larger proportion of teachers to pupils. German critics find the intellectual level lower, but the good relations of teachers and pupils higher, in England. They cannot understand the toleration of many uninspected and often grossly incompetent private schools, and of a very low leaving age in the public schools; but they appreciate the cult of games, the variety, freedom, and encouragement of individuality in British education. In a word, the two systems reflect much of the best of the two national characters; and it is increasingly recognized that mere imitation would not be good in either direction."

With all its splendidly equipped educational establishments and vast modern industries, the Government of Prussia appears to our author essentially based on an anachronism. "It rests uneasily upon the support of a feudal-minded nobility, who fill the upper ranks of the army, and exercise there a wide influence, a numerous, well-drilled bureaucracy, and a class of commercial magnates who now share with the landlords the privilege of tariff 'protection.'" Where Bismarck ruled with a rod of iron, there is now a ceaseless struggle between monarchical and parliamentary forces. "The Imperial Government of Germany, brave as is the front it presents to the outer world, is stricken with a deep impotency."

A critic of this sort, it is needless to say, does not take kindly to the militarist view of the future of Germany and England. What he says, in a semi-humorous vein, of the German fire-eater cannot be applied to the legitimate successors of the Moltkes and Roons, but it does hit off the Bernhardis who succeed in making considerable noise nowadays. *Mutatis mutandis*, his remarks may also be turned against a number of British military and naval Jingoes. "The German officer is frequently a highly in-

structed man—that is, he is familiar with the histories of Treitschke and other academic Jingoes, and popularizations of pseudo-Darwinian biology. He has been taught from the cradle to believe that force made the nation, and that, if it be now in danger, it is from peace, not from war. When he lays down the sword, and takes up the pen, he displays the floridity characteristic also of Berlinese sculpture and architecture. His politics are those of the fire-eaters whom Prince Bülow told that Bismarck's greatness lay not in his clinking spurs, but in his just measure of men and things."

Mr. Perris draws a vigorous and not unsympathetic sketch of Emperor William. He has consulted to good purpose the best sources available—Klaussmann's "Kaiserreden," Liman's "Der Kaiser," Arren's "Guillaume II," as well as the columns of the daily press. Frankness he regards as the Emperor's most characteristic trait, and he believes that with passing years he has grown. "But a generous impulsiveness, a love of throwing ideas broadcast upon the four winds, an indomitable energy and heat of mind, remain constant traits." "He 'hustles around'—not quite as cheerfully and boisterously as Mr. Roosevelt, but with an occasional plaint as to the 'enormous labor and crushing responsibility' of one in whose hands lie the destinies of sixty million souls. If he is evidently young for the rôle, and cannot look venerable, he must look fiercely energetic and of relentless will, overcoming a thousand difficulties, as Frederick the Great overcame his enemies, by self-confidence and rapidity of movement." All in all, "the Emperor is a true Teuton in his idealism, his sentimentality, his strenuous devotion to duty as he sees it, and his kindly anxiety to model the nation on the old-time patriarchal household. But he is only too evidently out of harmony with much of his surroundings. . . . He himself wishes to provide schools and universities, factories, farms, and fleets with the latest scientific equipment; but whoever looks with scientific eye upon absentee landlords, the Prussian electoral system, or divine-right monarchy, is in his eyes a dangerous enemy of an inspired order."

The book is written with considerable care and on the whole with great accuracy. There are but few minor blemishes. The Thirty Years' War did not begin "with the murder of the Vienna envoys by the native method of 'defenestration' (throwing out of windows) at Prague." There was no murder committed. Slawata and Martinitz landed upon a heap of refuse and escaped unhurt. Bismarck is spoken of (p. 355) as the "nonagenarian," and Pius X appears as "Leo X" (p. 375). "Jolly Bojar" (p. 198) stands for "Bajuvar," or possibly for "Bojer," which, however, in the context is inapplicable.

Professor Usher's "Pan-Germanism" offers, we regret to say, the greatest possible contrast to Mr. Perris's graceful pages. The American work is a mass of dogmatism and prognostication. It is made up of a number of essays, some of which have seen the light before in various periodicals, and the repetitiousness and contradictions may partly be accounted for in this way. But the lack of coherence has a deeper cause. The uncertainty begins with the very title of the book. Professor Usher's "Pan-Germanism" is now one thing, now another. One definition is, "a coalition of coalitions" among "Germany, Austria, Hungary, the Balkans, and Turkey." At another time, as we shall see, other states enter this coalition. Pan-Germanism is thus only partially German in its composition. What is its purpose? Professor Usher is careful to tell us that he does not give us his own view. He attempts to describe "Europe and Germany, as the Germans see them, as the necessary prelude to a brief statement of the progress Germany has made towards a realization of her scheme and a description of the attempts of her 'victims' to frustrate it." He warns us repeatedly, as he warms up to his task, that he is trying "to expound the German view of the situation rather than what he believes to be the truth." In reality, he gives us only what he imagines the Germans (what class of Germans is never specified) to be thinking. All the tremendous changes which the world is to see before long inevitably result, in this view of the case, from the fact that "Pan-Germanism is merely self-preservation. This new individual (!), who entered the world through the travail of the nineteenth century, is conscious of his sturdy strength and of his growing needs, is ambitious to improve his own condition and to leave to those who come after him a solid guarantee of immunity from the suffering and privation that he has endured."

It seems, however, that the sturdy youngster "cannot hope finally to achieve success without the hearty co-operation of Austria, of Italy, of Turkey, of Persia, and, above all, of the Balkans." We have come to the point where Italy and Persia have entered the coalition, while Hungary is left out. And why must all these allies go to war "for the purpose of executing (*sic*) Pan-Germanism"? Primarily, because "England, Germany hates, disdains, and despises." "When the victory is won" (particulars wanting), the allotment of territory will be such "as to satisfy the ambitions of the various parties without vitally offending any other equally essential party. *Divide et impera.* In all probability, Austria is to get the Adriatic" (does she not now own Trieste, Fiume, Ragusa, Cattaro, etc?), "access to the sea through the Balkans, and Egypt and Palestine; Italy will certainly expect the rest of the North African littoral, while the Balkan States, European Turkey, and Persia will insist upon a guarantee of their autonomy so far as their own local affairs are concerned. Germany, therefore, will surrender the Mediterranean to her allies in exchange for India, the rest of Africa, and the East and West India Islands," Cuba, of course, included.

Still, Mr. Usher by no means underestimates the difficulties of the task of downing England. "It is far from true that England is isolated in the world; she possesses three immensely powerful allies in France, Russia, and the United States." The United States, as a matter of course, "would promptly declare in favor of England and France, and would do her utmost to assist them." As a good American, Mr. Usher muses on the part his country is to play in the future world struggle. "It has been truly pointed out that the Japanese might successfully land an army upon the Pacific Coast, or the Germans land an army in New York or Boston practically without opposition." "*Sed cui bono?*" he wisely asks. "However seriously the capture of New York might cripple our commercial and railway interests, the difficulty, even at its worst, could be easily overcome by shifting the centre of business for the time being to Chicago, and the possession of New York would certainly not permit a foreign army to conquer the country, even if it were possible for any nation to maintain an army so far from its real base of supplies in Europe."

What, indeed, may not triumphant Pan-Germanism do when once on its, or, as Professor Usher might say, his, feet? Grant that Belgium and Holland are disposed of, and what still remains there for Germany to do? "Another prerequisite of final success would be the seizure of Denmark, Sweden, and Norway. With them in her hands, the Baltic would be to all intents and purposes hers. Russia would be squeezed into its furthermost corner."

Professor Usher is by no means oblivious of the rôle which money plays nowadays in diplomatic and economic matters. "The greatest economic strength of England and France comes from their possession of the greatest individual aggregations of capital in the world. The vast Rothschild fortune, known in Europe as *The Fortune*, is one-twentieth of the total wealth of the French nation, and is not, like so many American fortunes, the estimated value on the stock market of certain securities which, in case of a financial panic, might almost lose all value, but consists of houses, land, railways, solid tangible assets which could be destroyed

only by the destruction of France. In London, there is a group of individuals who between them control nearly as considerable and almost as solid fortunes. There are no doubt in Germany and Austria wealthy men." Indeed there are, and the Rothschilds, Mr. Usher might have added, have in Austria invested their money just as wisely as they have in France.

We cannot go any further into these wild speculations, nor point out specifically the basis of knowledge from which they spring. Suffice it to say that Professor Usher speaks of "Slavs *and* Croatians," and that his definition of the Balkans (he uses the term interchangeably for both the countries and the mountains) is as follows: "The great stretch of mountain, tableland, and valley, extending from the heights of the Tyrolese (*sic*) and Transylvanian Alps to the Ægean and the Mediterranean, has long been loosely designated, from political rather than geographical reasons, the Balkans." The author's endless threshing of mere straw reminds us of nothing so much as of the "Politisirerei" of aimless talkers over their evening beer—the speculating about war and war's alarms, when, to quote from "Faust,"

> Hinten, weit, in der Türkei
> Die Völker aufeinander schlagen.

CURRENT FICTION.

V. V.'s Eyes. By Henry Sidnor Harrison. Boston: Houghton Mifflin Co.

Virginia. By Ellen Glasgow. New York: Doubleday, Page & Co.

"Queed" and "The Miller of Old Church" hopelessly upset the Southern novel's long established rules of precedence. Their heroes were "self-made"; their "sons of best families" were reduced to secondary importance, and convicted of a deplorable lack of moral stamina. Indiana fiction could not have been more radically proletarian. Now at the hands of the same authors the old ideals of Southern womanhood undergo a pretty thorough sifting. In the process it develops that the real point of departure for both of these iconoclasts is not a revolt against an old code, either of morals or of art, but a growing unconsciousness of sectional differences. Unlike their predeccssors in the same field, they are not observing local types to rejoice in their localisms, but to place them in national movements. The Southern belle, to them, is merely the point at which they broach the woman question.

Mr. Harrison manfully attacks his subject in full glamour. He particularly requests your attention for the belle in full blush, the reigning queen of hearts, with parti-colored lashes an inch long and "gay" golden hair. Carlisle Heth is the superfine flower of successful commercialism; her father smokes better cigars than he makes; Mamma's social enterprises are managed on the strictest business principles, and the damsel's own costumes bear the sign manual of the metropolitan modiste. But envy not her specious triumphs. Mr. Harrison, whom none of these things deceives, is about to reveal her to herself and us as nothing more nor less than a social parasite. Trained only in the pursuit and allurement of the opposite sex, she is expected to provide handsomely for herself thereby. Failing a brilliant match, she becomes, in Mamma's plain English, a burden to her parents. The preservation of her social prestige costs an undesirable suitor's reputation and subsequent suicide. Her maintenance in the matrimonial market strains father's cigar factory (long and justly denounced as a homicidal institution) to the point of actual collapse. While this three-headed indictment is formulating, Carlisle (like Mr. Wells's Ann Veronica) tests her tether in various directions and is brought smartly up against her filial obligations, her practical ineptitude, and the inveterate obtuseness of an "ideally" eligible *parti.* A religious flavor is imparted to these humiliating revelations by the unworldly character of the apostolic V. V., more formally known as V. Vivian, M.D. He is lame, and from a confirmed habit of giving to him who asks, perpetually shabby. His friends claimed for him the second largest practice in town, although admitting that his habit of sending no bills might have something to do with that. On editorial pages his initials appeared appended to fiery denunciations of local factory conditions; but in personal encounter with the reprehensibly wealthy, compelling influences of childlike faith emanated from V. V.'s persuasive eyes—that self-same hypnotic confidence in the "better self" in which we were taught to believe in "The Passing of the Third Floor Back." By this modern incarnation of redeeming love, Carlisle is called to repentance. His sacrificial death, in the very act of instituting the long-needed factory repairs completes her conversion, as it were, and we end with a pietistic note of sacred emotion—"Ecce Homo!"

Thus our romantic moralist, who for the most part is very practical and brisk—although, perhaps, not quite so crude or vigorous, so amazing in invention or droll of phrase, as when in "Queed" he cured an unusually bad case of ingrowing knowledge. He has learned how to forget at least part of the table decorations in dinner scenes, but still keeps his unaffected American interest in price-marks. What's it worth? is the question with him, from wine labels to philosophies of life. And, be sure, he introduces no question which he will not undertake to fit with a ready-made answer.

Miss Glasgow's moralizing is of the scientific sort. Mr. Bennett, in his Five Towns, is not more alive than she to the historical aspects of personality. Indeed, she pushes the mode a point further, and seems rather to resemble the botanist who writes the history of a particular region's flora. As his pages explain the succession of varying growths in the same location, and the relentless supplanting of one botanical species by another, so hers account for the rise of new social types and the dying out of old ones on Virginia soil. In "The Miller of Old Church" a vigorous new type of rural manhood was springing up in the place of the old landed aristocracy. In "Virginia" a belated specimen of the old-fashioned Southern lady lingers on into the era of feminine self-assertion—the fine flower of a vanished social order, by a miracle of spiritual force sustaining itself in a hopelessly altered habitat, only to fade at last among the encroaching ranks of a lustier, more aggressive womanhood, unregarded except by an affectionate son. Her daughters are modernly self-sufficient. Her husband, who belongs as completely to the future as she to the past, finds himself at forty-seven still a young man and very much at home in the intellectual atmosphere of the day. An unappreciated playwright in his twenties, he is now a popular one. Then he had adored his gentle, uncritical wife, now he discards her for the actress who has shared his success. If the reader were to trust his own impressions, he might conclude that he was witnessing a martyrdom. But Miss Glasgow betrays none of the natural indignation of the martyrologist. Does Virginia's suffering wring your heart? It is the pain of extinction in a vanishing type. Only at the last she halts a little, torn between recognition of her subject's essential beauty and the determination to justify its fate, and her study of a social type, like Mr. Galsworthy's in "The Country House," becomes, in effect, the reverently executed portrait of a lady.

The reader might be puzzled to put his finger upon any point of likeness in two women so dissimilar as Carlisle Heth and Virginia Pendleton, had not their authors agreed in tracing the sins of the one and the sorrows of the other back to the same root, the old "orthodox" social dogma that woman was made solely for matrimony. Selfish or unselfish, they do but develop along different lines the same fallacious principle of feminine dependence. And both eventually find themselves, as the representatives of an obsolete ideal, weighed and found wanting against the needs of a modern world. All that is involved in the adjustment of woman to the new demands Mr. Harrison does not care to

inquire. His speculation is quick to claim sanctuary. But Miss Glasgow, soberly dissecting things as they are to discover the seeds of the future, is willing to ponder a whole new scale of ethical values. Old convictions concerning marriage are crumbling fast. New ones have not yet taken definite shape. For the present she is content to suspend judgment. But, like the maiden aunt in "Milestones"—that sorrowful progenitor of the new woman—from time to time she may be heard to observe distinctly and firmly, "This self-sacrifice is all wrong—all wrong."

CHRISTIAN DOGMA.

The Fundamental Christian Faith. By Charles Augustus Briggs. New York: Charles Scribner's Sons. $1.50 net.

The sub-title of Professor Briggs's latest volume is "The Origin, History, and Interpretation of the Apostles' and Nicene Creeds." Were this the only title, and had the author confined himself to historical and exegetical criticism of the two principal symbols of early Christianity, notice of the volume might be confined to exhibition of the dogmatism with which the purest speculations are asserted as historic fact and the conclusions of careful critics are dismissed with unmannerly epithets. But Professor Briggs entitles his book "The Fundamental Christian Faith," and he declares repeatedly, explicitly, and with Athanasian earnestness that he that believeth not each particular article of the classical symbols, in the precise meaning intended at the time of their origin, has no part in Christianity. A man must accept the virgin birth, the resurrection of the body, and one true and only church, or he must reconcile himself as best he may to the estate to which the father of orthodoxy consigned the unbelievers of his time.

On the doctrine of the virgin birth Professor Briggs is especially strenuous. As he confesses, he is eager to "hunt the opponents of the virgin birth out of all the holes and corners in which, like rats, they take refuge." One of the "rats," whom he pursues with particular vehemence, is Professor McGiffert, his colleague, the supposed errors of whose volume on "The Apostles' Creed" he appears to take particular delight in exposing.

Professor McGiffert explained the clause in question, not as an assertion of supernatural generation, but as an identification of Jesus as the offspring of a particular mother. Doubtless sympathy with the difficulties of modern doubt pressed the historian's judgment at this point, but Professor McGiffert explained how the article as he interpreted it was called for by the unbelief of the time, the gnostic heresy, whereas Professor Briggs has no explanation of how this, or any other article of the creed, came into being as a creedal statement.

It is just this lack of ability to see that every assertion of a creed, as well as the symbol as a whole, must have had some reason for its origin, either by way of declaring some fact or truth which had been denied, or testifying to an experience felt to be of great value and importance, which reveals Professor Briggs's inadequacy as a teacher of symbolics. For him a creed comes out of the skies, fixed infallibly to its last accent in the councils of the Trinity. He discerns behind it no human need, no strife of parties, no gradual and painful approximation to the best truth available to a particular age. The neophyte in theology would imagine from his volume that the Nicene symbol might have had its birth in the age of Hildebrand, or Thomas Hobbes, or Leo XIII, so far as its forms of thought are concerned, as naturally as in the fourth century.

Yet the Apostles' and Nicene Creeds, so interpreted, are set forth as the final and sufficient expressions of the Christian faith, binding in all their literalness upon the conscience of every man who would keep within the Christian fold. "All the decisions of the ancient church," says Professor Briggs, "are closed questions." The title of the volume was chosen deliberately and intelligently. This dogmatic exegesis of a few pages of creedal formulas from the times of Irenæus and Athanasius is supposed to be a definition of Christianity. How far it comes short of it, the richness and fulness of the religious life which Christianity has attained in this and many other ages bear sufficient witness, to say nothing of the wealth of power in the Christian gospels and the letters of Paul which finds no expression in the products of the creed-makers.

Because Professor Briggs has stood as a representative of liberal Christianity, clear statement of his wide divergence from the thought and method of really enlightened theologians is demanded. Instead of occupying an advanced position, he seems now to be even superstitious in Biblical interpretation. He is inclined to hold to the perpetual virginity of Mary, and asserts that in all probability she was Joseph's second wife. He knows that Luke talked with Peter and Paul about the virgin birth, and that Luke journeyed from Rome to Palestine to escape the Neronian persecution. The presence of such absurdities may perhaps serve the good purpose of warning the unwary that the volume in which they occur is not history, but dogmatism exercising itself *ad libitum* in one of its favorite fields.

William Lloyd Garrison. By John Jay Chapman. New York: Moffat, Yard & Co. $1.25 net.

Mr. Chapman's book might easily be made the text for a considerable discourse, not only upon Garrison and the Abolition movement, but also upon such topics as the current methods of studying and writing American history, or the place of the moral hero in the drama of progress, or the deadening influence of wealth on the individual and social conscience. One does not expect from Mr. Chapman, of course, a work of erudition, nor even, perhaps, of wide or particular information. Aside from the biography of Garrison by his sons, the writings of Samuel J. May and one or two others, and the history of Mr. Rhodes, the narrative gives, superficially at least, no evidence of extended study. Indeed, it does not pretend to be either a formal biography or a history of a period. "I have given the foregoing sketches," says Mr. Chapman, at the opening of his fifth chapter, "almost at random, and, where possible, in the words of others, in order to call up the decade between 1830 and 1840 without myself feeling the responsibility of a historian, and without asking the reader to give a chronological attention." So far as recognizing any conventional "responsibility of a historian" goes, the same disclaimer might with fitness be offered for the work as a whole.

Slight as is the basis of formal narrative, however, the direction of Mr. Chapman's interest is clear. With two things only is he concerned: the essential characteristics of Garrison as a man and a reformer, and the evaluation of the moral temper of the age. One does not need to read more than half a dozen pages to perceive that, to Mr. Chapman, Garrison is a moral hero, a fearless and clear-sighted opponent of national sin and a champion of social righteousness. Nowhere has the moral ascendency of Abolition and its great leader been more unqualifiedly or brilliantly urged. Yet it is in no spirit of thick-and-thin hero worship that the picture is drawn. The personal weaknesses and inconsistencies of Garrison, his violence of speech, his free use of personalities in attack and defence, and the narrow range of his intellectual and social interests, are all frankly exhibited. To Mr. Chapman, however, these admitted blemishes appear, not as blots on the 'scutcheon, a warp of smallness and baseness crossing a woof of gold, but as natural and inevitable defects of the quality. To him, Garrison was narrow because he was devoted, uncompromising because slavery was a moral wrong, vituperative because what is sinful ought to be destroyed. Until he entered the lists, slavery had met all comers and had won; but under his leadership, and with the weapon which he

forged, slavery, instead of being mitigated or restrained, was destroyed.

On this point Mr. Chapman, with all his enthusiasm for his hero, claims for Garrison no more, perhaps, than has at times been claimed before. His scathing arraignment of the North, on the other hand, for its long-time subservience to the South, throws down the gantlet to all those historians who, with ill-concealed contempt for Abolition as a moral issue, have sought to explain the fall of slavery on political or economic grounds, and who would like, apparently, to forget Garrison and his followers altogether The twistings and turnings of political expediency and legal technicality; the gradual dulling of the moral sense of the North under the combined influence of Southern threats and Southern cotton; the silence of the churches and the press; the open apologies for slavery by men otherwise respectable; the persecution and social ostracism of Abolitionists—these things, set forth with vivid and almost brutal frankness in Mr. Chapman's pages, are among the truths of history which it is not pleasant to have recalled. We have not accustomed ourselves to think of the North as, morally, rather the greater sinner in the long struggle with slavery. Yet nothing can be clearer than that such was in fact the atmosphere in which Garrison long had to live, and such the weight of opposition which he had to overcome.

Quite aside from its interpretation of Garrison's personality, therefore, Mr. Chapman's book commands attention as a social study, an examination of the growth of public opinion and ethical consciousness in ante-bellum America. To the historian it is at once an exposition and a challenge.

Notes

The American publication early next autumn of "The Magic Formula," a third collection of studies by L. P. Jacks, editor of the *Hibbert Journal*, has been assumed by Holt.

Duffield & Co. have in preparation "The Correspondence of Goldwin Smith," selected and edited by his literary executor and secretary, Arnold Haultain, who has added a bibliography of Goldwin Smith's various writings.

The same house announces a book of poems by Madame Martha Gilbert Dickinson Bianchi, and a new novel by the same writer.

The following titles are among Putnams' announcements: "The Thunderhead Lady," by Anna Fuller; "Sunia: A Himalayan Idyll," by Maud Diver; "An Unknown Lover," by Mrs. George de Horne Vaizey; "New England and New France," by James Douglas; "Mysticism in English Literature," by Caroline F. E. Spurgeon, and Schiller's "Die Braut von Messina," edited by Prof. Karl Breul, the last a Cambridge publication.

Among the volumes soon to be published by the Columbia University Press in the Studies in English and Comparative Literature are: "Gnomic Poetry in Anglo-Saxon," by Blanche Colton Williams; "Aaron Hill," by Alice D. Brewster; "Learned Societies and Literary Scholarship," by Harrison Ross Steeves, and "Chaucer and the Roman de la Rose," by Dean S. Fansler. In the Studies in Romance Philology and Literature two new volumes are soon to appear: "Uncle and Nephew in the Old French Chansons de Geste," by W. O. Farnsworth, and "Diderot as a Disciple of English Thought," by R. Loyalty Cru.

In a new volume, promised shortly by Macmillan, Mr. James Bryce, late Ambassador to Washington, says by way of introduction: "During six years spent in Washington it has been my duty, and also my pleasure, to travel hither and thither over the United States, responding, so far as time and strength permitted, to requests to address universities, chambers of commerce, boards of trade, citizens' associations, commercial clubs, and other public organizations in the greater cities. Out of the many such addresses delivered to these bodies or in commemoration of some person or event, I have selected a few, the topics of which seemed to possess a more than passing interest, and of which I had happened to keep some notes, enabling the substance to be reproduced. In revising them for publication, some few additions have been made, while matters of a local or purely occasional character have been omitted."

Dr. H. B. Gray, who has had years of experience in secondary education in England, and who was a member of the Mosely Education Commission to the United States in 1903, is bringing out immediately "The Public Schools and the Empire." Williams & Norgate are his publishers.

Count Gobineau's "Renaissance," in a translation by Paul V. Cohn, will be issued shortly by Heinemann. There is an introductory essay on the Count by Dr. Oscar Levy.

Two important Riccardi Press books are announced—"The Canterbury Tales," with thirty-six water colors by Russell Flint, Vol. I (to be followed by Vols. II and III in the autumn), and "Marius the Epicurean," in two volumes, the first long work to be set in the new "11-point" of H. P. Horne's Riccardi type.

The Rev. Cyrus Townsend Brady, D.D., has in the press of Dodd, Mead & Company a book entitled "The Fetters of Freedom." It discusses the trials of the early Christian church.

Forthcoming publications of Sturgis & Walton include: "Lanagan, Amateur Detective"; "Little Mamselle of the Wilderness," a juvenile by Mrs. Augusta Huiell Seaman, and "Glooscap, the Great Chief, and Other Stories," a collection of Indian legends retold by Emelyn Newcomb Partridge.

A Concordance to the poems of John Keats is in progress at Cornell University. The editors make this announcement to avoid the possibility of duplication in the work. If any one else is engaged in this enterprise, he is requested to communicate at once with Dr. L. N. Broughton, Ithaca, N. Y.

The University of Chicago has just added to the resources of the Harper Memorial Library the Durrett collection of Louisville, Ky. This well-known collection of material treats, in the main, of Southern and early Western history. It was brought together by Col. Reuben T. Durrett during the period from 1856 to the present time, and it contains some exceedingly important manuscripts, newspaper files, and books. The newspapers cover closely the history of the Ohio valley during the period from 1798 to 1860, the most important files being the Lexington *Gazette* and a Maysville, Ky., paper which was generally regarded as the organ of Henry Clay. Other files include those of such papers as the Louisville *Courier* for several years prior to the Civil War. These ante-bellum newspapers are particularly important for students who work in Chicago because, owing to the great fire, there are few such files in any of the libraries of the city. The books, like the manuscripts and newspapers, deal mainly with Virginia, Kentucky, Maryland, and the Ohio valley. On Kentucky Col. Durrett had gathered, it is thought, every item known to be in print and a great deal that was in manuscript; so that the University now has the best library of Kentuckiana in existence. On general American and European history there are many books and periodicals of importance; and on religious, educational, and social problems, and economic questions such as slavery, tariff, and internal improvements, there are pamphlets, reports, and public documents.

The April number of the *American Journal of International Law*, just received, opens with a paper by Prof. Eugene Wambaugh, on "Exemption from Panama Tolls." He declares that the contention that "no tolls shall be levied upon vessels engaged in the coastwise trade of the United States" is tenable, in view of the general law of England and the United States. Still, irrespective of legal principles recognized here and in England, the treaty itself, he says, deals expressly with the matter, and it seems conclusive, on a review of the whole matter, that we should give the services of the canal without discrimination and on reasonable terms. This paper is followed by an elaborate and convincing discussion of the new Moroccan protectorate, by Norman Dwight Harris, who gives evidence of great familiarity with the whole North African question. A protectorate seemed a necessity; the sufferings of the masses, under a long rule of misgovernment, corruption, and oppression, required the intervention of a strong, honest Government. A condition had arrived in which France could no longer act merely as a friendly adviser; she must, to fulfil her obligations in a moral sense, carry through long-delayed reforms, and give an efficient administration. Mr. Harris recounts the various negotiations of recent years among the European Powers having interests in North and West Africa. Students who are interested to know the precise condition of Canada and her international relations, will find material for study in John S. Ewart's paper, "Canada—Colony and Kingdom." The author's

closing sentence is significant: "Both political parties in Canada have agreed that there can be no war-obligation on the part of Canada, in the absence of her participation in the diplomacies which involve war." He cites three paragraphs of the Canadian Constitution, 55, 56, and 57, concerning which he says the understanding is fairly complete that they shall not be acted on. The 56th refers to the right of the Queen, in Council, to disapprove, at any time within two years, any act of the Canadian Parliament. The declared understanding goes far to fortify allegations of Canadian autonomy. An instructive paper by Dr. Hans Wehberg, on restrictive clauses in international arbitration treaties, is intended to indicate definite bounds within which such restrictions may fairly be assumed to be just, and reasonably applicable.

Royalties and pseudo-royalties have developed a penchant of late for writing "startling disclosures" concerning their relatives and contemporaries. The ex-Countess Marie Larisch (now Frau Brucks) is the latest to enter this field with a volume of reminiscences under the suggestive title of "My Past" (Putnam). The author is the daughter by a left-handed marriage of Duke Ludwig of Bavaria with an actress, Henrietta Mendel, and is a niece of the late Empress Elizabeth of Austria. The ostensible *raison d'être* of her volume is to clear up the mystery of the tragedy of Meyerling, the death of the Crown Prince Rudolph of Austria and the Baroness Mary Vetsera, and to demonstrate to a slanderous world the innocent part which the author herself played in that tragedy. How far Frau Brucks has succeeded in her endeavor can only be gauged by the internal evidence of the book itself. The Meyerling incident will probably never be fully explained, and the account of it here given is likely to be accepted with considerable reserve by the historian. In the earlier chapters of the book the ex-Countess appears so obviously actuated by a desire to calumniate the character of the Empress Elizabeth, the aunt whom she professes to have adored, that her statements on any subject can hardly be accepted as unbiassed. At the best, even according to her own account, she seems to have been pretty much what she declares Prince Rudolph once called her, the "go-between" for the Empress and the objects of her affection; consequently the accusation, which she endeavors to rebut, that she acted in a similar capacity for the Empress's son and his paramour, is at least understandable. In view, however, of the general animus that marks her attitude and of the fact that some of her statements concerning the Empress are easily disproved by a reference to dates, it seems only the part of common decency to regard all of them with suspicion. The book as a whole strikes any impartial critic as a peculiarly unsavory attempt to calumniate the dead for motives of personal revenge. The author tells us that she has been induced to write it because her daughters' lives "have been embittered" by the rumors that have gathered around her name in connection with the Meyerling tragedy. The revelation of the maternal character contained in these pages is hardly calculated to mitigate the bitterness of those unfortunate lives.

Miss Mary Mills Patrick's "Sappho and the Island of Lesbos" (Houghton Mifflin) is an attractive little volume, richly illustrated with reproductions of coins, marbles, vases, and terra-cottas, photographs of scenes in Modern Mitylene, and an old engraving of the Leucadian promontory. Seven chapters treat in a readable, if somewhat amateurish, style, of the age of Sappho, the poets contemporary with her, the island of Mityiene in ancient and modern times, Sappho's life, her school, her poetry, and the praise of Sappho in later literature. An eighth chapter adds a prose translation of the fragments, including those recently discovered. Miss Patrick defends the virtue of Sappho with all the enthusiasm, if not quite all the erudition, of Wilamowitz and the scholar whose name she prints as "Welcher." It is an inspiring theme, but the intensity of their conviction inevitably provokes the question of the witty French woman in a similar case, "Comment faites-vous, Monsieur, pour être si certain de ces choses-là." Miss Patrick adds two original arguments: First, Sappho was president of a women's college of music and deportment, and "the fact that a man or a woman has been able to hold the position as head of an educational institution has always been considered without question a sufficient proof of integrity"; secondly, Aristotle refers to her as an arbitress in other matters besides versification, such as ethical standards and logical reasoning. But surely a grave logician may quote a lady's logic without thereby vouching for her as an authority on that subject. Miss Patrick's familiarity with the modern life of the Ægean islands adds greatly to the interest of her work. Curious, if true, is the statement that the Æolic of Sappho is easier than the mixed dialect of Homer to one who approaches the ancient language through the modern. In the ode to Aphrodite Miss Patrick refers ποικιλόθρονος to the variegated marbles still found on Lesbos.

"The China Year Book, 1913" (Dutton), a volume of 728 pages, is remarkable for the amount of valuable information which it contains. The compilers, H. T. Montague Bell and H. G. W. Woodhead, acknowledge their indebtedness to the President and other officials for assistance and information, and call attention to the wider scope of this second issue of the work. A general description of the Republic, its fauna, flora, people, products, manufactures, commerce, and roads and railways, is followed by a detailed account of the central and provincial Governments with a lengthy chapter on the financial conditions. A list of the principal officials and noted men is to be found in the "Who's Who" chapter, and under the heading "Miscellaneous" much information is given on many subjects, and especially on opium. Education is treated very briefly, as the disorganization of the educational system by the revolution has made it impossible to procure any statistics for 1912. We regret that nothing is told in regard to the Chinese literature of the present time and the numerous additions to it of translations of foreign classics. A portrait of the provisional President is given, and a large map showing the products of the different parts of the Republic.

Mr. Charles Whibley comes nearer, perhaps, to making a perfect match of those quarrelsome partners, cleverness and dignity, than does any other of the living British authors. Nor is this faculty wanting to his "Essays in Biography" recently published in this country by E. P. Dutton & Co. In the first three essays, dealing with Sir Thomas Overbury, he has an opportunity of telling one of the strangest and most baffling tales of crime and vengeance in English history, and he succeeds in giving a kind of life to those incomprehensible creatures of King James's court. Another subject peculiarly suited to Mr. Whibley's scholarly but never pedantic pen is George Buchanan, the Scotch poet of Mary Stuart's days. Then follow sketches of Edward Hall, John Tiptoft, John Stow, the Admirable Crichton, the Duchess of Newcastle, and Sir Thomas Browne. It is all good reading.

"Papalism, A Treatise on the Claims of the Papacy as set forth in the Encyclical *Satis Cognitum*," by Edward Denny, "sometime Vicar of St. Peter's, Vauxhall," is mediæval in thought and scholastic in method. Being a commentary, it lacks even the merit of a systematic presentation of the development of the Papal claims. In one feature alone does it possess a certain value, and that is the grouping of quotations from the Fathers bearing on such aspects of the question as, for instance, the words of Christ to St. Peter. In his discussion of the question: "To whom did Christ commit the Supreme Authority in His Church?" the author says:

> As God of One Substance with the Father the Lord possessed essentially the supreme power; as Man He possessed that supreme power by delegation from His Father. It is this latter to which He refers in the text just quoted and which He in turn committed, unimpaired and unrestricted, in all its fulness in the commission, "As my father hath sent Me, even so send I you." His mission from the Father is an abiding one, and the power which He as Son of Man possesses by the mission, He delegates to the Apostles. They were not the recipients of some new commission deriving its origin, power and extent from Himself.

After reflection on the certainty displayed here with regard not only to the relationship between Jesus and the Creator, but also to the exact nature and intent of his actions, the reader may safely be left to form his own notions as to the limitations in point of view from which the book suffers. The book is published by Rivington, of London.

With the same scrupulous regard for accuracy and exact detail which characterized her biography of King John, Miss Kate Norgate has continued her minute examination of early thirteenth-century English history with a volume on "The Minority of Henry III" (Macmillan). It covers the eleven years from John's death, in October, 1216, until January, 1227, when Henry III, who had then passed his nineteenth birthday and had already since 1223 been exercising much of the power of a king, emancipated himself wholly from all minority restrictions and ordered all his tenants to come before him, the King, to receive confirmation of their holdings and privileges. Miss Norgate explains clearly the reasons for the omission from the re-issued Charter of 1216 of numerous and important clauses which had been exacted from John at Runnymede only the year before. Otherwise,

the chief interest of the constitutional history of this period lies in the establishment of precedents in regard to a regency and the other arrangements during a minority, and also in regard to the amount of personal influence which individual rival councillors, like Peter des Roches or Hubert de Burgh, might acquire over the mind of the new young king. These questions Miss Norgate analyzes soberly and thoroughly, and in the most minute detail. By reason of her intimacy with all the Latin and the barbarous Norman-French chroniclers, as well as with the less amusing public documents in the various series of "rolls," she is able to quote largely the picturesque phraseology of the age and thereby lend life to what otherwise would be but a dull narrative.

In the preface to "Marie-Antoinette, Her Early Youth, 1770-1774" (Macmillan), Lady Younghusband frankly states that her book is not for historical specialists, "but for the many who, taking a genuine interest in Marie-Antoinetto and her surroundings, have neither leisure nor opportunity for seeking out and studying the best authorities." Her curious dedication, "To the unfading memory of a misty day in winter on the far borderland of the Empire," together with other indications in her book, suggests that Lady Younghusband takes up her pen chiefly because she finds the composition of historical biography a pleasant pastime for lonely hours. She fills considerably more than five hundred pages with the narrative of the life of Marie-Antoinette before she was nineteen years old, that is, before she became Queen. It is a rather pathetic tale, this story of the little Austrian archduchess married for reasons of state at the age of fourteen to a clumsy, unappreciative booby like Louis XVI, separated at a tender age from her mother and brothers and sisters, and thrust into the vile atmosphere with which Louis XV surrounded his last debauched years. Lady Younghusband understands her subject and writes entertainingly with many interesting though irrelevant anecdotes and reflections of her own; and she succeeds in making Marie-Antoinette a very definite human being of real flesh and blood. The author's sources of information are chiefly the Mercy-Argenteau correspondence and the well-known works of De Nolhac, Funck-Brentano, Boutaric, De Broglie, Geffroy, and De la Rocheterie; and these she has used carefully and conscientiously.

The Bostonian Society Publications, Vol. IX, contains a contribution to our Revolutionary history of much interest. In February, 1775, Gen. Gage sent two of his officers, "disguised like countrymen, in brown cloaths and reddish handkerchiefs round our necks," to go to Worcester and Concord to find out the state of the provincial magazines there, and to make a "sketch of the country" through which they passed. The narrative of one of these spies, Ensign D'Berniere, is given, together with many illuminating notes by Mr. J. C. Hosmer. There is also an account of Madam Sarah Knight, by the Rev. A. Titus, in which much light is shed on the social and economic life of two centuries ago. Born in 1666, she was a schoolmistress, who taught Benjamin Franklin to write, and was also a copyist of legal documents, for "she appears as a witness to a hundred or more deeds of the leading firms and families of Boston." A journey to New York in 1704 is described in her diary, the route taken on horseback being over the "Old Colony Path" to Providence, and thence by the "Pequot Path" to Westerly and Stonington. In the latter part of her life she was a leading merchant of New London.

William Henry Larrabee, editor and author, and one of the oldest graduates of De Pauw University, died last week at his home in Plainfield, N. J. He was born at Alfred, Me., in 1829. In 1862 he became editor of the *Methodist;* in 1890 he was made assistant editor of the *Popular Science Monthly*, and for more than thirty years he contributed to Appleton's Annual Cyclopedia. He was the author of "How the World Was Made," "Earthquakes and Volcanoes," "History of the War in the East" (with A. J. Schem), and other books.

John Hays Gardiner, who for several years was a member of the faculty of Harvard College, died a week ago at Boston. He was born in 1863, at Gardiner, Me., and graduated from Harvard in 1885. In 1892 he was appointed an instructor in English, and in 1900 was made assistant professor. Three years ago he retired to devote himself to literary work. Professor Gardiner was author of "Forms of Prose Literature," "Elements of English Composition," and "The Bible as English Literature." He had given courses of lectures at the Lowell Institute, and was at work on a history of Harvard University at the time of his death. He was an occasional contributor to the *Nation.*

The death at seventy is reported from Paris of Alfred de Foville, a well-known French economist. He was an officer of the Legion of Honor and permanent secretary of the Academy of Moral and Political Sciences. He was a prolific writer on the subjects of transportation, agriculture, and the increase of prices.

In the death of Prof. Hugo Winckler, which occurred a short time ago at Berlin, Germany loses one of her most productive Orientalists. Beginning his career as an Assyriologist, Dr. Winckler gradually extended his sphere to include the Old and New Testaments and Arabic, as well as the Himyaritic of Southern Arabia. His activity was phenomenal. Besides many volumes of cuneiform texts, he published for many years at regular intervals of a few months an entire volume containing results of miscellaneous studies, which he entitled "Altorientalische Forschungen." His chief work, however, was in the domain of history, and it was while engaged in the preparation of his volumes on Babylonian-Assyrian history and on the history of Israel that he began to unfold the theory which developed into "Pan-Babylonism," with which his name will always be connected. In many monographs, as well as in addresses and popular articles, Winckler set forth his theory of the "Altorientalische Weltanschauung," as he called it, which aimed to show that the astral-mythological basis of the religion and culture of Babylonia and Assyria became the dominant point of view in the ancient Orient, and spread far and wide, leaving its traces in Egypt, Greece, Rome, and even in mediæval Europe. Gifted with a facile pen, Winckler knew how to present his views in an attractive form, and be succeeded in gathering numerous adherents, chiefly among the younger scholars. While it is more than doubtful that the theory in the extreme form advocated by Winckler and his most brilliant adherent, Alfred Jeremias, of Leipzig, will meet with general acceptance, there can be no question of the stimulus exerted by Winckler's researches upon the study of the ancient Orient. Many were the important discoveries made by him in the course of his career, by which knowledge has been permanently enriched. A few years ago he undertook excavations at Boghaz-Kiöi, an important centre of the old Hittite empire, and succeeded in finding thousands of texts in cuneiform characters, among which it is still hoped by scholars there may be a bi-lingual inscription which will finally settle the vexed Hittite problem. Had Dr. Winckler lived, the publication of this valuable material would have devolved upon him, but his health began to fail about five years ago, probably as the result of too strenuous work, and he passed away on April 19 at the early age of fifty years.

Science

The Building of the Alps. By T. G. Bonney. New York: Charles Scribner's Sons. $3.75.

Professor Bonney, long esteemed one of England's ablest and most active geologists, but now retired, has brought together in a readable volume a summary of his observations extending over many years of travel in Switzerland and the Tyrol. Fifty-seven years ago he first saw the Alps in the summer after taking his college degree, and almost yearly since has passed his days of recreation amid their summits. Few could bring to bear upon the subject so long and so detailed an experience.

The book is a well-written and interesting outline of the natural history of the "playground of Europe." It begins, as it should, with the geology. In the descriptions of the rocks the contrasts of older and younger are emphasized and certain mooted questions are set forth, together with the author's own opinions. The structural geology follows, and a reader who has never gazed upon the wonderful folds and faults will gain an excellent idea of them. Professor Bonney adheres to the older views of compression, but might perhaps have mentioned the later suggestions of the slipping of great masses from gravitational pull, with attendant crumpling. The movement of mountainous bodies of which we have learned in later years, across many miles of underlying strata from their original positions, has been one of the most impressive suggestions of recent investigation.

The sculpturing of the mountain crags by the erosive agents supplies a striking theme, and the accumulation of snow to yield glaciers furnishes anoth-

er. The elusive cause of glacial motion is clearly summarized, although again added interest would have been given by the description of the curving path, followed by a particle of ice or of rock, which first enters the glacier at its upper end; is buried by later falls of snow in the accumulating area, and emerges at the foot, where the dissipating influences are all-important. We have learned in later years some new and interesting facts along these lines. The chapter on ice action is followed by one upon the work of water, both on the surface and underground; by another upon the work of avalanches and floods; and by an outline of the curious meteorology of the mountains, set as they are, along the northern Mediterranean.

Although a geologist, Professor Bonney, like many another who has climbed the mountain-sides, has not been unmindful of the plants and the animals. The wonderfully beautiful Alpine flowers and the no less attractive ferns add scarcely less to the observant traveller's enjoyment than do the peaks themselves. Professor Bonney gives a running commentary on the species, and notes those familiar to him in England. There are some plants, also, which are old friends of lovers of American mountains, and which have reminded them of home uplands when scrambling Swiss trails.

The chapter on the Alps in Relation to Man is not the least valuable in the book. Some of our best relics of prehistoric peoples come from their caves and lake bottoms. The "lake-dwellers" receive more attention than do the cavemen, and yet Professor Bonney might perhaps have found matter of exceptional interest to a general reader in the discoveries of a few years ago in the grotto, behind the shrine at Wildkirchli, with their convincing evidence of inter-glacial man in the Alps. With men of late date the Alps are also intimately associated. The mountains offer heroic settings for heroic achievements.

Finally, Professor Bonney reviews the changes which have taken place in nearly sixty years of his own recollection, and closes with a purely scientific appendix.

Les Sociétés Primitives de l'Afrique Equatoriale. Par Dr. Adolphe Cureau. Paris: Armand Colin. 6 francs.

A French colonial governor of scientific training, Dr. Adolphe Cureau, has summed up his twenty years' experience of the Congo in a remarkable book. It is not a book of travel, but a study of human society among "primitive" peoples, whom Montaigne defined with exactness: "They are wild just as we call wild those fruits which Nature produces of herself and in her ordinary progress." Our author takes these words to express his point of view, although he seems at times to give in to the unprecise formula that such peoples who are behind in human progress are therefore "witnesses" and "survivors of primitive humanity." He grasps clearly the only work to be done by science from actual observation such as his own:

> Under the rising wave of European invasion . . . their original customs are changing, their unmoral simplicity of soul is being depraved, and the ancient foundations of their societies are crumbling. . . . Haste must be made to record what is passing away in all that is exterior and grossly sensible, and particularly in its deep and psychological causes—for coming centuries will be less and less apt to understand the primitive soul. . . . My programme of a general view will expose me to criticism from experts in African things, whom occupation or the chances of an exotic career have specialized in a corner or a tribe. I should have exposed myself to gross errors if I had depended on my own single observations and impressions. A check was necessary—and I have sought it in the experience of a number of persons, civil functionaries and officers, missionaries and traders, who have been willing to answer my list of questions. . . . The plan I follow is simple, in three divisions—the geographical and human environment of the social phenomena which I have to describe; the psychological individual, the element of society—finally, the society which is the chief object of study. In this last sociological part, my plan is to follow, in the order of their complexity, the successive stages of negro societies, from the biscxual couple up to the highest social organizations observed in tropical Africa.

It must not be thought that a plan so scientific has been written out in technical language. The book is extremely readable and is of palpitating interest for many of our own most burdensome problems. The rare use of reason, the consequent impermanence of sentiment among peoples without past or future, but living by the present sensible impulse, should lay down the law of missionary operation; and, by way of comparison, it should aid to the practical study of our own impulsive degenerates or "criminaloids"—who have nothing psychologically in common with his primitives, our author maintains. Here also appears the cruel error of an unscientific philanthropy which would transfer American negroes, products of essentially different progress, back to what are foolishly supposed to be their racial surroundings, as an anti-Home Ruler might wish to transplant Irishmen to some Himalayan cradle of the Celtic race. The comparison with the physiological and psychological changes in the race after one or two centuries under American civilization would also prove instructive. These the reader has to make for himself, in accordance with his own good faith. Dr. Cureau even declines to treat the influence of Mohammedanism on certain negro tribes towards the Sudan, as being outside his object—which is a synthesis of race facts as they have existed until now:

> How is it that these primitives who, for long centuries, have been cast aside from the rest of the world, show in their customs and beliefs the most characteristic traits of peoples completely unlike them in race, differing in intellect and character and area of expansion?

In July Sturgis & Walton will issue "A Reader of Scientific and Technical Spanish, with Vocabulary and Notes." It is edited by Col. C. De W. Willcox, professor of modern languages in the United States Military Academy.

An illustrated two-volume work on "Popular Botany," by A. E. Knight and Edward Step, is promised this month by Holt.

"Submerged Forests," by Clement Reid, is a Cambridge manual announced by Putnams.

The "Geography of Missouri" is treated by F. V. Emerson in the "University of Missouri Bulletin" (Educational Series, Vol. I, No. 4). Ten introductory pages briefly tell of the rocks of Missouri and of the "physiographic processes" that have acted upon them. Ten more pages describe the chief "physiographic provinces," namely, the Ozarks, the prairie plains, the Mississippi lowlands, and the river lowlands; all these receiving explanatory treatment, in terms of rock structure and external process. Soils and climate occupy about twelve pages; settlement and industries nearly thirty more—the slow settlement of the fertile prairies is a curious historical fact. Many diagrams, although rudely drawn, are very helpful to the reader. Similar bulletins concerning other States would be serviceable.

"School and Home Gardens" (Ginn), by W. H. D. Meier, contains compact and thorough directions concerning most of the plants which schools and homes require. Indeed, considering the temporary character of children's gardens, the book goes further than would ordinarily be expected, by including the care of trees, shrubs, and vines, and the work of grafting. The study, transplanting, and cultivation of wild flowers are encouraged by the book, which, with its clear print, attractive illustrations, and straightforward style, is in some ways a model of its kind. We cannot, however, recommend it for one of its intended uses, as a textbook for the grammar grades. For such a purpose the book seems unsuitable for two reasons: first, it assumes in the child a pretty complete knowledge of garden theory and practice, no explanation of which is given; and secondly, its vocabulary is too mature. The book is thus very decidedly "above grade," and would for school purposes need a skilful teacher, such as is unfortunately not yet provided except in some of our very best schools.

Stephen Dudley Field, inventor, died on Saturday at Stockbridge, Mass. He was a nephew of Cyrus and Dudley Field, and was born in 1846. His first important inventions were the multiple-call district-telegraph box, 1874, and four years later the electric elevator. In 1878-9 he built his first trolley car, in which undertaking he was a pioneer. It was not until several

years later that other inventors began to make improvements on the Field system. He sold his rights to the General Electric Company and the Westinghouse Company in 1896 to avoid the expense of litigation. In 1880 he made the first application of dynamo machines to telegraphy. Previous to this, the electricity was stored in batteries, which was cumbersome and expensive. He invented the stock ticker in 1884. In 1909 he made his last important invention, which was a cable quadruplex permitting four messages to be sent over cable wire at the same time. Mr. Field was a member of the American Institute of Electrical Engineers and the British Institute of Electrical Engineers.

The death is reported from Rhodesia, South Africa, on April 5, of William Harney Brown, naturalist. He was fifty years old. After his graduation from the University of Kansas in 1880, he had charge of the United States National Museum at Cincinnati. He took part in the expedition to St. Paul de Loanda to observe the eclipse in 1888-9. Later he went to Africa to collect specimens for the Carnegie Institution. For his part in the Matabele war he received from the British Government 13,000 acres of land.

Drama

We have before us a reissue of T. F. Ordish's "Shakespeare's London" (E. P Dutton & Co.), with an additional chapter on Westminster and Whitechapel and an itinerary for the benefit of those who wish to visit the places in London that are associated with the poet's memory. The book is a readable work of popularization, and, as such, has done good service, but we must regard as altogether inadequate a new edition, like the present, which takes no account whatever of Dr. C. W. Wallace's discoveries. Is this due to sheer ignorance or to the conspiracy of silence that seems to prevail in England in regard to Dr. Wallace's work? We have no desire to condone the faults of taste that have disfigured the articles in which the American scholar has put before the public the results of his investigations, but it involves a self-stultification for any writer on Shakespeare at the present day to ignore these researches. In Mr. Ordish's book there is not even a passing allusion to Shakespeare's residence at the Mountjoys' and the interesting affair in that family with which he became connected. But surely the spot where, in all likelihood, "Othello" (and doubtless even "Hamlet") was composed has at least an equal right to mention with the poet's conjectural residence in the parish of St. Helen's, Bishopsgate.

Lewis Waller, who arrived in London recently from a Canadian tour—which he reports as very successful—will sail almost immediately for Australia, where he will open in July with "Henry V." Madge Titheradge will be his leading lady, and in his company will be Evelyn Beerbohm, G. S. Titheradge, and Charles Quatermaine. He has new plays by Sydney Grundy and William Devereux, and the version of "Don Cæsar de Bazan," which was done at the Duke of York's Theatre, in London, some years ago. He expects to resume management in London next autumn.

When "Within the Law" is produced at the London Haymarket, under the joint management of Michael Faraday and Sir Herbert Tree, the part of the heroine will be taken by Edyth Goodale.

Miss Horniman has opened a season at the Court Theatre, in London, with a revival of Galsworthy's "The Pigeon." This will be followed by "The Whispering Well," a piece new to London. Other plays to be given are "Jane Clegg," by St. John G. Ervine, and "Elaine," by Harold Chapin.

Sir Sidney Lee, chairman of the executive committee, was the principal speaker at the annual meeting of the trustees of Shakespeare's Birthplace, held at Stratford-on-Avon, the other day. After referring to the loss which Shakespearean criticism and scholarship had sustained in the death of Professor Dowden, he announced that a visitor from America, Mr. Cooper-Prichard, of New York, had promised to complete at his expense the specimens in New Place Museum of the coins mentioned in Shakespeare's plays or in use in the country in the dramatist's day. Referring to the Royal Commission on Public Records, of which he is a member, he said that probably the most exacting and difficult of all the functions of the Commission would be to report on public records in local or private custody. That field seemed limitless, but for the Birthplace Trustees it was peculiarly promising. A thorough survey of local archives ought at any rate to bring to light some new Shakespearean clues. In that branch of inquiry local voluntary effort was especially to be desired, to supplement public central effort. He wished a great archæological society would arise in Warwickshire, thoroughly to catalogue and to coördinate all extant records bearing on county affairs through the sixteenth and seventeenth centuries. He did not admit that the amount of documentary evidence regarding Shakespeare's career was at present scanty. An exhibition of some twenty original Shakespearean documents among the national archives was organized by his friend, Dr. Martin, at the Public Record Office, a week or two ago. The trustees had also in their custody many original Shakespearean documents, and they intended to exhibit, at the side of their own documentary testimony, a complete series of facsimiles of documents which were at the Public Record Office or elsewhere.

Forbes-Robertson has just made his first London appearance as Shylock, in Drury Lane Theatre, and appears to have been greeted with fervent demonstrations from a brilliant and friendly audience, but he does not seem to have impressed the critics very deeply.

The Royal Naval and Military Tournament in London this year will include an uncommonly elaborate historical spectacle, entitled "The Restoration, 1660." There will be five scenes. In the first, "The Rule of the Rump, 1659," will be seen a typical seventeenth-century crowd in the narrow streets of London, buying and selling, or watching such sports as wrestling, cudgel-playing, and cock-fighting. A dour figure on a white horse appears from Whitehall. It is Hudibras — the creation of Samuel Butler—the earnest Puritan who cares neither for applause nor for unpopularity. The second scene, "The Gates of London, February 9, 1660," shows how the wrath of the populace is excited by the appearance of soldiers under Gen. Monck, who performs his last service to the "Rump" by breaking down the city gates because of the refusal of the citizens to pay the taxes imposed by the Parliament. In the third scene, "Monck signs for a Free Parliament, February 11, 1660," the General announces to the Lord Mayor that he has decided to "advise" the Rump to dissolve and summon a new Parliament. The next scene, "The Roasting of the Rump," shows the rejoicing of the populace, and leads up to the final scene, "King Charles enters London, May 29, 1660," a grand military pageant, in which Monck, who brought about the Restoration, is a conspicuous figure.

Music

THE WAGNER CENTENARY.

When Richard Wagner was born, on May 22, 1813, Haydn's grave had been closed only four years. Beethoven, Schubert, and Weber had not yet written their best works, Berlioz was only ten years old, Mendelssohn four, Chopin and Schumann three, and Liszt two, while Verdi was born the same year as Wagner, five months later. All these composers not only created masterworks, but exerted a wide influence on the world of music, yet none of them brought about such thorough changes as Wagner. As a boy he seemed to have talent for poetry, but not for music; his piano teacher, indeed, told him frankly he would never become a musician—and up to his death there were critics who maintained that the teacher's prediction had come true! Thirty years have since elapsed and barely a trace remains of the old rancor. Everywhere Wagner now plays first fiddle, in the concert halls no less than in the opera houses. The surest way to fill an auditorium is to announce a Wagner programme, even though he wrote so few pieces for the concert hall that his operas have to be drawn on therefor. Undoubtedly, much is lost by thus dissociating the music from the action and scenery; but if the public is satisfied with half a loaf of Wagner and prefers it to a whole loaf of other bread, what are you going to do about it?

Truth to tell, even those who enjoy Wagner's art-work in the opera house fall far short, as a rule, of understanding its full significance; particularly the subtle interdependence of the poetry and the music. Thousands to whom these operas have become old stories would be astonished, awed, and thrilled, as never before, if they could once distinctly hear every word that is sung, and note how it is mirrored in the

music, bar by bar. When Wagner brought out his "Tannhäuser" in Dresden he was disappointed because the audiences seemed to be more impressed by its operatic melodies in the olden style than by its musico-dramatic innovations. The fault, to be sure, was not all on the part of the hearers; the singers, and the players, too, were groping in the dark, dazed by a style that was new to them, and unable to show it off to advantage. That was in 1845. He had outstripped his generation; but instead of waiting for it to catch up with him, his astonishing originality impelled him to compose his "Tristan" and his Nibelung's Ring, in which he went beyond his own "Tannhäuser and "Lohengrin" by as big a stride as that which separated those works from the old-fashioned operas.

Singers, players, and audiences have learned much since 1845, yet a great deal remains to be done before the "art work of the future" can fully come into its own. The Bayreuth festivals have undoubtedly degenerated in important respects; the singers, in particular, are not always as carefully chosen as they were by Wagner in 1876 and 1882, the only two festivals he superintended; but his son has done the art-world a great service by carrying out at those festivals most conscientiously Wagner's directions regarding the interdependence of the scenic effects and the music, which are as subtle as the correlation between the poetry and the music. The time will doubtless come when justice will be done in our opera houses to every phase of Wagner's composite art; unless, indeed, it should prove that his demands are beyond human achievement; which is the case, it is to be feared, with regard to absolute distinctness of enunciation in so large an auditorium as his operas require.

While his quintuplex art-work (an amalgamation of music, poetry, painting, architecture, and sculpture, in action) has in a way conquered the world, it is clear that he was grievously mistaken in his egoistic idea that this kind of composite art-work was the only one which had a future. Notable things have been achieved in music and the other arts, separately, within the last half-century. So far as music alone is concerned, it must at the same time be admitted that, while some individual masterworks have been created, there has been no epoch-making achievement like his own in the music drama, or Beethoven's in the symphony, or Liszt's in the symphonic poem, or Chopin's in piano music, or Schubert's in lyric song. In the main, what Ferdinand Pfohl wrote many years ago, is still true: "Wagner is the oxygen, the atmosphere which modern opera breathes." Attempts to go beyond him have resulted in little more than exaggeration and caricature, as in the case of Richard Strauss. How much more ingratiating is Humperdinck's frankly Wagnerian "Königskinder" than "Elektra" or "Salome"!

Undoubtedly, the composers have been chafing for years under the tyranny of Wagnerian influence. A great sigh of relief was heaved when Mascagni brought forth what soon proved to be a *ridiculus mus*. A shout of joy went up when Debussy created a new "atmosphere" for himself and his imitators to breathe. Unfortunately, the chemistry of this new atmosphere was so simple—a whole-tone scale and certain augmented chords—that it staled in a few years. The crashing dissonances of Richard Strauss "made school" for a time; and encouraged by the ease with which a sensation and money can be made by such crude audacities, Schönberg and others have made cacophony the be-all of music. The funniest thing about it is that the perpetrators of these atrocities are benefiting by the very fact that Richard Wagner was assailed by the critics for his free use of discords. In view of the utter discomfiture of his enemies, many critics now are afraid to expose themselves to the future pillory by castigating Strauss, Schönberg, Scriabine, and the other "cubists." They do not see the great difference in the cases. Wagner, to be sure, enlarged the means of dramatic expression by the poignant use of discords as no one before him had done; but with the instinct of true and sincere genius he applied these discords only in tragic moments, whereas the cacophonists make no difference, musically, between love and murder. They offer cayenne pepper to those who ask for bread.

In our concert halls the Wagnerian atmosphere is almost as noticeable as in the opera houses. Liszt himself, who gave to concert music its protean new forms, called symphonic poems or tone poems, was largely influenced in doing so by Wagner's method of giving organic unity to the music of an opera by means of recurring leading motives. With Liszt, also, Wagner shares the honor of having brought about a revolution in the reading or interpretation of orchestral works of all periods. The "prima donna" conductors of our day, who earn almost as much as the dramatic sopranos and tenors, are, like them, the artistic offspring of Wagner and Liszt. It was they who taught the art of putting life, vigor, expression into symphonies and overtures, or into sonatas, by suiting the pace to the emotional character of the melody at every moment, thus revealing the secret of musical eloquence.

Putnams bring out late this month a collection of "Latin Songs; Ancient, Mediæval, and Modern, with Music," arranged by Calvin S. Brown.

The Philharmonic Society of New York makes the important announcement that they have obtained the services, as concertmeister, of Leopold Kramer, who formerly held the position of concertmeister of the Theodore Thomas Orchestra, Chicago, and of the Chicago Opera Company.

"The Merry Widow" had its 5,000th performance in English by the Henry W. Savage Opera Company a few weeks ago at Portland, Ore. It seems to be as popular to-day as it was when first produced. The royalties from it have made Lehar a millionaire. What is expected to be the successor of "The Merry Widow," "Das Fürstenkind," by Lehar and Leon, is to be brought out here by Mr. Savage next season as "King of the Mountains." He will also present "The Gypsy Chief," by Emmerich Kahlmann, the composer of "Autumn Manœuvres."

The Bach Festival at South Bethlehem, Pa., will be celebrated next week. The St. Matthew Passion will be sung entire on Friday afternoon and evening, May 30, while the following afternoon and evening will be devoted to the Mass in B minor. The Philadelphia Orchestra will coöperate with the local chorus of 200. The performances will take place in the Packer Memorial Church, Lehigh University. Inquiries as to hotels and boarding houses should be addressed to Mrs. E. F. Gray, No. 110 Church Street, Bethlehem, Pa. The general bureau of information will be the A. C. Huff Music Store, No. 57 South Main Street, Bethlehem, Pa.

A "bird music" concert was given a few weeks ago in Philadelphia by the Matinée Music Club. Among the pieces on the programme were Schubert's "Hark! Hark! the Lark," Cyril Scott's "The Black Bird's Song," Lehmann's "The Cuckoo," and "The Nightingale," by Ward-Stephens. Another unusual concert in the same city was one given by the chorus from the Pennsylvania School for the Blind. It included about fifty singers. The programme embraced the first part of Mendelssohn's unfinished opera, "Loreley," and the performance was highly praised for precision, tone quality, and sympathetic understanding of the music.

Canada's greatest choral society, the Mendelssohn Choir of Toronto, may make a tour of Europe. It will take $75,000 to do it, but prominent men have assured the conductor, Dr. Vogt, that that sum will be available.

Mention was made in this column a few weeks ago of the fact that Joseph Stransky, the conductor of our Philharmonic Orchestra, edited and completely remodelled Berlioz's opera "Beatrice and Benedict," first produced in 1862 and never a success anywhere. In Stransky's version it won immediate approval, and already sixteen German opera houses have accepted it for performance.

Paderewski's recent tour in Poland was the occasion of a most extraordinary display of sentiment on the part of his country-people. Madame Paderewska writing recently to a friend, said: "Mr. Paderewski was received in Poland—not like a king, but as a sacred emblem of the nation. It would be impossible to relate the poignant

emotion with which he was received. It was grand, sublime. Even Paderewski can live but once moments like that." In Warsaw Paderewski had a curious experience with the Russian officialdom. On the night of his concert there were several cartloads of flowers, wreaths and the like, to be handed over the footlights. The head of the Russian police said he had no objection to the demonstration—only all the ribbons of national colors must come off the flowers before they were taken through the audience. This was done without lessening the enthusiasm of the people in the least.

Art

The Old Colleges of Oxford: Their Architectural History Illustrated and Described. By Aymer Vallance. New York: Charles Scribner's Sons. 34+ 134 pp. folio. $35 net.

The Story of Architecture in Oxford Stone. By E. A. Greening Lamborn. London: Henry Frowde. 3s. 6d. net.

There are books aplenty about Oxford, but none that gives just the record of the growth of the college buildings which is to be found in this volume by Mr. Vallance. And it is a book most desirable to have. "In spite, then, of all the devastating changes it has undergone, Oxford still remains beautiful beyond compare. And whether in winter time, when its immemorial walls rise sombre by contrast to the whiteness of the fallen snow; or in the spring and early summer, when they stand embowered in lilac and laburnum, chestnut and may-blossom; . . . or in autumn, when pinnacle and buttress, turret and battlement, are incarnadined with banners of scarlet creepers—no matter in what mood, in what season, in sunshine or mist, the University city preserves its unique, unfailing fascination." It is Mr. Vallance's task to show in what way the buildings which are the chief source of this fascination were designed, and enlarged, and, too often lamentably, restored. To this end the book contains a large number of full-page illustrations, besides innumerable cuts in the text, reproducing in really superb form a great variety of drawings, paintings, engravings, and photographs, old and new. To the Oxford man who carries into the world "the vision of her august, transcendent personality," and even to the stranger who has passed through her gates, these pictures will bring a kind of homesickness, like the *desiderium Romæ* which haunted Erasmus. But the illustrations are by no means of sentimental value only. Many of them reproduce building details or notable bits of sculpture and metal work. Indeed, Mr. Vallance has succeeded throughout in mixing science and æstheticism in due proportions.

After the preface there follows a long introductory chapter which deals with the architecture of the University in general and in its broader outlines, and the customs, religious and educational, which were the causes of its specific development. Naturally, the author has been struck by the peculiarly conservative character of the Oxford style:

> Strange though it may seem, it is the fact that Oxford contains scarcely any work that can be entitled Renaissance in the strict sense of the term; that is, as applied to the early Italian revival. . . . It is incorrect, at any rate as far as Oxford is concerned, to regard Humanism and the Italian Renaissance as allied phases of one and the same thing. For while the University cannot in fairness be accused of reluctance to adopt the New Learning, nevertheless foreign art novelties met there with little sympathy. True to her character of the home of lost causes and impossible loyalties, Oxford clung with a tragic desperation to her ancient garments of Gothic pattern, hugging them about her until, worn to rags and tatters, they dropped off, and she was constrained to clothe her nakedness with the sole contemporary dress available in the eighteenth century, to wit, that sheer Palladianism into which the illusory "New Birth" movement itself had by that time degenerated. Thus it befell that Oxford architecture never passed through the normal gamut of successive phases of declension from the sixteenth century onward, but that between the perfection of English mediæval masoncraft, as practiced by Wykeham, Chicheley, and Waynfleet on the one hand, and the corrupt fashion of Trinity, Queen's, and Worcester Colleges on the other, there was no intermediate stage but that of the so-called "Oxford Gothic."
>
> In this style almost all the outward lineaments of Perpendicular were retained: the arches were four-centred; walls were crowned with gables or battlements, and their surface relieved by moulded panel-work or string-courses; windows were hooded by labels and always mullioned, and sometimes were enriched with tracery.

Elsewhere Mr. Vallance describes this Oxford Gothic as a "picturesque hybrid, . . . neither mediæval on the one hand nor Renaissance on the other." It was not in the purpose of his book, but he might with profit have digressed here to show how this mongrel, but fascinating, style of building is typical of that strange wedding of the classical and the mediæval which gives to the University its unique spirit—unique, at least, in the intensity with which it expresses the paradoxical nature of our whole civilization with its double source.

It is owing to a misunderstanding of this peculiar development at Oxford that some of the most censurable restorations have been made. Mr. Vallance calls attention to the evil influence of Ruskin's attempt to introduce Venetian Gothic, which is quite out of harmony with the spirit of the place. And naturally he has even harder words for the extraordinary lack of knowledge and taste that has led to such vandalism as the demolition, in 1857, of the Perpendicular chapel at Balliol "and the substitution of the streaky new building by Butterfield."

After the introduction Mr. Vallance takes up the individual colleges chronologically. We cannot here follow him in these successive chapters, but can recommend the book as a whole for the interest of its text and the beauty of its manufacture.

By the side of Mr. Vallance's magnificent folio the little volume by Mr. Lamborn looks modest enough, but it is an excellent treatise for all that. "Architecture," says Mr. Lamborn, "has too long been the plaything of the antiquarian; it is time that it was recognized as a matter of vital concern for every citizen." It is in that spirit, we take it, that he has composed this manual.

"A History of the Metropolitan Museum of Art" (The Museum), by Winifred E. Howe, has the sobriety and objectivity of an official record. Even in this impersonal form the story is a sufficiently inspiring one. Between 1870 and 1905 a feeble volunteer enterprise emerged as a great museum splendidly manned and with funds far exceeding any of its older European rivals. Such a growth is elsewhere paralleled, though not equalled, only in the museums of Boston and Berlin. An audacious initiative marked the early stages. William T. Blodgett, a cultured layman and trustee, bought on his own judgment two hundred thousand dollars' worth of old masters and bought them well. Gen. Cesnola patriotically imposed upon New York the Cypriote treasures for which European museums were bidding. When the collections were moved to the Park the trustees packed and unpacked the boxes with their own hands. In the late eighties Henry G. Marquand and Catherine Lorillard Wolfe inaugurated the tradition of princely gifts and bequests which in late years have come in an unfailing stream. The long backwater of Gen. Cesnola's later directorship is hardly mentioned for evident reasons. It was marked by the shrinking of many activities along the line of popular education. Such impersonality befits an official chronicle. Yet when one thinks of the outstanding men associated with the Museum: Prime, Marquand, Johnston, Blodgett, Morgan, one fairly craves a personal history of this great enterprise. In such a book would be abundant human nature to reward the annalist, and wherewithal to tax his sympathy and tact. Meanwhile Miss Howe's book fully meets the public needs of the case.

Ludwig E. Faber, a portrait painter, died last Friday in Hahnemann Hospital, Philadelphia. He was a charter member and for seven years president of the Sketch Club and vice-president of the Pennsylvania Society of Miniature Painters. He was fifty-seven years old and was born in Philadelphia. He studied art in France and Germany eleven years. Many of his works are in the public and private galleries of Philadelphia.

Finance

HIGHER RAILWAY RATES.

Officers of the Eastern railways on Wednesday of last week filed with the Interstate Commerce Commission their petition to be allowed an average increase of 5 per cent. in rates imposed for carrying all freight. This is the first application of the sort since 1910. In June of that year, shortly before the new law was enacted, under which the Commission was to possess the power of vetoing a change in rates, the Eastern railways announced an advance averaging 10 per cent. That action was opposed by Attorney-General Wickersham and enjoined by the Federal courts; the purpose of that interference being to restrain the roads from establishing higher rates until, under the new law then pending in Congress, the proposed rates should have been reviewed by the Interstate Commission.

The railways having yielded, their case was heard by the Commission in the autumn, and in February of 1911 the petition for higher rates was denied *in toto*. Stated generally, the grounds for the Commission's action were that the railways had not sufficiently established their need of such higher rates; that revenue from freight transportation was not decreasing, and that the railways had not adequately tested the possibilities of reducing their expenses through more economical management.

Since that judgment was affirmed, three different influences have been actively at work on the finances of the railways. One is the substantial and reasonably continuous increase in both gross and net earnings, which came with the return of better times and the great harvests of 1912. Another is the increase of wages, especially for the Eastern locomotive engineers under the arbitration board's award of last November, and for the Eastern railway firemen under the award of a month ago. The third dominating influence has been the heavy expenditure for additions, improvements, and new rolling stock, made largely out of earnings, but involving also extensive borrowings which, in a security market grown somewhat overburdened, entailed a progressive increase of annual fixed charges.

The petition presented to the Commission last week sets forth, and the railways undertake to prove, that their cost of conducting business "has been, and is being, steadily increased by increases in capital charges, increases in wages, increases in taxes, increased burdens imposed by legislative enactment, such as extra-crew laws, employers' liability and compensation acts, elimination of grade crossings, either in part or in whole at the expense of the carriers, and in various other respects, and that existing rates are insufficient to afford just and reasonable compensation and return to the carriers, and are unreasonably low in view of the value of the service afforded thereunder." They further undertake to show that large additional sums of money should be expended for enlargement of yards and terminals, additional tracks, block signals, additional shops, and so on—these being expenditures which are "demanded by existing and future transportation conditions," and which must be made if the railways "are to satisfy the needs of the public."

This presentation of the case is both temperate and impressive; it stands in altogether favorable contrast with the outcry against the Government's injustice and with the threats of business ruin which for a time made the episode of 1910 all but farcical. No one is likely to be very profoundly convinced by the recent published statement of President Rea, of the Pennsylvania, to the effect that a 5 per cent. all-round increase in freight rates would mean only 8 cents a month to every American citizen. The thing cannot be reasonably figured up in any such way, and if it could, it would still remain to be proved why that 8-cent charge should be imposed, any more than 16 cents, or 4, or none at all. But Mr. Rea does not finally rest his case on such an argument, any more than does the formal petition to the Interstate Commissioners. "Reduced to the simplest terms," he concludes, "the question involved in the proposal to increase freight rates is this: Are the people willing to pay the railroads sufficient freight rates to enable them to render the service which the people demand and should have?"

This is a fair and proper statement of the argument. Public opinion demands a certain grade of railway facilities; it has, through the arbitration boards, very generally increased railway wage scales; the public authorities have increased railway taxes. If the resultant enlarged running expenses and fixed charges press too closely on the revenue at the present transportation rates, it is reasonable for the companies to ask for a higher rate. Not even the fact that some railways may not urgently need the higher rate, while others do, is a conclusive argument against the request; for the Interstate Commission itself requires uniformity as between the competing railways, and if the Commission did not require it, conditions of railway competition would, since an advance in rates by the weaker lines alone would simply mean loss of their chance in competition.

The question for the Commissioners to decide is whether the proposed 5 per cent. advance, taking the petitioning railways as a whole, is right in itself or not. That must be settled in the light of the past two years' experiences, of the tendencies of the present day, and of such other considerations as the existing higher price of borrowed capital and the need for a larger margin, against less favorable business times, in the railways' own gross earnings.

The Psychology of Revolution

By GUSTAVE LE BON
Author of "The Psychology of Crowds." Translated by Bernard Miall.

8vo. $2.50 *net. By mail,* $2.75.

A book of an arresting character, in which the author makes specific application of his theory of crowds to activities in which the influence of the masses is most far-reaching. In it are discussed, with that graceful turn of phrase of which the author is a master, the psychology of revolutions in general, whether religious or political, and the mental and emotional make-up of the leaders of such movements, with very special and detailed consideration of the French Revolution.

IMPORTANT BOOKS

THE MECHANISTIC CONCEPTION OF LIFE. Biological Essays by JACQUES LOEB, Head of the Department of Experimental Biology, Rockefeller Institute for Medical Research.

The achievements of Professor Jacques Loeb in the field of experimental biology ensure any book of his a wide reading. His experimental work at the Universities of Chicago and California, as well as in his present position, gives this volume an especial significance. Professor Loeb here discusses many of the current problems in biology, including the question whether the phenomena of life can be unequivocally explained in physico-chemical terms. *238 pages, 12mo, cloth; postpaid, $1.65.*

HEREDITY AND EUGENICS. By JOHN M. COULTER, WILLIAM E. CASTLE, EDWARD M. EAST, WILLIAM L. TOWER, and CHARLES B. DAVENPORT.

Leading investigators, representing the University of Chicago, Harvard University, and the Carnegie Institution of Washington, have contributed to this work. Great care has been taken by each contributor to make clear to the general reader the present position of evolution, the results of experiments in heredity in connection with both plants and animals, and the enormous value of the practical application of these laws in breeding and in human eugenics. The volume is profusely illustrated. *312 pages, 8vo, cloth; postpaid, $2.70.*

MY LIFE. By AUGUST BEBEL. (With a Portrait.) An Autobiography of the Famous Leader of the Social Democratic Party in Germany.

This autobiography contains the story, from the inside, of the rise of the German trades-unions. Bebel gives a vivid description of the poverty of his early life and of his wanderings as a craftsman in search of work all through Germany—the Germany before the wars of 1864, 1866, and 1870-71, and before the Unification. Soon after his election to the Reichstag he was convicted of high treason for the expression of his views on the Franco-German war and had to spend some years in prison. The international reputation of the author, the extreme frankness with which he writes, and the striking successes of the movement with which he is identified make this a human document of remarkable interest and significance. *344 pages, 8vo, cloth; postpaid, $2.14.*

FRANCESCO PETRARCA AND THE REVOLUTION OF COLA DI RIENZO. A Study in the History of Rome during the Middle Ages. By MARIO EMILIO COSENZA, Instructor in Latin in the College of the City of New York.

In these pages the author draws a picture of Petrarch as a statesman. He has chosen for special treatment Petrarch's relations with Cola di Rienzo, because they constitute a story that is virtually a chapter in the history of Rome during the Middle Ages. The material of the present volume is drawn chiefly from Petrarch's letters, from the extremely important correspondence of Cola di Rienzo, and from the equally important archives of the Roman Church. Nearly all of this material is new to the English language. *344 pages, 12mo, cloth; postpaid, $1.60.*

From the Cambridge University Press

THE GENUS IRIS. By WILLIAM RICKATSON DYKES. With forty-eight colored plates and thirty line drawings in the text.

This elaborate and artistic volume brings together the available information on all the known species of Iris. The account of each includes references to it in botanical literature and a full description of the plant, together with observations on its peculiarities, its position in the genus, its value as a garden plant, and its cultivation. As far as possible the account of the distribution of each species is based on the results of research in the herbaria of Kew, the British Museum, the Botanic Gardens of Oxford, Cambridge, Berlin, Paris, Vienna, and St. Petersburg, and of the United States National Museum at Washington.

The most striking feature of the book is the forty-eight life-size colored plates, reproduced from originals drawn from living plants—making it a volume of great beauty as well as of scientific importance. *254 pages, demi folio, half morocco; postpaid, $38.36.*

BYZANTINE AND ROMANESQUE ARCHITECTURE. By THOMAS GRAHAM JACKSON, R.A. Two volumes, with 165 plates and 148 illustrations.

An account of the development in Eastern and Western Europe of Post-Roman architecture from the fourth to the twelfth century. The work both describes the architecture and explains it by the social and political history of the time. The description of the churches of Constantinople and Salonica, which have a special interest at this time, is followed by an account of Italo-Byzantine work at Ravenna and in the Exarchate, and of the Romanesque style of Germany, France, and England. Most of the illustrations are from drawings by either the author or his son, and add great artistic value to the volumes. *Vols. I and II, each 294 pages, crown quarto, half vellum; two vols, postpaid, $13.25.*

THE DUAB OF TURKESTAN. A Physiographic Sketch and Account of Some Travels. By W. RICKMER RICKMERS. With 207 maps, diagrams, and other illustrations.

A record of exploration of a little-known region, combined with the teaching of some elementary physiography. The book discusses the various geographical elements in the natural organic system of the Duab of Turkestan between the Oxus and the Jaxartes, the information being strung on the thread of a highly interesting story of travel and mountain exploration. The author was at great pains to obtain typical views of physical features such as mountains, valleys, and glaciers, and also of vegetation, village life, and architecture; and there are many diagrams for a clearer understanding of the text. The book is especially suitable for colleges, libraries, and schools, and for all students or teachers of physical geography and geology. *580 pages, royal 8vo, cloth; postpaid, $9.44.*

To the Lover

of the exquisite in bookbindings and to those who deal in beautifully bound books we call attention to the branch of our business known as our Art Bindery. In it are gathered skilled craftsmen who take pleasure and pride in their workmanship.

The artistic bindings executed here are exhibited in the bookshops of dealers and are to be found on the bookshelves of bibliophiles throughout the country. They rank with those imported from abroad. The increased volume of business done in this department during the past few years is evidence that we do not over-estimate our ability to execute fine bindings with the most careful regard to elegance, artistic merit and durability.

We solicit your orders, whether they are for a single volume or a library, and whether they are for half or full leather binding, with simple or elaborate treatment.

We also undertake the repairing of Family Bibles, heirlooms or any other bindings, carefully and skillfully mending torn leaves and properly guarding loose sheets or inserts. Send for a copy of "Bibliopegistic," an illustrated booklet pertaining to the art of binding books. You will be interested.

FREUND
THE POLICE POWER
By ERNEST FREUND
Professor of Law in the University of Chicago.

A treatise on the most comprehensive and the most interesting branch of American Constitutional Law.

PART I.
NATURE AND GENERAL SCOPE OF THE POLICE POWER

PART II.
THE PUBLIC WELFARE
First—The Primary Social Interests: Safety, Order, Morals. Second—Economic Interests.

PART III.
Fundamental: RIGHTS UNDER THE POLICE POWER
First—Liberty. Second—Property, Vested Rights Under the Police Power. Third—Equality.

PUBLIC POLICY—CONSTITUTIONAL RIGHTS—AMERICAN CONSTITUTIONAL LAW

The author has aimed to solve the problem of the nature and scope of the police power, upon which the validity of a great portion of current legislation depends. *One volume. Buckram.* $6.00 *delivered.*

WATSON
THE
CONSTITUTION OF THE UNITED STATES

A MASTERPIECE AS TO DEPTH, CLEARNESS AND SCOPE

By DAVID K. WATSON, LL.B., LL.D.
of the Columbus, Ohio, Bar.

No work on the Constitution approaching this in scope and treatment has ever been published. It is considered the most philosophical and comprehensive treatise extant on the Constitution.

In all sections of the country, critics agree that nothing more exhaustive or more profound has appeared on the Constitutional Law of the United States. It is the work of a lawyer as well as of a close student, and has the merit of combining both points of view, which renders it valuable alike to all classes of readers.

The work is published in two volumes, handsomely bound in Buckram. $12.00 *delivered.*

WINSTON CHURCHILL'S *New Novel*

THE INSIDE OF THE CUP

By Winston Churchill, Author of "Coniston," "Richard Carvel," "The Crisis," "Mr. Crewe's Career," "A Modern Chronicle," etc.

"The Inside of the Cup" is undoubtedly the most significant novel Mr. Churchill has written.

The romance of "Richard Carvel," the realism of "Coniston," and the deep social import of "A Modern Chronicle," are repeated in this powerful story of the present day.

In conception, consistent character drawing and style "The Inside of the Cup" reveals Mr. Churchill again as America's foremost novelist.

The Nation

NEW YORK, THURSDAY, MAY 29, 1913.

The Week

President Wilson's plain words about the pressure of selfish interests upon Congress to defeat the moderate reduction of the tariff proposed by the Underwood bill, are significant both for what they say and what they imply. It is known that for some time specific evidence has been coming to him of the truth of what he asserts. But his blunt utterance will of itself do a great deal to thwart the secret efforts of which he speaks. His deliverance will have a double effect. It will serve notice on the tariff lobbyists that their schemes are under close observation. And it will be a constant warning, and a kind of useful external conscience, to members of Congress who are exposed to temptation. They will know that any swerving on their part will subject them to the most odious suspicion. And behind all there is seen the obvious readiness of Mr. Wilson to be "a talking President" in this matter of tariff revision; one who will blurt out his opinion about men as well as about measures, and who will, if necessary, go straight to the country with his appeals.

There are lobbyists and lobbyists. By no means all of the men who go to Washington to get a hearing on the tariff rates affecting their own business are either dishonorable in their motives or subterranean in their methods. Some of them go openly to committee rooms to make their errands known. And when they do this in the spirit of offering information for the framers of the bill, pointing out, perhaps, oversights or inconsistencies or injustices or unworkable provisions in the measure as it passed the House, they not only are entitled to consideration, but are doing a public service. It is, however, to wholly different procedures that President Wilson alludes. The men whom he has in his eyes are, first, those gentlemen who, without any visible occupation, live well in Washington hotels and profess to have political "influence" at their disposal. There is no question of open corruption. Only, the "right" man is to be employed to get the matter properly presented to the committee, or to see that the thing is considered privately—and, of course, disinterestedly—by the Senators who will have most to say. Then there are the gentry who have advantageous personal relations with important legislators. In addition, there are the agents who ply the press with arguments and advertisements. And, lastly, far away from Washington there are the little organizations in Boston and New York and Philadelphia and Chicago and San Francisco that quietly raise money and have their meetings and send their letters and telegrams to Washington, all in the belief that if only the weakest point in the line of resistance can be pressed upon hard enough, the Administration's tariff plans may be brought to the ground.

Republican reorganization and harmony are approaching rapidly—on paper. Senators of both wings of the party are daily and amicably conferring, and the National Committee is favorably considering a plan to have a National Convention next year, at which the question of the representation of Southern States may be settled, and as many other roots of bitterness removed as possible. On all sides the disposition is to forget past differences and to unite for the future. Even those who do not believe in the need of the proposed party reforms are keeping civil tongues in their heads. Chairman Barnes was expected to make an angry retort to the suggestion that he should take himself out of the way of the chariot of progress, but he contents himself with a dry statement of his intention to call a meeting of the State Committee directly after the extra session of the Legislature. From Washington, where the chief get-together efforts are under way, all is grace, mercy, and peace, with a dash of new hope for the future. All the reports indicate that the Republican lion and lamb are preparing to lie down together. But where is the little child that shall lead them?

Wherever the Highland chief sits is the head of the table, and whatever Col. Roosevelt does has a way of getting at the head of the newspaper column. Hence it was inevitable that a great deal of space, with big headlines, should be given to his journey to Marquette, accompanied by a carload of friends and special correspondents, where he has gone into court to prove that he is not an habitual drunkard. This ought not to be a difficult task. The cloud of witnesses with which Mr. Roosevelt has compassed himself about on his journey can scarcely be intended merely to confound the one rash editor whom he is suing for libel. The Colonel's intention must be so to mass testimony concerning his drinking that the lurking stories and club-corner gossip about his frequently indulging to excess may get their quietus. That they were ever widely credited there is no reason to believe. Certainly no one who has had occasion to see Mr. Roosevelt often, or who knows the prodigious amount of physical and mental labor he gets through, could fancy that he was anything but an abstemious man who took the best care of himself. And to suppose that his is a temperament that requires vinous exhilaration is absurd. Get him interested, throw him into a fight, place him before huzzaing crowds that drink to him only with their eyes, and he will not ask for wine.

Organized labor's demand that Ambassador Page be recalled from London because of his hostility to the trade unions is somewhat perplexing. Organized labor ought to take pleasure in having its enemies sentenced to a long period of exile from the country, even if it is what some people might regard as an honorable exile. If Mr. Page is indeed a foe to democracy and a power for evil, the best place for him is three thousand miles away from Mr. Gompers's country. We cannot but regard this clamor by the unions as a very bad piece of tactics on their part. What they should have done is to interpret Mr. Page's appointment as a punishment instead of a compliment. They should now be arguing that President Wilson, anxious to rid himself of the embarrassing presence of an enemy of labor, has put him where he can do no harm.

Where except in California could the people be sure of having a Governor able to sum up the work of the Legislature before it adjourned? In that State, however, it is the custom for the Executive to send a farewell message to the lawmakers, and, performing that duty this year, Gov. Johnson recounts their mighty works. But first he pays his respects to "the organized conspiracy of detraction that for the last four months has been endeavoring to poison our people." The "special-interest press" of the State is the poison-scatterer. But it has been all in vain. "To-day," exults the Governor, "there is presented to California a record of accomplishment by this Legislature which, if accomplished in any other State in a decade, would be a matter of wonder and pride." As Johnson was chiefly responsible for the programme of legislation, the accuracy of his estimate can no more be called in question than can its modesty.

Mayor Gaynor's veto of the bill creating a Department of Public Welfare, to have control of the subject of gambling and prostitution in this city, has met with general approval. His message indicated a certain degree of sympathy with the general purpose in view, but took strong exception to the particular bill upon a number of grounds. Among those opposed to the bill, there are many whose opposition is based upon reasons other than those assigned by the Mayor. Of these reasons, perhaps the most weighty is that which rests on the fact that the proposal was put forward without full consideration of the experience of other great cities. It had also been urged upon the Mayor that the eve of an exciting Mayoralty election was inopportune for the inauguration of such a change. In the course of the next twelvemonth, it may be expected that much new light will be thrown on the whole question.

When a city is "cleaned up," in a moral sense, what becomes of the refuse? Where do the unfortunate women and the evil men who live upon them go? They usually go to some other city. Philadelphia's Police Department has been carrying on a rigorous quarantine of the local Tenderloin. Warned by previous experience, the police authorities of Philadelphia are seeing to it that the expelled denizens of the Tenderloin do not scatter over uninfected districts. When that object is attained, the local police are content. The head of Cleveland's police used to boast that he had "cleaned up" the city by driving its outlawed population—to Cincinnati. Philadelphia cleans up by starting an exodus in the direction of New York. New York cleans up by making it more comfortable for the practitioners of vice to take a train for Chicago. The trade of vice thus takes on an itinerant character. This or that city finds temporary relief, but what is the effect on the moral well-being of the nation as a whole? And what is the lasting outcome in the city immediately affected? These are questions not yet intelligently answered. It is certain that no cleaning-up process can be permanently effective which merely sentences vice to six months' exile.

Other States may be at their wits' end to raise as much money as their Legislatures wish to spend, but not Minnesota. Its Constitution permits loans from the State Treasury to municipalities, and both St. Paul and Minneapolis are looking to this source for 4 per cent. money. Within the next decade, it is prophesied, the income from the State school trust fund will reach five million dollars. This is due to the policy which the State has long followed of not selling the public lands which came to it as resources for its schools. These lands have become extremely valuable, owing in a measure to their timber and stone wealth. The income from this fund at present is stated to be about two million dollars. Iron-mine royalties paid the State five millions last year. The State Auditor is quoted as estimating that within forty years Minnesota will have an income of $200,000,000! Whatever discount may have to be made from this rosy estimate does not impair the moral that the time to conserve your natural resources is while you have them.

On the day when Indianapolis voters were dodging the polls, a city a hundred miles to the east of it was setting a very different example. Flood-submerged Dayton may not yet have got to her feet again, but she has recovered strength to adopt the form of city government whose invention gave Galveston a place in history. A committee of fifteen, headed by John H. Patterson, overwhelmingly defeated a committee nominated by the Democratic organization, and consequently will frame a commission government for the city. The vote was only slightly less than that cast at the Presidential election. Mr. Patterson scored a rare triumph, his election being virtually unanimous. In some wards, he received every vote. The scheme favored at Dayton seems to be a combination of the commission-government plan and the city-manager device. Five commissioners are to be elected in the city at large, and ward lines to be done away with; but these five men, instead of looking after various departments of work themselves, will appoint an expert in city management who will be the active administrator. The election was under the new Ohio law, which gives cities liberal powers in framing their charters.

"Taggart Man Nominated," ran a newspaper headline the other day. And the last sentence in the dispatch reads: "The vote was the smallest in recent years in Indianapolis." Cause and effect are seldom so neatly linked. This outcome of a contest for a Mayoralty nomination is the old story of the Boss Who Stays on the Job. Bell, the Taggart candidate, opposed Wilson at Baltimore. His leading opponent, Holtzman, was not unknown to his fellow-citizens, for they had made him their Mayor as recently as 1905. In that office he established a record for efficiency. A treasury which, at the beginning of his Administration, was penniless, he left two years later with above $200,000 in it. He brought about the first track elevation in the city. He managed to obtain a reduction in the price of gas from 90 cents a thousand feet to 60. The system of medical inspection of schools adopted under him is now to be found in every city in the State. He stood forth as specifically a Wilson Progressive. Yet the city which gave Wilson almost as many votes as Taft and Roosevelt combined, did not take the trouble to strike a second blow at bossism in either the Republican or the Democratic camp. It was too soon after the first one!

Everybody has long known that the tariff affected almost everything that

one could eat, drink, or wear, but it has been reserved for the Hon. Caleb Powers, of Kentucky, to discover its connection with the permanence of friendship, the secret of old age, and Browning's table-talk. It is just like the *Congressional Record* to bury this jewel of debate in the back pages of an unusually thick number, but, like murder, it will out, nevertheless. Mr. Powers first introduced an amendment to the Underwood bill as follows:

Par. 172½. Rough lumber, $1.25 per thousand feet board measure.

Par. 172¾. Railroad ties, 10 per cent. *ad valorem.*

He then obtained leave to print a recent speech of Chauncey Depew, modestly withdrawing himself from the arena for the sake of "putting before the general public one of the ablest speeches" he had read in a good while. Mr. Depew might have related his remarks more directly to rough lumber and railway ties, but perhaps he did not foresee that they would figure in a tariff controversy. At all events, he began by saying: "With each recurrence of these anniversaries, I am more impressed with the permanence of friendship." Even in reference to this item, however, he gave no hint whether it should be taxed specifically or *ad valorem*. Nor did the Hon. Caleb Powers. Browning, according to the entertaining Mr. Depew, had once been hailed by the Shah of Persia as a fellow-poet; but here again, both he and his Kentucky admirer fail to tell us whether Shahs or poetry, or both, should be admitted to this country at a specific duty or *ad valorem*.

The Institute of Arts and Sciences which is organized under the auspices of Columbia University will not attempt extension teaching in a specific sense, since the programmes to be offered by the Institute carry no academic credit and, of course, involve no obligatory attendance. What the University authorities are doing is to systematize the rather inchoate mass of lectures and courses, some of which are at present free to the public. Exchange professors came and went, interesting lecture series by the members of the local faculty were carried on, but little trouble was taken to acquaint the public with the advantages which were to be had on Morningside Heights. The Board of Education has advertised its free evening lectures much more efficiently than Columbia has done. The case of Henri Bergson is a brilliant exception. However, systematization is now to come. The change from an uncoordinated lecture system to an Institute of Arts and Sciences is radical to the extent that there will be a single fee of ten dollars for access to facilities which have hitherto not been related. That is not an excessive price for more than 250 lectures, concerts, readings, and recitals in a single season.

The French Government is now aware that the enactment of the proposed three years' law of military service is not a business to be disposed of with a turn of the hand. The garrison mutinies in Paris and along the German frontier have shown that the General Confederation of Labor is more than prepared to back up the Socialists' opposition to the project in Parliament. The bill will in all probability become law; but in order to do so it must have behind it the solid support of all parties outside the extreme Socialists. That is the significance of the interview between President Poincaré and M. Clemenceau, at the President's solicitation. The two men are political enemies, but M. Clemenceau has declared himself ready to cooperate with the President on a matter affecting so intimately the vital interests of the nation. The veteran Radical leader is now having his revenge. When Poincaré became President there was altogether too much talk of him as a "strong man" and as a "national" President who would stand above party, the implication being that at length the Radical ascendency in Parliament and the country had been broken. M. Poincaré is now making confession that no revolutionary change of opinion has occurred in the country, and that without the consent of the Radicals nothing can be done.

The Mikado's serious illness comes at a time when Japanese politics is in a highly nervous condition, this being in turn the symptom of profound changes that are going on in the national life. Under the traditional conception of the Mikado as a divine being who stands aloof from the mere concerns of the moment, the actual personality of the sovereign counts for little in its effect on the public mind, and a change of rulers hardly touches the national life. But Japan to-day is in a state of sharp transition. The forces of democracy are asserting themselves against domination by clan oligarchy as embodied in the group of Elder Statesmen. Some of the members of that famous group have passed away. The authority of the survivors has weakened. Their influence, for example, was not strong enough to keep in power the late Premier Katsura, standing as he did for the maintenance of class rule, as against a Parliament truly responsible to the nation. The death of the Emperor Yoshihito would thus have significance because any event of such importance as the accession of a new sovereign would be bound to be made the occasion for increased efforts by the opposing parties in the nation.

In the complex play of international politics at Peking, it would be difficult to trace the exact effect of Mr. Wilson's action in withdrawing from the six-Power loan negotiations, followed by our recognition of the Chinese Republic. But even as a coincidence, it is worth recording that not more than two months after the President's secession from the six-Power group, the loan, which had been in painful suspense for more than a year, became a fact. More than that, although the precise conditions on which the loan has been granted have not been made public, it is apparent, from such accounts as have reached us of the proceedings in the Parliament at Peking, that the drastic powers of supervision and control originally demanded by the bankers must have been seriously modified, or guarantees of some sort must have been provided to allay the opposition of the Chinese democratic party. Now comes the report of a compromise between the Government of Yuan Shi-Kai and the democratic leaders by which a committee of Parliament is to supervise the expenditure of the loan. The eagerness with which London has been subscribing for Chinese bonds shows the world's confidence in the stability of the present Government. President Wilson deserves the credit of having given the cue. He undoubtedly rendered China a service, and we have still to learn what harm American interests have suffered in the process.

SOME ESSENTIALS OF A CURRENCY REFORM LAW.

It is quite generally understood, regarding the programme for legislation on banking and currency reform, that the actual measure to which the Administration will give its approval is still in a formative stage. It may also be safely taken for granted that a wide variety of particular plans and expedients, more or less inconsistent with one another, are pressed upon those in charge of the bill. A process of selection and rejection is therefore necessarily even now under way, and it will not have been completed, even when the committees have framed and reported their bills to the two houses of Congress.

At such a juncture it is useful to fix the mind on the primary essentials of such a measure. There are some definite purposes and provisions which are, so to say, the *sine qua non* of an effective currency and banking reform law, and the best means of judging the wisdom or unwisdom of other and more technical proposals is to study them with a constant view to these main objective points.

These primary essentials are fortunately, at the present time, generally agreed upon by all people who have given intelligent study to the question. The first, in our judgment, is provision for a centralized reserve, which can be used to safeguard currency issues based upon other bankable assets, and as a basis for rediscount of commercial paper in behalf of individual banks. The second essential is a system of "zone" or district supervision, whereby general oversight of the banking affairs of a given district shall be constantly exercised by a responsible committee chosen by the banks of that district. The third is possession and exercise of the power to regulate discount rates within due limits, with a view to the movement both of foreign exchange and of home requirements. The fourth is a system of circulating notes which shall be not only safe but absolutely elastic; which shall not only expand with the larger needs of a given season's trade, but which (unlike our present banknote system) shall automatically contract when the needs of trade grow smaller. The fifth is a system for the transfer either of lawful reserves or of circulating notes from the central repository to the individual banks, in response either to shifting needs of trade or to a sudden credit emergency. In addition to all these, it is unanimously conceded that the Government must have such representation in the central governing board as will give it a voice in the general policy pursued.

The Aldrich plan was skilfully contrived to meet these fundamental requirements; but it fell short of providing for several contingencies which, in this country more than in any other, would be likely to arise. We may best sum up those defects of the Aldrich plan, and may best point out some distinct problems with which a new plan will be confronted, by setting forth certain things which a satisfactory banking and currency law must provide against.

One of these, and the most obvious, is inflation of the currency; a danger more threatening in any new legislation from the fact that such inflation, in its earlier stages, is likely to be popular. This was in several ways the crux of the Aldrich plan. It was partly provided for by the proposed imposition of a 1½ per cent. tax on outstanding notes in excess of $900,000,000, not directly secured by lawful money—as against the present actual banknote circulation of $753,000,000—and by a 5 per cent. tax on an excess above $1,200,000,000. But the restriction was much impaired by the further provision that notes issued by the central organization, and held by an individual bank, might be counted as part of that bank's required reserve against deposits. This, in our judgment, made distinctly against the normal elasticity of the currency.

A second matter to avoid has to do with regulation of interest rates by any central governing board or boards. It would be easy, and popular, for such a committee to use the machinery of the system to keep down the interest rate. It might be very different if they took measures to force the rate up. Yet nothing has been more absolutely demonstrated, in the experience of all great central banks, than that one of the useful and necessary functions of such institutions is the raising of the official discount rate when the foreign exchanges need to be controlled or excessive home demands on credit need to be restrained.

Perhaps an advance in the rate by a central committee, with a view to moderating a gold export movement, might cause no complaint or irritation; but the fixing of a higher rate with the avowed purpose of blocking excited speculation, would be a new experience to Americans. Wall Street itself has been accustomed, in the not very distant past, to see the great private banks use every expedient, when a speculation had already reached the stage of extravagance, for keeping down the current money rate. Far different, and infinitely more in consonance with sound finance, was the action of the Imperial German Bank on repeated occasions of the sort, when, as in the autumn of 1905, the president of that institution, announcing the advance in its discount rate from 4 per cent. to 5, publicly referred to the speculation by the German "outside public," and declared that it "was the duty of the Reichsbank to put a damper on the movement."

A final and obvious consideration, among the results which a useful banking and currency reform plan must avoid, is undue influence over the policies of the central boards by outside interests. Discussion of the possibility of what is somewhat loosely described as "Wall Street control" has been familiar enough; but there are outside interests which have nothing to do with Wall Street, and yet which would quite as willingly use for their own ends their influence with a central committee or committees as would financial promoting interests. Such committees must be equally prepared to resist the pressure of the Western farmer associations, or the Southern cotton conventions, or the inland real estate operators, as to reject unwarranted urgencies of the Stock Exchange.

TALENT AND THE POPULAR VOTE.

It is confidently stated that Senator Root will retire at the end of his term. The report is that he does not care to seek reëlection to the Senate by popular vote—the method that will hereafter be necessary. We do not know whether this rumor is well founded or not, nor are we informed if the reasons given for Mr. Root's alleged decision to quit public life are published with any shadow of authority from him. What his friends say is that, all other motives aside, he is disinclined to enter into the hurly-burly of a contest for a party nom-

ination in the primaries, and then a direct election by the people as United States Senator. If all this is true, and if Mr. Root does in fact withdraw to private life, his case will undoubtedly be used as a taking argument against the new plan of choosing Senators, not by the Legislature, but directly by popular vote. Here, it will be said, is a man of outstanding ability, fitted admirably to represent his great State in the Senate, yet one of the first effects of the change in the Constitution is to deprive us of his services.

The matter, however, requires a little examination. If there is any feeling in this State adverse to Senator Root, and of such a supposed intensity as to make his election by direct vote seem improbable, what is it based upon? His exceptional ability? Are the people offended by the display of intellectual power which he has made in the Senate? Would they rather have a commonplace man in his stead? If Root would have a poor chance in a popular election, what sort of chance would Tom Platt have had, or Depew, or Ed Murphy, or Dave Hill? These questions answer themselves. The people of New York have no dislike of unusual talent or commanding leadership in their public men. They have been proud of the debating force and the statesmanlike grasp which Elihu Root has exhibited at Washington. It is not at all for anything that he has done there that objection to him exists—if it does exist in any marked degree. For the causes of that, one must go further back. We will not here go into them. Every one knows what is meant. It was implied in Mr. Roosevelt's famous question, when he was hesitating whether to make Root or Taft his successor: "Could a corporation lawyer be elected President?" But note well that this implies no jealousy of Mr. Root's brilliant powers. They are of the sort which, by themselves, the people delight to honor; and, for our part, we are not at all sure that he could not present himself to the voters and win another election, if he cared to try. However that may be, it is manifestly unwarranted to say that the retirement of Mr. Root would be a proof that the people will not directly elect a Senator taller from the shoulders and upward than most of his colleagues in the Senate.

It may be said that a certain fastidiousness goes with such high abilities as Mr. Root's. He would not be unwilling to take the steps necessary to be elected by the Legislature, but he has a Coriolanus-like shrinking from going before the crowd and asking each man for his vote. That may be. We have to take temperaments as they are, with the defects of their excellencies. But look at the thing in another light. If direct election of Senators prevents Mr. Root from being kept *in*, will it not also be a sure means of keeping worse men *out?* We will plainly put a case. There has been talk of Mr. Hearst desiring to succeed Root. The idea will seem fantastic, or revolting, to most of our readers; but if they were actually confronted with the threat of such a disgrace to the State, in what way would they think the likelihood of averting it greater—through election by the Legislature, or by direct vote of the people? By the former method, think of all the opportunities that Hearst would have to make his private arrangements with Murphy and other bosses in control of the Legislature. We saw how the thing worked two years ago, when the candidacy of Sheehan was suddenly sprung on the State, and was defeated only by heroic efforts and the narrowest of margins. Who would not prefer to take his chances of beating Sheehan or Hearst by a direct appeal to all the people, rather than by endeavoring to influence an intrigue-ridden Legislature? In our opinion, there is not a particle of doubt where the advantage would lie.

Of all States in the Union, New York ought to be the last in which to suggest doubts whether the people will rise to men of distinguished talents and weighty character. Go back forty years and ask who are the public men in whom the great confidence of New York has been most conspicuously manifested. At least three of the most notable of them have been as far as possible from the cheap and demagogic type. Tilden and Cleveland and Hughes—in all of them there was a certain austere quality, of the sort which is popularly supposed to repel the multitude. Yet we know how the hearts of the people again and again flowed out to these men. With such precedents in mind, it will require a great deal more proof on the other side than we yet have in hand, to compel one to believe that the voters will not be glad to choose distinguished men as Senators, if they have a chance. They may defeat a conspicuously able candidate, but that will be, we may feel perfectly sure, for some other reason than his ability.

THE WEST VIRGINIA INQUIRY.

It is now settled that a Senate committee is to take testimony regarding the labor troubles in West Virginia, and especially in the matter of the declaring of martial law in certain districts, with trials by military commissions. The committee will consist of five Senators, who will sit in Washington to examine witnesses. As outlined, the investigation would seem to be of a wider scope than is desirable. To look into the whole range of labor conditions in the West Virginia coal mines, to determine what rôle in the disturbances has been played by the railways, would lead the committee far, and into matters where the Federal jurisdiction is not clear. Probably in sheer self-defence the inquiry will narrow, as it proceeds. And, after all, the question of greatest interest, and the one with which Congress has the undoubted right to concern itself, relates to the way in which justice has been administered in West Virginia during the period of violence and rioting by the miners on strike.

It was the anomaly, to use no harsher word, of civilians being tried in West Virginia by the military, although the courts were open, which first caught the attention of the public. This it was which prompted Senator Kern's original resolution for an inquiry. All the other matters were collateral and subordinate. It may or may not be true that the West Virginia miners have been compelled to work under oppressive conditions. There may or may not be warrant for the assertion that railway companies have selfishly fomented labor troubles. Those things are important in their place, but it is certain that by themselves they would not have moved the Senate to act. What aroused concern and debate in that body, and what has finally led it to appoint a committee of investigation, was the fear that lawbreakers in West Virginia had been deprived of their Constitutional right to due process of law. The disorders are admitted. The need of bringing turbu-

lent men to justice is not denied. But the question which stirred some of the ablest men and best lawyers in the Senate was whether martial law in West Virginia had not overstepped its due bounds.

The substantial points at issue were clearly indicated in the speeches, and the running debate, of Senator Goff and Senator Borah. The former is from West Virginia, and undertook a thoroughgoing defence of the action of Gov. Hatfield, both in declaring martial law and in directing military commissions to try offenders. As one who had been on the Federal bench, Mr. Goff was naturally familiar with the judicial precedents, and cited several decisions of the Supreme Court upholding the action of military tribunals. But Senator Borah contended with great force that all these cases had to do with a time of war, or of military administration of a conquered territory. His argument was, and it seems to us weighty, that the military arm can and should be used by the Executive when the occasion demands it, but should be used as essentially a police force. When public order cannot be preserved by the ordinary officials, let the soldiery be called in without hesitation. Let rioting and insurrection be put down with the sternest hand. If the processes of the courts cannot be executed by sheriffs and constables, let them be executed by the militia. But, affirmed Senator Borah, martial law must stop at the door of the courtroom. The troops may run down and arrest criminals and hold them under guard; but when it comes to ascertaining their guilt and fixing their punishment, that is a work for judge and jury. For officers of the militia, untrained in the law, to attempt it, is almost certain to lead to actual injustice, and in any event creates an angry feeling that the ordinary processes of justice are arbitrarily set aside. Into such an obvious irregularity it is proper for the Senate to inquire.

It has been said that most of the pressure for this Senate investigation has come from labor unions in West Virginia. That does not affect the merits of the case. All of us are concerned in maintaining due process of law, against the mere argument of pike and gun. It may be true that laboring men are more directly interested than any other class in having this particular matter set straight. But with this interest, there goes an obligation. It is to recognize the general desire to have courts that are pure and impartial, and will do exact justice between man and man. Labor leaders praised the Massachusetts court that acquitted Ettor and Giovannitti; but too many of them were ready to break out in denunciation of the New Jersey court that convicted Quinlan. A "class verdict" was the epithet applied to the findings of the jury in that case. Justice can know no classes; and the multiplying evidence, such as that furnished by the coming Senate inquiry and by the resolute prosecution now going on in Massachusetts of employers charged with conspiring against their men, should convince honest workingmen that the outcries of the Industrial Workers against the courts are both unfounded and unpatriotic.

THE CASE OF OLLIE TAYLOR.

A few weeks ago the country was startled by the report that a ten-year-old boy had been sentenced to eleven years of penal servitude for stealing a bottle of soda-water. The Supreme Court of Georgia, it was set forth, had confirmed this monstrous sentence on technicalities, declining to interfere with its execution, since the procedure had been regular and this Court had no power to inquire into the merits of the case. At once, the flood-gates of comment were opened. Everybody, from editorial writers to clergymen, whose business it was to tell his neighbors how to order their lives, pointed to this decision as typical of the way in which justice was done in the United States in the twentieth century. Did any one doubt that our courts were completely fossilized? There stood the supreme tribunal of Georgia to demonstrate it. It is hardly going too far to say that for two weeks Ollie Taylor was the most conspicuous argument used to persuade his countrymen to adopt the recall of everything connected with our judiciary.

The facts in the case have now been published. They show that the boy was not sentenced to eleven or any other number of years for stealing a bottle of soda-water. He was not "sentenced" at all. He was brought into the Juvenile Court of Atlanta four years ago, at the age of nine, on various charges, including repeated stealing from grocery stores. Upon promising to behave himself, he was put on probation and allowed to return home. A year later, he was again in court, under the same kind of charges. One of these was purloining a bottle of coca-cola. This time, his father stated to the judge that the boy was wild and uncontrollable, and if permitted to roam the streets would become an out-and-out criminal. At his request, Ollie was sent to the Fulton County Industrial Farm under an indeterminate commitment. In accordance with the statute which provides that any such person shall be released on parole as soon as he shows education and character sufficient to warrant this course, or his home conditions become suitable, the boy was freed on parole. He went back to his former associations, and the parole was cancelled. His father, angered at this turn, now changed his attitude, and resorted to the courts for recovery of the person and "services" of his son—thus ironically runs the legal formula. It was this application which, denied in the lower court, and refused finally by the Supreme Court, made the troublesome boy, in the eyes of multitudes, a martyr to an antiquated system of legal procedure.

The facts, therefore, turn out to be about as nearly as is possible the exact opposite of the report. Instead of the boy being a victim of our judicial processes, our judicial processes have been strained to their limit to save the boy from being a victim of himself. Instead of his being removed from a sympathetic and helpful atmosphere to an atmosphere of hardened criminals who would only bring to maturity his evil tendencies, he had been taken from a corrupting companionship and placed in an institution whose object is to do what the home has failed to do. Instead of being punished by the infliction of a penalty out of all proportion to the crime, he was educated at the expense of society. Half of the day he spends in school; the other half he is at work. "All the information I gained personally in Atlanta," says Miss Julia C. Lathrop, Chief of the Children's Bureau at Washington, "from my own observation and from people with whom I spoke about the matter, convinced me that the boy is receiving proper care." To put

the thing bluntly, the laws and courts of Georgia have been slandered.

It is true that this misrepresentation, gross as it has been, was the result, not so much of malice as of ever-ready credence. But this fact merely shifts the blame from one of our weaknesses to another. What business had any one to believe without investigation or confirmation so preposterous a statement as that a ten-year-old boy had been sentenced to eleven years for stealing a bottle of soda-water? Whence comes this eagerness to accept reports which exhibit our greatest institutions as either hopelessly corrupt or hopelessly stupid? Do we fear that needed reforms have no chance unless we can prove that the structure we wish repaired is rotten from top to bottom? Or are we so impatient for improvement that we are willing that the most extreme misrepresentations should obtain currency? Or are we simply children once more when a lurid story comes our way? In the present instance, a piece of poetic justice in this aspect of the affair must not be ignored. The myth of Ollie Taylor first appeared in Hearst's Atlanta *Georgian*. At once, with no effort at verification, the other Atlanta newspapers printed it. It was not many days before they were employing all their resources in a vain effort to clear the name of Atlanta and of the courts of Georgia from the charges which were repeated in a hundred other newspapers, North and East, which had done nothing more than use the statements furnished them by these Atlanta journals.

IN THE BALKANS.

The nature of the news from the Balkans, since the cessation of hostilities, once more emphasizes the enormous handicap under which the cause of international peace labors. Peace is essentially undramatic. Peace conferences are interesting so long as there is a chance of their ending in disagreement. The character of the recent news from the late seat of war is easily described: there has been no news. As far as the press on this side of the Atlantic is concerned, the Balkan peninsula has just walked out of the door and disappeared like a respectable citizen under a sudden attack of amnesia. This is all the more strange because, while fighting was under way, the correspondents were at pains to remind us of the momentous issues at stake. The Cross was in battle against the Crescent, the Near East was to be remodelled, the European balance to be readjusted, the historic conflict between Slav and Teuton was entering on an acute phase. But somehow, as soon as the last gun was fired before Tchatalja, and Nicholas I had marched out of Scutari, the Balkans became dead "copy." The readjustment of races and kingdoms was completely blanked by Mrs. Pankhurst. Only as the possibility of trouble in the Balkans cropped up has attention once more turned in that direction. Now, if Bulgaria and Greece should really leap at each other's throats, that would be worth while writing about.

All this while, the business of drafting a treaty of peace has been going on. The delegates of the Balkan allies and of Turkey have for some time been at work in London. Actually, they found their work half done in advance. The preliminary treaty has been prepared by Sir Edward Grey on behalf of the Powers. It is preliminary in the sense that it leaves most of the details to be arranged by direct negotiation between the allies and Turkey and by the Financial Commission in its sessions at Paris. But as marking the close of hostilities the treaty is definitive, and it is to be ratified within a fixed period. Thus the European concert comes out of the affair with something of its prestige restored. That prestige was at its minimum when the Balkan nations first went to war against the earnest protestations of the Powers, and subsequently made a jest of the solemn declaration of the Powers that the outcome of the war would not be allowed to change the *status quo* in the Near East. Where the European concert has regained something of its reputation is in its valiant efforts to prevent the extension of hostilities beyond the Balkans, and, secondly, in the arrangement of the future of Albania. The Powers may still do useful work in facilitating a settlement among the Balkan victors, with regard to the distribution of the Turkish spoils. For the moment even the fate of Albania is eclipsed by the increasing rumors of friction between Greece and Bulgaria in Macedonia.

That relations among the Balkan States, with Greece and Servia lined up against Bulgaria, have reached a state of acute tension is plain from recent developments. Squabbling between the Greeks and Bulgarians near Salonica culminated last week in what was almost a pitched battle. Later dispatches spoke of an attack on the Greek fleet by the Bulgarian batteries at Kavala, on the Ægean. It would be wrong to speak of events approaching a breaking point, because it is as yet impossible to think of the Balkan States as plunging into war among themselves and thereby endangering the fruits of their victory over the Turks. The present difficult situation has arisen out of the fact that the nature of the victory has been so much more emphatic than the allies could have expected in their most sanguine moments; and, secondly, because of the unexpected showing of Greece and Servia in particular.

Their military prestige at the outbreak of the war was certainly not of the highest. The experts assumed that if the allies won, it would be because of what the Bulgarians would accomplish in Thrace. It was believed that Servia and Greece might even be unsuccessful in their campaigns, but that Bulgaria's advance on Constantinople would atone for all that. Actually, the achievements of the Greek and Servian armies, in the matter of Turkish territory occupied and Turkish positions captured, fall little short of what the Bulgarians accomplished. It may very well be that their work was made easier by the fact that Turkey deliberately weakened herself in Macedonia in order to make a better stand in Thrace. But it would be idle to expect that Athens or Belgrade should admit it as a fact. The Greeks and the Servians fought well, they won, and they are now in possession; and the last circumstance counts against an ally as well as against an enemy.

Salonica is the crux of the situation. Should the city go to Greece, the Bulgarian Government might well feel that the heaviest fruits of victory have fallen to the supposedly weakest of the allies. In actual square miles of territory annexed, Bulgaria will still be ahead. She will have Adrianople and an outlet on the Ægean. But if Bulgaria is to develop into a maritime nation, with a fleet and a Mediterranean trade, she will have to create the necessary harbors. Enos, the most considerable shore town

she may acquire, is a village of seven thousand people with a poor harbor. Kavala has less than five thousand inhabitants. Compare that to Salonica, with a population close to 200,000, and its very important trade already established. Add to this the acquisition by Greece of Crete and the greater number of the Ægean islands, and it seems plain that Bulgaria's leadership in the Balkans is by no means so secure as it has been hitherto assumed. As a matter of fact, the fighting strength of Greece was underestimated when reckoning was made of only her army. Her fleet, small as it is, rendered important service in the war. With the acquisition of Salonica and the islands, her naval strength may be expected to reach very impressive dimensions. If Constantinople is ever to be taken from the Turks, the Greek fleet is bound to play fully as important a part as the Bulgarian army. Finally, the loss of Salonica to the Greeks would come all the harder because it was lost by so narrow a margin. The Greek and Bulgarian armies engaged in a race for the city, and the former won by a matter almost of hours.

Here is where the mediation of the Powers may yet be necessary. The establishment of a neutral zone at Salonica has not averted collision. A Greco-Bulgarian commission which was for some time engaged in investigating the rival claims to priority of occupation found it impossible to carry on its work. "Instead of entering upon the discussion with unbiassed mind," says the London *Times*, "both sides seem to have determined to fix the desired ultimate frontier"—and both sides were aware that there was a great risk "that a permanent character would subsequently be attributed to any temporary concessions intended to alleviate the existing tension." It is as perplexing a problem as any the peacemakers will have to face.

GIUSEPPE BELLI, THE POET OF THE POPULACE.

ROME, May 10.

Last Sunday, on the fiftieth anniversary of his death, a monument to Giuseppe Belli, the Roman dialect poet, was unveiled in the Piazza d' Italia, on the outskirts of the Trastevere quarter, which still retains some of the peculiarities of the Rome of his day. The ceremony was attended by representatives of many mutual aid and amusement societies, some with the quaintest names, for it is essentially as a poet of lower-class life that Belli is famous. But there were speeches by the Mayor, Count Gnoli, one of the poet's editors and commentators; Professor Artioli, and others, and the event has given rise to a small crop of *Belliana* in the newspapers and reviews. Few foreigners, even among those interested in Italian literature, and not many Italians outside of Rome and beyond a small *coterie* of dialect specialists, now read Belli; but it is to be hoped that there will be a revival of public interest in his admirable verse. For Belli was, in his limited field, a really great poet, and his collected sonnets present a wonderfully vivid picture of the Rome and the Roman populace of seventy years ago.

It was, indeed, a strange city and a strange people, full of the most strident contrasts of comedy and tragedy, of the grotesque and the grewsome, of beauty and squalor. Professor Hermanin has had the excellent idea of arranging in the Galleria Nazionale an exhibition of drawings and prints illustrative of Belli's Rome. There we can see the city as it was when the Ludovisi and other gardens had not been destroyed and the land sold for building lots, when the whole of the Piazza di Termini, where the station now is, was encumbered with fragments of the Baths of Diocletian, when the Prati di Castello, instead of being laid out as a residential suburb with regular streets reminding one of South Kensington or Berlin, W., were real meadows, dominated by the great mass of Castel Sant' Angelo, and were a favorite haunt for sportsmen intent on shooting waterfowl. At that time the Tiber, which at many points within the city was crossed by ferryboat, was not checked by embankments, and frequently overflowed the low-lying quarters. In those days Goethe visited Rome, and Sir Walter Scott, Canova, and Thorwaldsen, and the German artists met at the Caffè Greco, where, if report speaks true, the waiters refilled the stodgy shells of the meringues with fresh cream every morning, the guests of the night before having eaten the cream only! The Albergo dell' Orso, said to be the oldest hotel in the world, was still the best in Rome, and continued to entertain ambassadors and other celebrities. There were many curious festivals, too: that of Cervara, where the artists performed their classical masque in the grottoes by the Aniene; the Corse dei Barberi, races run by riderless horses down the Corso, which continued until they were stopped some twenty-five years ago, owing to the many accidents; the water carnival in the Piazza Navona, which was flooded for the occasion, while the carriages of the great splashed about in the wet; the Giostra delle Vaccine, a sort of bloodless bull-fight, which has lately been revived, and which was held in the Mausoleum of Augustus, now a concert hall where we recently heard "Till Eulenspiegel" and the "Dance of the Seven Veils" conducted by Strauss himself. Then there were no trams, no omnibuses, no cabs, only the funereal-looking carriages of cardinals and the more sumptuous equipages of the Roman princes, whose descendants now fly across the Campagna in high-speed motors. And over all was the dead weight of the Papal Government and the splendors of the Catholic Church, with its gorgeous ceremonies, picturesque processions, and abominable administration.

Of that old Rome nearly everything has disappeared, but traces still survive here and there, if we know where to seek them out—in Belli's own beloved Trastevere, about the gloomy Monte dei Cenci, round the Piazza Montanara, where in the shadow of the frowning Palazzo Orsini, built over the theatre of Marcellus, the picturesque Campagna folk still congregate on market-days. No visitor to Rome should omit a walk through these quarters, which are also destined—shall we say alas or fortunately?—to disappear into the limbo of *Roma sparita*.

Belli was born in 1791. The circumstances of his early life made it necessary for him to consort with all classes of people, especially with those of the lower orders, among whom he collected the materials for his dialect poetry. His first literary efforts, however, were serious poems in classical Italian, but of the poorest description. It was in the thirties of the last century that he put his intimate knowledge of the Roman *popolano* to good use and began that marvellous series of sonnets in *Romanesco* which have won him fame. At first a few were circulated in manuscript among his friends; then they were read aloud, learned by heart, and passed on from mouth to mouth among the common people whose lives they described. For their keen wit, merciless satire, and vivid pictures of things seen were, and are still, appreciated by the ignorant carter or workingman, no less than by the man of letters. Belli's muse grew more and more prolific, and the sonnets poured forth from his pen in a torrent, sometimes as many as five or six being written in one day. In all, he wrote more than two thousand, and they gradually came to be known and appreciated all over Italy, while Schuchard and Tellenbach in Germany, and Sainte-Beuve in France, introduced them to foreign readers. Most of them, however, were not known to the public until after the author's death, in 1863, and, indeed, during his later years he wished to destroy them.

But in 1831, when he had written only a few score, he realized that he was engaged in painting a great picture of Roman popular life in all its aspects.

In reading Belli, as Count Gnoli said in his address, we see "a whole city spread out before us, the *piazze*, the streets, the narrow alleys; the shopman is selling his wares, the good wives chatter and whisper by the road, the boys play; the grown men work or idle; oaths are interwoven with religious faith, superstitions with ribald laughter; here we have the numbers of the lottery, there an ignorant preaching friar, processions and thefts, grumbling in the antechambers of prelates, heartburning and corruption in the law courts, vice and ferocity in the prisons, and in the background the executioner showing a bleeding head to the assembled populace." All this Belli describes with a masterly touch, this and much more. At times he is coarse and obscene—this part of his work is all included in one volume of Luigi Morandi's edition—but he wished to paint every side of the life of the people and could not therefore omit that aspect, and even the most indecent sonnets are witty and artistic.

A large part of Belli's work, that which is perhaps best known, is of a political character. In sonnet after sonnet he lashes the inefficiency, cruelty, and corruption of the Papal Government with merciless satire. No one did more than he to undermine the foundations of the Temporal Power, for his verses sank day after day into the minds of the people, and by making them realize what a monstrous travesty of government and justice it was, destroyed such vestiges of respect for constituted authority as remained in Rome. Yet he was a devout Catholic, and anything but a Liberal in politics; although modern democrats profess to see a precursor of their ideas in Belli, the revolution of 1848 found in him a bitter opponent. He hated cruelty and oppression, but he had neither national feeling nor civic spirit. The Roman Republic of 1869, with its high idealism and the lofty patriotism of its leaders, he regarded with horror. "In this period," he wrote, "were enacted all the most villanous, barbarous, and abject deeds which the depraved conscience of mankind ever dared to commit"! To him the heroes of the Vascello are mere brigands, the Liberals odious "Jacobins," Mazzini, Saffi, and Armellini vile assassins, and the French invaders who reëstablished Papal despotism "Catholic warriors, our fellow-citizens in Christ."

During the last years of his life his pen became ever less prolific; domestic misfortune, ill health, and the political changes rendered him a morose, gloomy recluse, and he died almost forgotten by his contemporaries. Belli was neither the first nor the last Roman dialect writer. Not to mention early mediæval documents, or the dialect translations of the *Liber Historiarum Romanorum* and the *Mirabilia Urbis Romæ*, there are diaries, sacred dramas, and comedies, and also many sonnets by eighteenth-century poets. But it was Belli who brought this vernacular literature to its perfection, and if other more recent poets have followed in his footsteps, none has surpassed or even equalled the bard of the Trastevere. These other poets have used the vernacular merely as a means of expressing their own ideas and thoughts, and they write in *Romanesco* because it is racy and effective; but they might almost as well have written in literary Italian. Belli, on the other hand, puts into the mouths of the Roman *popolani* their own ideas and their own ways of looking at things. This is his great merit.

LUIGI VILLARI.

NEWS FOR BIBLIOPHILES.

Within little more than a year after the posting of the Ninety-five Theses, Luther's writings found their way to England. In October, 1518, Froben published the first edition of the Reformer's collected works, naturally at that time a small one. This he reprinted several times in 1519. On February 12 of that year he wrote the author that many copies were exported to England. One of them, now in the possession of Messrs. J. Pearson & Co., of London, is decorated with the arms of the Duke of Suffolk and the royal crown. This may indicate, as Pearson thinks, that it was once the property of Henry VIII, but is it not more probable that it belonged to his sister Mary, Duchess of Suffolk, whose former marriage to Louis XII of France had given her royal rank? A little later we know that she was strongly Protestant; indeed, when Bucer came to England in 1549, it was jestingly reported that this lady, now again widowed, might marry him.

But it was not only or chiefly by persons of rank that the German professor's works were read. The day-book of John Dorne, an Oxford bookseller, shows that many of them were sold there in 1520. And they promptly took effect. At Cambridge in the same year (Annals of the Academy of Cambridge, V, 499) a committee to examine the said works was officially appointed. Even in country districts they were read. Among the manuscripts of the Corporations of Shrewsbury and Coventry is a letter from G. Cowper to his father, Thomas Cowper, at London, dated March 3, 1520, containing the words: "As for newes ther ys none but of late ther was herytykes here which did take Luters opinyons." From this time on notices of Luther and his writings become quite frequent.

The popularity of the new works naturally stimulated the translation of them into English. The two earliest of these were noticed in a previous paper in the *Nation*, May 12, 1912. In the present article some information will be given about the six other tracts of Luther Englished during the reign of Henry VIII.

(1.) "De libertate christiani. The Liberty of a Christen man. Cum privilegio regali. Imprynted at the sonne by me John Byddell." This rendering of Luther's famous treatise of 1520 must have been published prior to 1544, as Byddell printed nothing thereafter. That it appeared later than 1531 is made highly probable by the fact that it is not mentioned in a mandate issued by the English prelates late in that year (Wilkins: Concilia, III, 720, wrongly dated 1529, see Calendar of State Papers of Henry VIII, V, app. No. 18), prohibiting by name all known English Protestant books. I believe the translator may be identified with John Tewkesbury, variously called a leather-seller and a haberdasher, converted partly by Tyndale's works, partly by the personal influence of a certain John Hacker (Foxe: Acts, ed. 1857, IV, 688; Strype: Memorials, ed. 1822, I, i, 116). In April, 1529, he was examined by Cuthbert Tunstall and Sir Thomas More, and under torture he recanted. Later he relapsed, and was burned December 20, 1531. More, who brutally calls him a "stinking martyr," says that the officers found on him in prison "a book of heresy of his own hand-writing, to wit, the book of Martin Luther, wherein he teacheth men under the name of Christian liberty to run into the devil's bondage." (More's Workes, 1557, p. 348h.) Was not this probably the translation afterwards printed? By 1530 Luther had published nearly three hundred separate tracts, and it would have been an extraordinary coincidence for two men to make independent versions of the same one. Tewkesbury's trial shows that he was not without learning, probably sufficient for the purpose. The only alternative to supposing that it was his own work, is the hypothesis that he copied it from the manuscript of a friend. This would have been remarkable, for, notwithstanding Shakespeare's "sugared sonnets among his private friends," the circulation of works in manuscript was no longer common. Tewkesbury died just as the tide was beginning to turn a little in favor of the Protestants, and it is not improbable that one of his friends, or even one of his guards, obtained the work and had it published posthumously.

(2.) "A very excellent and swete exposition upon the two and twentye Psalme of David, called in latyn Dominus regit me & nihil. Translated out of the hye Almayne in to English by Myles Coverdale. [Colophon:] Imprynted in Southwark by James Nycolson for John Gough. Cum privilegio. 1537." This tract has been sufficiently noticed by W. C. Hazlitt: "Bibliographical Collections" (1903, p. 236), and by H. E. Jacobs: "The Lutheran Movement in England" (1910, p. 118). It is reprinted in Coverdale's Remains (1846).

(3.) "An exposicion upon the songe of the blessed virgine Mary, called Magnificat. Where unto are added the songes of Salue regina, Benedictus and Nunc dimittis. Translated out of latine into Englysh by Jhon Hollybush." This book is lacking in all the large libraries, even in the Bodleian and British Museum. The only copy known to me is that formerly owned by Mr. William Jackson, now in possession of the firm of Otto Harrassowitz, Leipzig. (See his Catalogue, 328, No. 1099.) It is a translation of the following: "Martini Lutheri in Divine virginis Mariae, Zachariaeque Odas, Magnificat puta & Benedictus, Commentarii. Argentina. 1526." As Hol-

lybush is otherwise known only as a pseudonym of Coverdale, used in his New Testament, published by James Nicholson at Southwark, 1538, it may be inferred that Coverdale was the translator, that Nicholson was probably the printer, and that 1538 was not far from the date of issue.

(4.) "The last wil and last confession of martyn luthers faith concerning the principal articles of religion which are in controversy, which he will defend and maintaine until his death, against the pope and the gates of hell, drawen furth by him at the request of the princes of germany which have reformed their churches after the gospel, to be offered up at the next general councel in their names & now published before that all the world may have an evydent testimony of his faith. . . . [Colophon:] 1543." Here we have a version of the Schmalkaldic Articles, written by Luther in 1536, and published in 1538. The name of the translator is unknown, as well as that of the printer. In the Catalogue of the British Museum Zurich is conjecturally proposed as the place of printing.

(5.) "The chiefe and pryncypall Articles of the Christen faythe, to holde againste the Pope and al Papistes and the gates of hell, with other thre very profitable and necessary bokes. . . . Made by Doctor Marten Luther. [Colophon:] Imprinted for Gwalter Lynne. MDXLIII." Besides reprinting "The chief articles," this contains: "ii. The Confession of Faythe of Doctor Marten Luther," "iii. Of the ryght Olde Catholyke Churche and the new false Church," "iv. Of the Symboles or Confessyons of the Christen faythe" (not by Luther, but the Athanasian, Ambrosian, and Nicene creeds), "v. A singular and fruteful maner of praying used by the famous clarke Doctor Marten Luther" (Eine einfältige Weise zu Beten, 1535), and "vi. A prayer against the Pope and the Turkes." It is possible that Lynne may have translated some of these himself, as he did another tract of Luther in 1548. He was a London printer.

(6.) "The dysclosyng of the Canon of the popysh Masse with a sermon annexed unto it of . . . D. Marten Luther. Apocal. XVIII. Printed by Hans hitprycke." The identity of both the translator and printer has hitherto baffled all research. Ames and Herbert ("Typographical Antiquities," p. 1557), conjecture that it may have been printed in 1545.

PRESERVED SMITH.

Correspondence

"SI VIS PACEM PARA BELLUM."

TO THE EDITOR OF THE NATION:

SIR: While we are on the eve of celebrating a hundred years of peace between this country and yours, it might be worth while to recall how many narrow escapes we have had from a very different sort of celebration. My purpose, however, is not so much to recall these events as to contribute some personal reminiscences that may throw a little light upon the question whether the best way to preserve peace is, as many persons tell us, to prepare for war. It was not very many years ago that I heard Mrs. Livermore in Tremont Temple declare that the American fleet was the laughing-stock of the world, and she hoped that it always would be! But counsels other than these prevailed, and it was only a few years later that the white fleet began to make its appearance. An old sea captain who had been in many American ports and was familiar with the feelings of those among whom he moved, was fully convinced that the "final cause" of this fleet was the conquest of Canada, and there were not a few who believed with him that there was no other purpose for which it could be designed. Shortly after this appeared an article by Mr. Dicey in the *Contemporary Review*, in which he quoted the conversation of an intelligent Californian next to whom he happened to be seated at some social "function" in England, who assured him that the United States was "spoiling for a war," with England by preference, but, failing that, with any other country, it mattered not which, so long as it was war.

But perhaps the most significant fact is that of a conversation to which I can testify with a British sea lord—an admiral who was showing a company of us over his ship and explaining the way they worked the guns, how each group of gunners was separated from those in charge of the next gun, who might all be blown to pieces without creating panic in the neighboring groups, etc., etc. He concluded his lecturette with a little discourse on the folly of allowing the Americans to build up their big navy. Now was the time for England to blow it all to atoms before it grew strong enough to be a menace. I have no manner of doubt that he was a representative of his class and spoke the sentiments current among the officers of the fleet in those days. Thus it was that the "preventive measures" of the United States tended to provoke aggression, and the retaliatory preventive measures of our country, if these men had been allowed to have their way, would have produced the condition of eternal war and international hatred between these kindred peoples. And thus it ever must be that preparation for war is the guarantee of continued peace.

The truth is that the big-navy people and the gun-makers, whose prosperity is dependent upon wars and rumors of war, are, internationally speaking, the real "dangerous classes." The larger their fleets and armies the more influential they become, and therefore the more dangerous. It surely becomes those of us who seek peace and rejoice in the evidences of international good will to keep this element in its proper place, to discount its factitious fears of aggression, and distrust its interested counsels.

Halifax, May 19.

JOAQUIN MILLER AND JAPAN.

TO THE EDITOR OF THE NATION:

SIR: The late Joaquin Miller, the "Poet of the Sierras," used to claim the name of the discoverer of the Japanese in America (by America he meant California), in the sense that Rossetti or Whistler was the discoverer of Japanese art in London. It was in early 1885, when the number of Japanese in California was insignificant, that he had two young students stay with him at the "Heights," where he had newly settled from the East. I believe it was the first time that he became intimate with the Japanese character, on which he had many occasions to sing and write. When Yone Noguchi, now the renowned Japanese poet, whom he affectionately called son, made his home of four years' duration with Miller in his early American life, Miller's name became known widely in the Japanese colonies. We Japanese looked upon him as the truest friend, and we felt we needed a true friend among Americans, as the anti-Japanese hue and cry already then began to disturb our minds. I heard once from an American farmer at San José, who only knew a wild sort of rumor about Miller's personality, that Miller's friendship with Noguchi was the only good record of his whole life; his love for the latter was simply beautiful. As Miller's general understanding of the Japanese came mainly through his knowing of Noguchi, there was perhaps one point of weakness in it; that was his too great idealization of our Japanese characters, for which we felt often quite uncomfortable. However, we friends of Noguchi, who were frightened, without any real reason to be frightened, by the huge sign "Japs Must Go" in San Francisco Street at the political agitators' season, were glad to spend a day at the Heights, where the freedom and democracy of Whitman's song prevailed.

Miller was, to begin with, a mind of romantic cast to defend the weaker side; anybody who knows the origin of his assuming the name of Joaquin from the so-called Mexican bandit, Joaquin Mureta, whose alcoholized head we used to see in the Golden Gate Museum, will never think it strange that Miller defended Chinese and us Japanese when unreasonably treated by Americans. Miller wrote one Japanese article in the *Call*, San Francisco, I believe, in 1895. That was the first time I saw his writing on a Japanese subject, in which, as in many other cases of Miller's prose as well as poetry, he walked from summit to summit (of his mountains of idealization); from the same attitude he sang on the "Fishes of Nippon" in the *Century*, many years later, when we fought with Russia. Somewhere in that song on the shepherd youth against Russia's Goliath, I find the following:

> But oh, beware his scorn of death,
> His love of Emperor, of isles,
> That boast a thousand bastioned miles
> Above the clouds, where never breath
> Of frost or foe has ventured yet,
> Or foot of foreign man has set!
> Beware his scorn of food (his face
> Is scarcely more than sweet sea-air);
> Beware his cunning, sprite-like skill—
> But most beware his dauntless will.

Although we know Miller stopped in Japan (at least, at Yokohama) on his way to Peking in that momentous time of the Boxers' uprising, quite many years ago, as an American correspondent, we have no hesitation to declare that his real knowledge of Japan was slight; perhaps he was a writer whose blindness to reality or fact, or whose objection to seeing it, gave him a great audacity for his free spinning of rhapsodic extravaganza. My sober mind thinks, when I read his early poems on the Arizona prairie or the Sierra Valley, that his poetical license was too great; even Mark Twain, in comparison with Miller, is more trustworthy. It seems that

the early Western writers of America had one trait in common; that was a melodramatic profusion or irregularity. Lafcadio Hearn wrote once to Chamberlain: "Take Joaquin Miller. No man has written at times more absurdly. But what divine surprises and jets of light he has at times!" That is a true estimate even the most severe critics should agree upon. When he stayed in poetry, even his absurdity often appeared wonderful from his turn of mind or fancy; but he was inexcusable when he overstepped into the world of prose, where the sense of fact should be protected in one way or another. We Japanese have seen Miller's absurdity in the prose article called the "Little Brown Men of Nippon," in "Japan of Sword and Love," he published in collaboration with Yone Noguchi, Tokyo, 1905. Take an example or two from the article.

It seems that Miller accompanied the American troops in the advance on Peking at the time of the siege of the Legations in 1900. On the first day's fighting on the march from Tien-tsin the hot July sun fell on the backs of the Japanese from ten o'clock till darkness. "This was their first fighting in leather shoes and little gold-rimmed caps in a hot country and season, and their last. So many collapsed from sunstroke that the Emperor telegraphed: 'Use the American hat.'" Whether it is true or not, Miller appears in the article as assistant to Gen. Bennett, head of the Red Cross, and it became his duty to beg, borrow, or pick up all the American hats that he could discover for the "suffering little brown soldiers." At bivouac it was found that the little balls of cooked rice which each soldier carried on his back had soured, and this, together with the muddy water of the Peiho, made hundreds ill. "Then another telegram: 'Use American bread.'" The King of Korea immediately sent ten thousand sacks of flour, "that came with incredible swiftness," and ever since then the Japanese have eaten bread instead of rice.

To show the above statement is false, however with all the good intention of Miller's characteristic idealization, it is quite sufficient to say that the Japanese soldier has been trained and even dressed and fed by the German method since 1883; Miller must have been thinking, when he wrote such an absurdity with much excessive adulation of Japanese characters in his article, surely of the "Mikado" or "Geisha," a comic opera, with all the caprice of beauty, if beauty there was, and all the impossibility which is altogether too charming to exist. But Miller's love of Japan and the Japanese cannot be denied, and his admiration is sincere, although it is, in most cases, expressed with an extraordinary touch of fantasy. And when his life shall be written in the future, which is a sure thing in this biography-loving world, a few pages on the subject should be spared. S. TSUSHIMA.

Kamakura, Japan, April 20.

SAMUEL JUNE BARROWS.

To the Editor of The Nation:

Sir: Your review of "A Sunny Life" reminds me of the fact that Mr. Barrows was not merely interested in the work of the Prison Association of New York and the American Prison Association, but had also an intense interest in individual prisoners after their release. I saw him many times during the winter of 1892-3 in Athens. One of his great pleasures was writing to, and receiving letters from, former prisoners for whom he had procured work and whom he was constantly encouraging. Many of the letters he read to me. He was scrupulous in answering them. His piety was not of the "goody-goody" sort. As I saw him, his heart was close to that of the Nazarene.

DEMARCHUS C. BROWN.

Indiana State Library, May 23.

"ASKING STUDENTS TO DECIDE."

To the Editor of The Nation:

Sir: My attention has been called to an editorial in the *Nation*, entitled, "Asking Students to Decide," which deals with the annual post-card canvass carried on by the *Illustrated*. The editorial asserts that this ballot placed in the hands of the seniors will tend to make the professors popularize their courses. If by popular courses you mean "snap courses," courses that appeal to the indolent student, I cannot agree. I do not think that this is the definition which these students who have answered our post-cards give to the courses. The courses which they consider the most satisfactory are those which, as they look back upon them after the work has been done, have made the greatest contribution to their mental make-up. If a course of study, difficult though it may have been to pursue, has filled their minds with many new ideas, opened up new fields of thought, or given them an understanding of some of the natural phenomena which are going on around them, they are sure to realize it and appreciate it.

Students are fundamentally serious, even though apparently frivolous. They are the first to complain if a professor does not give them food for thought in his lectures, or if his lectures are merely a recapitulation of the week's reading or of his previous lectures. If professors can be induced to "popularize" their courses according to this attitude, which I think is the true one at Harvard, many of the poor courses could be eliminated. After all, the audience must be consulted. If the professor cannot command the attention and respect of his classroom by a clear, concise, stimulating presentation of his subject, his efforts cannot be regarded as valuable.

The editorial, in judging of the value of the results, made the mistake of saying that they were insignificant because the larger courses naturally received the largest number of votes. A reading of the past articles on the post-card canvass would have shown that all the figures were reduced to an average enrolment of 100, or that allowance for the difference was made in some way.

But, however that may be, it seems to me that the editorial conveys the idea that the *Illustrated* is an outsider which, by carrying on this "impertinent" canvass, is undermining the value of the courses and championing the cause of the indolent student. "Loosely connected with the University" is the phrase used, I believe. The *Illustrated* is not, of course, an official publication of the faculty, or of the students as the *Graduates' Magazine* and the *Alumni Bulletin* are of the alumni. We are, nevertheless, as closely connected with the University as the *Crimson*, the *Advocate*, or the *Monthly*. We are as closely connected as any undergraduate publication could possibly be. Our editor-in-chief has a position on the Student Council by virtue of his office. The magazine takes an active part in all University movements, as you may have noticed in the formation of the Press Association and the New Gymnasium campaign. In fact, standing as we do shoulder to shoulder with the *Crimson* in the discussion of the problems of the University, we can be regarded as more closely connected with the University than either of the purely literary magazines.

W. O. FENN,
Editor-in-Chief.

Cambridge, Mass., May 21.

SCHOOLGIRLS' CLOTHING.

To the Editor of The Nation:

Sir: In spite of your well-directed criticism in the *Nation* of May 15 against the "queer" bills introduced in the California Legislature, there is one that strikes me as rather sensible. I refer to the bill "giving school boards power to regulate the dress of school children." Although most teachers would not go to the length of prescribing a uniform, they would certainly be grateful for any relief from the present horrors of the clothing—especially girls' clothing—which they are obliged to face every day. Forty or fifty bands and bows of clashing colors are not conducive to the instructor's mental repose. Thin waists, low-necked sailor blouses, and elbow sleeves, moreover, are not conducive to general health; for as soon as a window is opened, our delicate maidens shiver and demand that the supply of fresh air be cut off. These same pupils, of course, who insist upon a temperature of 75 degrees in the schoolroom all winter, are the first to complain of weariness and inability to study "on account of the heat" as soon as the thermometer outside strikes a general average of 65 degrees. Such a state of affairs, involving, as it does, health, beauty, intellectual training, teachers' health, and parents' pocket-books, certainly demands the attention not only of Gov. Johnson, but of his noted chief. Please do not oppose their efforts! ACADEME.

Boston, Mass., May 17.

INTEREST ON GOVERNMENT BANK DEPOSITS.

To the Editor of The Nation:

Sir: I dislike to see the *Nation* make a mistake, as I am very fond of it, but I am sure, if I understand what you say on the first page of your issue of May 8 concerning depositary banks, that you do not comprehend all the work which some of the depositary banks are required to do by the Secretary of the Treasury.

My bank is in the West, and we have cashed as high as 800 Government checks in a single day, which reduced the Government balance $54,000 below the deposit of bonds, and it was twenty days before the balance was restored to amount of bonds. And we are compelled to transmit funds

without cost to the Government wherever the Treasurer may direct.

So you can see that the Government is not fair to all of its depositary banks when it compels them to put up bonds (largely United States bonds) at a low rate of interest, and then pay 2 per cent. on the average deposits that the Government carries with such banks. W. W.

Omaha, May 20.

[This case would certainly seem to present elements of hardship, if the bank were compelled to carry United States Government deposits, and if other national banks were also unwilling to pay the 2 per cent. rate because it was non-remunerative. But no bank has to accept such deposits if it does not choose, and the banks in general, so far as we are aware, have made no protest—though, naturally, all of them would prefer to pay only 1 per cent. on deposits thus secured, or to pay nothing. It was, in fact, a proposal of the bankers themselves, in 1908, that some interest should be charged on public deposits, and the statute merely prescribes a minimum of 1 per cent., any higher rate being discretionary. In the present money market, which Secretary McAdoo presumably took into reckoning, the average Government deposit with a national bank ought to be able to return a profit, even with 2 per cent. interest paid and transfers made free.—Ed. Nation.]

THE TARIFF ON BOOKS.

To the Editor of The Nation:

Sir: In a letter on "The Price of English Books" in last week's *Nation*, it is stated that the tariff benefits no material interest. Now, the International Brotherhood of Bookbinders has two agents in Washington at the present time working to maintain the 25 per cent. tax on books. In view of the fact that American bookbinders get twice the wages of the best-paid European workers and that the tariff is partly responsible for that result, it should appear that some interests are served.

Though in general a free trader, I find myself condoning this duty because the increase in the cost of books, due to it, is so small in comparison with the greater ability of our people to pay as to be almost negligible. The scientific publications of a certain house in London, for example, can be bought here at a price which is in excess of the English list, net, by just about 25 per cent.—the amount of the tariff. The Tauchnitz Edition, similarly, costs but forty-five cents. What "Teacher" says concerning the difference in price in other series is perfectly true. But where the price is a hundred to two hundred per cent. greater than that charged in England, it is not due to the tariff, but to that principle of trade which operates in some other businesses, namely, that of charging what the traffic will bear. Why should we be charged seventy-five cents for the World's Classics, in red leather, which are sold in England for one shilling and sixpence, when a scientific book published in London for sixteen shillings net, can be bought here for $4.85? This difference is emphasized by the consideration that in the one case the greater demand should make for cheapness, while in the case of the technical book the small sale would be a justification for an increased charge. The fact is the American bookseller has to do with a different public, a public with more money and with less discrimination as to book values.

A certain well-known song occupies three pages of music. Most music publishers would issue such a song in a folder with a single sheet insert and charge forty cents, list, which, with half off to the professional, nets twenty cents. The publishers of this particular song padded it with two pages of advertisements and issued it with a folder insert. Songs of that length usually list at sixty cents. Half off to the professional makes the net charge thirty cents. The song sold by the hundred thousand, and should have become cheaper if anything on that account. But no, the public wanted it and must pay for it, and so the discount was lowered to one-third, making the net cost to the professional forty cents. The tariff does not enter into this case, and beyond the strict 25 per cent. tax it does not enter into the cases cited by "Teacher" in his letter to the *Nation*. Suppose Congress should abolish the tax on books; are we so very sure we could then buy foreign books at the home price plus the cost of shipment? Experience indicates no such result.

Henry Chequer.

Somerville, Mass., April 11.

Literature

A NEW EDITION OF THE GOLDEN BOUGH.

The Golden Bough: A Study in Magic and Religion. Spirits of the Corn and the Wild. By J. E. Frazer, D.C.L., LL.D., Litt.D., Fellow of Trinity College, Cambridge, Professor of Social Anthropology in the University of Cambridge. In two volumes. New York: The Macmillan Co. $6.50 net.

These volumes represent a part of the third edition of Mr. Frazer's now famous book, which, published a good many years ago, slowly worked its way to a position of high significance among the contributions which our age has made to the study of the earliest forms of human society and the earliest phases of human thought. It has grown in size by the accumulation of new facts drawn from the study of savage races, and a comparison of the beliefs and customs of these races with the records we have of the like customs and ideas in bygone times. The last published instalment of the book contained an examination of the figure of the Dying and Reviving God as it appears in the Oriental religions of classical antiquity. The two present volumes deal with another branch of the subject, viz., the spirits connected with plants and animals, especially those plants which bear a part in man's life in providing him with food and clothing, and those animals which he uses for food or for the purposes of agricultural labor.

The first topic taken up in these volumes is the ancient mythology of Dionysus as a Vine God and a Tree God, traces of which survive among the peasantry of Southeastern Europe to-day, and the similar mythology of Demeter and Persephone as the Corn Goddesses. Then follow the magical significance of games and rites in agriculture, the Corn Mother and Corn Spirits all over the world, and especially the personifications of the Corn Spirit, sometimes as a man (often a stranger), sometimes as an animal, a wolf, or dog, or fox, or cat, or goat, or bull, or horse, or pig, or bird. Next comes, in Vol. II, a treatment of the deities of vegetation as animals, of the practice of eating (in a sacramental sense) first fruits, and offering them in sacrifice, of the belief that the qualities of a living creature pass to one who eats its flesh, and of other kindred topics. On all these an immense mass of information is collected from all parts of the world, so that the book is a veritable treasure-house of materials for a history of the origin and primitive forms of savage religions.

How large and how interesting are the questions regarding primitive man, and indeed regarding man altogether, which these inquiries raise, need not be said. Whether or no we accept Mr. Frazer's explanations—and his immense wealth of knowledge as well as his acuteness entitles his theories to respect—we cannot but be grateful to him for the industry which has collected such a store of facts and arranged them in a form fit for the use of all students and thinkers. He has written one of the great books of our time, and may almost be called the creator of a new branch of inquiry, for although he has not himself been a direct first-hand observer, living among savage tribes, and although others before him, like Mannhart, had collected many significant facts, without which his own book could not have been written, still, in bringing together so many data from different quarters, ancient and modern, and tracing their connection, he has rendered a quite exceptional service to knowledge. It is a service which ought never to be forgotten.

We have not space here to enter on a consideration of his main theories, some of which raise controversy. They can be better dealt with when the remaining parts of the book have appeared. But there are certain lines of interrogation, or of reflection, which present themselves to the reader's mind as he follows the long course of Mr. Frazer's statement of the phenomena. Only

to a few of these can we advert. Some of them are suggested by the author in his Preface:

> The notion of the immortality and even of the resurrection of the lower animals appears to be almost as familiar to the savage and to be accepted by him with nearly as unwavering a faith as the obvious fact of their death and destruction. For the most part he assumes as a matter of course that the souls of dead animals survive their decease; hence, much of the thought of the savage hunter is devoted to the problem of how he can best appease the naturally incensed ghosts of his victims as to prevent them from doing him a mischief. This refusal of the savage to recognize in death a final cessation of the vital process, this unquestioning faith in the unbroken continuity of all life, is a fact that has not yet received the attention it seems to merit from inquirers into the constitution of the human mind, as well as into the history of religion.
>
> Few men are sensible of the sharp line that divides the known from the unknown. To most men it is a hazy borderland where perception and conception melt indissolubly into one. Hence, to the savage the ghosts of dead animals and men, with which his imagination peoples the void, are hardly less real than the solid shapes of which the living animals and men present to his sense, and his thoughts and activities are nearly as much absorbed by the one as by the other. Of him it may be said with perhaps even greater truth than of his civilized brother: "What shadows we are, and what shadows we pursue."

As one meditates on the facts set forth in the book, not a few other questions emerge which may be called the "by-products" of the inquiry. How, for instance, are we to explain the recurrence in different countries, among tribes which have ever since our knowledge begins been out of all relation to one another, of beliefs and customs almost identical? Does this point to a common origin, at however remote a date, or are we to ascribe it to the action of the same causes operating alike on different races; in other words, to deep-seated general tendencies in the human mind? The point is all the more interesting because a careful examination might throw light on ethnological affinities.

The superstitions or mythologies of various races, and the forms of ritual in which their ideas take shape, are of value as an indication of intellectual quality. If we compare the folk-lore tales of the Celts and Teutons with those of the black peoples of Africa, we are struck by the inferiority of the latter, though it is less striking than that which exists between the developed mythology of the Norsemen, for instance, and the rude fetichism of the negro. There is much more of an imaginative quality in the former. How far can the more or less of a poetical element in superstitious beliefs and usages be treated as a test of progress towards civilization? Another interesting question presents itself when we ask how far usages and folk-lore have been passed on by one race to another. In European Turkey we find customs very like those which existed long before the Christian era; yet the population has been affected by the incoming of not a few new tribes from distant quarters.

The suggestions which Mr. Frazer throws out regarding the connection between the sacramental killing and eating of a victim who is also an object of worship, and the Jewish Passover, with its influence on the sacraments of Christianity, raise another whole group of questions too large to be discussed here. It may well be doubted whether much of the primal ideas through which the Passover may have originally grown up can have still survived among the Jews at the time when Christianity arose. The persistence of ancient superstitious customs is indeed amply illustrated in this book. Even in England, France, and Germany there are plenty of such survivals to-day. But the original meaning and purpose of the custom has in most cases been long since forgotten.

This persistence seems to be now nearing its end, at least among the civilized peoples. Elementary schools will before long kill it out in the countries last mentioned, though it may remain for centuries among the aborigines of India and Siberia and South America. It is an interesting, though not a surprising, fact that the old usages do not take fresh root in new lands. One never hears that any of the agricultural superstitions and customs described with such fulness in these volumes have crossed the sea, even with Lithuanian or Italian immigrants, from those regions where they are still observed, so unlike are the conditions of migration in our age from those of the days when Teutons and Celts, Finns and Slavs, were wandering over all the countries between the Euxine and the Baltic. This is one of the many marks of the wonderful change passing over the world in our days. It is fortunate that such a record as these volumes contain of the former world has been now compiled, for fifty years hence many of the phenomena it describes will have passed away from popular use and memory.

CURRENT FICTION.

Wilsam. By S. C. Nethersole. New York: The Macmillan Co.

"Wilsam" is an Old English word surviving in Kent, the scene of this tale. It means "Goods driven ashore when no wreck or ship is visible, hence called Goods of God's Mercy." So is driven little Mercy Pardilow, a child of seven, whose mother goes down with a London-bound ship a mile or two off the Kent shore. A label on the child's clothing consigns her to Milly Gatehouse of Lucksboat Farm, Kent. Milly herself, as fortune will have it, is on the shore when "Wilsam" is delivered up by the sea. Milly not only is sister to Mercy's mother, but has borne, in youth and in secret, a child to Mercy's father. Providence has gently veiled her mind as to the past, and there are times when it gives way altogether. Her brother, Robert Gatehouse, of Sibert Wood, is a hard, narrow man, and his wife is a hard, jealous woman. They have two sons, the younger an amiable cripple and a poet, the elder a handsome but ruthless and ambitious lad, a son of his house. Milly's son is a consumptive.

Here, it will be seen, are all the necessary materials for one of those narratives of sordid rustic life which a certain school in fiction has made so much of the past decade or two. The good poet Michael loves Mercy, but Mercy loves Sibert, the elder cousin. Sibert, from his point, loves a butterfly, but, being jilted, comes to Mercy for life-partnership. He inherits his father's selfish absorption in money-making, sacrifices his wife and little son to the welfare of his hop-fields, and loses the child by one of those dreadful, hateful accidents of neglect which seem to make a mockery of life. Sibert Gatehouse succumbs to the family tendency, and goes mad for a season. Only for a season: here romance emerges, for the first time with any certainty of step, from our painful and grim "reality." The father gets back his reason, and when he gets it back, he is a changed man. His grasping ambitions are gone, his selfishness is gone. Much of his strength also is gone, and there is something rather painful in Mercy's contentedness that this should be so. "My husband is all mine, now; neither pig-headedness, nor the labor of money-getting, nor other love holds him—he is all mine. . . . Even if the strain of it tires me out before my time, it is my life, it is worth while, that always, all day long, I am the staff on which Sibert leans." A minor and plaintive strain of romance, a "dying fall," which hardly serves to cheer the reader after all the restless pathos that has gone before. The spirit of the book, as a whole, is enervating rather than bracing; it lacks the robust constitution of great fiction.

Unexpected Affinities. By Susan Taber. New York: Duffield & Co.

All the trouble in this story came directly from the theorizing of Mr. Hervey, who was a gentle, absent-minded paterfamilias in private life, and in public an inspiring "leader of advanced thought." Between what Mr. Hervey said about the equality of the sexes, and what he said about the ultimate neces-

sity of eliminating the capitalistic class, the poor man nearly "did for" both his daughters in a matrimonial way. For Rosalie, remembering father's sayings, instead of humoring an elderly husband when he showed himself a bit of a martinet, thought to assert her right to consideration by engaging in a flirtation with his cousin. And a young Irish mechanic, who had heard Mr. Hervey on "Labor and Its Relation to Capital," was for beginning at once on the elimination of the moneyed class, starting with the particular plutocrat who had offended him personally. And the victim of both these plots was none other than the world-weary multi-millionaire whom Alice Hervey had elected to love to distraction. Altogether the Herveys' Long Island sojourn was full of harrowing suspense that year.

While the events of the story are marching on to prove that Griselda is still the pattern of the "model wife" and that the best hope of the masses lies in the intelligent benignity of the conspicuously wealthy, the reader may stop occasionally to puzzle his head over sentences like these: "Alice was not impervious to her surroundings" and "The earth had the radiant appearance of a young girl fresh from her bath in the sea, and pausing to dry her wet hair and rosy cheeks upon the shore."

The Nest. By Anne Douglas Sedgwick. New York: The Century Co.

Mrs. de Selincourt says in her Preface:

> It seemed suitable when making a selection of short stories for publication in book form, to include my first attempt with my last, and therefore the very juvenile production—"Miss Jones and the Masterpiece"—finds a place with the others.

This is magnanimous, and even bold. The story of the priggish model, for the sake of whose qualms and charms a painter cuts to ribbons his masterpiece, is crudely told. It was written before Miss Sedgwick acquired the urbane style, the suave, hesitant, allusive, qualifying manner of presenting a story cultivated (though not invented) by Henry James. That manner is, we suspect, already obsolescent—the blunt and robustious style is to have its turn—but has been effectively used by various story-tellers of the past decade, notably Mrs. Wharton and Miss Sedgwick. Its danger is in lending an air of subtlety to simple and even commonplace materials. We are not sure that the substance of "Miss Jones and the Masterpiece" is really of less account than that of "The Suicide" or "The Nest."

The title-story is based upon a situation of dramatic possibilities, but its working-up is novel rather than original. A man is warned by a specialist that he has only a month to live. His instinct is to go home, to "the nest," for refuge; but he determines to spare his wife the shock of knowing his fate. The discovery that she is on the eve of flight with another man leads him to tell her, so that she may not spoil her future for nothing: she will have only a month to wait. The wife's passion returns; the month is a second honeymoon—and the end of it satiety on the man's part, the discovery that he is not going to die after all, and the wife's bitter resentment of both facts. "The Forsaken Temple" is in the same key. "The Suicide" and "The White Pagoda" are bits of lighter comedy.

The Heart of the Hills. By John Fox, jr. New York: Charles Scribner's Sons.

In a story which leaves a clearer impression of contemporary history than of personal drama, Mr. Fox records the passing of his mountaineers and shows Kentucky during the last years of the nineteenth century in the throes of transition. When coal lands began to be opened and small farms began to replace the great estates, the lordly days of the Blue Grass aristocracy were already past, and the picturesque days of half-savage mountain life were numbered.

All the changes that one generation can compass in the relations of the two sections are illustrated in the friendship of four representative young people who invade each other's territory—the Blue Grass boy and girl visiting the hills in their younger days and the mountain boy and girl later attending the Blue Grass college. Between the son of the mountaineer and the son of the gentleman farmer mutual respect gradually supplants the instinct of rivalry, as the consciousness of superiority on one side and resentment of it on the other are lost in the democracy of youth. Each comes near to stealing the other's sweetheart, but each in the end comes back to his own and casts in his lot among his own people. For although in a few years antagonism can give place to good will, the disparity between a century of gentle breeding and a century of semi-savagery cannot be overcome so speedily. It is the wisdom of the mountain girl that recognizes this intangible barrier and accepts the limits it imposes.

While all this is interesting as a social record, and there are, to boot, exciting passages in the civilization of the young barbarian Jason (he is even brought to trial for complicity in the murder of Gov. Goebel), there is nothing in the rest of the story to compare with the opening scenes of mountain childhood. In this case, as often before, we might easily have dismissed the author as an agreeably light-hearted romancer of rather conventional imagination, were it not for the partiality he knows so well how to enlist at the outset for his little men and women of the wilderness.

Sally Castleton, Southerner. By Chittenden Marriott. Philadelphia: J. B. Lippincott Co.

Again the beautiful daughter of a Southern general falls in love with a Northern spy, and falls not vainly. From the moment when they first set eyes on each other it is clear that nothing is going to be able to part them, though the situation, outside of red covers, would be unpromising enough. The most original actor in the drama is a stove in which the wounded Confederate hides himself, while the spy, in a loud ringing voice, confides his name and his plans to a fellow-Yankee. The result is that our Capt. Radcliffe makes the rest of his journey to Richmond under the eye of Southern authority. He is also required to escort thither the fair Sally, who hates the enemy of her country, though she loves the man. Their adventures are in accordance with the best traditions of the theme: there is no more to say.

THE LAND OF PYGMIES.

Pygmies and Papuans: The Stone Age To-day in Dutch New Guinea. By A. F. R. Wollaston. With appendices, illustrations, and maps. New York: Sturgis & Walton Co. $4.

The Land of the New Guinea Pygmies: An Account of the Story of a Pioneer Journey of Exploration into the Heart of New Guinea. By Capt. C. G. Rawling. With 48 illustrations and a map. Philadelphia: J. B. Lippincott Co. $3.50 net.

The charm of Dutch New Guinea lies in the fact that it is now the least known part of the world, and that one finds there man in the earliest stage of human civilization, the Stone Age. It is almost inaccessible. For thirty miles inland it is a desolate tree-covered swamp, with an extraordinary network of waterways. Then come the foothills separated by deep ravines with almost unclimbable knife-edged ridges. These lead up to the Snow Mountains, whose crowning peak is higher than Mont Blanc, and which have many precipices, one of these having a sheer descent of 10,000 feet, the deepest in the world. Any party attempting to go inland must take every ounce of food along, and while below the foothills is at any time likely to be overwhelmed by the floods occasioned by the incessant rains. The difficulties of exploration by land or water are so great that a joint English and German expedition, under the leadership of Lieut. Graetz,

which has planned to start next October, will carry a dirigible balloon.

The wonderful fauna, and especially the marvellous forms of bird and insect life known to exist there, led the British Ornithologists' Union, in commemoration of the fiftieth anniversary of its foundation, to undertake a zoölogical exploration. The scope of the expedition was broadened by the contribution of funds by the Royal Geographical Society. A liberal grant of money also was made by the British Government, and the Government of Holland not only supplied an armed guard at its own expense, but conveyed the expedition in a gunboat from Batavia to New Guinea. Early in January, 1910, a well-equipped company, the leaders of which were six Englishmen, collectors and surveyors, landed at the base of operations near the mouth of a river on the southern coast. From this point for fifteen months numerous unsuccessful attempts were made to reach the snow limit. Mr. Wollaston, who was medical officer, entomologist, and botanist of the party, writes the official account.

The failure was due mainly to the lack of efficient native carriers, to their dependence on canoes and rowboats instead of steam launches, and to the incessant rains. A stream that one day was so shallow that it was difficult to drag a canoe, might on the next be a raging torrent not to be faced. During a period of twelve months rain fell on 330 days; several nights more than six inches fell. Camps were continually overflowed and the food stores ruined, while the few native inhabitants had no settled homes. Notwithstanding the terrible monotony and unhealthfulness of the life, the fascination of the region and the longing to overcome the obstacles to its exploration are such that Mr. Wollaston, soon after his return to England, started on another expedition, and is now in New Guinea, having succeeded in reaching the snow on January 30 of this year. Several other parties are also engaged in exploration.

The scientific results of the expedition, though it failed in its main object, were of great importance. Many new and interesting forms of bird-life were added to the natural history collections of the British Museum, including ten species new to science and thirteen species of birds of paradise. The information obtained from intercourse with the Papuans of the coast region reveals the existence of a people so primitive that they are using stone axes and shell knives. They have no knowledge of pottery, and "water boiling they had never seen" until the white explorers came among them. They did not cultivate the ground on account of the recurrent floods, and the bulk of their food is sago.

In the foothill region a tribe of pygmies, called Tapiro, was discovered, the average height of the men being 4 feet 9 inches. Notwithstanding several visits to their village, a woman was never seen. They were more intelligent than the coast natives, their houses, built on piles, being greatly superior to the Papuan huts, and they cultivated the ground. Yet their only tools were stone axes and pieces of wood. Their apparatus for making a fire consisted of a split piece of wood, a long piece of rattan, and the tinder, sometimes a lump of a palm shoot, sometimes a piece of dried moss.

The birds were very numerous, but it was difficult to get sight of them on account of the density of the forest. At one place, says Mr. Wollaston, "the air of the jungle was heavy with the scent of the wild vanilla, and all around us were calling (but we could not see them) Greater Birds of Paradise; sometimes we were within sound of as many as six at one time. On that day, too, I first saw the Rifle Bird (*Ptilorhis intercedens*), one of the most beautiful though the least gaudy of the birds of paradise, whose long-drawn whistle can never be mistaken or forgotten." Notes on the 2,200 birds collected, representing about 235 species, are contributed in an appendix by W. R. Ogilvie-Grant. The pygmies are discussed in another appendix by the great authority on that subject, Dr. A. C. Haddon, while S. H. Ray gives notes, with vocabularies, on some of the languages of Dutch New Guinea. There are two maps and sixty illustrations, including six colored plates, reproductions of drawings of the stone axes, carved wooden clubs, ornaments, etc.

In "The Land of the New Guinea Pygmies" Capt. Rawling describes his experiences while attached as surveyor to the expedition to Dutch New Guinea. He succeeded in mapping 3,000 square miles of hitherto unknown land. Although he failed in his main purpose to reach the snow-line, his discovery of the Tapiro pygmies is important, especially for anthropologists. These people are evidently strongly attached to their own way of doing things, for when Capt. Rawling, after watching one make fire by rubbing a rattan rope against the sharp edge of a stick, showed how it could be done by a match, "the effect was disappointing as, after one gasp of surprise and a grunt of disapproval, he not only refused to accept the box as a present, but walked hurriedly away when the experiment was about to be repeated." Their dress, that is, of the men, for a woman was never seen, "consisted of a grass helmet with upright rims, and a projection at the crown into which a bird of paradise plume could be inserted."

Next to the pygmies and the Papuan natives of the coast regions, the birds were the most interesting of all the living creatures. Among the new species discovered was a bower bird,

so called because of the bowers or huts they construct for nesting purposes in a forest clearing. The huts are composed of moss, and are of elaborate structure, opening in front on to a lawn or garden, the whole laid out with great exactness and scrupulous care, and decked with brilliant leaves, flowers, and berries. On this dainty lawn the male bird dances and disports himself before his mate, or meets other males, who play and dance together. The flowers and berries are grouped or placed in lines, according to their colors, and are renewed as soon as they fade.

The value and attractiveness of the book are increased by the reproduction of 48 photographs and a map showing the results of the surveys.

The Daffodil Fields. By John Masefield. New York: The Macmillan Co. $1.25 net.

It is only a little while since every one was repeating that style is the sole preservative of literature. Without style, we were assured, anything like a work of permanent literary value is impossible. And now with these words still ringing in our ears we are asked to look upon Mr. Masefield's doggerel as portentous of a new and higher order of poetry. Not that Mr. Masefield cannot write as respectable verse as any one when he pleases. Much of his "Story of a Round House" would pass muster in any collection. Indeed, to a sane criticism the sea pieces in the latter half of that volume, together with a few descriptive passages in "Dauber"—for Mr. Masefield, be it said, is as descriptive as any decadent of them all—constitute his best work. But it is not such matters as these—nor even his odd fancy for the rhyme royal, which reappears in his latest volume, "The Daffodil Fields"—it is his violence, his licentiousness, in a word his barbarism, which is gleefully hailed, as the first fruits of a genuinely modern English poetry, by a chorus of enthusiastic admirers, who point triumphantly to his poetic atrocities as though they were so many spiritual qualities.

It is all very bewildering. But it would be much more so were it not for certain characteristics of the time, which serve in a manner to define if not to explain the puzzle. In the first place, there is the current optimistic fatalism which is closely allied with the modern doctrine of progress. On the one hand we cheerfully prate of eugenics as though the race, like a superior breed of cattle, were capable of indefinite improvement by its own efforts and by taking thought we might add any number of cubits to our stature. On the other hand, we sigh despondently over Socialism as though, however undesirable, it were ineluctable by any exertion on our

part. And all the time for the physical development of the species we can do but little, while the growth of Socialism is entirely within our control. But in whichever way our interests or the accidents of the moment lead us to express ourselves with regard to any particular subject, we all agree with Hegelian fatuity that whatever happens must happen for the best, since it happens fatally—that every step is necessarily an advance, that all motion is promotion—in short, that anything and everything is progress.

It is no wonder, then, that those whose daily thinking is pervaded with this genial philosophy, should apply it to Mr. Masefield as well as to Socialism. You may not like him, they declare with exquisite irony, his halting stanzas, his limping versification, his vulgarity of expression, his indecency of theme; but there he is, and that is the end of it. And yet may it not be permissible to suggest that, after all, Mr. Masefield is not inevitable; he is not one of the great elemental forces of nature? On the contrary, the success of his writing depends entirely upon our indulgence; and if we indulge his work, we do so, not because it is either fatal or superior, but because it is agreeable with our own temper and disposition.

That it is in harmony with certain ideas of the day it is impossible to deny. Above all, it falls in with the prevailing conception in accordance with which the term human has come to suggest all the vices, frailties, and errors of mortality. When we use the word humanity nowadays we imply, not the dignity of a creature made a little lower than the angels, but the debility of a species which has evolved a little from the brutes. Such is the connotation, a connotation little different from animal, with which science has gradually familiarized us—science, be it said, for it would not be fair to incriminate the sciences in detail, though some of them, pleasantly termed moral, are doing their best to confound the confusion and discredit even our noblest attainments by raking them back indiscriminately into the rubbish heap of our brutish origins. In this sense humanity has grown to signify the lower, baser, more instinctive elements of the race. And it is just this besotted humanity of which Mr. Masefield's verse is the living figure and illustration. The mean, the sordid, the degraded—these are the aspects of life with which he is the most concerned. In some respects, it must be acknowledged, his vision resembles Crabbe's; but it differs immeasurably in being totally devoid of moral atmosphere. His puppets are twitched by instinct and by instinct alone. They seem to have no inhibitions. Whether they are in for murder or conversion, they proceed spasmodically and without scruple, compunction, or reflection. Like the lower animals, they act out of the immediacy of their nature; their pathos, for there is a kind of crude pathos about them, is the pathos of brute or insensate things. One and all they might serve as demonstrations of Stirner; they are examples of "instantaneity." For this reason there is something curiously automatic and machine-like about them.

In this respect again Mr. Masefield flatters the inclinations of his time—in particular, its hankering for passion. Like every weak and febrile individual or generation, we have developed an ardent admiration for the more convulsive and elementary emotions. Nietzsche is an instance. Strength for us has become a paroxysm; sexual desire especially, as the most fitful and headlong of impulses, has come to exercise an uncanny fascination over our imagination. Witness the research of what our current literature calls passion. Under these circumstances we may congratulate ourselves that Mr. Masefield has rescued us from decadence by a resort to violence: the fact is that we have but exchanged one form of decadence for another. There are many forms of decadence; and if we are to have decadence at all, it is better to have the "comely decadence" of Walter Pater than the obscene and unseemly decadence of Mr. Masefield.

Youth and Life. By Randolph S. Bourne Boston: Houghton Mifflin Co. $1.50 net.

The precocious young man writing of himself, in imitation of his elders, with insolent and piquant egotism, is neither an infrequent nor an especially alarming phenomenon; after a little sparkling and sputtering he usually goes out. The author of this book is indubitably a young man, but happily of a different family. Only in his last chapter, A Philosophy of Handicap, does he draw directly upon experience peculiar to himself, and that chapter is in effect a really stimulating and triumphant valediction to handicap—the maturest thing in the volume. For the rest, he is an earnest eulogist of five-and-twenty, discoursing fervently, solemnly, and almost impersonally through thirteen smoothly expository chapters on Youth and Life, written with tall capitals—the latter viewed pretty much in the rosy abstract. To indicate his position more precisely, he is a Galahad with sword girt on, kneeling in the chapel and consecrating his arms. This is equivalent to saying that he is in love with love, devoted to art, and ambitious to reform the world, and that he would probably look on becoming an alderman, writing a textbook, or marrying Susan as a base and ridiculous compromise with the existing order.

Such young men are useful and dangerous. They constantly renew the vigor of old and middle-aged men by threatening, as the phrase goes, to blow them off the "lid"—a corrective, doubtless, to senile apathy, but irritating to elderly patience. Mr. Bourne is probably right in insisting that the young men "see visions," but then, if we may permit ourselves the transatlantic expression, you have got to see a jolly lot of other things before your vision amounts to much. And you may have a nice measure of your age in the degree of impatience with which you read our author's remarks on the Virtues and Seasons of Life. The writer of this review, for example, regarded himself, on opening the book, as a man of uncertain age, but when he came to the author's advice on the rearing of children, he looked in the glass for gray hairs. "Life," says our philosopher, "will present so many inevitable necessities to the child when he gets out into the world that it seems premature to burden his childhood with a training which will be largely useless." This is directed at the moral and religious instruction imposed by parents on their offspring. This benevolent monster, life, as we are informed, "endows us with a morality that a mother and father with the power and the love of angels working through all the years of our childhood, could not have created within us. Trust life and not your own feeble efforts to create the soul in the child!" At this point the reviewer in a fit of senile irritation scrawled in the margin: "In heaven's name, are not, then, the efforts of father and mother a legitimate and desirable part of 'life'?" And, turning to another elderly person, he added, "So long as the young men propose to revise 'life' by omitting the nurture and admonition of parents, let us continue to sit quietly on the lid."

A sense that he had lost his immortal youth passed over the reviewer again while he was perusing Mr. Bourne's discourse on the Excitement of Friendship. Now this friendship prized by youth "is lived on a warm, impetuous plane" (*sic*), it languishes in absence, it has no place for "harsh criticism or fault-finding"; "for the secret of friendship is a mutual admiration, and it is the realization or suspicion that that admiration is lessening on one side or the other that swiftly breaks the charm." At this, it must be admitted, the reviewer yawned behind his hand, and felt like a member of a school board at a high-school commencement. "Mutual admiration" he vaguely recalled as the bond of feminine alliances and the earliest league of youth; the adult friendship stood rough knocks, was indifferent to separation, subsisted, indeed, upon a pleased mutual recognition of competency in the pursuit of interests external to the friends.

But to continue in this strain would be to write another homily on another of the seven ages of man; and Mr. Bourne will treat the period much more effectively when he reaches it. His presentation of the younger generation shows a pretty talent for analysis, somewhat overworked. As for the generation itself, it appears here to be a little deficient in gayety of heart, unduly confident in the strength of its insight, and amazingly disrespectful of its predecessors. In compensation it is fearless, honest, and terribly serious. Its vision —to tell the truth, we think its vision will improve with age. (We of "the generation which is fast passing away" do not so much envy your possession of that.) Its fine heat and passion, its sense of dedication—that is its sacred gift, which the cynic life will gamble for; something should come of that.

Writings of John Quincy Adams. Edited by Worthington Chauncey Ford. Vol. I. 1779-1796. New York: The Macmillan Co. $3.50 net.

The scholarly industry of Mr. Ford, lately exhibited with conspicuous success in the monumental edition of Bradford's "History of Plymouth Plantation," now promises to add another title to the already considerable list of definitive editions of the writings of American statesmen. The writings of John Quincy Adams have not, of course, been entirely unavailable hitherto. Besides the twelve volumes of "Memoirs," edited by his son, Charles Francis Adams, in 1874-77, we have his Presidential messages and proclamations accessible in various compilations, besides the indispensable record of the *Congressional Globe*. His extensive correspondence, however, has for the most part remained in manuscript, and no collection has been made of his occasional contributions to newspapers and his miscellaneous writings and publications.

Mr. Ford's editorial method is not likely, we think, to go unchallenged, and certainly invites comment. He does not, for one thing, as a rule, indicate the source from which the various papers are drawn, or make clear whether or not they have previously been printed. In the case of personal letters, the source is apparently the manuscript collections of the Adams family; but whether that is the case with the diplomatic correspondence is not stated. Further, he does not propose to reproduce all that Adams wrote, but only such a selection as will include "what is of permanent historical value, and what is essential to a comprehension of the man in all his private and public relations." The "Memoirs," itself only a selection, is to be used "only where needed to explain the text" of what is now to be printed. Apparently, therefore, the bulk of the contents of this edition is to consist of correspondence and state papers.

An examination of the present volume shows that, even within these limits, Mr. Ford has exercised considerable editorial latitude. Much personal matter has evidently been omitted. Of the three "Menander" papers contributed to the *Columbian Centinel*, in 1792, only one is given; and only three of the four "Columbus" papers on the Genet episode, published in the same journal in 1793. Letters deemed of minor importance have been relegated to footnotes, in extract or summary, though upon what principle is not always clear. A good illustration of this latter procedure is afforded by the last document in the volume, where a long letter to John Adams, dated June 24, 1796, and dealing with the likelihood of war between the United States and Great Britain, is followed by long extracts from letters of June 16 and 22 to the Secretary of State, on the same subject, and of apparently equal significance. On what principle Mr. Ford prints the personal letter in full, and the official letters, also in manuscript, in a footnote and in extract only, it would be interesting to know.

There will, of course, be no disposition to question Mr. Ford's assurance, in his preface, that nothing has been suppressed which can contribute to a knowledge of Adams in either his public or his private life, and that the texts are printed as written. The reëditing of so voluminous a work as the "Memoirs," too, might well give the most courageous editor pause. It is important to note Mr. Ford's method and omissions, however, because they serve to differentiate this edition of Adams's writings from recent editions of the writings of Washington, Hamilton, Madison, and others; and because what is "of permanent historical value" and "essential" in studying Adams's career can be seen only by using the volumes of this edition and the "Memoirs" together.

The present volume, extending to 1796, covers the years of Adams's boyhood in Europe, his student days at Harvard and law studies at Newburyport, his brief period of law practice in Boston, and the first two years of his diplomatic service at The Hague, to which post he was appointed in May, 1794, at the early age of twenty-seven. His earliest letters, written mainly to his father and mother, exhibit the precocity which went far to justify the remark that he "never grew up," but stepped full-fledged, even as a youth, into the field of politics. Barring a certain self-conscious positiveness, natural in one with his inheritance, and a style occasionally stilted after the manner of the age, his observations on men, institutions, events, and tendencies are singularly acute and sound. His aversion to monarchy and aristocracy is balanced by a profound distrust of democracy, at the same time that he sees some of the pitfalls in the *via media* of representative government.

In the Netherlands, where his main business at first was the negotiation of a loan, his letters on the military and political convulsions of the time show unusual powers of observation and description, marked skill in acquiring and sifting information, and, in the main, a sound but by no means friendly estimate of French policy. In England, on the other hand, whither he was sent in 1795 to exchange the ratifications of the Jay treaty, he found only "rancorous enemies" of the American Administration in power, declared to his father that "between the United States and Great Britain no *cordiality* can exist," and thought that "it is on our part [not] to be desired." Gouverneur Morris, who records that Adams, "in his wrath and indignation at the conduct of the British Government, seemed absolutely mad," was set down by Adams as "more decidedly English the more I see of him."

Mr. Ford's explanatory work has the skill and finish of a practiced hand. His notes, modestly said to be restricted "to the identification of individuals and indication of related material," are very full, including not only numerous extracts from other sources than the Adams papers, but also summary accounts or explanations of related events. The frontispiece is an excellent reproduction of the well-known Copley painting of Adams, done in 1795.

Notes

In "Jewish History and Literature under the Maccabees and Herod," B. H. Alford furnishes a continuation of a volume published in 1910 with the title, "Old Testament History and Literature." Longmans publish the work.

The following titles are promised by Putnams for June 3: "An Unknown Lover," by Mrs. George de Horne Vaizey; "Sunia; A Himalayan Idyll," by Maud Diver, and "The Letters, Speeches, and Correspondence of Carl Schurz," edited by Frederic Bancroft.

Books in preparation by Dutton include: "The Rubai'yat of Omar Khayyam," with seventy-five illustrations, by Edmund J. Sullivan; "Jane Austen," by William Austen Leigh and Richard Austen Leigh; "The Youth of Goethe," by P. Hume Brown; and the following numbers of the Channels of English Literature series: "The English Novel," by George Saintsbury; "English Lyric Poetry," by Ernest Rhys; "English Elegiac, Didactic, and Religious Poetry," by the Rev. H. C. Beaching, D.D.; "English Satirists and Humorous Literature," by Oliphant Smeaton; "The English Essays and Essayists," by Hugh Walker; "English History and Schools of History," by Richard

Lodge, and "English Criticism," by J. W. H. Atkins.

The Harvard University Press announces the following books as in preparation: "Essays on English Agrarian History in the Sixteenth Century," by Edwin Francis Gay; "Studies in Anglo-Norman Institutions," by Charles Homer Haskins; "Essays on Chaucer," by George Lyman Kittredge; "The Way of Salvation (Buddhaghosa's Treatise on Buddhism)," translated from the original Pāli into English by Charles Rockwell Lanman; "The Search for Salvation in the Greek and Roman World," by Clifford Herschel Moore; "Judaism at the Beginning of the Christian Era," by George Foote Moore; "The Works of Vitruvius," translated by the late Morris Hicky Morgau, prepared for publication by Albert Andrew Howard and Herbert Langford Warren; "A Bibliography of Municipal Government," by William Bennett Munro; "The Harvard Expedition to Samaria," by George Andrew Reisner; "The Priuciples of Business Policy," by Arch Wilkinson Shaw; "Cases on Constitutional Law," by Eugene Wambaugh, and "The Yoga-System of Patañjali, or the Ancient Hindu Doctrine of Concentration of Mind," translated from the original Sanscrit by James Haughton Woods.

Doubleday, Page & Co. are reprinting Joseph Conrad's books, "Youth," "Lord Jim," "The Point of Honor," and "Romance."

E. P. Dutton & Co. announce the establishment of an educational department by the purchase of the Thompson Brown Co.

This week Holt is bringing out Rupin's "Die Juden der Gegenwart," translated from the second revised edition, with an introduction by Dr. Joseph Jacobs, and "The World Soul," by H. Fielding-Hall.

The new edition of Samuel Butler's "Alps and Sanctuaries of Piedmont and Canton Ticino," which Mr. Fifield is bringing out, has an introduction by R. A. Streatfeild, besides several additions which were found in Butler's manuscripts.

"By a small majority Congregation at Oxford has passed the preamble of a statute establishing a commercial diploma at the University." But, as the *Athenæum* goes on to say, "a preamble, as we know, does not mean any hurry about 'reform,' and we think it likely that Oxford will do without this one for some time to come. The city of lost causes is not yet the stronghold of loud cash."

The "New York Times Index," just issued, is a most useful and valuable record of all the important events of the first three months of the year, filling 272 large octavo pages. It will be helpful as a reference to any newspaper kept on file. If the amount of space given to any subject is the proof of its significance, then the American people are most interested in sports, for fifty-five columns are devoted to them, while President Wilson and Congress have only eight each, woman's suffrage six, and the Balkan war a little more than three.

An interesting and valuable contribution to "Eskimology" is Mr. V. Stefansson's account of the distribution of life in Western Aretic America, in the *Geographical Journal* for May. For more than five years, he has wandered in the Arctic, often with no European companion; he has made himself master of the Eskimo lore and traditions, and so revealed the human side of the region more fully than any other explorer. He calls attention to the deceptiveness of the figures of our census returns for northern Alaska, which show "that the Eskimo population of the country has remained approximately constant for the last thirty years." But these returns are concerned only with the coast people, whereas the people of the interior have become almost extinct since the introduction of firearms has destroyed the caribou, their chief food.

Retrospective views of the results of race-mixture in various lands, with special reference to the Indian and negro in America, are given by Prof. G. Fritsch, of the University of Berlin, in *Petermann's Mitteilungen* for April. As the result of his investigations he believes that not every intermingling of races necessarily implies a deterioration. In the military department are a description of the new Albanian State by Prof. A. Baldacci, of the University of Bologna, and a short account of Cheik-Saïd, an abandoned French Gibraltar, by Capt. E. E. Schulze. This is a town on the Arabian shore of the Strait of Bab-el-Mandeb, at the outlet of the Red Sea, which was for many years in the possession of the French and was regarded by Napoleon as an important post, but is now abandoned.

The article most worthy of mention in the New International Year Book for 1912 (Dodd, Mead) is the one on the Presidential campaign of last year. It runs to fifty pages, one-fourth of which are taken up with the party platforms, printed in full. The editor's remark that especial pains has been taken to insure comprehensiveness and impartiality well defines the result. It is not only the best account of the complicated series of incidents which it follows, but the only adequate one easily accessible. Other topics which receive particular attention in this volume are the Titanic disaster, and the question of safety at sea; the Balkan war; the minimum wage; workingmen's compensation; syndicalism; the Panama Canal, and city planning. The thin paper, a feature introduced in last year's issue, adds materially to the ease of handling a book which many persons will have occasion to consult frequently.

The eighteenth revised edition of Baedeker's "Paris" is now ready for travellers who are turning in that direction. Like its gaudy and ubiquitous companions, it is published in this country by Scribners. Another volume from the same house is Ethel E. Bicknell's "Paris and Her Treasures," also a guidebook, not so exhaustively complete as its scarlet rival, but having a certain, doubtful, advantage of illustrations.

Three new volumes of the Loeb Classical Library (Macmillan) have come to us. Two of these, Vol. III of Horace White's text and translation of Appian's "Roman History" and Volume II of F. Storr's Sophocles, are continuations of authors whom we have already noticed. Besides these, there is the first of the three volumes which are to contain "The Works of the Emperor Julian," with an English translation by Prof. Wilmer Cave Wright. Of the Julian we shall have more to say when the work is further advaneed.

Dr. G. B. Grundy, of Corpus Christi, Oxford, has got together a volume of metrical versions from the Greek Anthology, which Henry Frowde (in New York) publishes for him as "Ancient Gems in Modern Settings." A considerable number of the epigrams are translated by the editor himself, and with no mean skill, as this example from Crinagoras may testify:

E'en shouldst thou live the quiet life, nor sail
The sea, nor travel on the land,
To journey into Attica thou shouldst not fail,
And on Demeter's nights of worship stand
Within her temple. Thus of life's dull care
Thou shalt be free: and, when thou goest where
We all must dwell, thy spirit shall not quail.

It is an attractive little book, though it must be confessed that very few of the translators have been able, like William Cory, with his wonderful version of Callimachus, to catch the real spirit of the anthologists, with their undertone of delicate pathos. It is true, as Parrhasius wrote in the quatrain with which Dr. Grundy closes his pleasant introduction:

'Twill sound a foolish boast; but still I make it,
We have attained the clear-set bounds of art.
Further man cannot go; but, yet I take it,
The critic still will play the critic's part.

Translation is a difficult thing at best, and translation of Tacitus is an impossibility. This is frankly admitted by W. Hamilton Fyfe in the introduction to his version of "The Histories" (Clarendon Press). "Because Tacitus is never a mere stylist," he says, "some of us continue in the failure to translate him." For a "failure" this effort is unusually successful. Mr. Fyfe renders the sense of the author accurately and in faultless English of a high order of stylistic merit. This involves, to be sure, a free handling of Taeitean sentence structure, but even so be approaches nearer to the spirit of the original than do former translators. Only rarely does he attempt to render epigram by epigram. A single sentence (I, 89) will show at once the difficulty and the measure of success of this translation:

Vulgus et magnitudine nimia communium curarum expers populus sentire paulatim belli mala, conversa in militum usum omni pecunia, intentis alimentorum pretiis.

Though the cares of state were too vast to arouse any interest in the masses, yet as the price of food rose and the whole revenue was devoted to military purposes, the common people gradually began to realize the evils of war.

This is of course not Tacitus, but it is good. A short introduction warns readers against criticising the Roman historian for not following modern historical methods, and defends his narrative against the modern tendeney to whitewash everything ancient, of which Ferrero furnishes so good an example, in his recent treatment of the women of the Cæsars, although Mr. Fyfe does not mention him. When occasion arises, necessary explanations are found in notes.

We have more than once called attention to the extraordinary flabbiness of a good deal of the popular biography produced in Great Britain and imported to this country at prices which may be warranted by the paper and binding of the books, but which from any other point of view are simply exorbitant. A worse specimen of this British product than Giberne Sieveking's "Memoir of Sir Horace Mann" (Dut-

ton) does not often reach New York. Mr. Sieveking's knowledge of history is measured by the statement that Walpole resigned in 1741, with no word to indicate that the February of this year is by the reformed calendar changed to 1742. His knowledge of eighteenth-century literature is shown by the insertion of a (*sic*) after the phrase "is wrote" in a letter. His own grammar is proved by this: "For between the leaves of some letters lie pressed the essence of a personality." And the general elegance of his style is illustrated, briefly but feebly, by this: "By 29th May the whole explosion of disturbance as regards the English ship which had been captured, is quieted, for the ship had been restored." The book, in a word, is simply illiterate. By what means books of this sort—and the present volume is only a bad specimen of its kind—get published in London we do not know; probably the publishers rely on pictures and thick paper and high prices to sell a certain number of copies in this country. Curiously enough this evil is particularly evident in the field of popular biography. It does much harm, since this is the field to which aspiring readers are likely to turn first from indiscriminate fiction.

"The Children's Reading" (Houghton Mifflin), by Frances Jenkins Olcott, answers sensibly a large number of questions that are frequently asked by parents. Each of the fourteen brief chapters (on Ways of Guiding Reading, Picture Books and Illustrators, Poetry and Rhymes, Useful Books, Religious Books, etc.) is followed by an annotated list of books. In her choice of verse the author is perhaps least helpful, including as she does such a difficult poem as Lowell's "Commemoration Ode." The appendix contains a graded list of 100 good stories, a detailed explanation of the mode of procuring books through public libraries and by purchase, and an extended list of editions of books available at moderate prices.

A notice in these columns last year of Miss Margaret E. Burton's "Education of Women in China" referred to the singular success of mission schools in reaching the submerged half of China's millions. The author has supplemented her first book by a second, "Notable Women of Modern China" (Revell Company), which assembles what French essayists would call the *pièces justificatives* of the earlier work. Of the half-dozen biographies here recorded, four are those of physicians now in charge of hospitals who have been professionally trained in America, one of a lady of wealth and distinction devoting herself to evangelization among women of the upper class in Foochow, and one of a Taoist nun whose conversion to Christianity at the close of her life was the result of her almost instant conviction of the futility of her asceticism after visiting her cousin Dr. Mary Stone's hospital. The resolute action of this lonely girl in abandoning her idols and violating the traditions of her people has a dramatic poignancy which recalls stories of the early Christian Church. Perhaps the most notable woman in this collection is Dr. Stone, who translated her Chinese name, Shih, into English for convenience when studying in the University of Michigan, thus reversing a practice not infrequently followed by Europeans when they assume Chinese names. Since 1901 she has been in charge of a hospital built by an American in her native town of Kiukiang, where the usefulness of her labors in relieving suffering and training women as nurses and efficient mothers has become celebrated throughout Asia. Her friend and fellow-student, Dr. Ida Kahn, owes her chance in life directly to the charity of a missionary. As the sixth daughter of parents who were only desirous of having a son, her fate was committed, immediately after her birth, to a blind fortune-teller, who declared that she must either be killed or given away if a son was ever to be expected. "The parents were not willing to end the little life, so they determined to engage the baby to a little boy in a neighboring family and give her to the family of her betrothed to bring up. But when they called the fortune-teller again to ask his judgment on the proposed betrothal, he declared that the little girl had been born under the dog star, the boy under the cat star, and therefore the betrothal was not to be thought of." Happily, the missionary was ready to adopt her, and after a thorough academic and technical training in America, she has a position and influence, as physician in charge of a hospital in Nanchang, second to no woman now living in China. The early experiences of these women emphasize the obstacles to female activity in China under former conditions, the crushing and pervading nature of which can be only dimly realized by Western readers. Among the most serious of these was the necessity of having a girl's feet bound if she was to move in respectable society. On account of their violation of this custom, the heroines of this little volume had to undergo in their early youth a social ostracism that required a fortitude rare in children of any country. One of them was stopped in the street by a girl of her acquaintance and ordered to kneel in the dirt to the young aristocrat's bound feet—a form of hazing which opens suggestive vistas to students in lands that have acquired a considerable proficiency of their own in the arts of petty tyranny.

As emblem of the new Napoleonic Empire various symbols were suggested—the historic Gallic cock, the traditional fleur-de-lis, the busy bee, which could sting as well as make honey, the mighty elephant with the motto *Mole et mente*, or a lion lying over the map of France with one paw ready to reach out across the Rhine. All these Napoleon decisively rejected and selected instead the figure of an eagle with extended wings about to take flight. Such eagles, made of brass about eight inches high, mounted on stout oaken staves, and surmounting new regimental silken flags, formed the new military standards which were to be the rallying point of the French from Ulm and Austerlitz to Leipzig and Waterloo. On December 5, 1804, three days after the coronation, in an impressive ceremony in the Champ de Mars, Napoleon presented more than a thousand of these new eagles to the representatives of the different regiments and ships-of-the-line, exclaiming with his usual dramatic effectiveness, "Soldiers! Behold your standards! These Eagles to you shall ever be your rallying point. Wherever your Emperor shall deem it needful for the defence of his throne and his people, there shall they be seen!" Mr. Edward Fraser, in "The War Drama of the Eagles" (Dutton), has waded through the Napoleonic literature with an eye for the picturesque, the dramatic, and the heroic, and woven together a very readable narrative of the occasions on which deeds of bravery were done for the defence or capture of these emblematic eagles.

Mr. H. E. Goldin's translation of "The Mishnah, Baba Meziah (Middle Gate), Treatise II" (Putnam) should make appeal to two classes; in the first place to members of the legal profession, interested in comparing so ancient a code as this of Israel's with modern legal codes, and in the second place to clergymen of every denomination, who will find ample corroboration of a popular theory that the ancient civil codes were as wide and sound as is much hastily devised procedure of to-day. There are, moreover, chapters of no little interest to the mere layman. Under "Articles Lost and Found," for instance, we discover a host of wise and useful laws, which equal, if indeed they do not surpass, modern procedure. The chapter on Usury is also of considerable interest to the layman, showing how strong was the law against usury, and this despite the oft-repeated charge against the Jew of favoring this practice. The difference between direct and indirect usury is of profound interest. The translator's supplementary comments are often valuable, for instance, his lucid explanation of the attitude of Jewish jurists towards the law of the Pentateuch which makes it legal for the Jew to lend to the Gentile, and not to the Jew. The appendix, giving an explanation of Jewish terms and some biographical details of the Jewish rabbis and jurists mentioned in the volume, is interesting and valuable, and there is also a good index.

"Siberia," by M. P. Price (London: Methuen), consists partly of a traveller's impressions of life in south central Siberia, in Krasnoyarsk, Minusinsk, and the vicinity, partly of a brief historic and economic account of Siberia, with an added chapter on the neighboring region of Mongolia. Without being noteworthy either as a work of art or as a scientific authority, the volume is always sensible and informing, and nearly always entertaining. In 300 brief pages Mr. Price gives a distinct impression of Siberia as a dwelling-place for normal, moderately happy humanity, a region destined to greater and greater economic importance as it is developed by the present colonizing policy of the Russian Government. His chapter on Mongolia is particularly useful at the present moment. Perhaps it is captious to quarrel with small errors in so modest a book; but a writer who speaks of using Russian sources and of conversing with Russian peasants ought not to print such abortions as "mirobny sud" (p. 123) for *mirovóy sudyá* (justice of the peace), and, still worse, "Pravo-Slavonic" (pp. 107, 108) as the name of the Russian Church and the language of its ritual. This last is a queer contamination of *Slavonic* with *pravoslávny* (orthodox).

"Social Forces in Modern Literature" (Ginn), by Prof. P. M. Buck, jr., is a fair example of a kind of book of which excellent examples are sorely needed. The au-

thor attempts, with undue brevity, to trace the development of fundamental modern ideas from the beginning of the eighteenth century to the day when romanticism burst into luxuriant bloom. Montesquieu, Rousseau, Lessing, Wordsworth, Goethe, and Shelley are centres of study. The bibliography at the close of the volume is full enough for most purposes, and shows discrimination, though Hettner's history of eighteenth century literature should certainly have a place in a list of twenty-five books of value in a study of Rousseau. "Rawnsby" (p. 248) is a misprint for Rawnsley.

"Le Tour de la France par Deux Enfants," by G. Bruno (Mme. A. Fouillée), is good reading for beginners in French. An illustrated edition of the work, with notes, exercises, and vocabulary by V. E. François, has just been published by Holt.

The same house has also brought out Molière's "Les Précieuses Ridicules" and "Les Femmes Savantes," in one volume, carefully annotated by J. R. Effinger.

Science

The Growth of Groups in the Animal Kingdom. By R. E. Lloyd. New York: Longmans, Green & Co. $1.75 net.

To the earlier naturalists species of animals and plants, being the finite expression of divine ideas, were regarded as fixed and immutable. Possibly it is due to the inheritance of this view, much attenuated in transmission, to be sure, that the modern conception of species based upon plant and animal experimentation, has made such slow headway. Systematists regard all species as of equal value in classification, whether millions or few representatives are known. Furthermore, the conception of a species is largely an individual matter involving endless disputes and needless wrangling. Lloyd substitutes the word group for the much-abused term species in this book and means by it any aggregate of animals having common characteristics and differing in any degree from other aggregates. The groups may comprise only one individual or many millions of individuals, evolution being "the arrival of novelties into the world; each extinct species of animal or plant was in its early days a novelty." The view that he advocates is the growth of these smaller groups into larger, and the constant fluctuation in numbers of the individuals comprising them. The forms that were common yesterday become rare to-day and may disappear to-morrow, and conversely forms which did not exist yesterday and are rare forms to-day may become common forms to-morrow. The problem of species as thus conceived focusses upon the nature of those forms which did not exist yesterday and are rare to-day—upon their mode of origin and the factors instrumental in their further increase.

All of these matters are clearly brought out in Mr. Lloyd's excellent work. The force of his arguments is much enhanced by an unaffected and delightful naïveté of style, and the volume itself is a model of fine bookmaking. The arguments are all in favor of the origin of species through mutations and the admitted object of the book is to protest against the widespread belief in natural selection as a creative agency. His conclusions are drawn from observations made upon many thousands of rats that were killed in India in connection with the attempt to exterminate all rodents that might be carriers of the plague. In different regions, and always in some localized portion of the region, small groups were occasionally found with characteristic and well-marked differences from the normal rat type of the region. A number of such variants are described, and the author shows by deduction that each type must have arisen from some one ancestor which appeared first as a sport. From these he draws the conclusion that such small centres of original variations are the starting points of new species in nature. These small groups, fostered by the conditions of natural selection, are the forerunners of large groups in the future. The book is a plea, therefore, for the mutation theory of De Vries, and its original contribution is the description of small numbers of variants in an enormous population, the opportunity being rare for this kind of work on animals in nature. The conclusions are directly opposed to those of Tower, who, working experimentally on the potato beetle, was able to raise under artificial conditions an enormous group of one variety which exists in nature only as a comparatively rare sport. Tower's contrary conclusion, to the effect that such mutants or sports are crushed out in nature in the struggle for existence, and that actual species originate by natural selection, is clearly and logically handled by Lloyd in his seventh chapter, and he finds in Tower's experiments the very fulfilment of his own hypothesis concerning the mutant rats—rare to-day, common forms to-morrow.

A chapter is devoted to the rather novel bearing of the mutation theory in practical matters of disease. Its value in the breeding of plants and animals has been pointed out repeatedly, but not its value in pathology. He shows that if there is an evolution of animals there must be also an evolution of animal diseases, and that new ones are constantly cropping up as mutants to be crushed out of existence or sustained in the struggle for existence. Thus a pernicious habit among common harmless organisms may arise as a mutation, as when the common green bottle-fly acquires the habit of depositing eggs in the nasal cavity or ears of sleeping or intoxicated men, thus giving rise to the disease known as myiasis. Such a habit has arisen in a limited group of flies as a mutation and, were it general in the species, would make a menace of the ordinarily harmless green bottle-fly.

The concluding paragraph of the book is in keeping with the general protest against the selection theory, pointing out the danger from a belief in natural selection, "in what may be called the right of the spirit of competition which is daily invoked in order to smother those altruistic feelings that are an important part of the human mind."

Three science books are included in the announcements of the Harvard University Press: "Hyperbolic Functions of Complex Variables," by Arthur Edwin Kennelly; "The Scientific Work of Morris Loeb," edited by Theodore Richards, and "Architectural Acoustics," by Wallace Clement Sabine.

"The Principles of Science" (Holt), by William Forbes Cooley, is designed to be used as an introduction to philosophy. In many respects the book is satisfactory. On the one side the author shows that he has studied the metaphysicians: the authority of Plato, Descartes, Kant, and the other great masters, is freely and intimately given. But his knowledge of science is unfortunately shallow; how can he hope to treat adequately the modern scientific postulates of matter, energy, electricity, or relativity, when from his references we must judge that he obtained his knowledge from elementary textbooks and popular expositions of physics? The philosophy of science cannot be mastered until its teachers have studied and worked in science as well as in philosophy. Until that is true, their criticisms of science are not balanced. To any one who has a real knowledge of science, it is irritating to see Plato and Kant matched with quotations from Ganot's or Watson's elementary textbooks of physics. A single illustration, although many could be given, will suffice; the author in discussing Lord Kelvin's principle of the dissipation of energy says: "It will all be diffused to a common level or pitch, and nothing whatever will go on. The universe will be a uniformly warm (or cool) mass, henceforth, forever motionless and inert." Now if he had only cursorily studied Lord Kelvin's works or even the scientific definition of heat, that it is a mode of motion, he would have known that things will still go on in a uniformly warm universe and that it will not be motionless and inert whether energy is available or not. It is a bit presumptuous to discuss the principles of science when even the simple and fundamental facts are not correct.

Albert E. Wilkinson, investigator in horticulture at the New York State College of Agriculture, has contributed "Modern Strawberry Growing" to the Garden Library of Doubleday, Page & Company. As there is virtually no time in the year when something cannot be attended to or experimented with in the matter of strawberry culture, either natural or forced, so there

is no season in which the amateur or professional grower will not find something to help or interest him in Mr. Wilkinson's book. If he starts to read too late for the setting out of spring plants or too early for the autumn planting, he will turn naturally to the mid-season activities of potting runners and so on, and find just what is needed for the successful treatment of the strawberry bed. There is an excellent section on pollination in the chapter on breeding and propagation, careful reading of which would enable any novice, intelligent enough to raise strawberries at all, to do good work in selective propagation. It does not assume, as most books do, that every reader enjoying the thrills of his first summer in a garden knows all about the mystery of sex in plants. Then there is an alluring chapter on Alpine strawberries which, no doubt, will lead more than one enthusiast far from the humdrum of the commonplace varieties of fruit to the fascinating but doubtful venture with the smaller more fragrant berry that is not a thing of a week or two, but produces from June till frost. Incidentally Mr. Wilkinson has told his story of the strawberry with a freshness that is remarkable when one considers that everybody from Hesiod down to the latest writer for a garden magazine has had to say about the same things on fruits and vegetables, for the reason that the principles of growing them are the same to-day as in the beginning of agriculture.

William McMurtrie, who died in New York on Saturday at the age of sixty-three, was from 1882 to 1888 professor of chemistry at the University of Illinois and later served as consulting chemist for large business firms in New York. He was a chevalier du Mérite Agricole, France, and a member of several other learned societies. He was also the author of the following works: "Culture of the Beet and Manufacture of Sugar Therefrom," "The Culture of Sumac," "Grape Culture in the United States," and "Wools and Other Animal Fibres."

Prof. William Hallock, of Columbia University, died on Tuesday of last week at the Homœopathic Hospital in Providence, R. I. He was born in Milton, N. Y., in 1857, and graduated from Columbia in 1879; two years later he received the degree of Ph.D. from the University of Würzburg, where the following year he was assistant in the physical laboratory. For the next nine years he was attached to the United States Geological Survey. In 1891-2 he was the assistant in charge of the astro-physical observatory at the Smithsonian Institution. While connected with the Geological Survey, he conducted the investigation of subterranean temperatures in the famous dry well at Wheeling—the second in depth in the world—where the drill went down to 4,500 feet below the surface of the earth. His experiments were described in a paper read last year before the American Association for the Advancement of Science. He was also for three years at work in the Yellowstone Cañon, investigating the phenomena of hot springs and geysers, and comparing results with those obtained by Professor Bunsen in Iceland. In collaboration with Prof. Carl Barns, of the Geological Survey, he worked for some time at New Haven, studying methods of measurement of high temperatures. Among the other topics to which he gave his attention were the effects of pressure on powdered materials and the thermal expansion of rocks. He returned to Columbia in 1892 as an associate professor in physics, and in 1902 was made professor. Four years later he was elected dean of the faculty of pure science, and held that office until all the graduate faculties at Columbia were merged, in 1909.

Drama and Music

New Irish Comedies. By Lady Gregory. New York: G. P. Putnam's Sons. $1.50 net.

Of the five plays in this volume, only two have any real dramatic quality; but all have positive value, though not in equal degree, as intimate studies of Irish life and character. In dialogue they are frequently, sometimes extraordinarily, felicitous, racy in expression, rich in quaint and characteristic metaphor, and strokes of spontaneous humor and simple pathos. Occasionally they exhibit flashes of imaginative eloquence and passion. But, on the other hand, they are often sorely in need of revision and compression in long passages where the author, with a fatal fluency, weakens a serviceable motive, whether comic or serious, by merciless reiteration. As this fault is chiefly observable in her more farcical interludes, there is a presumption that it is due to haste rather than to lack of ingenuity or invention. In her best moments she can be vigorous, concise, and dramatic, but, throughout her writings, a tendency to diffusiveness and over-elaboration is strongly marked. On the printed page, where the flavor of the speech exerts a peculiar appeal, this is a matter of comparatively minor importance; but on the stage, where action is all important, the effect is mischievous and frequently disastrous.

There is much capital reading in "The Bogie Man," "The Full Moon," and "Coats," but these pieces are the merest sketches, devoid alike of dramatic substance and reasonability. At the bottom of each of them is an essentially comic idea which might easily have been more skilfully handled. The personages are alive, and the talk humorous and quaintly characteristic, but perpetually revolving about the same point, which soon becomes blunted by repetition. "The Full Moon," based upon the old belief that "naturals" are sensitive to lunar changes, has more substance than the others, and is the most pretentious of the three. The panic created among a group of superstitious peasantry by the supposition that one of them may have been bitten by an imaginary mad dog and infected the rest, is described with humorous vivacity, but the whole thing is hopelessly extravagant. The one redeeming merit lies in its perfect Irishry. But "Damer's Gold" is a genuine if somewhat attenuated little drama, with the truth of nature in it. The central figure is a "sport," who, disheartened by his persistent ill luck in all sorts of gaming, has turned miser and amassed a golden treasure, which excites the cupidity of his relatives. He is a thoroughly human and Hibernian study.

But it is in the brief episode of "McDonough's Wife" that Lady Gregory exhibits her best dramatic and imaginative powers. It is a blend of sordid domestic tragedy and legendary fantasy. McDonough, a wizard of the pipes, who has been roaming the country round in joyous revelry, returns to find his young wife dead in his deserted hovel and awaiting a workhouse burial. He vows that she shall be carried to the grave with every honorable rite and fullest public observance. Sounding eloquent dirges upon his charmed instrument, he brings the whole countryside to the humble bier, and the people, under the spell of his music, vie with one another in their eagerness to do service to the corpse. With an actor capable of giving due emotional expression to the remorseful anguish and fiery wrath of McDonough, this sketch could not fail—it has never been acted—to create a profound effect in the theatre. Though written in prose, it is essentially poetic in its ideas, and is especially notable for the picturesque vigor, conciseness, and mingled realism and fancy of its literary form. The contrast between the direct homely speech of the old workhouse women and the no less direct but more pictorial utterances of McDonough, is particularly striking. It seems to be a pity that Lady Gregory should have devoted so much time to the development of her comic vein, which, though productive, is seldom precious, instead of the tragic, in which her "McDonough's Wife" suggests infinite possibilities. But even in her comedies her complete mastery of all the external national characteristics has been of incalculable value to the Irish Theatre.

The Ambassadors' Theatre is the name chosen for London's newest house of dramatic entertainment. The manager is Durrant Swan, who will open it with a new play by Monckton Hoffe, called "Panthea." The part of the heroine, a Russian who has suffered imprisonment on political grounds, has been assigned to Miss Lillemore Halvorsen, a Norwegian actress. The story is in four acts, the first of which takes place on the coast of Northumberland, the remaining three in a Continental city.

"We hope," says the London *Times*, in reviewing Martin Harvey's revival of "The Taming of the Shrew," in London, "that some careful chronicler is at work making notes of one of the most interesting things in the theatrical history of our time—the

return to common use of Elizabethan method of staging Shakespeare. For it seems pretty certain now that this is no piece of archæological affectation, but a movement that will spread, because it answers to a public demand." The whole play, Introduction and all, was over in two hours and a half.

Some time ago it was announced that the council of the London Academy of Dramatic Art had acquired a site adjoining their present premises for the erection of a theatre for the students. Architect's plans have been prepared, and the council will begin building as soon as the plans have been passed. A special committee, consisting of Sir Hubert von Herkomer, Sir Arthur Pinero, Sir George Alexander, Bernard Shaw, E. S. Willard, Dion Boucicault, and Granville Barker, has been formed to consider the details of the building. The natural presumption is that the theatre, when it has been finished, will be admirably adapted to its purposes. Whether it will ever add materially to the number of properly trained actors, of which the stage, on both sides of the Atlantic, is so badly in need, is another question. Possibly it may fulfil the most sanguine expectations of its promoters and directors, and rival the ancient authority of the Paris Conservatoire, but common experience tends to show that even the most richly equipped of dramatic academies fail to attract the best student material. Young men or women possessing special qualifications for the stage have little difficulty in finding an engagement which will enable them to acquire a certain amount of experience and make a little money at the same time. Too often it is the less-favored candidate only who is willing to give both time and money for instruction. If the capable tyro has the good luck to obtain entrance to a genuine stock company—not, of course, one of the commercial affairs which give two performances every day, and work every morning at rehearsals, but such an organization as that headed by Miss Horniman or F. R. Benson—he will encounter tests which will speedily discover his best faculties and give ample opportunity for improving them. Well do the speculative managers know—as Miss Horniman is learning to her cost—where to find recruits capable of doing good work. Mr. Benson, who for years has been stripped systematically of his chief performers, must have supplied half the principal theatres of England with their leading men and women. All managers realize, very thoroughly, that work in a repertory company provides the best dramatic schooling in the world. Until very recently companies of this description—once so common—have been few and far between in England, while in America they have been virtually extinct; but now they seem to be multiplying again, and their reappearance is a most encouraging phenomenon.

Dutton promises in the autumn, "Wagner, as Man and Artist," by Ernest Newman.

How Wagner astonished an audience in Berlin is related by Otto Lessmann in a German magazine. It was in 1871. He had lectured at the Royal Academy on the opera, and in his honor the "Verein der Berliner Musiker" arranged a performance of his "Faust Overture," under the direction of Prof. Julius Sturm. When it was over Wagner seemed to hesitate for a moment as to what he should do. Then he got up, thanked the musicians, and remarked that, as he had not been connected with an orchestra for twenty years, he felt impelled to show his gratitude further by an artistic deed. "You will understand my request," he added, "that you will repeat the 'Faust Overture' under my personal direction." What then happened made an indelible impression on all who were so fortunate as to be present. The spiritual revelation he made of the various moods of that tone poem stirred the hearers as they had never before been stirred. The difference between a genius and a mere professional conductor was made manifest. The musicians themselves were stunned by what they had done. "We looked at him, and we knew and did what he wanted," they remarked.

It is not often that two pianists play together in concert halls, although the public would doubtless enjoy an occasional duo. Many years ago Carl Czerny arranged Rossini's "Semiramide" overture for thirty-two hands. In San Francisco, a few weeks ago, this piece was played by sixteen pianists, and the audience of two thousand, we read, gave "unstinted applause."

Emma Calvé is said to have decided to devote the rest of her life to teaching, but she "will accept only young ladies of great promise." That will not prevent any one from applying.

Jacques Thibaud, one of the best violinists of the French school, is coming back to America next season. He will give three concerts with the Philharmonic, and will be heard with the other leading orchestras. He was born in Bordeaux, where his father taught him until the age of thirteen, when the boy was sent to the Paris Conservatoire. In 1886 he won a first prize. To supplement his modest means he played several years at the Café Rouge, where he chanced to be heard by Edouard Colonne, who at once offered him an engagement. Soon after, the leader being unable to play the incidental solo in an orchestral work, young Thibaud was entrusted with the task, and so well did he acquit himself that he was engaged as a regular soloist at the Colonne concerts, appearing fifty-four times in a single season. His fame in Paris established, he visited England and America, and then returned for further Continental triumphs, which have brought him both fortune and a unique standing among the masters of his instrument.

The well-known pianist, Bachaus, who will return to America for another tour next season, was born in Leipzig in 1884. He studied nine years with Reckendorf and one year with d'Albert, and at the age of sixteen made his first public appearance with the Gewandhaus Orchestra, Arthur Nikisch conducting. From that day Bachaus has advanced without interruption to the goal he has attained.

Harold Bauer also returns to this country next season. His manager expects him to surpass his last record here, when he played seventy times. Already he has been booked by seven of our orchestras.

Art

THE SALONS.

PARIS, May 17.

Nothing is more striking in the two Salons this year than the absence of a number of the men upon whom they usually rely for their chief distinction or notoriety. At the Salon of the Société Nationale des Beaux-Arts the list is long—Zuloaga and Anglada, those two Spaniards who were always sure to inspire any and every emotion rather than indifference; Sargent, Caro-Delvaille, Morrice, Blanehe, Charles Guérin, Louis Legrand, Maurice Denis, Hochard, whose death is just announced as I write; Zorn; Veber, who was invariably amusing whatever else he might not be and whose place can hardly be taken by Augustin Hanicotte, another modern striving to out-Breughel Breughel. At the Salon des Artistes Français the absent could be more numerous and there would be no very serious cause for regret. The most notable among them is Sorolla, who, though not the supreme master New York, in a moment of enthusiasm, discovered him to be, puts so much sunlight and vigor into his painting that it could not fail to tell on the dull, colorless walls of the older of the two exhibitions.

If the result of so many of the better-known men staying away was to bring forward any genuine new talent or reveal any promising new movement among the younger men, their absence would be more than welcome. The Salons nowadays seem to have a deadening influence upon regular exhibitions, almost equal to that of the Royal Academy, gradually reducing a mode of expression that was original at the outset into a hard-and-fast formula. Painters like Pointelin in the Old Salon or Lhermitte in the New keep turning out the same picture year by year until they might exhibit actually the same canvas again and again, and I, anyway, would not be the wiser. But, apparently, the younger men are not prepared to take advantage of the unexpected opportunity; they contribute little or nothing to make up for the loss, even though, in the Nationale, they are treated with a consideration never accorded them before.

The principal central gallery, heretofore reserved almost entirely for the older members of the Society, has been handed over to them, but no revelation of unknown genius, no menace of revolution, has followed as a matter of course. The place of honor is filled by Louis Charlot, who has a large group of peasants at table that shows close study of Cézanne, but none of the deliberate eccentricity of Cézanne's more strenuous disciples—a conscientious piece of work,

but drab and dreary in color, undistinguished in design, neither interesting as realism nor effective as decoration. And yet there is nothing more accomplished in the room, though it is overshadowed by Suréda's two huge canvases, in one of which a snake-charmer, in the other Jews mourning the dead in a cemetery, have served him as motive for a brilliant scheme of color carried out in large simple masses, with the different planes broadly indicated, a method that commands more immediate attention in a big exhibition than the subtler harmonies of a far more accomplished painter. But Charlot and Suréda are scarcely an improvement on Besnard, or La Gandara, or Zuloaga, or the others, whom they have succeeded for an interval, and this time, certainly, the game is not with the young.

The truth is, the younger men have seldom had so little that is new and, at the same time, worth while to say, though seldom has so much been made of their determination to say something and thrust novelty upon it. You have only to go to the Salon des Indépendants, on the Quai d'Orsay, to realize this. Here you have between three and four thousand works by the artists who, presumably, knock in vain at the doors of the two official Salons and who proclaim their independence in the name they give themselves. And what do you find? Three-fourths of the show made up of rank incompetence, banality, sentimental anecdote that even the Royal Academy in London would reject; a sprinkling of exaggerations or caricatures that would be more appropriate to the Salon des Humoristes; and the rest, a collection of the experiments and absurdities and trivialities of the different schools that are supposed to be the most advanced and that have recently been represented for the first time in America, where their work has excited so much talk that I know better than anybody the uselessness of my adding to it now. Of them all, the Cubists are most to the fore, and, without questioning their seriousness, without refusing absolutely to believe that a new development in art may eventually come out of their groping after they possibly do not know what, the fact remains that at the present stage of their research art is reduced to a geometrical problem. Even one of the initiated may not always be able to guess, unaided, what other Cubists seek to express by their cubes, and, this being the case, the rest of the world may possess its soul in patience until Cubism has progressed from experiment to actual accomplishment. In the meanwhile, my visit to the Indépendants has convinced me that, however mediocre the Salons of the Champs-Elysées may be, their mediocrity need not be attributed to contempt for, or neglect of, the most modern schools and movements. The Salon des Indépendants is by far the least interesting or stimulating exhibition I have been to this spring in Paris.

Two or three of the older men at the Nationale have apparently made an effort to break away from the conventions in which they had imprisoned themselves. It comes as a surprise to find, in the place of the super-elegant women yearly supplied by La Gandara, a large Don Quixote on a canvas of heroic proportions, the costumes correct according to Cervantes, the knight's visions hovering above him. The intention is evident to emphasize the ideal side of his character, just as La Gandara, in his portraits, strives to emphasize the real cut and textures of the last creations from the Rue de la Paix. But, as one looks, one remembers certain small canvases by Daumier, as much more modest in conception as in size, but with a tragic intensity in the figure of Don Quixote, a grim beauty in the landscape, and a fine quality in the painting that La Gandara does not approach. Le Sidaner, likewise out for adventure, leaves the familiar scenes of the earth where he has been wont to wander, and, in a series of six canvases, gives his impression of the heavens above him, of sunshine and clouds, at different hours and seasons. In each there is a low sky line, and then a vast expanse of sky, now cool and pure in the early light of a spring morning, now warm and golden in the splendor of the sunset, or again, with the storm clouds sweeping across in sombre fury, or drenched with moonlight. The sunset and the spring morning are particularly successful, full of light and atmosphere, but these, like the others, are, after all, only studies, memoranda of passing effects and momentary impressions, scarcely justifying the scale upon which they have been made.

Carolus-Duran's Crucifixion is almost as unexpected as La Gandara's Don Quixote, though he has more than once strayed from the beaten tracks of portraiture, and it is as melodramatic. It is curious to see how the habit of over-emphasis, which he has developed in painting the jewels and silks of his sitters, must still cling to him in his interpretation of so different a theme: a storm-laden sky may be used as a symbol of tragedy, but he has worked up his storm to such theatrical intensity that the tragedy itself is blotted out, just as often his sitters disappear in the magnificence of their costume and accessories.

But, on the whole, the most interesting work comes from men who are content to give only new variations of old themes and according to old recipes. In neither Salon is there a portrait of greater distinction than one of a lady by Boldini, at the Nationale. In it his mannerisms are modified, but they are still there. The idealized fashion-plate still seems to be his aim; there is still the effect of violent movement suddenly arrested in the inexplicable swirl of the draperies about the lady's feet and the tortured lines of the trees between which she walks, for Boldini has invented a new background and shows her coming through a wood, and has thus given himself the motive for a pleasant harmony. As the gray-black of her dress repeats the gray-black of the trees, so here and there, at her waist, on her skirt, a touch of vivid green reechoes the young green of the grass in the little wood. The result is a freshness rare in his portraits, whose color and atmosphere are more apt to savor of the boudoir and the drawing-room. The figure has life and spring, the face vivacity and charm, the feeling of youth fills the canvas. Boldini's other portrait is of a man who, it is clear, appealed to him much less and whose modish elegance, as Boldini has seen it, borders on the effeminate; nevertheless, few of the other portraits can be ranked with it. Besnard's, of M. Dubar, director of *L'Echo du Nord*, his only painting this year, is most disappointing, and, for him, a commonplace piece of work that might be easily overlooked were it not by an artist one never willingly overlooks.

Renouard makes his portrait of M. Bryois, Consul de France, almost a caricature, seeming to insist in it, though perhaps unintentionally, on the contrast between the face, which suggests the good, simple *bourgeois* of comedy, and the official gold lace of the coat with the array of decorations. But Renouard, as a painter, loses a good deal of the vivacity that distinguishes him as a draughtsman. The picture is heavy, academic in treatment, very different from his series of rapid sketches in the Courts of Justice that are shown with the drawings downstairs. Simon is not more inspiring in his portrait group, this time of a Famille en Deuil, as he calls it: a mother and four children, Bretons, gathered together in an interior as dull as their faces and their dress. Keen as is his eye for character, Simon has an unfortunate tendency to pose his sitters as if for the camera; when they are not interesting in themselves—and they are not in this new group—he is at no pains to lend them the interest of originality in his arrangement. We have long since learned the fallacy of naturalism in art. It is the very fidelity to nature of an able painter like Simon that enables us to understand why the Cubists declare the only possible error in art to be imitation. At the opposite extreme is the portrait group by Aman-Jean. No camera could record the exhaustion, the inanition that has overtaken the mother and daughter and

son—for such I take to be their relations—and the two dogs who are posed in a landscape as dim in form and color as themselves. They are outdone in weariness only by the figures in the two tall, narrow panels the same artist has painted for the Chilian House of Parliament, in one of which Law slumbers over her task, while in the other Force is far too languid to resist Temptation or to fall a victim. Aman-Jean and his sitters and models long since sailed away from this material world for the land where it is always afternoon. Of the other portraits, none calls for special mention. Cecilia Beaux has three, but they will not repeat the triumph of her painting of a child and nurse, so amusing in its ingenious composition and harmony of white, shown at the same Salon in its earliest years.

Gaston Latouche has not been more eager than these portrait painters to wander after fresh inspiration; he has made no effort to open the window and let into his studio the real light of day, or night, to illuminate his idyls. His scheme of illumination is again frankly artificial, but rarely has he used it to such admirable purpose as in the vine-covered arbor, where a slim, winged Love dissects a Satyr for the entertainment of a group of ladies met together for "the five o'clock." The subject is as sham-idyllic as in many a panel or vignette of the eighteenth century, but then it has much of the same grace and charm. Fragonard never painted a daintier figure than Latouche's Love, bathed in the golden light filtering through the foliage-covered lattice of the arbor, and few modern painters could rival the delicacy with which the detail of porcelain and silver is rendered. The painting gives to the exhibition the note of gayety it so sadly needs. Myron Barlow, as unadventurous, has not stirred from the restful gray rooms where his quiet women work and move in the simple round of domestic duties; but this year, in one or two, he has introduced a stronger note of color that sings out in the peaceful grayness—the vivid blue of a teapot and cups and saucers on a table, the scarlet of a woman's shawl repeated in a scarlet box close by. Cottet returns to his old haunts in Brittany, to find there a sonorous effect of light in the Port of Douardenez and a rhythmical pattern for a frieze in the costumes of peasants as they follow the procession at Plomodierne. Frieseke once more sees, and makes you see with him, the dainty beauty and decorative possibilities of a beautiful woman at her toilet, a theme Richard Miller, in the other Salon, treats with equal elaboration, but with greater strength of color and with such minuteness of observation and breadth of treatment in a little figure on the table near his model, that of this alone he might have made a picture few painters of still-life could surpass.

Alexander Harrison gleans no new secrets from the sea he has painted again and again during many years, nor has Willette much more that is vital, though it may reflect a later mode, to tell us of that side of Paris life to which he has returned again and again for subject and models. The same woman, eternally young, poses in front of the same sea on Louis Picard's canvas, and Melchers's mother and child seem to come from a land we already know. But if many artists in the Nationale repeat their method or their subject until it becomes difficult to write anything of their work one has not written before, at least their repetitions do not offend the eye, like those huge machines that, in the Artistes Français, Gervais and Rochegrosse and other painters less capable manufacture year after year with unabated enthusiasm and unimpaired ability, even though the fashion for that sort of Salon picture has had its day.

There is not much else to note of the painting at the Société Nationale when I have said that, probably for the last time, some of Boutet de Monvel's conventional panels may be seen, a trifle discountenanced by their alien surroundings; that there is a monumental dignity in Flandrin's young cavaliers grouped on a large canvas, though they are not much more than roughly blocked in; that it is interesting to find a younger Cazin and a younger Roll endeavoring to carry on, however imperfectly as yet, the family tradition; that the trail of Gauguin may be traced in the work of at least one exhibitor, Charles Dufresne; and that Cameron Burnside, Grace Ravlin, Koopman, Rolshoven, are among the Americans whose work stands out above the average. At the Société des Artistes Français, I recall no other paintings that struck me one way or the other, save the bold and brilliant Algerian subjects of Léon Cauvy, and the strong but somewhat coarse Lune de Miel by Carlos Vasquez, that, in the arrangement of the two peasants, seems almost a modern parody of the beautiful little Van Eyck in the London National Gallery.

When it comes to the section of prints, again one is struck with the number of men who do not show. It may be that artists begin to realize the hopelessness of exhibiting small prints, as well as small black-and-white drawings, in such a bewildering caravanserai. Or it may be that, for all we hear of the "boom" in etching, the true etcher is still, as he ever has been, in the minority. At the Société Nationale, Louis Legrand is sorely missed. But it would be useless to go through the list of the absent. Nor does the presence of Lepère Béjot, Beurdeley, and Webster help one to forget them. As for the color etching, it seems to be there for no other purpose than to reveal itself in all its iniquity, varying from the small elaborate plates used as illustrations and printed on the page with type as they never should be, to the large elaborate plates reproducing the artist's paintings, which is as little their mission. Lithographs make no braver showing, and this is the more extraordinary when one recalls all the good work being done by the Senefelder Club. I noted some amusing lithographs printed in color by James R. Hopkins, rather too frankly inspired by Japanese models, but the color used with due respect for the limitations of the medium; these few examples, however, were about all that interested me. The drawings in black-and-white or in color are not remarkable. To judge from the Salons, illustration might exist no longer. In the hodge-podge of water-colors and pastels, hung more or less abominably in both Salons, the work of Luigini, of Antoni, of a minority of others, may now and then catch the eye, the growing influence of the Japanese may seem more marked than ever. But when I have said this, I have said all that need be said. That an occasional masterpiece may be lurking somewhere unseen in the confusion is more than likely, but I doubt if there are eyes penetrating enough to detect it.

The sculpture never fails to impress by its efficiency, in one Salon as in the other. There is no lack of competent sculptors in France, and it is therefore the more difficult to understand why there should be so few fine modern pieces of sculpture. The French cannot be found fault with for refusing monuments to their great men, their heroes, but how often does the monument add beauty or distinction to the French town in which it is erected? Rodin has yet to find his rival in the Salons, but it is long since he has shown anything of monumental importance, though it is not now for lack of opportunity or commissions. He sends this year, as frequently before, only partly finished work. What one would like to have today is the completion of some of the works, the studies for which Rodin has allowed the public the privilege of seeing from time to time during the last ten years and more. N. N.

George W. Bricka, of New York, announces for publication on Juno 2, "Posters: a Critical Study of the Development of Poster Design in Continental Europe, England, and America," by Charles Matlack Price. The volume, containing 42 reproductions in color and 120 in monotone, is published in *de luxe* form. The text includes a discussion of the history and development of poster art from its inception to the present time. The edition is limited to 250 numbered copies.

Among the art books announced by Dut-

ton are: "Greek and Roman Sculpture," by A. Furtwängler and H. L. Uirichs, translated by Horace Taylor, and "The Masters of Past Time," by Eugène Fromentin, translated by Andrew Boyle.

Mr. Albert Hale has compiled a handsome volume of photographs of "Old Newburyport Houses" (Boston: W. B. Clarke Co.), which we can recommend to any who are interested in early New England architecture. In many cases details and interior views are given as well as the general exterior.

A. E. Gallatin's "Whistler's Pastels and Other Modern Profiles" (John Lane) has reached a second edition, and to grace the event the author presents a couple of inedited Whistler sketches, besides an additional handful of brief essays, of which those on Frieseke and Max Beerbohm may be particularized.

Finance

THE DEADLOCKED MARKET FOR NEW SECURITIES.

Two events of the past week, which had been expected to give an illuminating test to the mysterious investment market for new securities, were the almost simultaneous offerings of the $45,000,000 of New York city 4½ per cents in this market, and of $125,000,000 Chinese Government 5 per cents in Europe. The response of the public to those offerings had been awaited with great interest, because of its failure to respond in its customary form to a number of preceding offers of new high-grade securities.

The offer in New York, on April 14, of $30,000,000 4½ per cents of the Chicago, Milwaukee & St. Paul Railway, at 99½, evoked subscriptions of only $24,000,000, and the bonds sold at 99¼ on the Stock Exchange shortly afterward. Other expected bond issues, such as the $21,000,000 new Interborough Rapid Transit 5 per cents, were thereupon held back from market. In London, during the past few weeks, more than a dozen new security issues, most of them of high character, had failed to be covered by public subscriptions and had been left largely on the hands of the underwriters.

The offering, two weeks ago, of $55,000,000 5 per cent. Brazilian Government bonds at 97, elicited bids of only $3,300,000 from the English investing community, and the underwriters, among whom were the Rothschilds, were compelled to retain the remaining $51,700,000. Shortly before, an offering of $12,500,000 Madras & Mahratta Railroad 4 per cent. bonds at 99, guaranteed by the Indian Government, was covered to the extent of only 10 per cent. More recently, only $500,000 Montreal 4½ per cent. municipal bonds out of $2,000,000, offered at par in London, were taken.

A recent compilation showed the following results to the London offering of other high-grade securities: $10,000,000 Grand Trunk Pacific 4s, offered at 87, only $2,000,000 taken; $15,000,000 New South Wales 4s, offered at 98, only $2,400,000 taken; $5,340,000 City of Edmonton (Canada) 5s, offered at 100½, only $1,068,000 taken; $5,000,000 State of Bahia (Brazil) 5s, offered at 93, only $750,000 taken; $15,000,000 Union of South Africa 4s, offered at par, only $900,000 taken; $10,000,000 Western Australia 4s, offered at 98½, only $1,300,000 taken. Out of ten great London offerings, which asked for nearly $138,000,000, only $13,500,000 was taken by the public.

So unusual a series of unfavorable responses raised some questions. Was the supply of investment capital actually too deficient, through actual shortage or through use in other directions, to meet the demands of borrowing Governments and corporations? Or were investors so fearful of a great political or financial calamity, that most of them would not part with their capital on any terms? Or were they reserving their funds for other and still more important impending loans? Or had they reached the conclusion that, through increased gold production or for other causes, they must have a larger return for their invested money? Or were they merely convinced, because of one or two cases in point, that better bargains could be had by waiting until the new securities had failed to be covered at the sale and were left with the underwriters, to be disposed of on the best terms obtainable? Any of these hypotheses was plausible; it was hoped that last week's two large sales would indicate which of the suggested causes was really the main consideration.

It cannot be said, perhaps, that the outcome of the week's two offerings conclusively answered this question; still, the results were at least suggestive. The New York city bonds were 70 per cent. oversubscribed in Tuesday's bidding; but, in spite of their high rate of interest and their undoubted security, they brought on the average only a trifle above 100⅛. Thus they seemed to confirm the bankers' theory, widely asserted after the St. Paul bond sale, that for the present, at any rate, the market for all but the highest grade of new securities was on or near a 5 per cent. basis. The Chinese loan in Europe had a different result. Offered at 90, the $37,500,000 London allotment was more than fifteen times oversubscribed, and bidders received only 2 to 5 per cent. of their applications. The Berlin portion was covered at least five times over.

Now the Chinese bonds, at the offered price, yielded more than 5½ per cent. to the investor; but, on the other hand, the security for a loan issued by an experimental revolutionary Government was certainly not of the highest quality. Therefore the loan must be classed as a success, and inference is reasonably plain that capital can be had abroad, even with Europe's present deadlocked money markets, to meet these large demands. But in that regard, a not dissimilar conclusion may be fairly drawn from the New York city episode. At a price, borrowing corporations and Governments in good standing can get their money.

But at what price? That is the still unsettled question. Owners of capital are clearly both able to dictate terms and disposed to do so. But whether this is because a permanently new rate of return on such capital has now been somehow fixed, or because the immediate demands from such borrowers exceed the available increment of new capital, or because some investors refuse to lend at all, leaving the rest in control of the situation—these problems are still debatable.

It is probably true that the second and third of the above-suggested explanations, which would reflect a more or less temporary condition, are those most favored by practical authorities. The foreign situation is clearly abnormal, and largely dependent on political affairs. But there would still remain, even if trouble of that nature were to be removed, the simultaneous and enormous requisitions by the younger outside communities of the world, and by European states with ambitions for larger armaments.

BOOKS OF THE WEEK.

Pictures the Naval Hero "in Miniature" in

The Life and Letters of John Paul Jones

Her Researches Bring Jones Out of the Mists of Legend Into the Sunlight of History

Of Paul Jones as a child she gives this vivid glimpse:

"The village legends still alive at Kirkcudbright bear witness to his early talent for seamanship when he was yet more child than boy. Words of command caught from the lips of his sailor-teachers he was wont to repeat to a company of subjugated playfellows assembled in their mimic ships, while he assumed a superior place upon a rocky eminence on the shore and in a loud voice directed manœuvres; and often he would launch his little boat alone upon the waters, calling out to his imaginary crew in words of authority and command—the hero in miniature, prophetic and engaging picture."

Frederic C. Howe

Shows the City is the Hope, Not the Despair, of Civilization ni

European Cities at Work

A Study of Municipal Achievements Possible for American Cities

He describes the control of the great factors of city life, such as transportation, the land on which the city is built, the open spaces in which the city breathes, and the houses in which people live. It is along these lines that the European cities have made the most rapid advance in recent years. It is in these directions that they have pushed the idea of municipal administration far in advance of American cities.

James Huneker

Retells the Romance of Helena von Doenniges and Ferdinand La Salle in "A Half Forgotten Romance," One Paper of His New Book

The Pathos of Distance

Vivid With Brilliant Comment Upon Intellectual and Artistic Tendencies

These random phrases may give the flavor of the book and the flash of the writer's style:

"Helena von Doenniges has 'red hair of the rich hue called Titian by æsthetic hair-dressers and ardent reporters.' Meredith's is a 'crackling, incendiary style.' Our skyscrapers are 'waffle-faced' with windows. Our women 'have grown young; all except the young women.' Yeats's is 'sweet, languorous, poetic speech.' 'The once almost demigod Chateaubriand is only remembered as the name of a beefsteak,' while Récamier is better known as 'the woman who wore so becomingly an Empire gown.'"

$2.00 *net; by mail* $2.19.

Price Collier's

Views of the German Army

Among the Most Interesting, Sharp-sighted and Independent in His Outspoken New Book

Germany and the Germans

From an American Point of View

He once says of the army:

"It is the best all-round democratic university in the world; it is a necessary antidote for the physical lethargy of the German race; it is essential to discipline; it is a cement for holding Germany together; it gives a much-worried and many-times-beaten people confidence; the poverty of the great bulk of its officers keeps the level of social expenditure on a sensible scale; it offers a brilliant example, in a material age, of men scorning ease for the service of their country; it keeps the peace in Europe; and until there is a second coming of a Christ of pity and patience and peace, it is as good a substitute for that far-off divine event as puzzled man has to offer."

$1.50 *net; by mail* $1.65.

The Life and Letters of Gen. George G. Meade

Vivid with Letters from Mexican and Civil War Battlefields

Graphic Biography of a Great Soldier, Edited by

George G. Meade

On June 29, 1863, General Meade wrote to his wife at Middleburg, Md.:

"We are marching as fast as we can to relieve Harrisburg, but have to keep a sharp lookout that the rebels don't turn around us and get at Washington and Baltimore in our rear. They have a cavalry force in our rear, destroying railroads, etc., with the view of getting me to turn back; but I shall not do it. I am going straight at them, and will settle this thing one way or the other."

Whether or not in "this thing" he included the whole war, the blow he struck in the battle described in the pages to follow was mortal to the Confederacy. This largely autobiographical work uncovers the mind of the victor of Gettysburg.

2 *vols.* *With portrait.* $7.50 *net.* *Postage extra.*

Henry James's

Humor and Portraiture Make Delightful Every Paragraph of His New Book

A Small Boy and Others

These two single sentences may suggest how vivid are Henry James's boyish memories in this volume of autobiography. The first pictures his great-aunt, Wyckoff, who "signified her wants as divinities do":

"Solidly seated or even throned, hooded and draped and tucked in, with big, protective, protrusive ears to her chair, which helped it to the effect of a shrine, and a large face in which the odd blackness of eyebrow and of a couple of other touches suggested the conventional marks of a painted image."

The other gives the little boy's notions of American society as gathered from the conversation of his elders:

"The field was strictly covered, to my young eyes, I make out, by three classes, the busy, the tipsy, and Daniel Webster."

$2.50 *net; by mail* $2.73.

A Dickens Dramatic Reader
By FANNY COMSTOCK
338 pages, 60 cents
The aim of this book is twofold, to present portions of the works of Charles Dickens for use in the reading class, and to assist in dramatic representation.
By extracting the dialogue from the enveloping explanation and comment, attractive material is presented, suitable for upper grades of grammar schools, for high schools, and academies.
The book includes scenes from "Pickwick Papers," from "Nicholas Nickleby," and entire versions of "The Cricket on the Hearth" and "A Christmas Carol."

School Advertising in The Nation

THE NATION stands alone in its field. It has a larger circulation than any other politico-literary journal published in this country, going to all the principal libraries and reading rooms, and into thousands of families.

The circulation is chiefly among the thinking and well-to-do classes—lawyers, physicians, bankers, and other professional men—and in the homes of cultivated people, where the education of children is a matter of careful consideration.

The rate is reasonable, and discounts are made on continuous insertions, of which most of the school advertisers avail themselves.

Advertising rates, 15 cents an agate line each insertion, with the following discounts: 5 per cent. on 4 insertions, 10 per cent. on 8 insertions.

SPECIAL RATE—Ten Cents a line net for thirteen times
(Minimum space three lines)

Orders may be forwarded through any responsible advertising agency, or directly to
THE NATION, 20 Vesey Street, N. Y.

Leading Fiction that has Quality

A New Novel by ELIZABETH DEJEANS

"A writer to be reckoned with."—Chicago Record-Herald.
"She has advanced into the foremost rank of novelists."—Hartford Courant.

THE HOUSE OF THANE

A vital portrayal of the modern pirate, a subtle study of the emotions, an even more absorbing story than "The Far Triumph."

By ELIZABETH DEJEANS, *Author of "The Winning Chance," "The Heart of Desire," "The Far Triumph," etc. Illustrated in color by F. C. Yohn.* 12mo. *Cloth.* $1.25 *net. Postpaid,* $1.37.

Freshness of viewpoint and a power of revealing the true inner emotional life of men and women have won for Elizabeth Dejeans an important place in American Letters. Her last novel, "The Far Triumph," published in 1911, definitely placed her in the forefront of American writers whose works show a deep study of human character.

In the new story the character of John Thane is remarkably well drawn and readers will be impressed by the truthfulness with which his passions and emotions are described and their effect upon his life brought out. From the moment when Thane realizes the shallowness of his wife until the climax, the story is a succession of dramatic and thought-stirring scenes. The gradual awakening of this strong, dominating man to the true values in life through the devotion of Mary Kelly, a lovely young girl, child of the streets, is exquisitely done.

"LO MICHAEL!"

By GRACE L. H. LUTZ, *Author of "The Mystery of Mary," "Marcia Schuyler," "Dawn of the Morning," etc. Illustrated in color by Gayle Hoskins.* 12mo. *Cloth.* $1.25 *net. Postpaid,* $1.37.

Novels dealing with the clash of social classes and the problem of the poor are very often unpleasant reading, but this strong sociological love story is one of exquisite charm and sentiment.

"Mikky," the little newsboy, saves the life of Starr, the baby daughter of a rich banker, from an angry mob. Through the banker's help and his own indomitable energy, "Mikky" rises to power, and not the least of that which makes him so appealing is his remembrance of the poorer class from which he arose. The story of how he and Starr eventually struggle through class prejudice to happiness is developed through a series of absorbing incidents. Mrs. Lutz handles all her characters sympathetically, and as the story grows in intensity, the social differences which separate Michael and Starr are brilliantly contrasted. The story is free from any suggestion of socialistic motives and is a most absorbing human chronicle.

THE UNFORGIVING OFFENDER — Second Printing

By JOHN REED SCOTT, *Author of "The Colonel of the Red Hussars," "The Last Try," etc. Illustrated in color by Clarence F. Underwood.* 12mo. *Cloth.* $1.25 *net. Postpaid,* $1.37.

"John Reed Scott has shaken off the ghastly cloth of tradition and comes forth into the open to hazard a novel in which a woman who errs recovers her lost place among women who are good women, not merely anointed saints. That a woman should be given her chance to moral rehabilitation only thin-lipped, skirted puritans will deny. Such books as this do more good for the cause of woman than the most sulphurous preachments."—*Minna Thomas Antrim, in the Philadelphia Record.*

THE ROAD OF LIVING MEN — Second Printing

By WILL LEVINGTON COMFORT, *Author of "Routledge Rides Alone," etc. Frontispiece in color by M. Leone Bracker.* 12mo. *Cloth.* $1.25 *net. Postpaid,* $1.37.

"Mr. Comfort writes stories that are unlike any others."—*San Francisco Argonaut.* "A fascinating love story."—*Boston Globe.* "A very vivid story which one reads with no halting interest."—*N. Y. World.* "The book fairly breathes optimism and joy."—*Knoxville Journal-Tribune.* "One has no hesitation in classing this with the best romantic fiction of the day on either side of the Atlantic."—*Chicago Record-Herald.*

THE MAXWELL MYSTERY

By CAROLYN WELLS, *Author of "A Chain of Evidence," etc. Illustrated in color by Gayle Hoskins.* 12mo. *Cloth.* $1.25 *net. Postpaid,* $1.37.

"Holds one firmly and powerfully to the end."—*Philadelphia Press.* "The best novel by far that Miss Wells has written. It is full of surprises and is a most exciting story."—*Newark Evening Star.* "Curiosity is kept alive by rapid action and the solution is completely hidden until every possible theory is tested out."—*Springfield Republican.*

Timely Books of Great Value and Interest

PICKETT AND HIS MEN

By Mrs. LA SALLE CORBELL PICKETT, *Author of "Literary Hearthstones of Dixie." Illustrated with portraits and battle scenes.* 8vo. *Cloth.* $2.50 *net. Postpaid,* $2.70.

The year 1913 marks the Fiftieth Anniversary of the Battle of Gettysburg, which makes this remarkable work of timely interest. It is an intimate recital of the events preceding, during, and following the giant battle, and as a piece of literary work it contains the most noble description of a charge ever penned. The soldiers of both North and South will long turn to this epic of Gettysburg, not only as the standard work upon this subject, but also as a remarkably thrilling piece of writing.

THE REDUCTION OF DOMESTIC FLIES

By EDWARD H. ROSS, M.R.C.S. England, L.R.C.P. London. 16 *full-page plates.* 8vo. *Cloth.* $1.50 *net.*

The object of this book is to bring to public notice the necessity for the reduction of domestic house-flies in cities, towns, villages and rural districts. There is a great deal of evidence to show that these insects are directly concerned in the spread of certain diseases, and therefore every effort should be made to sway public opinion in favor of fly reduction. This book is intended to describe the nature of the insect known as the house-fly—its life, its danger to human beings, and the part it plays in causing sickness, death and misery; and to show how this pest may be best reduced in its number, so that its dangerous influence may be lessened.

J. B. LIPPINCOTT COMPANY, PUBLISHERS, PHILADELPHIA

The Nation

NEW YORK, THURSDAY, JUNE 5, 1913.

The Week

For a long time there have been complaints in various parts of the country that the postal service has not been conducted upon that plane of efficiency and public convenience to which the people are entitled. It was strongly suspected that the good fiscal showing made by Postmaster-General Hitchcock—the wiping out of a deficit of $17,000,000—was obtained, in greater or less measure, by cutting expenditures at the cost of deterioration in the service. This suspicion is confirmed by the report made to Postmaster-General Burleson by a committee consisting of the First, Second, Third, and Fourth Assistant Postmasters-General and the chief clerk of the Department. In support of their conclusion a number of specific instances of unjustifiable saving are pointed out. Failure to make deserved promotions, and delay in filling vacancies, constitute one class of administrative delinquencies charged in the report; another class has reference to refusals of needed extensions of the rural free-delivery service and to temporary discontinuances or curtailments of star-route service. For this sort of policy there is no sound excuse. The true policy is that indicated by Postmaster-General Burleson. "The people," he says, "are more interested in good service than they are in any technical showing of surplus—especially if that showing is not justified by the facts of legitimate accounting. They want good service, and are willing to pay for it."

But, having said thus much, we feel bound to add that the report, or the official summary of it at least, is anything but a fair or judicial appraisement of the facts connected with Postmaster-General Hitchcock's administration of his office. Whatever fault may attach to his excesses in the way of retrenchment, the question remains whether he did not effect large and praiseworthy economies. The report does not expressly deny that he did; but it evidently seeks either to produce the impression that he did not, or at least obscure the fact that he did, if such was the fact. Surely, an official report, made by a formidable array of high-class administrators, should not leave out of sight all question of the relative magnitude of the things it deals with and the things it does not deal with. The instances of false retrenchment for which figures are given may be highly important in the matter of good postal service, but they go an extremely little way towards accounting for the improved fiscal showing made by Mr. Hitchcock. Thus great stress seems to be laid on the following:

> Records show that during the four years from March 4, 1909, to March 4, 1913, vacancies which were allowed to exist for periods of from one month to more than one year aggregated the equivalent of thirty-four clerks employed continuously during the above period.

Well, thirty-four clerks at $1,500 a year means $50,000 a year; and if Mr. Hitchcock kept places vacant, and created a big grievance, in order to effect this saving, he certainly showed extremely poor judgment. But the $50,000 in or the $50,000 out makes no perceptible difference in the wiping out of the $17,000,000 annual deficit which he found when he entered upon his office.

Col. Roosevelt's libel suit had the happiest ending possible. He obtained a complete vindication, and has forever disposed of the gossiping or malicious stories about his excessive drinking. This was his main object, and to attain it the trouble and expense to which he put himself were well worth while. For not only has he cleared his own reputation, but has given a needed public lesson on the folly of believing, without evidence, the reports of private scandals in the lives of public men. Not the least fortunate aspect of the suit was the decision of the defence not to present their side in court. The editor's lawyers were well advised in concluding that nothing they might produce in the way of evidence could break the force of the testimony given by so many who had had the best opportunity to observe Mr. Roosevelt's habits, to the fact that he indulges in intoxicants only with extreme moderation. After all this array of witnesses had been heard, there was nothing for the editor to do but make his apology and retraction and submit to the formal verdict against him. As this was all that Col. Roosevelt had sought, he was prompt in waiving any question of money damages, and left the courtroom with the justified sense of a good piece of work well done. He undertook it not only for his own sake and that of his family and his future fame, but in the public interest; and his course in the whole affair deserves nothing but praise.

The Massachusetts Legislature has passed an amendment to the State Constitution providing for what may be called the referendum, though it is not the institution made familiar by recent Western Constitutional changes. As the last Legislature also had passed it, the proposal will be submitted to the people in November. It would be misleading to call the proposed measure Progressive. The fact is that the Legislature was supposed to have the power of referring measures to the voters, as in most States amendments to the Constitution have always been so referred. A decision by the Massachusetts Supreme Court, however, held that the power was limited; an act applying to a city or a county might be referred to the unit concerned, but not acts in general. Thus, all that is now done to write into the Constitution explicitly what had erroneously been thought to be there. Proof of the essentially conservative character of the forces behind the amendment is found in the failure of an energetic attempt to couple the initiative with the referendum. Evidently, to ask the voters to say yes or no occasionally upon a measure of importance is felt to be one thing; to interfere with the functions of the Legislature by establishing an added method of making laws alongside of it, is quite another.

How far New York State has come since the days of Gov. Hughes is prettily shown by the shift that has taken place in the direct primaries issue. It is not now a question whether popular nominations are desirable, but who shall have the honor of presenting them to the voters of this State. On the one side

stands the Governor, grimly determined to serve the peepul no matter what sinister forces shall attempt to block his way. On the other side is unfurled the saffron banner of W. R. Hearst, equally reckless of personal fortune if only the enslaved masses may be lifted a step towards the light. The trumpet of neither gives an uncertain sound, but poor little Miss Direct Primaries halts between her two champions, utterly bewildered by their contradictory directions to her. She could be content with either high-minded leader, but how is she to follow one to the right and the other to the left simultaneously? The fault lies, of course, with the Governor. He represents the peepul in a merely official way, while his noble antagonist represents them by virtue of his very being. Mr. Hearst could not misrepresent them in their loftiest aspirations if he tried. It would be a psychical impossibility.

Georgia's name leads all the rest south of Mason and Dixon's line in the possession of automobiles. In fact, this only mildly expresses her supremacy in this respect, for she boasts nearly twice as many of these vehicles as any of her neighbors. Moreover, she is increasing her supply of them faster than any other Southern State, the number in Georgia having gone up in the past twelvemonth from 14,000 to 20,000. The Atlanta *Journal* endeavors to discover the reason for this distinction. Is it greater prosperity, or more reckless extravagance, or better roads? This last suggestion is significant. An automobile is peculiarly impatient of bad roadways. A highway which a conservative horse and driver will accept as an immutable decree of a mysterious Providence, a man in a motor-car will denounce as a contrivance of Satan, or, more likely, as an indication of the shiftlessness of the community. What the scorn and wrath of delayed outsiders have not availed to accomplish in making Southern roads more nearly what they should be, ought to follow in the wake of the 11,000 automobiles of Tennessee, the 10,000 of Florida, the 4,000 of Alabama, the 4,500 of Arkansas, the 7,000 of North Carolina, the 6,000 of Virginia, and the 7,500 of Kentucky.

The Board of Health of this city has adopted unanimously a resolution the effect of which is to put a stop, for the present at least, to the use here of the Friedmann method of treating tuberculosis. To meet the situation produced by the exploitation, past and prospective, of this alleged cure, the Board caused to be inserted in the Sanitary Code a new section forbidding the use of living bacterial organisms in the inoculation of human beings, "until after full and complete data" concerning preparation, dosage, and administration have been submitted to the Board, and permission shall have been granted by it. This action does not constitute a final condemnation of Dr. Friedmann's method; but it does suffice completely to justify the cautious attitude assumed by the medical profession of this city generally when Dr. Friedmann first presented his claims, and adhered to ever since. Those who saw nothing in this caution but professional jealousy, or a superstitious regard for professional rules, can hardly fail to see now that something much more respectable than this was at the bottom of the matter. Physicians know that when an issue of this kind comes up, far more is involved than the question of giving the new man, or the new process, "a fair chance"; the risk of incalculable mischief has to be considered, and considered with a most serious sense of responsibility.

So extreme a case of the obstinate juror as appears to have been presented in the Gibson murder trial at Newburgh is rarely met with. "One juror," the foreman is quoted as saying, "refused to have anything to do with us. He refused to answer questions. He refused to give his views. He refused to tell us where he stood on any subject. Except for him, we should have been back in court very shortly after retiring." But this is a risk inseparable from the jury system as it stands, with its requirement of unanimity; and that requirement, in criminal cases at least, is of such enormous value that we cannot afford to abandon it on account of occasional failures of justice which it may cause. It is true that a general laxity of feeling and opinion in regard to the execution of the criminal law may lead to a condition in which such failures become a frequent occurrence, and a serious menace to the whole system of criminal justice; but the cure for that is a toning up of public opinion and sentiment. Precisely this thing has taken place in recent years throughout the country, and most notably in this city.

People not of the Protestant Episcopal communion are puzzled at the agitation, by no means new, for a change in the name of that church; nor will they be helped to an understanding by the statement of the Bishop of Texas, the Rt. Rev. Dr. Kinsolving, that "we can be thoroughly Protestant and at the same time wholly Catholic." The ritualists or high churchmen, who are strong in some of the smaller dioceses, wish to emphasize their church's claims to catholicity and apostolic descent by calling themselves "the American Catholic Church" or "the Catholic Church in America." The broad churchmen, as represented by Bishop Perry, of Rhode Island, hold that "names must be rid of sinister associations that now attach to them. The word 'Protestant' must be cleansed of defiance and irreverence, if it be retained. The word 'Catholic' must be purged of spiritual pride and arrogance if it is adopted." Accepting these views, the diocese instructed its delegates to the next General Convention that, while there was need of making the title of the church more "truthful and historically descriptive," the mind of the church had not yet matured as to the best change to be made.

Even if W. Heinrich Schmidt, of Worcester, Mass., has failed to win the English golf championship, he is a made man in the field he has apparently chosen to take as his own. The player who carries Hilton to the nineteenth hole can afford to be judged on his merits only. But the romance of this New England boy's adventure will, of course, appeal to a sentiment that ranges far beyond the tee and the putting green. The case of young Schmidt is another illustration of how an aspiring American can impress himself on his countrymen by way of Europe. In the field of music it is too often the case that this country will not recognize an American artist until he has been brevetted by the Kaiser or Covent Garden. In literature, examples are not wanting. Josephine Preston Peabody, known only to a few of the elect here, was revealed to us by

the British. Theodore Dreiser's belated reputation came to him *via* Mr. Arnold Bennett and H. G. Wells. Mr. Edward Knoblauch set out from London to conquer New York. The same issue of the paper that recorded the achievement of young Schmidt announced the forthcoming presentation at Berlin of a play by Herman Scheffauer, of California. We cannot have too many such cases.

Some will say that Sarah Bernhardt is among the fortunate mortals whose fate it is never to taste the cruel fickleness of the crowd. The common notion is that nowhere are the vicissitudes of popularity so sharp and so rapid as in the theatre. This is an erroneous view. Every year undoubtedly brings the rise of new "stars," and witnesses the sinking of others. But Madame Bernhardt is by no means a solitary instance of the public's fidelity to its favorites, in spite of temporary wanderings of the fancy. In the case of the great Frenchwoman it would, of course, have been an utter disgrace to human nature if the crowd had failed to acknowledge eminence of such high degree. Her recent triumphs must be regarded as paid to the artist at the height of her gifts, rather than to the Bernhardt of to-day. It is hard to imagine vaudeville audiences succumbing at any time to the spell of even a golden voice, employed in a foreign tongue; and particularly to-day, when the magic of that voice has faded. All the more credit for recognizing the sentimental claims of the past. It shows us not such a terribly practical people after all.

In Canada the Liberal majority in the Senate has refused to be intimidated by Premier Borden's threat that, if the Government's naval plans were rejected, some way of mending or ending the upper house would be devised. By a vote of nearly two to one, the Senate did reject the Government bill appropriating the sum of $35,000,000 for the construction of three Dreadnoughts for the British navy. It was a practiced hand that drew the Liberal amendment upon which the Government was beaten. In asserting that "this House is not justified in giving its assent to this bill until it is submitted to the judgment of the country," the Opposition has made use of the formula employed by the Canadian House of Commons in voting down reciprocity with this country and voting Sir Wilfrid Laurier out of office. For this year at least Canada stands uncommitted to battleship building, and the experts who have been deciding Armageddon on paper will have to sharpen their pencils and try again. More foresighted was Mr. Asquith when, in reply to a motion for a vote of thanks to Canada for her offer of battleships, he suggested that Parliament had better wait until the gift had assumed tangible shape.

Coming so soon after the Liberal defeat at Newmarket, the increased Unionist majority in the Altrincham bye-election calls for an explanation by Mr. Asquith's supporters. The difficulty is that bye-elections in England are hard to explain on any other principle than that they usually run against the party in power. Local elections may be won on diverse issues. At Altrincham, which is an agricultural constituency, there was said to be dissatisfaction with the enforced contribution of four pence a week under the Government's insurance scheme. Yet it would be absurd to suppose that if a general election were fought on this issue there would be anything but emphatic approval for a policy to which, in fact, both political parties have subscribed. If any nation-wide trend is now running against the Liberal party, aside from the traditional swing towards the Opposition, the cause will be found in the Marconi disclosures, of which the popular interpretation is not necessarily the correct interpretation. It must be a poor Unionist orator who cannot draw a poignant contrast between Lloyd George rolling in wealth acquired through speculation, and the same Lloyd George depriving the workingman of his hard-earned pennies to support an insurance scheme which, like all Government schemes, is not at all what it might be made by a patriotic Opposition.

The question has been raised whether there will be a successor at all to the laureateship. Four years elapsed between the death of Tennyson and the appointment of Alfred Austin. This long interregnum is not to be entirely explained by the difficulty of finding a poet worthy to step into Tennyson's shoes. During three years out of the four the Liberals were in power, and the nomination of a poet laureate by a Liberal Prime Minister presents peculiar embarrassments. The party traditions are against imperialism and against the undue glorification of war. But what is a national poet without a touch of the jingo? The laureateship almost demands a Conservative, in an age of rapid transformation like the present. In addition to singing the nation's victories he is by definition expected to sing, as Alfred Austin did, of those institutions which have been the making of England's greatness in the past, the throne, the aristocracy, the great landed interests, that entire orderly system which presented itself even to Tennyson as embodying progress by broadening down from precedent to precedent. But it is hard to imagine any poet in whose appointment Mr. Lloyd George had a share chanting the praises of England's landed gentry.

The difficulty is one which even a Conservative Imperialistic Ministry must face. Alfred Austin's poetic qualifications appeared all the more meagre because Swinburne and Kipling were possibilities. But the author of "Atalanta" was impossible for a nation with whom Puritanism is not a tradition, but a fact. The Swinburne who sang of England's sea as no other poet before him, could not atone for the author of "Dolores" and "Faustine." Nor could Kipling's "Recessional," in itself a sufficient title for the post of national poet, obliterate the slang of the "Barrack Room Ballads." It is difficult to imagine a laureate who has referred to the Empress-Queen as "the Widow," however affectionate the intention may have been. Kipling's manner was revolutionary even if his political views were nationally sound, and a poetic revolutionary is out of place as laureate. One thing is certain, that Kipling as poet laureate would no longer be Kipling to the great majority of his admirers. Nor is it at all certain that to the great, mediocre mass of the English nation his astounding verve, his audacity, the very brilliancy of his heterodox genius would not be disconcerting. In its corporate sentiments every nation clings to the ancient forms and loves the ancient decorum.

LIVING UP TO TREATIES.

The significant news from Washington is that the clause of the Underwood bill allowing a rebate of 5 per cent. in the duties on goods imported in American ships is to be dropped by the Senate. It ought to be. The question is not one of encouraging American shipping, but of preserving American honor. What the discriminatory clause referred to undertakes to do, the nation has pledged itself not to do. Our treaty with Great Britain specifically binds both countries to charge "the *same* duties" on goods brought into the ports of either, whether carried in British or American bottoms. Mr. Bryan stated last week that the counsellor for the State Department, Mr. John Bassett Moore, was carefully examining our commercial treaties to discover if the discriminatory shipping provision was in violation of any of them. But really it is not necessary to go beyond the British treaty. This is perfectly clear and explicit; and all the countries with which we have "most-favored-nation" treaties—and the number comprises nearly every country in the world—would be at once entitled to claim the same treatment for their ships as for the English. In fact, it is admitted at the State Department that a score or more of formal protests by foreign Governments have been filed against the shipping clause.

The idea embodied in it has frequently been propounded in Congress and elsewhere. Its avowed aim has been that of restoring the American merchant marine. The argument has run that shipping subsidies are impossible. Time and repeated efforts have shown that the American people have a rooted objection to them, and that Congress will never enact a comprehensive system of paying ship-owners out of the public treasury. Hence the only alternative is to lay discriminating customs-taxes on goods imported in foreign ships. This, it is contended, would speedily throw the bulk of the importing business into American hands. It is a plan which was tried in the early years of our republic, and would certainly be successful, so its enthusiastic advocates assert, if put into effect to-day. This is open to serious doubt, merely as a question of fact. It seems to be innocently supposed that other nations would only wring their hands helplessly, while we were discriminating against *them*, and would never think of discriminating against *us*. But this is folly. It is virtually certain that the chief shipping countries would strike back. They might do it by laying a sur-tax in their ports on all goods imported in American bottoms, and leave us just where we were before. We may be sure that some form of the *lex talionis* would be applied. But all such speculation is beside the point. Whether or not the discriminatory clause of the Underwood bill would do anything to bring back the American flag on the ocean, the plain fact stares us in the face that we have solemnly bound ourselves by treaty not to discriminate.

"So much the worse for the treaties," a prominent Representative in Congress is reported to have said. But he could not have said it seriously. It is true that treaties are not absolutely essential to intercourse between nations. Take the instance of our present relations with Russia. The former treaty has been abrogated, and a new one not yet negotiated. Be it noted that the Russian treaty was abrogated in accordance with its own terms. Due notice was served, as therein provided. President Taft did not assume that he or the country was entitled to declare a treaty at an end whenever any of its provisions became irksome. But we are getting on very well with Russia without any treaty. This is because both nations are observing the ordinary rules of friendly behavior. We attempt no discrimination against Russian commerce, or the rights of Russian citizens, not because we have stipulated not to do so, but because it is sound policy not to do so; for we know that there would be instant retaliation. If this would occur even without a treaty, it is the height of absurdity to fancy that the United States could discriminate against a nation in the case of which it had agreed not to discriminate, without inviting immediate and severe reprisals.

The whole question comes down to one of good faith. It has been said by many, and some foreigners are saying it, that Americans are growing very careless about treaty obligations. The thing is spoken of in certain quarters as a new and threatening manifestation of democracy. A great people will do whatever it desires at the moment, regardless of what it has bound itself not to do. But we believe that is a view as shallow as it is cynical. There is no evidence that Americans as a whole do not mean to live up to their international bargains, whether they make a wry face over them or not. Certainly those public men who have the best title to speak for popular sentiment in this matter express no doubt on the point. Mr. Bryan has again and again insisted upon the duty of scrupulously living up to treaties; and we owe a debt to Mr. Roosevelt for his utterances of the same tenor. His advice to his countrymen is to be, indeed, very cautious about entering into treaties, but, once having done so, to abide by their terms religiously. It is this feeling, typically American we believe, which is certain to put the brand of condemnation upon every undeniable violation of a treaty. President Wilson's opposition to the discriminatory clause is in line with the best traditions of his office, and is only what was to have been expected of him.

THE RIGHTS OF PATENTEES.

For the second time in little more than a twelvemonth, the Supreme Court has passed upon an issue of the most fundamental character concerning the right of a patentee to control the selling of his product. In the case decided March 11, 1912, the issue involved was whether the owner of the patent could legally prevent the buyer of the patented article from using it in connection with any materials or adjuncts he might choose to employ; in the case decided last week, the issue was whether the owner of the patent could legally prevent the buyer of the patented article from selling it at a price lower than that fixed by the patentee as its retail or reselling price. The first case was decided *in favor* of the unrestricted control of the patentee over the use of his product; the second was decided *against* the unrestricted control of the patentee over its price.

That these two decisions are contradictory in spirit is evident. The right of a patentee to determine at what price his product shall be sold by others seems but a slight extension of his undisputed right to determine the price at which it shall be sold by himself; while the right to dictate what mate-

rials or accessories shall be used in connection with it opens up, theoretically at least, an unlimited vista of possibilities of domination over matters not in the least contemplated in the grant of monopoly as to the article itself. How, then, does it come that the same court which last year sanctioned the more remote and more extensive power, has now denied the more immediate and more restricted one? The answer is twofold. In the first place, it is not the same body. Both decisions were made by a divided court, four to three last year and five to four this year; and the four who constituted the majority in last year's decision are the same four judges that formed the minority in this year's. Chief Justice White and Justices Hughes and Lamar dissented from the broad-construction view in the mimeograph case; and now, in the sanatogen case, they are reinforced in the narrow-construction view by Justice Day, who was then absent, and Justice Pitney, who had not yet taken his seat on the bench, so that there was one vacancy.

There is, however, another element in the matter. Though the spirit of the first decision is in contradiction with that of the second, there is no direct inconsistency between them as a matter of law. Justice Day, speaking for the majority in the sanatogen case, seeks to reconcile the two decisions by pointing out that in the mimeograph case the control claimed, and sanctioned by the court, referred to the right to "use" the article, of which a monopoly is granted by the law to the patentee, while the claim in the sanatogen case must rest solely on his right to "vend" it; the idea apparently being that even if the right to "use" it may, by construction, be made to cover a somewhat complex and indefinite region, the right to "vend" it is a very simple thing, and terminates when the vending has once been accomplished. Whatever may be thought of the force of this consideration, it does not require a great deal of boldness to conjecture that if the mimeograph case had been decided by the full court as at present constituted, the decision would have been the reverse of what it was.

Important as these decisions are, and far-reaching as their consequences may be, it must be remembered that they should not be regarded as resting on any fundamental principles applying to the rights of property in general. Whatever policy Congress may desire to institute in regard to either of the questions affected by the decisions, it can establish without the least difficulty, and without the least objection in point of fundamental principle. Upon this matter, much confusion of thought seems to exist in quarters where one would not expect to find it. We cannot help thinking that such confusion is at the bottom of the view expressed by Justice Lurton when, in his opinion on the mimeograph case, he said:

> The market for the sale of such articles to the users of his machines, which by such a condition he takes to himself, was a market which he alone created by the making and selling of the new invention. Had he kept his invention to himself no ink could have been sold by others for use upon machines embodying that invention. By selling it subject to the restriction, he took nothing from others, and in no wise restricted their legitimate market.

It is neither true in fact, nor presumed by the lawmaker, that if a given inventor had "kept his invention to himself" the world would forever have gone without it; the grant of monopoly is given him by the law for an arbitrarily limited period, in entire consciousness of the fact that it will keep out of the field not only would-be imitators, but likewise other inventors who may have been just as meritorious as he in every respect except the one element of priority in time. The patentee has no natural right, nor even the ordinary kind of property right, in his invention; as a matter of specific expediency, such privileges are given him as, upon a rough computation of advantage and disadvantage, seem best calculated to encourage invention and progress; and he is not inherently entitled to any others.

Chief Justice White used extraordinarily strong language in depicting the dangerous possibilities which might flow from the decision in the mimeograph case unless Congress took action; and since that time the subject has been actively discussed, and a scheme for the revision of the patent law has been reported by the House Committee on Patents. The decision of last week limits in one particular the general rights hitherto claimed by patentees under existing law; but, whether this limitation be desirable or not, it does not reach the points of most concern in the question of the abuse of either legal or virtual monopoly advantages. Especially does it leave quite untouched the power of suppressing patents, which is at present at the disposal of any powerful corporation that may see its advantage in pursuing such a policy. Every country, or almost every country, in Europe makes the non-utilization of a patent for two or three years sufficient ground for its forfeiture; and it is difficult to see why this should not be our policy also. The character of last week's decision, and of the dissenting opinion of last year, is sufficient warrant for the belief that the time is ripe for a thoroughgoing consideration of the needs of our patent law in its relation to modern business conditions.

EUROPEAN CHANGES AND AMERICAN IMMIGRATION.

How is our immigration problem likely to be affected by the profound social and political changes now under way in those European countries from which we draw the bulk of our alien population? Is the problem one that, in the nature of things, can be dealt with solely on this side of the Atlantic, or does it involve certain factors not within our own control? Senator Dillingham reintroduced this week the Immigration bill passed in the last session of Congress and vetoed by Mr. Taft. In its new form the bill omits the literacy test which was the main reason for the Presidential veto. In its place we have a very extraordinary provision, which has, however, the merit of being sincere; it is frankly restrictive in intention. No immigrants of any one nationality shall be admitted in any one year to a number exceeding 10 per cent. of the total number of residents in the United States of that particular nationality. It is a device which smacks somewhat of the governmental methods found by Gulliver on the island of Laputa.

The spectre which rides behind Senator Dillingham is the steady decline of immigrants from Northwestern Europe and the steady increase in our Slavic and Mediterranean population. In the decade from 1860 to 1870 the annual immigration from Great Britain and Ireland was above 100,000; from Germany, nearly 80,000; from the Scandinavian countries, 12,500; from Italy, a little above

1,000; from Austria, less than 1,000; from Russia, less than 500. From 1880 to 1890 the average annual immigration from the United Kingdom was nearly 150,000; from Germany, almost the same number; from the Scandinavian countries, more than 65,000; from Italy, 30,000; from Austria-Hungary, 35,000; from Russia, 26,000. From 1900 to 1910 a noticeable change takes place. The annual average for the decade is: United Kingdom, 86,000; Germany, 34,000; Scandinavia, 50,000; Italy, 205,000; Austria-Hungary, 215,000; Russia, 160,000. Significant as these figures are, it will still be observed that the popular views on the subject are exaggerated. The impression goes forth that the North European immigration has virtually been submerged in the Slav and Latin tide. The fact is that as late as 1911, out of the 522,000 aliens added to our permanent population, nearly 180,000 were of the older immigration. This, added to the resident Anglo-Saxon and Teuton element in this country, would still postpone for some time the danger of a Slavicized and Latinized United States.

What are the reasons for the decline in the older immigration? Why did nearly one and a half million Germans land in this country between 1880 and 1890, and only 341,000 between 1900 and 1910? Why during the same period did the English influx drop from 657,000 to 388,000, and the Irish influx from 655,000 to 339,000? Is it a case of the inferior coin driving the superior coin from the market? Did the arrival of the Slav and the Italian render the United States less attractive for the North European? The true cause is found outside of this country. It is not that the United States has grown less attractive to the German, but that his own Fatherland has grown much more attractive to him. It is not that the Irishman finds the United States a less desirable place to live in, but that he is finding Ireland a much more livable place than it used to be. As for the Englishman and the Scotchman it is not their own home that is holding them back, but Canada draws them where formerly the United States took them. In other words, it was internal conditions in Northwest Europe that largely conditioned the older immigration to this country, and it is a change in such conditions that has reduced the volume of immigration. The Germany that rose after 1871 has shown herself capable of supporting her native increase. Ireland is rapidly tending in the same direction. The drain on her vital resources which in sixty years cut her population in half has almost ceased. Within a year or two a balance between gain and loss is predicted. Every reason leads us to believe that Ireland, under Home Rule, will send fewer and fewer of her sons across the seas.

The question arises whether the same causes may not be expected to operate within the countries from which the heaviest immigrant tide now sets in our direction. Southern and Eastern Europe is astir. Italy is experiencing an industrial and commercial renaissance. She has taken possession of an immense territory in North Africa. It is not to be expected that Tripoli will ever take care of Italy's entire surplus population, or that for years to come it will even offer serious competition with the United States and Argentina. But who would have predicted thirty years ago that an annual German emigration of more than 150,000 would dwindle to less than 35,000? What will be the effect of the political reconstruction of the Balkan peninsula? It is legitimate to suppose that under new auspices the Balkan national life will absorb many who now seek their fortunes in this country. In the Hapsburg monarchy the trend is unmistakably towards the enhancement of the Slav influence. Economic pressure is no doubt mainly responsible for the exodus of Croats, Czechs, and Galician Poles; but the redressing of the political balance in their favor, followed by a more vigorous national life, is bound to show results in a diminished emigration.

So with Russia, from which we now draw more than 150,000 emigrants every year. Here is no case of inevitable economic pressure driving out a surplus population. The empire is thinly populated. Its resources, counting in the scarcely touched wealth of Siberia, are enormous. Backward political institutions and racial repression have rendered emigration the only refuge for the population of the Jewish Pale. The immediate prospects of a favorable policy towards the Jews of Russia are not of the brightest. But confidence in the forward movement of civilization compels the belief that Russia, too, must become a more livable place for her people. In that case, this country is likely to register the change in a diminished immigration from that source.

FITS AND MISFITS IN OFFICE.

Mr. Gamaliel Bradford adds, in the June *Atlantic*, to his gallery of Confederate portraits an interesting sketch of Judah P. Benjamin. Materials for the study are scanty. Benjamin saw to that, destroying all the letters and personal records upon which he could lay his hands. Yet Mr. Bradford succeeds in evoking a fairly clear picture of the man, with the unusual result of going counter to the presupposition with which the author set out. The view of Benjamin with which he began was that he was a man of "remarkable ability, an adventurer of genius, but of little character." But, "now," concludes Mr. Bradford, "I am forced to the opposite conclusion, that his character was respectable, if not unexceptionable, but his ability mediocre." He speaks of Benjamin as "a small man placed in a great position"; but adds that "the crises of nations always exhibit such misfits."

They were certainly numerous enough in Benjamin's time, both North and South. He began as Secretary of War in the Confederate Cabinet, but so soon had everybody by the ears, particularly the generals in the field, that he was promoted to the State Department. Yet he could not have been a worse misfit than Lincoln's first Secretary of War, Simon Cameron. It was for something worse than incapacity that he had to be removed—or, rather, exiled to the American Legation in St. Petersburg. And anybody who has read Welles's Diary would be able to mention other square pegs in the round holes of Lincoln's Cabinet. As for the Union army, it required full two years to weed out the misfit commanders.

The misfortune of getting the wrong man for an important office, or of failing to get the right man—which often comes to the same thing—is not entirely to be blamed upon the appointing or electing power. In advance, it is impossible for the wisest to be sure of their man. Judged by all antecedents and likelihoods, Mr. Taft was ideally fitted for the Presidency. If it had been his lot to fail of election to it, every-

body would have said that he would have been one of tho most successful of Presidents. As it is, his friends can but renew the old sigh, *nisi imperâsset*. Great as are many of his qualities, and engaging as is his nature, he left office with the general verdict that he had not highly succeeded. And as the brightest anticipatory hopes, founded on apparently the soundest reasons, are sometimes dashed by the actual experiment, so are apprehensions of a display of unfitness occasionally proven needless by the event. It is much too soon to make any predictions about President Wilson's Administration, but already he has made certain vaticinations about his conduct in office appear ridiculous. It was said that he would be forever making speeches or lecturing, and that the crushing and unavoidable routine of the Presidency would be too much for him. What could a schoolmaster do in one of the most laborious positions in the world? Well, thus far Wilson has kept still and worked like a horse. His industry and dispatch are the wonder of Washington. An old Senator came away from the Executive offices with the remark: "It appears to me that this college professor is more of a man of business than any President I have known."

Truly, you never can tell. One reason is that the public, and even a man's friends, cannot be sure beforehand for what kind of work he is best fitted. Another reason is that the man himself often does not know until he has tried. It frequently occurs that men of unusual powers believe that they could have succeeded better in something else than the work they are compelled to do. Their confidence is ordinarily based on something more stable than that of Sir Godfrey Kneller, who was positive that he should have been a much greater soldier than artist, since he did so love the smell of powder! But the greatest minds have sometimes displayed a singular lack of correct self-judgment. Goethe seems to have thought that his work in optics—mostly mistaken, we believe—would carry his name further down the generations than his poetry. And as for the men who now and then step outside their chosen field, we know what sorrowful head-shakings they occasion, and what rebukes they invite. When Dr. Arnold began taking part in the political discussions of his day, his opponents said: "What a shame that the Head Master of Rugby should waste his time in writing pamphlets!" It is probable, however, that some of his admirers exclaimed: "What a pity that a man with such capacity for statesmanship should be compelled to teach boys!" Both were wrong.

It is not uncommon for men in high office to express regret that they had not devoted themselves to some other pursuit. Gladstone is said to have more than once lamented the fact that he did not follow his first inclination to the Church; in that case, he would undoubtedly have been Archbishop of Canterbury instead of Prime Minister. His great rival, Disraeli, once pretended to Matthew Arnold that he was sorry he had given up literature for politics. In both these instances, one suspects a certain affectation or insincerity. But neither was ever alleged against Lord Althorp, who did more than anybody else to get the Reform Bill of 1832 through the House of Commons. His aversion to public life was unmistakably genuine, and it was with real bitterness that he said that nature had intended him to be a farmer, but circumstances had compelled him to be a politician. Such complaints have been rare in this country! All would admit, however, that to condemn a man to the forced labor, and the cruel and unusual punishments, of an important political office, when his heart is not in it, and his tastes and his desires would drag him out of it, is one of the worst cases of misfitting.

FEDERAL ARCHIVES OUTSIDE OF WASHINGTON.

There has lately issued from the Government Printing Office a volume, edited by Mr. Herbert Putnam, Librarian of Congress, entitled "The Archives of Government Outside of Washington." It cannot fail to stimulate the growing demand for a National Archives building in Washington. It comprises reports from various officers of the national Government throughout this country and abroad and shows the extent and character of their archives. In it are disclosed the damage and loss which the records have sustained from fire and flood, from the frequent moving of offices, from the ravages of vermin and insects, and, worst of all, from the neglect of officials. It is impossible to read Mr. Putnam's summary of the general conditions, and the condensed reports themselves, without a feeling of indignation that such ignorance and wanton carelessness should have been allowed to go unchecked, and even unnoticed, up to the present time. For many years past the deplorable condition of the Government archives in Washington has been made the subject of investigations and reports; but this is the first time that attention has been called to the condition of the Federal archives outside of Washington. The reports now published were ordered to be prepared by President Taft last summer, the duty of prescribing instructions for the reporting officers and of editing the reports for transmittal to Congress being assigned to the Librarian of Congress.

The most important of the archives outside of Washington are undoubtedly those in our diplomatic offices throughout the world; but the reports show that not one of our old legations has complete records. For instance, those at London begin in 1828, although the mission was established in 1785; those at The Hague in 1830, although we had a Minister there in 1781; and those in Denmark in 1841, whereas the mission was opened in 1812. The absence of some of these records is due to the fact that it was common, in earlier years, for a departing Minister to carry his records with him. Thus it happens that many documents which are really official are in the hands of descendants of diplomatic officers, and others are owned by collectors, while some are in historical institutions. They figure, too, in nearly all large auction sales of manuscripts.

Notwithstanding all the losses, the reports show that the Legations have a considerable amount of interesting historical data in their archives. Thus, the Legation at Peking has Caleb Cushing's account of his voyage to Macao and the making of our first treaty with China in 1844; in Bogota is correspondence with Colombia as early as 1834 on the subject of a railway at Panama and a canal across the Isthmus of Darien; at Rome there are letters of Garibaldi offering his services to the Union army when our Civil War broke out; at Madrid there is the record of the dispute with Spain over the boundary of Louisi-

ana. These are only examples of many rich deposits.

The reports from the offices under the Treasury Department show that, although the internal revenue districts were not established until 1862, their records are not complete in any offices except perhaps those at New York and Brooklyn. Some of the custom houses were established in 1789, but none of them has complete records. It is gratifying to notice that the early records of several of the oldest offices were rescued from impending destruction a few years ago and sent to the Library of Congress, where they now are. The reports from the offices under the War Department bring to light curious and unexpected historical data—a British admiralty chart of Mobile Bay, dated 1771, in the United States Engineer's Office at Mobile, for example, and the records of a firm of merchants running from 1754 to 1813, in the Depot Quartermaster's office in Philadelphia.

Perhaps the reports which plead most eloquently for a reform in the methods of caring for the archives are those from the clerks of the Federal district courts. Court practice is based largely upon precedent; old court records are constantly used if they are usable; the issues involved are grave questions affecting property, liberty, and even life. Here we should expect to find that the greatest care had been exercised; but the fact is that not one district court has all of its records. Many have been burned, but more have been lost through carelessness.

Fortunately, some of the records of the district courts of the Confederate States have survived and are at Birmingham and Mobile, Pensacola, Oxford, Miss., and Atlanta. Some of the courts do not know what records they have lost, for there are no inventories. The Clerk of the District Court at Concord, N. H., says the records are "of tremendous historical value," but that their arrangement is unsatisfactory; the clerk at Savannah, Ga. (the court having been established in 1789), says he has "priceless historical records in a chaotic state"; the clerk at Des Moines says: "No investigator could work to advantage with the archives in their present condition. It would first require an archæologist, in the sense of an excavator, to dig them out of the dirt."

Nearly all the reporting officers declare that they can accommodate an historical investigator, and that his presence in the office would be acceptable to them; but it is perfectly plain, as Mr. Putnam says, that all the archives which are not in actual current use for administrative purposes should be sent to Washington and find their final resting place in a new National Archives building. They should no longer be left to the care of officers who are in too many cases ignorant of their value and indifferent to their preservation.

BALKAN PEACE—AND STRIFE.

The treaty of peace between Turkey and her Balkan opponents was signed in London on Friday of last week. Whatever the immediate future may bring to the victorious allies, this event is definitive so far as the Ottoman Empire in Europe is concerned. Turkey in Europe emerges from the struggle a fragment of her former self. Constantinople and a mere hinterland of some six or seven thousand square miles remain out of her holdings of nearly 65,000 square miles at the beginning of the war. Crete and the islands in the Ægean are lost to her. Constantinople is more than ever dependent on the sufferance of the Powers, and the Powers are in turn no longer the free agents they were until half a year ago, when it was for them to issue orders and for the Balkan peoples to obey. Had peace been signed under other auspices than actually obtained, this would be the time to review the rise and fall of the Ottoman power in Europe, and, specifically, to examine the interesting problem why an empire which showed remarkable vitality under corrupt and despotic government should have been confronted with disaster as soon as it made the attempt to bring its government and its institutions into conformity with the principles of modern life.

Unfortunately, peace comes to the Balkans under gloomy circumstances. The same dispatches reported the signing of the treaty between Turkey and the allies and the imminence of war within the ranks of the allies. Between Bulgarians and Greeks actual fighting has taken place. The division of Turkish spoils is the issue. When the Balkan alliance was organized last year none of the partners to the agreement foresaw that victory would come to them so easily and in such full measure. It was assumed that the brunt of the war would fall upon Bulgaria, that the Greek fleet would play an important part, and that Servia might help out, but hardly more than that. Servia's military prestige had been at low ebb ever since her bad defeat by Bulgaria nearly thirty years ago. The showing made by the Greeks against Turkey in 1897 was not such as to raise large expectations with regard to the Greek army. In their anticipatory apportionment of Turkish territory, Greece and Servia, and particularly the latter, were content with a much smaller share than they now demand. The acquisition of the region known as Old Servia would have satisfied the Government at Belgrade. Both to the Servians and Greeks came amazing success in the field. The Servian forces overran northern and central Macedonia with ease. The Greek advance northward into Epirus and maritime Macedonia was almost as rapid. A revision of the preliminary agreement became inevitable.

What makes the problem all the more complex is the extraordinary intermingling of ethnic and historical claims in the disputed region. It is not as if virgin territory were to be carved out and the dispute were over the actual share of each partner, measured in square miles. Macedonia is a welter of races. Bulgars, Serbs, and Greeks live in the same villages, and often so evenly balanced as to leave a minority in control, no matter to which one Government the particular village should be assigned. So confusing is the racial patchwork in many sections that the suggestion was even brought forward for the erection of a self-governing Macedonia with guarantees of local autonomy for the different peoples. If the appeal is made to history, the claims become still more contradictory. The Greeks, regarding themselves as the successors of the Byzantine emperors, might formulate a title to the greater part of the Balkan peninsula. The Bulgarian Czars in their time ruled over what is now Servian territory. The Serbs under Stephen Dushan, back in the fourteenth century, extended their sway over Macedonia and Albania. Religious differences have been superimposed on the racial problem. The authority of the Patriarch of Constanti-

nople and of the Bulgarian Exarch have been in conflict among the adherents of Byzantine Christianity. In the Albanian districts the Catholics are in a heavy majority.

Conflicting historical claims running back a thousand years or more need not usually be regarded as insurmountable difficulties. The diplomats may throw them back and forth over the council table, but they can hardly have meaning to the masses of the people. Unfortunately, in the Balkans these historic claims find support in the persistence of very real racial animosities. Up to five years ago the Greeks, the Bulgarians, and the Serbs were engaged in bitter internecine war in Macedonia. The ills of that unhappy country were due in minor part to the wickedness of Turkish rule. It was in anticipation of the downfall of Turkish rule that marauding bands from the three countries turned Macedonia into a land of massacre, each nation trying to win a foothold before the Turkish collapse came. Recognizing that the time had come for a decisive attack upon the Turks, the warring nationalities laid aside their enmities. The conquest of self-government for Macedonia was the object contemplated by the allies. Had only that been obtained and Macedonia placed under a ruler probably nominated by the Powers, the struggle among the nationalities would have been renewed on the political field, until such a time as the ultimate disposition of that region could be effected either by agreement or by war. But the Turkish collapse has brought about the need of an immediate solution for what was regarded as a problem for the future.

GREECE REVISITED.

ATHENS, May 22.

The perennial charm of Greece to the classical scholar is not lessened even by a fifth visit. But the charm is not quite the same that it was forty years ago, when the late Professor Seymour, of Yale, and I came to Athens for the first time. The semi-Oriental picturesqueness of Greece and her people has nearly vanished, especially in the cities and larger towns. Athens is now a modern city. A good water supply is needed, and to provide this a commission has recently been voted by the Senate. There are a few parts of the city, particularly on the north and east slopes of the Acropolis, that recall the Athens of earlier days, where one may still see an old Greek with fez and fustanella or Turkish trousers serenely puffing at his nargileh.

The conveniences for travel in the interior have within a few years increased greatly. The inns at Delphi, Nauplia, Olympia, and other points are more than tolerable. By rail the tourist can travel from Athens by way of Argos and Kalamata to Olympia, and return thence by way of Patras, thus encompassing the entire Peloponnesus; and a train will take him through Thessaly to the vale of Tempe. You can go to Marathon and back by motor-car in an afternoon.

One of the most important gains to Greece from the present war with Turkey is the acquisition of territory in Macedonia long desired, through which to build a railway connecting Greece with the transcontinental line that runs from Vienna to Costanza. The distance to be covered is less than one hundred miles.

The splendid achievements on the field of battle by the Crown Prince, now King Constantine, and the tragic death of his father, King George, have firmly established the reigning house in the affections of the people. The immediate effect of the war upon agriculture is painfully apparent as one rides through the country. Everywhere are seen fields untilled or worked by old men, women, and children, whose husbands and fathers are in the army. After so long a campaign and such heavy expenditure, it is surprising to find Greece still so well equipped to prolong the conflict. A well-informed citizen told me that, if necessary, Greece could have put into the field a hundred thousand men who had not seen service. The credit of the country is unimpaired, and its paper money is equivalent to gold. One meets at every turn Greek soldiers from our own country who are eager to air their English vocabulary whenever they meet a "fellow-countryman." There are in all about 80,000 of them who came to fight for their fatherland, and he is the exception who does not intend to return to America.

Archæological excavations have not been possible this season, since nearly all available workmen have been enlisted in the war. In spite of this, however, interest in archæological studies is as keen as ever. At a recent public meeting of our American School, one of its members, a young woman who was graduated at Vassar, gave an account of excavations conducted by her at Halæ in Bœotia, where important remains of a prehistoric city were found. Professor Karo, of the German Institute, has recently given an account of his excavations at Tiryns, which revealed the existence of an earlier prehistoric palace which he dates at about 2000 B. C. lying beneath the later palace, dating from about 1400 B. C. The visitor to the Acropolis sees scaffolding erected before the east portico of the Propylæa, which is undergoing extensive repairs. The easternmost of the north row of the Ionic columns that formed the central colonnade, together with part of the architrave running to the north wall of the central portico of the Propylæa, has been skilfully restored from ancient material found lying about on the Acropolis. A similar restoration of the corresponding column and architrave on the south, for which the stones have been found, is also to be made. A partial restoration of the front colonnade of the southwest wing is also to be undertaken. These restorations are under the direction of Balanos, a skilful Greek architect, who has been aided, however, in finding the material by the brilliant young architect of our American School, Mr. W. B. Dinsmoor, whose investigations promise to give much new light on the ancient construction of this building, particularly of the roofs of the two wings at the west. Former visitors to the Acropolis who recall the ruinous condition of the north porch of the Erechtheum, are delighted to see this gem of ancient architecture so beautifully restored. The west wall of this building, with the windows and engaged columns of the Roman period, has been erected mostly from ancient material. How much has been added to our knowledge of this remarkable structure by the studies and discoveries of the architect, Mr. G. P. Stevens, now of the American Academy in Rome, supplemented by the researches of Dinsmoor and Mr. B. G. Hill, the director of our School at Athens, is too long and technical a story to tell here.

It may interest the readers of the *Nation* to know that the American School is preparing to publish in suitable form the results of the investigations of its architects and scholars into the history and construction of the Erechtheum, and that this volume is so far advanced that its appearance may be expected before the close of the present year. Slight repairs on the Parthenon are also under way. The great undertaking of reërecting the columns of the peristyle, whose *disjecta membra* are lying at the sides of the building, still waits for the requisite funds. That the Greek Government and its archæological society will some day undertake this task cannot be doubted. If it can be done with as much skill and good taste as the Greek architects have exhibited thus far in their restorations, there can be no doubt that this noblest monument of Greek art that has survived from the days of Pericles will impress the beholder with an added sense of beauty.

It is a great delight to see how well the Greeks are caring for the preservation of the monuments of the past. All ruins and sites of excavations are carefully guarded, and at every site one

finds small local museums for preserving and exhibiting fragments of sculpture and architecture found on the spot. In this connection it is worth while to observe how alert the Greek Government is to safeguard possible sites of archæological interest in the newly acquired territory in Epirus and Macedonia. Already ephors of antiquities have been appointed in these districts, and steps have been taken to organize museums and to preserve ancient works of art or objects of interest in the domain wrested from the hands of the Turks.

Coming from Italy, where there is an equal zeal for guarding and preserving objects of ancient art and monuments of historic interest, one cannot fail to observe the difference between the Greek and Italian authorities in their attitude towards the visitor. In Italy all sites and collections are made as far as possible sources of revenue. Perhaps the most flagrant case is found at Pompeii, where, after you have paid the admission fee of two and a half francs, you find that all the noteworthy things, with the single exception of the house of the Vetii, are locked away from inspection by gates and doors, which, to be sure, the guards are expected to open at your request without a fee. But this is rarely done ungrudgingly and without manifest discontent if a fee is not in sight. On the other hand, Greece, which is a much poorer country, throws open freely to the public all sites and collections of artistic and historic interest, taking pains even to post notices in the museums forbidding custodians to receive any gratuity. "Well," said the Greek of whom I made inquiry, "we Greeks are proud of the monuments of our past history, and if you foreigners think it worth the while to come so far to see them, we feel that we ought at least to let you enjoy the sight without requiring a fee."

Nothing is more gratifying to the American visitor to Athens than to find how greatly esteemed by the Greek scholars and by the other national schools of archæology is the work done by our American School. Its contributions to the history of the buildings on the Acropolis are recognized by European scholars as of the greatest value. The most recent of these has just appeared from Dr. Hill, on "The Older Parthenon," in which he shows that all previous reconstructions, notably that of Dr. Dörpfeld, are erroneous, and that the building destroyed by the Persians was a hexastyle, and not an octastyle, temple, and had a cella almost as long as the temple built by Pericles.

A much needed addition to the building of our School, providing more room for its library and for its students and instructors, is now in course of erection. A much needed addition to the permanent endowment of the School would be a great boon worthily bestowed.

MARTIN L. D'OOGE.

NEWS FOR BIBLIOPHILES.

Southey, when writing to Sir Egerton Brydges, says: "The paper upon Bunyan in the last *Quarterly Review* is by Sir Walter [Scott]. He has not observed, and I, when I wrote the 'Life' had forgotten; that the 'compleat design of a Pilgrim's Progress' is to be found in Lucian's 'Hermotimus.' Not that Bunyan saw it there—but that the obvious allegory had presented itself to Lucian's mind as well as to many others" (Brydges's "Autobiography," Vol. II, p. 285). This reference is also given in a footnote to the reprint in Southey's "Cromwell and Bunyan." The passage, although a striking one, has not, I think, been quoted in this connection, but it must be read with Southey's warning. In the excellent version of Lucian by H. W. and F. G. Fowler (Clarendon Press), it is thus given:

Lycinus. I conceive Virtue, then, under the figure of a State whose citizens are happy—as your professor, who is one of them, phrases it—absolutely wise, all of them brave, just, and self-controlled, hardly distinguishable, in fact, from Gods. All sorts of things that go on here, such as robbery, assault, unfair gain, you will never find attempted there, I believe; their relations are all peace and unity; and this is quite natural, seeing that none of the things which elsewhere occasion strife and rivalry, and prompt men to plot against their neighbors, so much as come in their way at all. Gold, pleasures, distinctions, they never regard as objects of dispute; they have banished them long ago as undesirable elements. Their life is serene and blissful, in the enjoyment of legality, equality, liberty, and all other good things.

Hermotimus. Well, Lycinus? Must not all men yearn to belong to a State like that, and never count the toil of getting there, nor lose heart over the time it takes? Enough that one day they will arrive, and be naturalized, and given the franchise.

Lycinus. In good truth, Hermotimus, we should devote all our efforts to this, and neglect everything else; we need pay little heed to any claims of our earthly country; we should steel our hearts against the clingings and cryings of children or parents, if we have them; it is well if we can induce them to go with us; but, if they will not or cannot, shake them off and march straight for the city of bliss, leaving your coat in their hands, if they lay hold of it to keep you back, in your hurry to get there; what matter for a coat? You will be admitted there without one.

I remember hearing a description of it all once before from an old man, who urged me to go there with him. He would show me the way, enroll me when I got there, introduce me to his own circles, and promise me a share in the universal Happiness. But I was stiff-necked, in my youthful folly (it was some fifteen years ago); else might I have been in the outskirts, nay, haply at the very gates, by now. Among the noteworthy things he told me, I seem to remember these: all the citizens are aliens and foreigners, not a native among them; they include numbers of barbarians, slaves, cripples, dwarfs, and poor; in fact, any one is admitted; for their law does not associate the franchise with income, with shape, size, or beauty, with old or brilliant ancestry; these things are not considered at all; any one who would be a citizen needs only understanding, zeal for the right, energy, perseverance, fortitude, and resolution in facing all the trials of the road; whoever proves his possession of these by persisting till he reaches the city is *ipso facto* a full citizen, regardless of his antecedents. Such distinctions as superior and inferior, noble and common, bond and free, simply do not exist there, even in name.

Hermotimus. There, now; you see I am not wasting my pains on trifles; I yearn to be counted among the citizens of that fair and happy State.

But there is, we are now told, a difficulty in finding a safe guide, and there are apparently many different and inconsistent ways, and the most respectable person at the entrance of each road has a welcoming hand and an exhortation to go his way. Here Lucian is on a fresh tack and the resemblance to Bunyan lies only in the passage quoted, and there are of course essential differences in the outlook of the Greek satirist and the English Puritan.

WILLIAM E. A. AXON.

Correspondence

THE ETIQUETTE OF HUMOR.

TO THE EDITOR OF THE NATION:

SIR: A witty writer—was it Charles Lamb?—once said that "a difference of taste in jokes is a severe strain upon the affections." However true this may be, there are undoubtedly certain canons of good taste which are universally accepted by well-bred people as governing humorous expression of any sort. To twit any one upon his personal failings, physical or mental; to touch upon the low or obscene; to interrupt with ribaldry grave and earnest thought: all these, it may be assumed as granted, are taboo among true ladies and gentlemen—"Ladies are always present!" said a fine old army officer.

No less rigorous and indisputable, I conceive, is the ban against openly ridiculing sincere religious belief. "I do not think any man of modesty or thoughtfulness," said Ruskin, "will ever speak contemptuously of any religion in which God has allowed one good man to die, trusting." There are tourists who giggle at the ceremonial service, strange to them, in foreign cathedrals, mosques, and synagogues; to whom the devout Mussulman, prostrating himself upon his prayer-rug, is an object for jibes and merriment; but these ill-bred spectators have few defenders. The only excuse for their bad manners is their ignorance.

The law of good-breeding which applies to the spoken jest holds good, with even greater force, when wit and humor receive more or less permanence in print, inasmuch as the audience becomes immeasurably larger. If it be rude, unseemly, barbarous, to laugh at an act of religious service, how much more detestable is the offence when published and placed in the hands of countless readers, many of whom are sure to be wounded by the thoughtless witticism! Yet this is done openly and without rebuke, in our own country, almost every day in the year. There is rarely, for instance, an issue of the leading humorous weekly in the United States in which portions of the Bible, the liturgy, or the service of Protestant, Romanist, or Jew are not held up to ridicule in squib or cartoon. Some weeks ago the acme of this ill-bred jocosity was reached when the words of the dying Christ upon the cross, "Father, forgive them; they know not what they do!" were used to point a silly and banal joke;

and the proud contributor of the phrase was awarded a prize of one hundred dollars! Surely, the sacred words were applicable anow to the perpetration of this almost blasphemous piece of applied witticism!

But I am assailing such "jokes" as the foregoing not from the standpoint of ethics or religion, or personal grievance; I am merely endeavoring to apply to them the laws of good breeding; of the bearing and conversation to be expected of a gentleman in the society of others of his kind. The offence just referred to was committed, probably, out of pure ignorance of the feelings of many of the readers of the paper. Were the editor importuned to make fun publicly of the last words of his dying mother, or even to quote them with a jest, he would shrink with horror from such desecration of her memory. He simply did not realize that there are millions of people, thousands of his readers, to whom the scene of the Crucifixion in all its terrible details is sacred. The question is not—and herein consists the gist of what I have to say—whether their religious belief is true or false; nor does the editor, by his attitude, claim immunity for an excess of iconoclastic zeal. In a number of the same periodical, issued a few weeks later, there was on one page a shamefully gross caricature of the Hebrew prophet in the wilderness, fed by ravens, and on a closely succeeding page a picture worthy, from its tenderness, its lovely suggestions, its sweet helpfulness, to be framed and placed on the walls of every Christian home in the land. It was called, if I recollect, "A True Worshipper," and represented a little boy in his pajamas, kneeling beside a Pullman sleeping-berth to say his prayers, while two or three men drew back, hushed and touched by the sight of the little fellow's innocent devotions, and, it may be, the memory of their own childhood, when they bowed their heads at night upon their mother's knee. The editor who honestly desired to aim the shafts of his ridicule at religion would never have published that illustration. In his treatment of the story of Calvary, in his cartoons of Old Testament scenes, in his caricatures of the officiating clergy of almost every religion among civilized men to-day, he is simply trying, it seems, to "split the ears of the groundlings."

What is the remedy for this too frequent violation of the decencies of the trade of humorist? A remonstrance from a subscriber will receive the inevitable retort: "My dear fellow, we are not accountable for difference of taste in jokes!" The entire point of the objection, namely, the basic barbarism of special forms of humor under discussion, is of course disregarded. The managers of such a publication, I repeat, undoubtedly err from pure ignorance, for it is inconceivable that they should hurt, shock, repel the more thoughtful of their readers out of simple wantonness, or that they should wilfully overleap the bounds of decency and good taste.

For an example of these last *desiderata* they have not far to look. It is rather the fashion for us Americans to speak slightingly of the recognized organ of British humor. But, whatever our opinion of the liveliness of its wit, no one can deny that our old friend in Bouverie Street is always clean and kindly. Its humor is as sweet and wholesome as its satire is trenchant. It is never guilty of ridiculing sincere religious belief, whether held by a Hottentot or by a bishop or by an innocent child; it never prints salacious or suggestive pictures; yet it seems to have succeeded tolerably well in a business way, and, to quote one of its most familiar advertisements, to be "still going strong."

It is a great pity that we cannot have a humorous paper conducted, in so far at least, on the same lines; with a keen flavoring, if you will, of American wit; a paper that would appeal to the average American citizen, that would recognize the legitimate limits of the joke, that might mercilessly attack with the powerful weapon of ridicule not the sanctities of home or religion, but whatever it believed base, mercenary, hypocritical in our complex modern life, while it fostered what was good and of honest report; a paper of infinite jest, of unfailing good humor, of kindly wit; a paper of which one might say, with old Izaak Walton, "It is worth gold. I love such mirth as does not make friends ashamed to look up at one another next morning." WILLIS BOYD ALLEN.

Boston, May 30.

"HOOSIER."

TO THE EDITOR OF THE NATION:

SIR: The communication in your issue of May 8, from H. M. Kingery, as to the origin of the word "Hoosier," is a striking illustration of the fact that error crushed to earth will rise again. The "new account" of its derivation from the use of "hussar" by Col. Lehmanowski has passed the age of threescore years and ten in Indiana, and is as hopeless as other conjectural theories that have been commonly accepted.

A few years ago an autobiographical sketch of Col. Lehmanowski was published at Philadelphia, with the title "Under Two Captains," edited by Rev. W. A. Sadtler, Ph.D. In this Col. Lehmanowski expressly states his faith that he originated the word, as stated by Mr. Kingery; but in connection with facts that completely disprove his theory. Lehmanowski lived in the East until 1833, and did not reach Indiana until the spring of 1834. The first appearance of the word "Hoosier" in print, as applied to Indiana, was long supposed to be in a Carriers' New Year's Address of the Indianapolis *Journal*, on January 1, 1833. This poem, by John Finley, was above the average in merit, and attracted wide attention. The name was immediately adopted by Indiana people, and in the summer of 1833 a newspaper named the *Hoosier* was started at Greencastle, Ind., by ex-Gov. J. B. Ray.

Finley's poem, however, was originally written in 1830, and the word was in use in its Southern slang sense in Indiana at least as early as that time. But the poem put it in a new light, and nicknaming States was a popular fad at that time, so that no reproach attached to it.

It is noteworthy that discussion as to the origin of the word arose at once, and all of the theories that have since been elaborated, with one exception, were offered in print during the year 1833. Among them, the "hussar" theory was advanced by the Cincinnati *Evening Star* a year before Lehmanowski arrived in Indiana. Most of these theories are based on the erroneous assumption that the word was coined for the purpose of indicating a native of Indiana. In reality it was adopted, just as "Buckeye" for Ohio, "Sucker" for Illinois, "Red Horse" for Kentucky, etc.

The word is still widely in use in the South in its original sense of an uncouth rustic, and is applied especially to the mountaineers, from Kentucky to Georgia. It has often been remarked that English dialect is better preserved in our Southern States than in England, and that many so-called Americanisms are really English dialect. This is almost certainly the case with "Hoosier." Its most probable source is the Cumberland dialect word "hoozer," which is applied to anything unusually large, and which presumably comes from the Anglo-Saxon *hoo*, meaning "high," which is a common component of English place names.

The subject received full historical consideration in No. 2, Vol. IV, of the Indiana Historical Society's Publications; and this was continued in the *Indiana Quarterly Magazine of History* for June, 1911. Up to the present, the earliest use of the word in print that has been discovered is in a New Year's address of the *Indiana Democrat* for 1832, in which, in the course of jocular advice to the Legislature in connection with the public lands, it is advised to

> Ask for our "hoosiers' " good plantations.

As any discoveries of earlier printed use of the word will probably be accidental, it would be a favor if any one finding such use would inform the undersigned.

Indianapolis, May 29.

BLAKE AND POST-IMPRESSIONISM.

TO THE EDITOR OF THE NATION:

SIR: In an article in the *Nation* of March 6, entitled "Old and New Art," F. J. M., jr., calls attention to the fact that the platform of Post-Impressionism had been anticipated by certain maxims of William Blake. The affinity between Blake and the artists of the new school is not limited to theory alone. It is only necessary to compare Blake's designs in any one of his books ("Urizen" will serve admirably) with the canvases of Van Gogh or Matisse to see how thoroughly in accord they are. Everywhere in Blake one finds the "powerful distortions" and the "childish symbolism" which Professor Mather designates as the characteristics of the new art.

Perhaps some Post-Impressionist, Cubist, or Futurist will give us a logical interpretation of the "Prophetic Books"?

HENRY A. BURD.

Hiram College, May 23.

JEFFERSON ON THE BOOK TAX.

TO THE EDITOR OF THE NATION:

SIR: The following extract from the Minutes of the Board of Trustees of the University of Georgia may be of some interest, as showing the length of the lane which finally gives some faint hope of turning:

November 13th, 1821.

The committee to whom was referred the letter of Mr. Thomas Jefferson, dated at

Monticello the 28th of Sept., 1821, on the subject of existing duties on imported books, report, That your committee entirely coincide in opinion with Mr. Jefferson. That although our own manufacturers ought to be encouraged, the paramount interest of science demands that every facility should be afforded to the obtainment of books which are essential to the student and man of letters, and which are rarely if ever published in our country. The committee recommend the following resolution:

Resolved, That a respectful petition to the congress of the United States be prepared, to be signed by the President in the name and behalf of the Trustees of the University of Georgia, praying a repeal of the duty on imported books; and that an address, to be signed in like manner, be made to the Senators and representatives of Georgia in Congress, soliciting their aid to effectuate the object of said petition, and that a copy of Mr. Jefferson's letter accompany the said address.

Literature

THE NEW CHINA.

The Passing of the Manchus. By Percy Horace Kent, M.A. (Oxon.). With illustrations and maps. New York: Longmans, Green & Co. $4.20 net.

In attempting to write a general history of the recent upturn in China, the author of this volume has set himself a task without hope of finality. There are, however, compensating advantages; Mr. Kent shows himself to be qualified by temperament and training to discuss a situation not yet fully achieved; he lived through the turmoil at Peking, had access to unpublished documents, and enjoyed a personal acquaintance with the leaders in the struggle; he has written a book which, if not exhaustive, is wholly satisfactory and deserves much higher praise than that implied in the publishers' customary and rather meretricious adjective "timely." It is an effort of solid merit and good breeding, plainly told and entirely free from that "certain condescension" which is apt to pervade the writings of foreigners in other countries besides our own.

Mr. Kent's belief in the inherent soundness of the race which has weathered so many storms, while it does not blind him to the dangerous elements in the present outlook, implies the comforting conviction that the desire of the masses for an honest administration must assert itself in the long run. The people may respond less expeditiously than in other countries to the call of patriotism, but this is largely due to their habit of acknowledging a supreme Government in which they felt no responsibility. Their resistance to change has become a byword with us; but it was not the people who showed a prejudice in the past to unfamiliar institutions, it was the Manchu Government. The nation does not expect much from others; it has been trained for ages in a bitter experience of labor and sorrow—

With close-lipped Patience for its only friend—

Sad Patience, too near neighbor to despair.

It may bungle badly for a time under untried captains, but even here there appears to be material out of which statesmen are made, and with their well-known capacity for organization the people, after enduring confusion for a time, may be trusted to work out their political salvation. "There is," says the author sensibly,

a tendency for the West to be too harsh in its judgments of China. In its impatience to see a settled China ready for much business, it inclines to forget that revolutions must run their normal course. Again, peoples amongst whom representative institutions are part and parcel of life are apt to underestimate the great difficulties of representative government, and an infant deliberative assembly of untried men, unorganized and under no recognized leader, must inevitably prove a rudderless bark on the political sea. It does not follow that the material is bad material, and the closest observers have formed high hopes of many of the men who now occupy the stage. Despite immaturities and even absurdities, something of a spirit of true renascence is abroad. It is certain that great numbers of the leaders realize perfectly well the vastness of the task which lies ahead. They understand the radical differences between the new China, for which they stand, and the Old. They recognize the great gulf fixed between them, and frankly admit that the ideals for which the Republicans have striven are not to be attained short of many years. And, what is more important, they appreciate the fact that the most essential element in the requirements of progress is sound finance, with its handmaiden, properly organized administration.

Mr. Kent also furnishes the materials from which we are able to estimate several elemental factors that more or less condition the future—among them the military utility of their army, the personnel of their politicians, and their comprehension of the task of reconstruction.

The first of these is revealed in his account of the operations about Hankow. This was the only part of the Empire where the fighting can be described as serious or sustained. Many tales of the struggle have already been printed, but none of them is to be compared with the orderly and precise description of the entire campaign here related. It is no reflection upon the bravery of the rebels under General Li to conclude that the honors of these operations rest mainly with the Imperialist army. Had not the other provinces been utterly rebellious, the fighting qualities and leadership of this one army might ultimately have secured the Dynasty upon its throne. It met the best array of the rebels when they were in possession of the resources and strategic positions of the three cities, and in the recapture of everything north of the river it showed itself a fighting machine of a high order. The proof of this lies in its willingness to fight without any compelling conviction in the righteousness of its cause, while the rebels with all their enthusiasm became demoralized and retreated. But these operations, "if they had shown the strong points of the Chinese modern soldier, had also afforded a painful demonstration of his weaker side." The massacre which followed the recapture of Hanyang revealed, as in the similar case of the Japanese at Port Arthur in 1895, the common soldier still "lacking in the moral sense which goes with true humanitarian instincts and the higher forms of civilization. He has learned the mechanical side of his profession, but still has to learn the higher side, which only asks a fair fight and honors a vanquished enemy." Some reflections of this kind were made upon the moral fibre of the Japanese after their assault upon China, but another war proved that they could learn the other lesson of warfare, too. *Pace* the humanitarian, the main point just now is the question, Will the Chinese peasant fight to a finish? There is hope for China if her men of the future will fight for a better cause as resolutely as that one army fought for the decadent Manchus.

In his estimate of the leaders which the crisis has brought forward, Mr. Kent is commendably tolerant. It is clear that they cannot be fairly judged by the standards of an alien civilization, yet there are moral laws as generally recognized in Asia as in America, and it would be idle to deny our right to hold them up to judgment under these. It must be remembered that nearly all the actors in this drama are still alive and that the author has been long associated with many of them; also that the evidence in the case of a living man is never complete. The conduct of Yuan Shi-Kai is submitted to rigid but not unkindly scrutiny. He has been accused of opportunism and of playing false to his liege; but "the East is preeminently the land of opportunism and personal strife," and "he had neither reason nor desire to bolster up the Manchu Dynasty. What he was imbued with was a large and patriotic interest in the future of his country." We cannot stop here to examine the evidence, but his task was not that of a Cavour, and his decision to dethrone the Dynasty to save his country seems to have been an act of patriotism comparable to that of the Italian Minister. In the impeachment of Sheng, whose policy of railway concentration had aroused the strongest hos-

tility, a personal enemy of the future President was disposed of before he could encounter his opposition. He was able and corrupt after the fashion of his old master, Li Hung-Chang; but while the author might easily have depicted his career in severer terms, he is content to say that "the circumstances of his end excited emotions which obscured his faults, while he himself exhibited a composure in misfortune which, as Macaulay wrote of a far greater but scarcely more scrupulous Englishman, 'has half redeemed his fame.'" The episode is told with considerable dramatic force.

As to Sun Yat-Sen's part in the events of 1911, Mr. Kent admits that he was the father of republican aspirations in China, but writes him down as "a theorist, with many of the characteristics of the visionary rather than the cast of mind of the practical politician." Sun's elevation to the post of Provisional President appears to have been a happy accident rather than a result of either his own efforts or those of any party behind him. Another character about whom some mystery hangs is Gen. Chang Chao-Tseng, famous in the early days of the rebellion as the Dictator of Lanchow, a reformer, yet not a republican. When he had, apparently, the Court at Peking in the hollow of his hand and was ready to dictate terms of surrender, his nerve suddenly failed upon hearing of the assassination of his comrade, Wu, and he sought protection rather ignominiously in the foreign concession in Tien-tsin. The rôle of T'ang Shao-Yi as Yuan's emissary in the peace conference of January at Shanghai comes in for no such condemnation here as in Mr. Bland's recent book, for it is an open secret now that T'ang's republican proclivities were known to his chief, and were among the causes that got him his appointment. With his unhappy and costly attempt to negotiate the Belgian loan in March, 1912, while the Provisional Government was committed to deal exclusively with the Six Powers, the author is justly severe; the only explanation for this palpable breach of faith is T'ang's nervous breakdown under a family affliction. In the aggregate it is a very human company we have to deal with in these pages.

These are only a few of the galaxy of men whose political acquaintance must be made by any one who tries to understand the work of reconstruction now developing in China. Mr. Kent's sympathy with them and his appreciation of the extraordinary difficulties in the task before them—coupled, of course, with his intimate acquaintance with their careers—render his book the most important contribution to an understanding of the political situation that has yet appeared. Taken as a whole, one is inclined to conclude that the nation's best hope for the immediate future lies in the quality of its guiding minds. The prospect of reasonable control through legislative action is less bright. With their acute instinct for discussion and criticism, the Chinese will be long in learning to proceed with a legislative programme and to abide by the results of a majority vote. There is no real coöperation as yet between the representatives of the North and South, nor is there a proper understanding in the provinces of the necessity of checks upon provincial interference or of the organization of an Audit Department at Peking if the country is to obtain foreign loans. In their collective capacity the members of the National Advisory Council have wasted time in dangerous intrigues, and thus far little constructive work has been accomplished. "For the most part," we are told, "side issues in preference to great principles have engrossed the members, who have obstructed the executive and denied assistance to the President in his enormously difficult task." Against these distracting elements and the impractical nature of the ideas now afloat must be set the habit of the people accustomed to look to a strong central Government and their willingness to accept a compromise when convinced that the attainment of all their designs is hopeless. It is possible in the growing confusion of conflicting aims that Yuan may be compelled to "undertake a Cromwellian rôle," but in the author's estimation "before this point is reached it is to be expected that the idea of the chief power of the state continuing to lie in effect with Yuan Shi-Kai, as it undoubtedly does at present, will be acquiesced in." It has the appearance of a contradiction in terms—a republic under a Dictator—but there is a great and honorable work of national education to be carried on before China is fit for representative rule. In such work a career is open for every man of patriotism and training, and even the Kwangtung hot-heads must pause before they precipitate another revolution for the sake of a theory in the face of the passive demands made by the needs of the mass of the population.

CURRENT FICTION.

The Combined Maze. By May Sinclair. New York: Harper & Brothers.

The life of a clerk who spent the best part of his young manhood expiating the marriage into which honesty and exuberant youth had betrayed him, might easily have assumed the guise of a dingy tragedy. Miss Sinclair has made of it an heroic idyl of London youth. For not in the stuffy home of his apothecary father, nor in his mahogany pen in the furniture-store counting-house, can she be rightly said to have "found" her hero, but at the exhibition performance of his gymnastic club, where she chose him for his radiant preëminence on the parallel bars—"John Randall Fulleymore Ransome, . . . leader in Section I of the London Polytechnic Gymnasium." This J. R. F. Ransome is an uncommonly likable chap. In spite of the engaging Cockney turns of his speech, he cannot be said to belong exclusively to London:

> In all cities there are many thousand Ransomes, more or less confined in mahogany cages, but John Randall Fulleymore stands for all of them. He is one of those who, in a cold twilight on a Saturday afternoon, stagger from the trampled field, hot-eyed under their wild hair, whose garments are stained from the torn grass and uptrodden earth, with here and there a rent and the white gleam of a shoulder or a thigh; whose vivid, virile odor has a tang of earth in it. He is the image and the type of these forlorn, foredoomed young athletes, these exponents of a city's desperate adolescence, these inarticulate enthusiasts of the earth. He bursts from his pen in the evening at seven or half past, he snatches somewhere a cup of cocoa and a sandwich, and at nine he is seen, half pagan in his "zephyr" and his "shorts," sprinting like mad through the main thoroughfares. In summer some pitch, more or less perfect, waits for him in suburban playing fields; and the River knows him, at Battersea, at Chelsea, at Hammersmith, and at Wandsworth, the River knows him as he is, the indomitable and impassioned worshipper of the body and of the earth.

And as all cities have their young Ransomes, armored in cleanly instincts against the insidious dangers that lie in wait for their youth, so in every city, among the host of workingwomen, appear the two feminine types, opposed and sharply contrasted, of Winny Dymond and Violet Usher—slips of virginal independence "accompanying themselves" in perfect security at all hours of the day and night, and soft Delilahs piercing the masculine heart with their need of protection against the terrors of the crowded streets. On every side we see them multiplied, these three, children for an ancient game, actors predestined to their parts in the world-old drama of sacred and profane love.

No two pieces of fiction could be further apart in their subject-matter than "The Combined Maze" and its immediate predecessor, "The Flaw in the Crystal," this treating of what is most intangible and clusive in human experience, and that concerning itself with the obvious circumstances of everyday middle-class life. They are alike, however, in the proof they offer of their author's advance in artistry, alike in significant simplicity, clearness of design, and in

the magical propriety with which her rhythmic prose reflects an undercurrent of mystic meanings. There are times when this style seems in danger of becoming a curiosity. The pages look like prose, but many of them reveal in the reading something in the nature of a metrical chant.

With its favorite precursor, "The Divine Fire," the newer book has more in common. If we were to venture an observation or two without instituting a detailed comparison, we might remark that in her curiously feminine attitude towards her characters she has not changed at all. She still views them as a fond mother might, yearns over them with an excessive tenderness, watches them with tears in her eyes. This maternal emotionalism, except when her ecstasy takes a whimsical turn, is apt to provoke in the reader a defensive mood of critical reserve. Where she has changed is in a perceptible tightening of her hold upon reality. She has become more discriminating and less fastidious. To instance a single particular: When the genius of "The Divine Fire" was admitted to have dropped his "aitches," it was whispered with bated breath, and we all blushed together. In "The Combined Maze," without resorting to the redistribution of "aitches," she fairly revels in the niceties of middle-class speech, to the delight of the reader's ear and the tickling of his sense of humor.

The Candid Adventurer. By Anna Coleman Ladd. Boston: Houghton Mifflin Co.

Mrs. Ladd has come close to killing her hero with kindness, creating him not more a candid than a candied adventurer. Even when allowance is made for the fact that he is a painter, with a considerable talent in music, the demands of a "temperament" will scarcely account for this superabundance of the sweet and the precious. Though he is said to have the pulse to be sorely tempted by sin, the reader will feel that this is an attribute conceded to him by his earthly creator alone. Jerome Leigh has returned from study abroad to set up a studio in Cambridge. He occupies the stable of a place he has inherited, and rents the house to the rich Mrs. Osborne, a young Boston widow, whose excuse for residing in the college town is carefully explained. Thus hero and heroine are separated only by a hedge, and the courtship at once begins. This consists largely of the impulsive, often indiscreet, prattle of Jerome, who, though twenty-seven, is still a spoiled child. His indiscretions shock his Puritan acquaintances—so much the worse for Boston and Cambridge is clearly the author's inference—all except Mrs. Osborne, who recognizes his fineness and sincerity. Voyages to the other side twice separate the two, the second causing a misunderstanding which is only cleared up by the wisdom coming from the mouth of a little child. Mrs. Ladd evidently knows her Rome and Paris well.

POETIC MATERIALISM.

Winds of Doctrine. By George Santayana. New York: Charles Scribner's Sons. $1.75 net.

"The present age is a critical one and interesting to live in," writes Mr. Santayana; and in the book under review he gives us, in classic English, his impressions as an interested observer of the scene. His attitude is that of a cool and dispassionate looker-on amid the medley of warm philosophic controversies and intellectual tendencies, both technical and popular, which fill our age. But the fact that he preserves ever a kind of aloofness in his discussion does not imply that he has no theory of his own. His attitude is rather that of the conscious possessor of the truth who, with Puck, delights to note what fools these mortals be. Naturally and characteristically, he is not at all concerned to spread his truth abroad and make converts. Did all men understand the nature of reality as clearly as he, the rich variety of the human spectacle would be lost, and the unconcerned observer cheated of his intellectual enjoyment. Nevertheless, he makes no concealment as to what the true philosophy is, and those who wish may learn. It is, namely, materialistic naturalism, and from this pole star of truth all the winds of doctrine are to be judged.

The book is made up of six essays, entitled respectively: "The Intellectual Temper of Our Age," "Modernism and Christianity," "The Philosophy of M. Henri Bergson," "The Philosophy of Mr. Bertrand Russell," "Shelley; or The Poetic Value of Revolutionary Principles," and "The Genteel Tradition in American Philosophy." The essay on Bertrand Russell is clear and analytic, sympathetic and just, but also rather scattering—a collection of ruminations on various themes. The essay on Bergson, though less sympathetic, is better done and much more important. Naturally, Bergson stands, in the eyes of our author, as the type of most things that are false in our foolish world. In a series of brilliant pages Bergson's fallacies stand revealed. Notable among these is his identification of a kind of literary psychology with metaphysics, and the resulting attribution of what is true of his own consciousness to the universe at large. This latent subjectivism, according to our author, is at the bottom of most of Bergson's fallacies, and explains the self-deception of the whole Bergsonian school when they flatter themselves that they have avoided the difficulties of idealism. "Matter and mind, for these transcendentalists posing as realists, merge and flow so easily together only because both are images or groups of images in an original mind presupposed but never honestly posited." But it is, of course, Bergson's vitalism and his attack upon the application of materialistic science to life that seems to Santayana particularly mad. "If divination and eloquence—for science is out of the question—were to invoke nothing but a fluid tendency to grow, we should be left with a flat history of phenomena and no means of prediction or even classification. All knowledge would be reduced to gossip, infinitely diffuse, perhaps enlisting our dramatic feelings, but yielding no intellectual mastery of experience, no practical competence, no moral lesson. The world would be a serial novel, to be continued forever, and all men mere novel readers."

In fact, when dealing with the follies of M. Bergson, our author at times loses his usual philosophic calm and allows his cleverness to run away with his pen, as in the following witty and peculiarly unworthy thrust:

> M. Bergson would have us believe that mankind is what nature has set her heart on, and the best she can do, for whose sake she has long been making very special efforts. We are fortunate that at least her darling is all mankind and not merely Israel.

The three essays on "The Intellectual Temper of the Age," "Modernism and Christianity," and "The Genteel Tradition in American Philosophy" are less technical than the others and concern themselves with broad philosophical tendencies rather than with particular doctrines. The Modernist movement is regarded as one of the many anomalies of the times, and the Modernist is shown to be quite out of place, not only within the Catholic Church, but anywhere inside Christianity. For Christianity, in Santayana's opinion, means a certain ancient theory about supernatural intervention, with the practical corollary of fleeing from the world as the first duty of man. "Modernism is, accordingly, an ambiguous and unstable thing. It is the love of all Christianity in those who perceive that it is all a fable. It is the historic attachment to his church of a Catholic who has discovered that he is a pagan." And if Christianity is, indeed, no more than what Santayana thinks it, he is, of course, amply justified in his view of Modernism.

The intellectual temper of our age suits our author about as ill as does the genteel tradition in American philosophy. The latter, in fact, is only a part of the former. The genteel tradition in question is a combination of Calvinism and transcendentalism, and

we Americans have been keeping up the show of believing in both, while in reality we believe in neither. This contradiction between our official philosophy and our actual belief is another example of the many anomalies of the age. Still others that may be mentioned are our enthusiasm over nationality combined with our socialistic and levelling tendencies; the silly freaks of contemporary art; our modern craze for antiquity, and our cultured worship of vitality. "Having no stomach for the ultimate, they (our contemporaries) burrow downwards toward the primitive. But the longing to be primitive is a disease of culture; it is archaism in morals. To be so preoccupied with vitality is a symptom of anæmia." Closely connected with this is the glorification of irrationalism and the philosophical belittling of the intellect:

> Human intelligence is certainly a product, and a late and highly organized product, of evolution; it ought apparently to be as much admired as the eyes of molluscs and the antennæ of ants. And if life is better the more intense and concentrated it is, intelligence would seem to be the best form of life. But the degree of intelligence which this age possesses makes it so very uncomfortable that, in this instance, it asks for something less vital, and sighs for what evolution has left behind. . . .
>
> Anomalies of this sort will never be properly understood until people accustom themselves to a theory to which they have always turned a deaf ear, because, though simple and true, it is materialistic; namely that mind is not the cause of our actions but an effect, collateral with our actions, of bodily growth and organization. It may therefore easily come about that the thoughts of men, tested by the principles that seem to rule their conduct, may be belated, or irrelevant, or premonitory; for the living organism has many strata, on any of which, at a given moment, activities may exist perfect enough to involve consciousness, yet too weak and isolated to control the organs of outer expression; so that (to speak geologically) our practice may be historic, our manners glacial, and our religion palæozoic.

Certainly, there could hardly be a finer example of the modern tendency to "burrow downwards toward the primitive" than is Dr. Santayana's espousal of the materialistic philosophy. Its beautiful simplicity has been admired ever since Thales made the suggestion that not mind but water was the cause of all things. The Lucretian formula resolves us of all mysteries. Thought, aspiration, insight, the minutest variations in the life of the spirit, are, as Dr. Santayana will assure us, "perfectly explicable scientifically." Thus "the movement of consciousness will be self-congruous and sustained when it rests on continuous processes in the same tissues," etc. etc. Doubtless, it would be old-fashioned to intimate that this brilliant book is itself a refutation of the doctrine it teaches. But if all the wit and subtlety which one finds here are really the mere product of "continuous processes" in the brain, one is at least forced to conclude that Dr. Santayana must have very remarkable "tissues." And it might be set down as one of the anomalies of the age that so brilliant a defence of reason against the irrationalism and emotionalism of our contemporaries should itself be fundamentally a glorification, not of the brute, but of the inorganic.

A Keeper of Royal Secrets: Being the Private and Political Life of Madame de Genlis. By Jean Harmand. With a Preface by Emile Faguet. New York: Brentano's. $3.75 net.

In this book of upwards of four hundred pages the life is told of a remarkable woman who was conspicuous in the social, political, and literary life of the stormy years of the last quarter of the eighteenth century. She was one whose name was well known by everybody, by people of all classes; whose talents were recognized by her bitterest enemies, and they were many; whose hand was seen in political intrigues involving persons of the highest rank; whose books were widely read, and whose memoirs, written late in life, fill several volumes and aroused harsh criticism. But this singular person, always before the public of her day, has been forgotten until, as M. Faguet says in the Preface, "Mme. de Genlis has come to be only a name remembered with a smile, inasmuch as it evokes the idea of the most tedious author of a very tedious epoch; and for some the idea of a political *intrigante* of somewhat easy morals, who, in the witty phrase of another woman, 'made precepts of the virtues and practice of the vices.'" M. Harmand's book has for its aim to tell the truth about Mme. de Genlis and in a way to rehabilitate her.

Stéphanie-Félicité du Crest, whom we know as Mme. de Genlis, was born January 26, 1746, and died December 31, 1830. Her father, Pierre-César du Crest, was a member of one of the oldest families of the aristocracy of France. Her mother, a member of the family of Chaussins, was also of the nobility, though of less ancient lineage than the du Crests. Her early life was spent in the country on a family estate, for the du Crest family, though of the high nobility, was too poor to enter the life of Paris and Versailles. In a chapter upon her education the author shows how neglected were she and all other children of her kind. The catechism, a little writing and reading, that is about all. If Mme. de Genlis became one of the best educated women in France it was due solely to her own ambitious and indomitable spirit. As she grew to womanhood she made much use of her musical talent in her social advancement. In 1763 she married the Comte de Genlis, and a little later went to Paris and entered upon her first period of real brilliance. Here she first met Rousseau, whose ideas of life and especially of education had a powerful influence upon her future. Here she met the "Philosophers," most of whom she learned to detest, a feeling that increased with age.

And in Paris began her acquaintance with the family of the Duke of Orleans, which was to become an intimate relationship later, when she was appointed *gouvernante*, or tutor, to the children of the Duke de Chartres, who became Duke of Orleans at the death of his father. She finally supplanted the wife of this Duke in his affections and became his adviser in private and public affairs, so that she was often called by her enemies "the Maintenon of Orleans." Perhaps this did not displease her. In 1777 she withdrew from the circle in the Palais Royal and for the next fifteen years lived in the convent of Bellechasse near by, where she directed the education of the Orleans family. Though apparently in retirement, she was most active in politics and literature, advising the weak Orleans in the stormy years after the meeting of the States-General in 1789, writing essays, novels, educational and philosophical treatises, and realizing the fact that she was a celebrated woman. The chapters that treat of this period of her life are the most interesting of all; they give us an insight into the relations of the Orleans family to the Revolution not to be had in any of the formal histories.

As the time of the Terror approached Mme. de Genlis was obliged to separate from the royal family, much to her and their regret. The Duchess of Orleans also began to protest at last, and demanded her dismissal. Thenceforth for some years Mme. de Genlis wandered about in Switzerland, Germany, Holland, and England, making a poor living by her writings. She returned to Paris after the danger was past, after the Duke of Orleans, the Comte de Genlis, and a multitude of her old friends and enemies had lost their lives on the scaffold, and a new social and political régime had begun. In later years, like Mme. du Deffand, whom she had known in her youth, and Mme. Récamier, a contemporary, she took rooms in a convent in Paris. There she busied herself in writing her memoirs and in rewriting old pamphlets and romances and in meeting her friends. A vivid picture of her old age is given in one of the final chapters:

> Those who were good at gossip, including old Mme. de la Reynière, still in vigorous health and always hostile to Mme. de Genlis, said that she had gone there to end her days in monastic observances, "disappointed with the vanities of the world and

the false hope of celebrity." But if we are to credit Lady Morgan, Mme. de Genlis's room still blossomed strangely with the perfumes of the world. "Her apartment might pass for the oratory of a saint or for the boudoir of a coquette." The English woman thought she was in some region of romance. She mistook, it seems, for a "beautiful bedstead in the Greek style" the commonest of bedsteads in mahogany veneer, and for the "draperies of blue silk" an old bed quilt. But, after all, the beautiful gilded harp, always kept in tune, the alabaster vases, the fresh flowers everywhere, the piano heaped with new music, seemed elegant trifles beside the great crucifix of ivory that Pius VII had asked to see during his forced stay in Paris, and the chaplets and rosaries hanging on the walls, one of which was regarded as a precious relic because a few days before his death Fénelon had held it in his hands as he prayed.

In three chapters that form Part vi of his book, the author discusses, always in clear and interesting fashion, Mme. de Genlis as a moralist, as a dramatist, and as an educationalist. In her writings she is always moralizing, no matter what the subject may be. Her own life was that of her period, and most strangely inconsistent with her views and teachings. "The real Mme. de Genlis," in the opinion of M. Harmand, "stands somewhere between the blameless prodigy of virtue and the unscrupulous adventuress that were depicted by extremists." Several excellent portraits and a complete list of the writings of Mme. de Genlis add to the value of the book, but an index, much to be desired, is wanting.

Notes

Forthcoming books in Macmillan's list include: "A Prisoner in Fairyland," by Algernon Blackwood; "The Heart of Gaspé," by John M. Clarke; "The Country Church," by Charles Otis Gill and Gifford Pinchot; "The Church and the Labor Conflict," by Parley Paul Womer, and "The Influence of Monarchs," by Frederick Adams Woods.

Two books will soon be added by Longmans, Green & Co. to the American Citizen series edited by Albert Bushnell Hart. They are "Organized Democracy, an Introduction to the Study of American Politics," by Frederick A. Cleveland, and "Public Opinion and Popular Government," by A. Lawrence Lowell.

Lippincott brings out this week "The House of Thane," a new novel by Elizabeth Dejeans.

The next issue in the Scott Library (Walter Scott Publishing Co.) will be Newman's "Apologia pro Vitâ Suâ," in two volumes. It will include the controversy in letters with Kingsley.

Henry James Forman will publish in the autumn, with McBride, Nast & Co., "London, an Intimate Picture."

Among the books which Putnams are bringing out this week is "Ellen Key, her Life and her Work, a Critical Study," by Louise Nystrom Hamilton, translated by Anna E. B. Fries.

The following are among the books announced for publication next autumn by the Yale University Press: "Life and Letters of Nathan Smith," edited by Emily A. Smith; "Earth Hunger and Other Essays," by the late William Graham Sumner; "Trade Morals, Their Origin, Growth, and Province," by Edward Page; "The Ethics of Public Service," by Henry Crosby Emery; "Yale Readings in Insurance," edited by the late Lester W. Zartman, revised with additions by William H. Price, and "Lectures," by the Rev. Charles H. Parkhurst.

A selection of the "Poems by William Allingham" has been made by Helen Allingham for Macmillan's Golden Treasury series—an addition that will be welcome to those who have enjoyed the "Adieu to Belashanny" and the other Irish Songs.

The Macmillan Standard Library, a new series of reprints, at fifty cents the volume, will include a large number of the books of this house for which there continues to be a steady demand. Fiction is issued in red cloth binding, non-fiction in navy blue. Of the former we have received "A Kentucky Cardinal," by James Lane Allen; "Kings in Exile," by Charles G. D. Roberts; "A Dark Lantern," by Elizabeth Robins; "Mr. Ingleside," by E. V. Lucas; "The Colonel's Story," by Mrs. Roger A. Pryor, and "Elizabeth and her German Garden."—Miscellaneous: "The Church and the Changing Order," by Shailer Mathews; "How to Keep Hens for Profit," by C. S. Valentine; "How to Help, a Manual of Practical Charity," by Mary Conyngton; "The Building of the Church," by Charles E. Jefferson; "Abraham Lincoln, the Man of the People," by Norman Hapgood, and "New Worlds for Old," by H. G. Wells.

James Sandy Rose, a Frenchman despite his English name, is found dead in his Paris apartment, with a woman's gown in the chamber, which leads to a suspicion of murder; but an unfinished MS. left by the man tells the true story. This forms the substance of Rémy de Gourmont's "Une Nuit au Luxembourg," which has been translated by Arthur Ransome as "A Night in the Luxembourg" and published by John W. Luce & Co. M. Rose, it appears, has been for a night the companion of a strange being who in one of his avatars was Jesus Christ, and who now deigns to talk hours of philosophy and religion with his human comrade while walking in the gardens of the Luxembourg. The outcome of it all is astonishingly simple — an Epicureanism which denounces every moral restraint and seeks the intensest pleasure of the moment. Meanwhile the divine person, who mocks at men's notion of Christianity, is accompanied by three marvellously beautiful nymphs, one of whom falls to the enjoyment of M. Rose. We are left to suppose that it is her robe which is discovered in his apartment, and we may explain her presence, as goddess or very woman, according to our fancy. M. Rose begins his record with these proper words: "I am certainly drunk, yet my lucidity is very great. Drunk with love, drunk with pride, drunk with divinity. . . ." It used to be held that a man drunk with love and pride was under some other sway than that of divinity; but we pass that. The words are a fair enough description of the book. That M. de Gourmont is an accomplished writer no one need be told; that his present dialogue contains many curious bits of imagination and speculation may be supposed; but to take this composite of eroticism and pseudo-mysticism, this belated relic of the most putrid moment of French decadence, as a piece of serious philosophy, as Mr. Ransome takes it, is really grotesque. Mr. Ransome, we must say in justice, has done remarkably well in transferring the tone and gait of the original to his English rendering. He adds an appendix which contains a portentously serious appreciation of M. de Gourmont as poet, critic, and philosopher.

Each new volume of the Highways and Byways series (Macmillan) brings an increase of admiration for the skill and uniformity of style which mark the work of the various authors. The latest volume, "In Somerset," by Edward Hutton, is no exception to the rule. The author has a county filled with both quiet charm and romance. Here is Wells, the very *ocellus* of cathedrals and cathedral towns; here is Bath, in which, more than anywhere else in England, the style and spirit of the eighteenth century seem to linger in visible form; Glastonbury, hoary with tradition; Sedgemoor, in whose swamps and mists was fought the last melancholy battle on English soil; the Quantocks, associated in the minds of all lovers of poetry with Coleridge and the Wordsworths; and a score of other places, such as Exmoor, more or less familiar for some charm of beauty or wildness. Mr. Hutton knows the romantic aspects of the county and makes no sparing use of them. Thus of the Mendips:

> For Mendip holds the secrets of men and civilizations older far than Rome, and, here alone, more enduring. Maesbury Camp, the lonely and forbidding Barrows upon Blackdown, weigh upon one as nothing that Rome has abandoned here is able to do; they seem to speak to one of a life that is so old it is an agony to think of it, and they threaten us with their enormous wisdom: the vast labor which has ended only in a few gigantic heaps of barren earth. For upon the Mendips, as upon no other mountains in the world, perhaps because few are so old as they, man and his efforts fade into nothing; their futility is exposed by the emptiness of space and the passing of time.

This vein is a bit overworked by Mr. Hutton, if truth be told; and he might also have spared his readers the insistence on the fact that he belongs to the pre-Reformation faith. But in general the book is an interesting and veracious account of Somerset. The illustrations are from drawings by Nelly Erichsen, and are admirably adapted to the text.

We have gone far, and some may add fared worse, since the days when "Cavendish on Whist" was the classic and almost the only authority for the scientific card-player. If Bridge produced its thousands, Auction bids fair to outdo it with its tons of thousands of expositors, till the ordinary player who regards the game as a recreation and has acquired his knowledge by the experimental method, faced with this mass of literature, is fain to marvel at his own brilliance in being able to play at all. The various treatises on the game do not as a rule differ materially one from another either in the methods advocated or in the

manner of arrangement. Auction is becoming standardized, and soon there will be little left to say about it. E. V. Shepard, in "Scientific Auction Bridge" (Harper), strikes out a new line in assuming on the part of some of his readers ignorance of either Whist or Bridge, and his arrangement of chapters in sub-headings of Chief Essentials and Details makes for clarity. Another feature of the book is that its recommendations are based on "mathematical probabilities."

This statement, by a natural process of thought, brings us to Milton C. Work's "Auction Bridge of To-day" (Houghton Mifflin). Mr. Work, since the publication of this book, has distinguished himself by inventing a series of conventions to be applied to the Spade declaration that are calculated to make of Auction not only a "mathematical probability," but a positive certainty. We have not space to enter into a detailed consideration of Mr. Work's proposals, which have set the whole Auction world agog, but briefly his system implies a code of conventions in the Spade declaration which would inform the partner as clearly as would a prearranged signal concerning the nature of the declarer's hand. The objections to such conventions are obvious, and, we think, insuperable. For the ordinary player their observance would demand a printed record to refresh his memory, and Auction would be choked, as Whist was before it, by the piling up of purely arbitrary conventions. In Mr. Work's book we find only the germ of this later development in what he has to say about the "three-spade bid." For the rest "Auction of To-day" is to be commended as a clear and logical exposition of the principles of the game.

Florence Irwin's "The Development of Auction Bridge under the New Count" (Putnam), a considerable portion of which has appeared in separate articles in the New York *Times*, makes no radical departure from established precedent, although there are certain conclusions to which some experts would take exception. It is intended for the player with at least a rudimentary knowledge of the game, and its distinguishing feature is the number of hands that are reproduced illustrating the various points that the author makes.

The "Lectures on Legal History and Miscellaneous Legal Essays" (Harvard University Press), by James Barr Ames, is undoubtedly the choicest product of American legal scholarship. Dean Ames was a searching and accurate student of legal history. He explored its very sources. It was his practice as a young man, we are told, to take the Year Books to his summer home for careful study and comment. He knew their contents even more thoroughly than those of the current law reports. His intimacy with Glanville, Bracton, and Fleta was as close as with the standard treatises of modern times. And yet, extensive and varied as was his legal learning, he was always its master and not its victim. It was not accumulated merely—it was assimilated. Learned in the law as he was, his great reputation with his students and colleagues, as well as with his readers, rests not so much upon his erudition as upon his genius for discovering the reasons underlying accepted legal rules, and his rare power of generalization from "a wilderness of single instances." His own valuation of these traits is shown in the following extract from an address on "The Vocation of the Law Professor":

If the professor renounces the joy of the arena, and the intellectual and moral glow of triumphant vindication of the right in the actual drama of life, he has the zest of the hunter in the pursuit of legal doctrines to their source; he has the delight, the highest of purely intellectual delights, which comes, when, after many vigils, some generalization, illuminating and simplifying the law, first flashes through his brain.

Most of the material in Mr. Ames's volume has been reprinted from various legal periodicals, although some parts of the lectures on legal history appear now for the first time. Not a few of the essays have attained the rank of legal classics. But every serious student of our law will rejoice in having these widely scattered writings brought together in a single volume, and thus made easily accessible. In this form they ought to be read more widely and to exercise even a greater influence over legal thought than heretofore.

Adelaide Mack writes in a crisp, racy style of "Magnetic Paris" (Bobbs-Merrill), and, with the admirable coöperation of the illustrators, is successful in conveying to the reader something of the peculiar zest that those who love their Paris always associate with the city. The author, with an unaccustomed wisdom for which we are grateful, has realized that excellent descriptions of monuments are to be found in trustworthy guide-books, and confines herself entirely to the human, and therefore the most interesting, side of Paris. It is the gay city that she loves most to describe, the life of the Boulevards, of Montmartre, and of the Quartier. At times perhaps her enthusiasm runs away with her, as when she seems to be looking at the present rather effete bohemianism of the Quartier through the glasses of Du Maurier. Her frankness, too, is sometimes a little self-consciously emancipated, and she has a tendency to argue from the particular to the general. We should, for instance, accept with some reserve her statement that it is "often" the French mother who arranges the first irregular *ménage* for her son in the interests of his general well-being. Nor are French people uniformly quite so suavely dishonest as this writer would have us believe; but we must make allowances for poetic exaggeration and admit frankly that this is about the only thing of which the Parisian *concierge* cannot take advantage. One obvious injustice to the intelligence of the Parisians is when the author tells us that they "revel" in the banalities of the two Montmartre resorts "Heaven" and "Hell." The fact is that if these abominations depended on domestic patronage for their support they would starve. They are kept going principally by foreign tourists, for the most part English and American, who attend them with a vague and quite mistaken notion that they are participating in the naughty night life of Paris. Such passages as we have mentioned, however, are insignificant blemishes in a book that is on the whole bright and entertaining.

During the past year, Prof. Giovanni Luzzi, of the Waldensian Theological Seminary, in Florence, has been giving a series of lectures in various universities and seminaries in this country. These lectures he has now put together, with some additions, and published under the title "The Struggle for Christian Truth in Italy" (Revell). Dr. Luzzi is an ardent Protestant, and his references to the Catholic Church have a ring that reminds one of the Scotch Covenanters; and it is, of course, from this point of view that he writes history. The two short chapters embracing the history of Christianity from the earliest times to the end of the Protestant Reformation naturally have little to tell that is not common knowledge, and were evidently written to make the book formally complete. Two other chapters, moreover, on recent developments of Protestantism in Italy are too detailed to be of much interest to the general reader. On the other hand, chapter iii, The Dramatic History of the Bible in Italy, contains much that will be new and interesting to most American readers, while chapter iv, on the Waldensian Church, "the Israel of the Alps," contains a story of persecution, courage, endurance, and faith that will speak to every human heart, whether American or Italian, Protestant or Catholic. The final chapter, on Modernism, is significant chiefly for the light it throws on the Waldensian attitude towards the new movement. Modernists, it seems, are of two kinds: those whom Dr. Luzzi likes and those whom he likes not. The former are represented by the now famous pamphlet, "Il Programma dei Modernisti," whose views on Higher Criticism and germane subjects are apparently as unacceptable to the Waldensians as to Pius X. This "hypercritical and destructive movement," Dr. Luzzi tells us, has been largely given up and is now "almost forgotten." The proper sort of Modernism is, of course, constituted by those members of the Catholic Church who have retained their evangelical belief and who would reform Rome by remodelling it on the Protestant pattern.

Mason W. Tyler's "Recollections of the Civil War" (Putnam), edited by his son, William S. Tyler, is one of those records of honorable but not notable service which appeal to family or local interest, but which contain little of significance for the historian. The author, a son of William Seymour Tyler, for more than sixty years professor of Greek at Amherst, served in the Union army during the last three years of the war, and participated in a number of important battles from Gettysburg to Petersburg; but his personal share in them was not exceptional, and he does not appear to have undergone any unusual experiences. The story has been developed, however, by use of the "Official Records" and other sources, into a not uninforming general narrative of the war.

Mr. Hubert Howe Bancroft publishes a revised edition of his "New Pacific," a book first issued in 1899 (New York: The Bancroft Co.). The author's equipment for such a task, the description of the vast area now fully thrown open to the advanced races, and the entrance of the United States upon the field, no one will question. He had a long and successful business career in San Francisco, has sojourned for protracted periods in foreign Pacific lands, and found time to collect and systematize in his famous library much

of the history of the subject. His limitations as an historian are well known; he shows a tendency to eccentric and overconfident judgments, and too great vehemence both as regards what he likes and dislikes. The "anti-expansionist" reads his pages with small approval. As to the present issue, the kaleidoscope has turned many times since 1899, and Mr. Bancroft has not caught in his revision all the changes. A book which contains no mention of Yuan Shi-Kai, Sun Yat-Sen, and the Chinese Republic, and which does not record the collapse of Diaz and the anarchy in Mexico, is hardly up to the date 1913. Nevertheless, the book is packed with information, vigorous and honest, and will be found stimulating even when one dissents.

The death at seventy-four is reported of Sir Robert Kennaway Douglas, the well-known writer on Chinese subjects, and for some time professor at King's College, London. He had a chance for first-hand observation while for some years in the Chinese consular service, and later took charge of the Chinese Library in the British Museum, as well as of Oriental printed books and MSS. Among his published works are "The Language and Literature of China" and "Europe and the Far East."

Alfred Austin, Poet Laureate since 1896, died at his home in Kent, England, on Monday. He was born at Headingley, near Leeds, May 30, 1835, the second son of a merchant and magistrate of that borough; his mother was the sister of Joseph Locke, civil engineer and member of Parliament. Both his parents being Roman Catholics, he was sent to Stonyhurst College, and afterwards to St. Mary's College, Oscott. He took his degree at the University of London in 1853, and in 1857 he was called to the Bar of the Inner Temple. But he studied law in deference only to the wishes of his parents, his main interest being in literature. At the age of eighteen he published a poem entitled "Randolph," and he completed his first novel also while a minor. His first acknowledged volume of verse, "The Seasons: A Satire," appeared in 1861. His other productions in verse are: "The Human Tragedy," 1862, republished in an amended form in 1876 and finally revised in 1889; "The Golden Age: A Satire," 1871; "Interludes," 1872; "Rome or Death!" 1873; "Madonna's Child," 1873; "The Tower of Babel," a drama, 1874; "Leszko, the Bastard: A Tale of Polish Grief," 1877; "Savonarola," a tragedy, 1881; "Soliloquies in Song," "At the Gate of the Convent," "Love's Widowhood and Other Poems," "Prince Lucifer," and "English Lyrics," all published between 1881 and 1890. He wrote three novels, "Five Years of It," 1858; "An Artist's Proof," 1864, and "Won by a Head," 1866, as well as "The Poetry of the Period," reprinted from *Temple Bar*, 1870, and "A Vindication of Lord Byron," 1869, in reply to Mrs. Stowe's article, "The True Story of Lord Byron's Life." He was a constant contributor of editorial and other matter to the London *Standard* and also wrote frequently for the *Quarterly Review*. During the sittings of the Œcumenical Council of the Vatican he represented the *Standard* at Rome, and he was a special correspondent of that journal at the headquarters of the King of Prussia in the Franco-German War. His political writings include "Russia Before Europe," 1876; "Tory Horrors," 1876, a reply to Mr. Gladstone's "Bulgarian Horrors," and "England's Policy and Peril," a letter to the Earl of Beaconsfield, 1877. In 1883, in conjunction with W. J. Courthope, he founded the *National Review*, and continued to edit that periodical till the summer of 1893. In 1892 Macmillan & Company issued a collected edition of his poems in six volumes, since which time they have published "Fortunatus the Pessimist," "England's Darling and Other Poems," and a prose work entitled "The Garden That I Love." Among his latest productions were "The Bridling of Pegasus" and his autobiography. For an extended appreciation of Alfred Austin's literary achievement we refer our readers to the issue of the *Nation* for October 19, 1911.

We have to report the death of Giustino L. Ferri, who, after writing over a pseudonym, gained open recognition by his novel, perhaps his best, "La Camminante." He was also a critic of some note.

Science

A History of Nursing: From the Earliest Times to the Present Day, with Special Reference to the Work of the Past Thirty Years. Edited, and in part written, by Lavinia L. Dock, R.N. In four volumes: Vols. III and IV. New York: G. P. Putnam's Sons. $5 net.

These handsome books form the conclusion of a work begun some years ago by M. A. Nutting and L. L. Dock. The first two volumes, with a different secondary title indicative of the period covered, appeared in the latter part of 1907 and were noticed in these columns. Time has brought a marked change in the preparation of the work. Miss Nutting, having taken up the active duties of instruction at Teachers College in New York city, no longer appears as an editor, although she is said to have aided much as an adviser. Miss Dock herself seems to have written several of the chapters—there are ten of them in all—and to have revised with much freedom the material furnished by many contributors for the rest of the history.

As the work stands, we have confessedly only an outline, and in many parts a very slender outline. Large regions of the world are not even mentioned. Africa has six pages, and Russia does not appear in the index, although Finland occupies a dozen pages; possibly a delicate recognition of political distinctions. The whole American continent south of the Rio Grande is also lacking, except for eighteen pages about Cuba and a bare half-page given to Porto Rico. From the point of view of the book there is no nursing in all these vast territories, and consequently no history. The index is arranged mostly by countries and only in part by topics and persons, with many gaps and inconsistencies which make it rather hard to use. There is a brief bibliography of more than a hundred titles in half-a-dozen languages, agreeably free from typographical blunders, and intended to cover only books bearing pretty directly upon the propaganda and history or the general questions of the education of nurses, rather than upon the art of nursing. The text is illuminated by more than fifty portraits of nurses, including many striking personalities, and there are some twenty more pictures showing groups of nurses or illustrating their work in various parts of the world. That the books are well made goes almost without saying.

These pictures suggest, and the text often confirms the impression, that we are here dealing with a history of nurses rather than a history of nursing. The most careful reader, otherwise unfamiliar with the movement, will have difficulty in getting any clear notion of just what the progress in nursing has been. When it comes to understanding what is meant by various outgrowths, such as district nursing, social service, and so on, there is a regrettable absence of precise explanation of what has been done, not to speak of what it is thought desirable to do, which, of course, has not yet become history. We find many generalities, much enthusiasm and devotion, a markedly feminine lack of perspective and proportion, along with strong individualistic tendencies, but feel a striking lack of clear-cut statements of accomplishment and purpose. In a survey of this kind it is, of course, difficult to bring out a comprehensive view of aims and deeds, but the cause (or should we say the Cause?) would be helped by an effort to do this. We expressed a similar regret in noticing the first part of this work, some five years ago. We may be obtuse, but as we read these newer volumes we seem again to meet everywhere a spirit of unrest, a state of fidgets, together with an unwillingness, it surely cannot be incapacity, to recognize that some at least of the opposition to present tendencies in nursing may have a sound sense of conservatism and good judgment, masculine though it be, behind it. Perhaps, after all, we should remember that we are really dealing with one aspect of a universal feministic movement, and that a whole sex breaking away from certain long established limitations is finding itself, or at least thinks it is. If we take this attitude, then all questions as to the relation of nurses and nursing to doctors and medicine, and as to the service needed by the sick in contradistinction to the intelligent aid needed by the general public, may seem to be of secondary importance.

Let us not be misunderstood. We write these things, as we have written before, not in any unfriendly mood, but

with apprehension. The prime purpose of nursing is the care of the sick, and in this work there can be no question that the nurse must be subordinate to the doctor. We may make phrases and talk of coöperation as prettily as we please, but the fact remains that one must lead. The modern nurse is with us, apparently, to stay; she is a most valuable aid; she is, however, a problem of which the solution is not yet at hand, not even in these volumes. As this movement came up there were eager enthusiastic champions among the medical men, but there were also many doctors who felt that a very serious danger was before the profession. These men were not all the short-sighted, hard-hearted, narrow-minded old fogies that Miss Dock and her *consœurs* would have us believe. Early, too, dominant spirits showed themselves, and it was evident that these and their like would be satisfied with nothing short of independent leadership. The movement has gone on and is extending indefinitely. It has made, and always will make, a strong appeal to women as coming closer to them than any other form of public service. Of the male nurse we hear virtually nothing, although he exists. Now, as the "nurse" broadens the field of her endeavor, taking in all forms of supervision of certain parts of private and industrial life, not only is it hard to place the limit, but it also grows more and more evident that her relation to the doctor must become less intimate as she becomes more and more a social worker. Must not the outcome be, either that the nurses will break up into independent groups of workers of which only one or two will remain in close touch with the doctor, or that the whole group will become an independent unit and form a sort of medical guild, taking up a not inconsiderable though subsidiary part of the practice of medicine? We shall then have a condition of things in medicine somewhat analogous to that of earlier times, the overcoming of which has always been regarded as a large step forward, but with this difference: that the distinction of activity will be based on sex. We have no doubt that the men will still be quite able to hold their own; women in medicine having as yet done nothing to justify the contrary opinion; but such a return to old conditions would be a matter of deep regret. A shadow like this seems to move through the pages of this History of Nursing. Were it only a ghost with no substance behind it!

The Yale University Press will publish in the autumn: A "Life of Samuel W. Johnson," formerly professor of chemistry at Yale, the book being made up very largely of Mr. Johnson's correspondence, and edited by Elizabeth A. Osborne; and "The Evolution of Modern Medicine," by Sir William Osler.

None of the smaller animal forms is more universally feared than is the spider, and thus, in spite of its marvellous instincts and interesting habits, it is usually neglected, even by the nature student. For these reasons, the publication of "The Life of the Spider" (Dodd, Mead), an English translation of Fabre's scattered writings on this group, is especially welcome. It is needless to enter into a detailed review of the seventeen essays which have been selected. We find discussed the reputed venomous nature of spiders, and, though the author's general conclusion is that "however immediate in its effects upon the insect entangled in the fatal web, the spider's poison is not serious for us and causes less inconvenience than a gnat-bite," yet he shows ample reasons for fearing certain rare species. The tunnel-building and the habits of the running spiders, the peculiar ballooning habits by which the dispersal of the young of various species is brought about, and, most fully of all, the web-building and the domestic life of our commonest garden spiders, constitute the main subject matter of the collection. The essays have a wealth of interesting observations, and are characterized by the same vivacity and charm which pervade the more strictly entomological writings of this poet-naturalist of France. The translator, Alexander Teixeira de Mattos, has already done a real service to English readers by his excellent renderings of a series of Fabre's insect essays, under the title of "The Life and Love of an Insect." In the book before us, as in the earlier volume, he has been particularly fortunate in preserving much of the charm of the original. His few footnotes, explanatory of technical terms, will be of aid to the general reader, though we must dissent from the statement (p. 74), that the cicada is "an insect akin to the grasshopper." As a preface to the collection there is reprinted the enthusiastic appreciation by Maurice Maeterlinck which, under the caption "The Insect's Homer," appeared two years ago in the *Forum*.

The National Association of Audubon Societies has published in book form a large number of the "Educational Bird Leaflets" which have been issued for several years for use in schools. Seventy-six species of birds are described with forty-six colored plates of great beauty. Eminently useful suggestions are made as to the economic value of many of our birds and the best methods for their preservation. The principal contributors are Mr. William Dutcher, president of the Association, and the well-known author, Mrs. Mabel Osgood Wright, whose descriptions are often charming.

In his "Outlines of the History of Psychology" (Macmillan), Prof. Max Dessoir, of the University of Berlin, gives us a sketch of what appears to him to have been the important steps in the development of the science from the earliest times to our day, although he makes no attempt to deal at all adequately with the work of the men of our own generation. The volume will prove to be a useful addition to the library of the psychologist who has no taste or opportunity to study the texts of those writers whose thought has historical significance, rather than vital interest at the present time. The book bears a close relation to the author's "Geschichte der neueren deutschen Psychologie," although it is in no sense an abridgment of that work. The translation is made by Donald Fisher under the authorization of Professor Dessoir.

We greeted a few years ago the appearance of Otto Keller's monumental work, "Die Antike Tierwelt" (Leipzig: Engelmann). The second volume, which has just been issued, exhibits the same commendable qualities as the first. That treated of mammals; this of birds, reptiles, fishes, and insects. The work is of the first importance for both zoölogists and students of the classics. The author gives for every animal its ancient names, its characteristics as described by ancient writers, representations of it in art, and allusions to it in literature. The general reader will, therefore, find much that is highly entertaining. Beasts, like the tortoise, the snake, and the frog, soon take one from zoology to poetry or religion. The illustrations are well selected and reproduced; especially admirable is a color photograph of a famous mosaic at Naples. The book will long remain the standard work on the subject.

"Thick-Lens Optics" (Van Nostrand), by Arthur Latham Baker, is designed to give a working knowledge of such lenses as are used in cameras, microscopes, and telescopes. The author limits himself to a discussion of finding the focal lengths of such lenses, and does not attempt the more intricate problems connected with aberrations. There are so many who desire to have a knowledge of lenses that the book should prove to be useful. The analysis is limited to simple trigonometry, and graphical solutions are much relied on.

Edward L. Bates and Frederick Charlesworth have prepared two textbooks in mathematics for students in technical and trade schools which are published in this country by D. Van Nostrand Co. One of them, "Practical Geometry and Graphics," treats of geometrical methods from Euclidean geometry to Cartesian and descriptive geometry, and the other, "Practical Mathematics," is a consecutive course in algebra, trigonometry, and calculus. These two books remind one of Rankine's "Mechanics" as regards the close and brief analysis, and of their kind they are excellent. A student who worked through them carefully would be in a different class from those who are accustomed to the milk-and-water mathematics so usual in this country.

Lord Avebury, better known as Sir John Lubbock, is dead in London, at the age of seventy-nine. Although an expert in finance, having served on the International Coinage Commission, and introduced banking reforms in England, he won greater fame in science, in which field he wrote many books. In 1865 he published "Prehistoric Times, as Illustrated by Ancient Remains and the Manners and Customs of Modern Savages," which went through several editions. This was followed by "The Origin of Civilization and the Primitive Condition of Man," and by "Marriage, Totemism, and Religion." He also wrote special treatises on plants and insects. His most popular works deal with humanistic topics, such as "The Pleasures of Life," of which some 259,000 were sold. Other books

relate to economics and coins. Lord Avebury was a member of several foreign societies and had been honored by British and Continental universities.

Frederick Albion Ober, an authority on birds and a founder of the Explorers' Club, died Saturday night at his home in Hackensack, N. J. He was born in Beverley, Mass., in 1849, and was educated in the public schools and through private study. From 1872 to 1874 he hunted birds in Florida and explored the Lake Okeechobee region, and in 1876-1878, 1880, he made an ornithological investigation of the Lesser Antilles, discovering twenty-two new species of birds and adding many types to collections in the Smithsonian Institution. Two of the new species were named after him. In 1881, 1883, and 1885 he travelled in Mexico, and later in Spain, Africa, South America, and again in the West Indies, whither he went as commissioner for the Chicago Exposition, 1891-92.

Mr. Ober was the author of forty books on historical topics and natural history. Among them are: "Camps in the Caribbees," "Travels in Mexico," "Young Folks' History of Mexico," "Montezuma's Gold Mines," "Everglades," etc. (six volumes), "In the Wake of Columbus," "Josephine, Empress of the French," "Under the Cuban Flag," "My Spanish Sweetheart," "Crusoe's Island," "Porto Rico and Its Resources," "A Brief History of Spain," "History of Mexico, Central America, and Cuba," "In King Philip's War," and "The Heroes of American History Series" (twelve volumes).

Drama and Music

Towards a New Theatre. By Edward Gordon Craig. New York: E. P. Dutton & Co. $6 net.

The forty highly original and imaginative designs in this beautifully printed volume, and the critical and explanatory notes attached to them, are proof positive of the author's lofty aspirations and artistic instinct; but they are often so fantastic in their symbolism as to raise grave doubts of their practical applicability—or even desirability—in the theatre. Most students of the modern stage will sympathize heartily with what he has to say, especially in his "afterword"—which is among the clearest and most logical of his utterances—about the narrowness, the vulgarity, and the frequently entire untruthfulness of the so-called realistic drama, and concerning the many offences against the most vital principles of dramatic art, committed in the name of spectacle. But they will also see very clearly that many of his theories, if carried to their full development, would be likely to prove just as fatal to the prime artistic object of the theatre, which is the competent acting of worthy plays.

Mr. Craig has no general grasp of the subject to which he has devoted so much time and labor. In his zeal for the pictorial—for the creation of backgrounds reflective of the majesty of nature and in harmony with the inspired vision of the poet—he is apt to disregard the legitimate function and position of the actor, although he speaks much of the importance of speech and action. In several of his most striking and colossal conceptions—it is only reasonable to suppose that his sketches are drawn more or less accurately to scale—the players are made to appear as formless and insignificant pygmies, whose facial expression, voice, and gesture would inevitably be futile amid such vast surroundings. True, he admits that his designs are tentative, and frequently expresses his contempt for the theatre that is confined by the limits of roof and walls, lamenting the bygone days of the classic Greek drama beneath the wide canopy of heaven, and of the old religious mysteries enacted in towering cathedral aisles, but these vain regrets—in which the exigencies of climate and the march of the ages are conveniently forgotten—contribute nothing of practical value towards the construction of the new theatre of which he dreams. Nor does he himself appear to have any definite notion of what his own ideal institution is or ought to be. It is to be infinitely beautiful, noble, inspiring, veracious, and artistic, fully representative of all that is best in national characteristics and aspirations, but of the steps by which this end is to be achieved he tells virtually nothing. His is a counsel of perfection without directions.

His designs for the environment of certain incidents in "Hamlet" and "Macbeth" are uncommonly impressive in their simplicity, their spaciousness, and their suggestion of the tragic, the terrible, or the mysterious. But it should be noted that they are poetic conceptions for which there is little warranty in the text. They are imposing tableaux, of much decorative value, but illustrate the sentiment of a particular moment rather than the spirit of a continuous scene. It may be granted that in the greatest poetic drama, or in allegory, scenery of a purely fantastic symbolism may be employed to advantage—it is even conceivable that the arrangement of rectangular screens which Mr. Craig uses in the closing act of "Hamlet" may, with their cunning use of light and shade, create a notably artistic effect, but, as a general rule, where scenery is introduced at all, it should resemble, however distantly, what it is intended to represent. It may be impossible, as Mr. Craig says, to reproduce Nature—although he seems to think it may be easily improved upon—but it is not so difficult to give a plausible imitation. He is often further away from the truth than the realists themselves.

But visionary as many of his ideas are—a fact of which he sometimes appears to be dimly aware—they often start from a foundation of fact and common-sense. Much of the present-day realism upon the stage, whether this term be applied to the crude mimicry of everyday excesses, or vulgarities, or the more elaborate and costly accumulation of spectacular details, is wholly pernicious and abominable, antagonistic alike to art and truth. If he does nothing else, he points out where the English-speaking theatre is behind the rest of the world in dramatic knowledge and enterprise, shows how remarkable and genuinely artistic effects may be created with moderate expenditure, and discourses with authority on the latest developments in machinery and lighting. His enthusiasm and boundless self-confidence give spice to his essays, but do not encourage much confidence in his capacity for solid achievement. The test of this will come when his long projected school gets finally into operation. If he be prudent he will devote his earliest and best energies to the systematic and thorough training of actors. Without them all his ambitious plans will come to nought.

This month the De la More Press will have ready Mrs. Stopes's "The Burbages, Founders of Shakespeare's Stage."

"Julius Cæsar" is the latest addition to the New Variorum Edition of Shakespeare (Lippincott). This volume, like the "Richard III," was prepared by Horace Howard Furness, jr., who is carrying on the work of his father, and, naturally, on the same lines. It is perhaps needless to say that in assuming the completion of this enterprise he has the good wishes of numberless students of Shakespeare. It will be a source of gratification to all who cherish the traditions of scholarship in this country that the name of Furness should continue to be honorably linked with that of the great poet. In the main, the present volume does not fall below the level of its predecessors. We note, however, one important omission in the evidence concerning the date of composition of the play—namely, the entry dated September 21, 1599, in the diary of the Swiss physician, Thomas Platter, which seems to confirm the view that "Julius Cæsar" was already in existence, in some form or other, before 1600. The thatch-roofed theatre on the other side of the Thames, spoken of in the diary, must have been the Globe, which had been opened for performances the preceding summer, and there can be no reasonable doubt that the "Julius Cæsar" which Platter saw was Shakespeare's play. The text of the entry in question was published in *Anglia* by Professor Binz so long ago as 1899. A variorum edition should also include some record of the correspondence with regard to the relations of this drama to Posecti's "Cesare" (1594), which will be found in the issues of this journal for June 2 and 9, 1910. We would still further suggest to Mr. Furness that the "Shakespeare-Grammatik" of W. Franz is a much more comprehensive and scientific guide in gram-

matical matters than E. A. Abbott's treatise, which, though it contains valuable material, is in many respects antiquated.

As regards the appendix embodying criticisms of the play—and the same thing is true of the selections from the discussions of the characters scattered throughout the edition—it seems to us that this part of the work might easily be freshened up. For instance, Brandes stands indisputably in the very front rank of the interpreters of Shakespeare, yet he is scarcely represented at all in Mr. Furness's critical apparatus. Other names, like that of Wolff among contemporary German critics, also suggest themselves. These writers are certainly more stimulating than Snider or Stapfer, not to mention some more recent ones that are drawn on by the editor. We make these remarks, not simply with reference to the present volume, but with reference to future volumes which Mr. Furness may have in preparation. As a last item of criticism, we must express our surprise at the editor's English. Take, for example, the following sentence: "It is, I think, well-nigh impossible to assign the date within limits closer than these two years, 1599 to 1601, and therefore accept that period as its time of composition." The reader is left guessing as to whether "accept" here is an imperative addressed to the public or whether some other syntactical relation is to be assigned to it in the sentence. Very irritating is the abuse of "wherein" for "in which." In the preface, within the space of a single page, we have noted five examples of this substitution, which seems habitual with the writer. It would be easy to point out other apparent Teutonisms in the author's style.

A valuable feature of the volume is the reprint of "The Tragedy of Julius Cæsar," which was written by Sir William Alexander, Earl of Stirling, probably in 1604 or 1606. It is in large measure, to be sure, a translation of a French play by Jules Grévin. Besides this reprint, we have the usual appendices of the series dealing with the date of composition, sources, stage-history, etc. In connection with the discussion of source, the editor reproduces from North's Plutarch the passages on which Shakespeare based his play. An index concludes the volume.

The text of the Chinese play, "Turandot," which has reached this country, is a sufficient explanation of the speedy collapse of that costly experiment in London. It is difficult to imagine what reason any experienced manager could have had for supposing that such nonsensical stuff could amuse or interest an adult audience. The story is thin, stale, and transparent—altogether devoid of any dramatic suspense or thrill—while the dialogue, at its best, is exceedingly feeble and in its professedly comic passages absolutely deplorable. The presumption is that Sir George Alexander depended upon the splendor of the spectacle to make amends for all other deficiencies. The result proved how egregiously he was mistaken.

Concerning the recent revival of "Othello" in Drury Lane Theatre, London, by Forbes-Robertson, the London *Times* says:

A good, straightforward performance of "Othello," and none the worse, perhaps, for being just a little old-fashioned. The actors were evidently of opinion that their business was to set forth a story plainly, and to say what they had to say distinctly, and there was none of your new-fangled nonsense about "atmosphere," either Venetian or Cypriote, or about doing the thing in the Elizabethan way.

During Sir George Alexander's provincial tour, which begins in September, the St. James's Theatre, London, has been let by him to Granville Barker and Lillah McCarthy.

A prominent English critic speaks favorably of "The Whispering Well," a morality play produced by Miss Horniman in London. He finds no valid objection in the fact that the theme is trite, as well as the scenery and acting. "Here is a perfectly simple, entirely unpretentious Morality, with qualities of picturesqueness and honest force about it that make it, in its fashion, moving and, in its fashion, improving." Evidently the reaction against the new manner of producing plays is growing.

Mme. Schumann-Heink is still the greatest contralto on the stage. Cleofonte Campanini evidently thinks so, too, for one of his first acts on becoming director of the Chicago Grand Opera Company was to engage her for next season.

The London Philharmonic would have had no deficit at all this season had it not been necessary to increase the orchestra for nearly every concert to above 110 players. When the present rates of subscription were fixed, an orchestra of 75 to 85 players satisfied the requirements of composers and audiences alike. The Society's report refers to the election of Safonoff and Mengelberg as honorary members; also to the bestowal of the Society's medal on Mme. Tetrazzini and Harold Bauer. Invitations have been issued to English composers not yet represented on Philharmonic programmes to submit MSS. for approval.

The memorial concert given in Albert Hall, London, to aid the widow of the late colored composer, Coleridge-Taylor, netted $5,000. While this was regarded as a gratifying result, it is obviously not sufficient to support the family, and a movement has therefore been set on foot to obtain a Civil List pension.

Art

DAVID AND HIS PUPILS.

PARIS, May 24.

The exhibition of the work of David and his pupils, given by the city of Paris in the Petit Palais des Beaux-Arts, is so interesting that the wonder is the public has had to wait for it so long. The interest is no doubt in large measure historical, but then the history involved is of artistic as well as political value. The huge frigid pictures, the self-conscious classical exercises, the big official portraits of the heroes and heroines of the Republic and the Empire, that came out of the studios of David and Drouais and Gros and Girodet and Gérard and Ingres and contemporary painters of secondary note, may have none of the glamour, none of the power to thrill, of the world's great masterpieces, but they represent an important stage in the development of art in France, and therefore of the world. It is also true that the leaders of the school, being masters themselves, sometimes managed to forget their creed and conventions and to betray in their less ambitious canvases some of the emotion, some of the intense personality they were at such pains to sacrifice to their cold and correct ideals.

Naturally, most space has been devoted to David, the master of all, the man strong enough to impose his conventions not only upon French artists, but upon France. There was already a good opportunity to study him and his methods at the Louvre, and this opportunity is now made complete by the collection got together in the Petit Palais. To look at his classical subjects, at his Apollo and Diana, his Paris and Helen, at his Seneca, his Belisarius, his Socrates, his Leonidas, at the stately, dignified, formal, tedious compositions he built up from motives he had searched his mythology and ancient history for, to look even at a painting like the famous Marat in the bath, the portrait of a man he loved as well as admired, and a work considered by many critics to be strikingly modern in feeling—to look at these is to wonder how the idea of rebellion, of revolution, could ever have been associated with David's art, whatever morally or politically may have been his principles.

Yet David was, in his way—or thought he was—no less a rebel, a revolutionary, a seceder, as these things go, than the Cubists and Futurists in theirs. In his teaching and in his practice, he was protesting against what he believed to be the insincerities, the artificial extravagances, of the eighteenth-century painters, of Watteau and Greuze and Boucher and Fragonard. He had no sympathy with their sham shepherds and shepherdesses, their atmosphere of the boudoir and the court, their ignoring of life as it is. When he painted the gods and the warriors and the philosophers of a past of which he could not possibly know more than the painters he condemned had known of the real shepherding of their day, when he manufactured those huge, correct, and colorless classical groups that eventually won for him and his followers their name of *Pompiers*, he was under the impression that he was returning to Nature. It seems almost incredible that he could have deluded himself into believing there was the least touch of nature in his work, even though he did paint from the nude. Certainly, nobody can believe it nowadays, and there might be more difficulty in feeling as much as a shadow of interest in those performances, representative though they are of a

phase, a movement, were it not that he also painted many eminent people of his time, and that he occasionally came down from his high classical stilts and gave himself up to the free pleasure which he evidently felt in painting his more insignificant sitters.

As I have said, the Marat in the Bath is in the collection, as well as the two copies of it by two of David's pupils, a valuable historical record, if little more. There are besides portraits of a number of his other famous or notorious contemporaries: Sieyès, Madame Tallien, Junot, Ministers, Deputies, generals. But almost the only one of this series that appeals by something more than the name and fame of the sitter is the beautiful Napoleon as First Consul, in which only the head is finished—the painting that was to represent Napoleon after the battle of Castiglione, and that David began in the excitement of his discovery of a modern hero who would have been worthy of a niche in the temple of antiquity. It is a noble head, modelled with much sympathy, and we may rejoice that the work remained as it is, for the qualities we now admire in it might have been lost had David carried it to the excess of finish to be deplored in many of the surrounding canvases. The portraits that left with me a deeper impression than the pompous official series were apparently of no great importance, as far as the subject is concerned, for the names of the sitters have not been recorded. There are two, small and unassuming, of boys which are quite charming, one in the treatment of the yellows and grays of the color scheme, the other in the painting of the flesh and the white collar and ruffles, both showing what David's achievement might have been had he gone as directly to Nature as he fancied he did. One or two portraits of himself have the character he more often subordinated to theory and the atmosphere he rarely troubled to suggest.

To make light of David and his accomplishment would be absurd. He was learned and scholarly as a painter, his drawing was beyond reproach, he was serious, filled with the respect due to his art; also, an artist who could impress himself upon his pupils and followers, whose influence could carry everything before it, is a power to be reckoned with. But this cannot blind us to the fact that few artists have wandered so far astray from Nature in their determination to return to it. He was as artificial (if more virile in his affectations) as the men against whose art his was a protest, and he had neither their grace nor their undeniable charm. His pompous and theatrical Greece and Rome were a sad exchange for the Island of Cytherea, his solemn posing nudes poor substitutes for gay shepherds and shepherdesses, masquerading in silks and laces, powders and patches.

What is true of David is true of the others of the group. You pass from room to room, absorbed wholly in the subjects of the paintings or their associations—here, Gérard's large portrait group of Queen Caroline and her children, his Madame Récamier, his Madame Mère, or Girodet's Murat, or Franque's Marie Louise and the King of Rome; and there perhaps the Eleazar of Gros, memorable simply because he painted it at the age of seventeen for the Prix de Rome competition, and because it gave no sign of the hot rebellious days to come, when he was to paint those "sujets inutiles et tableaux de circonstances," as they seemed to David, by whom he, really the first of the Romanticists, was frightened back again into pseudo-classicism.

There is no question that the exhibition serves as a chronicle in paint of one of the most dramatic periods France has ever passed through, and one of the strangest phases in French art—one of the most fruitful phases, possibly because of all that came out of the revolt it could not fail to bring about in its turn. Nothing could explain the movement of 1830 more eloquently than this collection of David and his pupils. But from the midst of the frigid formalities of classicism and official portraiture, a small painting now and again asserts itself as a painting, and draws the eye away from the big canvases that at first kept it modestly in the background. Murat, for all the heroic proportions Gros lavished upon him in compliment to his royal estate, is passed by cheerfully for the little portrait of M. Jacques Amalric, the painter's nephew, unpretentious in size, but full of a vivacity that has disappeared in the elaboration of the big canvas, full of simple beauty in the harmony of color, the arrangement of blue upon blue, that regal gorgeousness could not condescend to. The Odalisque and the Reading of the Æneid by Ingres may be passed as readily for his sympathetic portrait of Madame Ingres, with its delicate scheme of grays, its subtle rendering of textures, in its atmosphere enveloping the figure. In the work done by the men of David's school, when they were not making public proclamation of their artistic faith, you get the measure of their greatness and learn how much of their real selves they suppressed in their loyalty to the creed they had accepted without reserve.

It is a delight to see again a long series of drawings by Ingres, those amazing portraits which he never surpassed—a delight to find the notes and memoranda of David and Girodet and Gérard. The least distinguished members of the school could in black-and-white make some excuse for their existence and survival. Miniatures, too, have a place, most notably a number by Isabey (the father), a wonderful gallery of portraits of the Bonaparte family. Altogether, there is no exhibition in Paris just now so worth a visit from all who are interested in the history of France and of French art.

N. N.

"The Life and Letters of Frederic Shields, 1833-1911" (Longmans), by Ernestine Mills, is, perhaps, more interesting on the biographical than on the artistic side. Shields as a painter had rather more than the usual defects of the "sensitives" of his period. As a man, he presents much that is admirable. Born of humble parents, by an early heroic struggle, involving inordinate drudgery and the habit of semi-starvation, he succeeded at the cost of his health. He soon was able to sell those charming water colors of country life which are still, perhaps, his best work, but he incurred a nervous instability to which noise was torture. Probably no day of his manhood passed without acute suffering. It seems, also, as if his soul were as badly treated as his body. Bred in a narrow faith, his letters to a younger brother, and, later, to the girl model whom he did the grotesque injustice of making his wife, are models of priggish pietism. That there was a larger and sweeter side to the man is shown in his friendships. He was one of the few to whom Rossetti clung to the end. Shields himself, tortured by insomnia, had skirted the gulf of that temptation from which Rossetti never emerged. From such a life as Shields's no coherent product is to be expected. He holds his place by a charm which was largely that of the neo-mediævalism of his time, and by occasional flashes of larger inventiveness. It was his elaborate drawing of Bunyan's Vanity Fair that in 1861 attracted Ruskin. Two years later came the powerful designs for Defoe's "The Plague in London." Happily, these remarkable drawings were photographed from the blocks before unskilful woodcutting destroyed them. In the Vanity Fair Shields showed himself a sort of Calvinistic Frith. In the Plague designs all smallness had departed in favor of sinister concentration and simplicity. His way as a creative illustrator seemed clear, but at this point he was caught by the neo-romanticism of Brown, Rossetti, and Morris. He became an accomplished designer for stained glass; at the end of his life he did for a generous patron the entire mural decoration of the Chapel of the Ascension at Bayswater. It cannot be said that he utterly failed in this his greatest undertaking, and yet it would be idle to assert that his will rank with the best decorations of modern times. As with most British artists of the day, especially the religiously inclined, his grasp on the rationale of mural decoration was slight. He wished it to be more elaborately charming in line and more winning through facial expression than good wall painting ever is. His great religious subjects are painfully built up, artificial, and restless by virtue of emotions only half-visualized. The elevated character of the man, and his close relation to the Rossetti circle, will doubtless attract sympathetic readers to this tactfully compiled and fully illustrated memoir.

Finance

TWO EVENTS.

During the week just past, two events have occurred with a bearing, more or less direct, on the financial situation. One was last Friday's formal signing of the peace agreement between the Balkan allies and Turkey; an event which had long been looked forward to, in the financial markets, as essential to the return of better times in European finance. The other was the confession of insolvency, a few days before, by an important American railway company, the St. Louis & San Francisco. The Stock Exchange greeted the news of the peace arrangement with something like apathy. It received the news from the so-called "'Frisco system" with more or less agitation, but, except for a sharp decline in that railway's securities and in other low-priced shares, with no extensive change of values.

The first comment of Europe's markets, on the official termination of the Balkan War, was that it came too late to relieve the financial situation of its accumulated burden. The strain of uncertainty and of lack of confidence had been long-continued. Borrowing Governments and corporations, which had withheld their requisitions from the money markets during the period of actual war, had at length been compelled to present their demands. Only a cautious and partial response had been obtained from the investing public; some of the loans had been described as failures, and the feeling of uncertainty had been accentuated.

The recovery, so often predicted as an immediate consequence of the settlement of peace, did not therefore come. That the good effects of this formal ending of the war will be experienced later is still the general judgment of financial Europe. One great obstacle to return of confidence is, at any rate, removed. The immediate sequel in the markets must depend, however, on other things.

Sometimes the actual removal of a cause to which all the financial ills of the day have been popularly ascribed, serves only to prove that other and larger influences have been at work, and that the imagined single cause has really been only an incident. That was so after England and the Transvaal concluded peace in the middle of 1902. It then became speedily evident that the trouble with Europe's markets had been an overdone financial "boom" and an excessive strain on credit; that the only remedy was a prolonged period of reaction, liquidation, and gradual recuperation. London, Paris, and Berlin, instead of responding with enthusiastic financial recovery to the news that the Boer War was definitely over, greeted the announcement with a heavy decline in prices. Yet, on the other hand, the definite conclusion of peace between Japan and Russia in 1905, and between the United States and Spain in 1898, was followed, after brief hesitation, by world-wide recovery in the financial markets.

The question will be tested in an exceedingly interesting way by the events of the next few weeks. The St. Louis & San Francisco receivership touched other problems; first, because it happened in America; next, because it seemed like confirmation of the misgivings long prevalent as to the general financial situation. When that announcement came, interest naturally converged on two questions. One is, what the week's developments meant to the future of the 'Frisco property; the other, how far, if at all, they bore on the situation of other railways.

Receiverships do not necessarily mean prolonged adversity and hardship. Railways such as the Seaboard Air Line, the Cincinnati, Hamilton & Dayton, and the Chicago & Great Western have within the past five years emerged from the hands of receivers greatly strengthened by their enforced financial readjustment; none of them having remained in receivers' hands much longer than twelve months. As for the 'Frisco: in 1900, when the present management came into power, it was a system of 1,401 miles; to-day it is a system of 7,500 miles. In 1901 net income amounted to $4,439,000 and fixed charges to $2,629,000, showing the "margin of safety" (that is, the proportion of net income remaining after payment of fixed charges) to be 40 per cent. But in 1912, net income amounted to $12,992,000 and fixed charges to $12,654,000, showing the "margin of safety" to be only 1 per cent. The comparison with former years shows what the real capacity of the 'Frisco is. It was a case of ill-advised ambitions and of rash and unfortunate experiments with capital.

If, next, one looks at the railway position generally, another set of comparisons is in point. Of the Atchison's present capitalization, 54 per cent. is in bonds bearing fixed charges; the ratio in the case of St. Louis Southwestern, Kansas & Texas, Burlington & Quincy, and Rock Island—roads traversing the same district as the 'Frisco—ranges from 51 to 66 per cent., in the order named; even the Missouri Pacific's ratio works out at 73 per cent. But the 'Frisco's bonded debt makes up 85 per cent. of its total capitalization. This bears pertinently on the question, whether or not other roads are necessarily in the same condition.

Before the 'Frisco's old position can be reëstablished, however, subsidiary companies which have been operated at a loss must obviously be reorganized, and unprofitable leases and guarantees must be cancelled. After that has been done, then 'Frisco's own fixed charges will presumably be scaled to a point consistent with the road's net income. That could be done through substituting new preferred stock or income bonds, for instance, in place of outstanding mortgage bonds.

That 'Frisco can again be made a paying property is fairly evident. In 1903, after paying 4 per cent. dividends on both classes of preferred stock, the final surplus remained at $634,000; in 1902, it was $1,472,000; in 1901, $1,997,000.

A sound way of preventing the hardships attendant on a great disturbance of prices, would be a boon to mankind. It is tantalizing that, with all the resources of modern society and all the conquests of the modern intellect, we should still have nothing more scientific as the basis of the colossal pecuniary transactions of the present time than the value of a fixed weight of a given medal. One proposal of a more scientific standard has been familiar to economists for the better part of a century; and it has recently, in a modified form, been raised to renewed prominence by Prof. Irving Fisher, of Yale, who has devoted to his scheme of "a compensated dollar" a number of extremely able papers. In a word, the multiple standard, of which Professor Fisher's scheme is a modification, takes for the fundamental unit of payment not a certain definite coin, but so much of that coin as may be required to purchase specified amounts of certain designated basic commodities; so that when the average price in coin of these commodities increases, the amount of coin necessary to the fulfilment of a given money contract increases correspondingly; and likewise in the reverse case. Professor Fisher's modification consists essentially in altering the amount of gold that is represented by the dollar, so as to correspond to these price changes, and thus counteract them; to have a dollar variable as to gold, but approximately stable as to its purchasing power.

The plan is discussed in a masterly way by Professor Taussig in the May number of the *Quarterly Journal of Economics*. With the precision of a surgeon at the dissecting table, he lays bare every part. As for an international agreement, he points out why this is virtually out of the question, and why, even if "by some unexpected stroke" it were procured, it would rest upon the frailest basis. "Any war would put an end to it. Any stage of depression in an important country would render it in the highest degree irksome, would lead to its revocation by some one country, and then would cause the whole structure to topple over." As for its adoption by one country alone—say, the United States—the case is, if anything, even worse. The idea that, once adopted, it would be free from the agitations of politics, is visionary. When any great class or any great section suffered through a Congress-made arrangement, there would arise an imperious demand for a change. "Can we imagine a Congressman telling his constituents that they need only wait a while, until all

money incomes and all prices had adjusted themselves to the new conditions?"

BOOKS OF THE WEEK.

Abbot, W. J. Notable Women in History. Phila.: Winston Co. $2.40.
Abercrombie, Lascelles. Deborah: A Play in Three Acts. Lane. 75 cents net.
Allen, Daphne. A Child's Visions (Drawings). Dutton. $2 net.
American Business Encyclopædia and Legal Adviser. 5 vols. Boston: J. B. Millet Co.

"The reader yields to the honesty of the work. . . . One feels the human tenderness," said the *N. Y. Evening Post* of H. H. Bashford's "The Pilgrim's March." The same author's

PITY THE POOR BLIND

is just ready

The story of a Pagan-minded young English couple and an Anglican priest. The title is purely metaphorical, referring to blindness regarding God and his laws, but the interest is most human. $1.35 *net*.

Henry Holt & Co., 34 W. 33 St. New York

Out of the Blue
By R. GORELL BARNES
Crown 8vo. $1.35 *net.* (*Postage* 10 *cents.*)

This is the story of a man and a girl cast together on a desert island, and left in its freedom and its solitude to face for a year the problem of a love which they were already on the brink of recognizing.

"Described with fine imagination. Mr. Barnes shows adroit and firm construction in his manner of keeping the reader in suspense during the warfare between love and honor."—*London Times.*

Sociology Applied to Practical Politics
By J. BEATTIE CROZIER,
Author of "Civilization and Progress," etc.
8vo. $3.00 *net.* (*Postage* 15 *cents.*)

A discussion of Socialism, Free Trade, the Mixing of Races, Race Degeneration, and other all-important problems of the present day.

LONGMANS, GREEN, & CO.

GETTING TOGETHER
ESSAYS ON THE REGULATIVE IDEAS OF RELIGIOUS THOUGHT
Edited by JAMES MORRIS WHITON, Ph.D.

The tendency toward religious unity finds expression in these fourteen essays by distinguished spokesmen of different denominations, Christian and Jewish, who are agreed upon fundamentals. 12mo. $1.50 *net.*

THE EDUCATION OF TO-MORROW
By ARLAND D. WEEKS, M.A.

A vigorous overhauling of educational ideals to show what sort of curricula are best for an economic democracy. It contends for a closer relation between education and the life interests, if not the vocations, of the community. 12*mo.* $1.25 *net.*

Personality
By F. B. JEVONS, Litt.D.
Professor of Philosophy in the University of Durham.
12*mo.* $1.00 *net.* *By mail,* $1.10.

This work deals with the problem of personality, especially as raised by William James and M. Bergson. If a man imagines himself bound, in deference to science or psychology, to deny the existence of personality, he commits himself to saying "I do not exist." If he shrinks from that absurdity, he must accept personality as a reality; a person is both a subject who knows others and an object of other's knowledge. The bond, however, which holds persons, human and divine, together, cannot be merely intellectual: it must be emotional as well as intellectual—the bond of love.

The Nation

NEW YORK, THURSDAY, JUNE 12, 1913.

The Week

To make the Constitution of the United States easier to amend is a proposal that would have had a better chance of attracting attention a few years ago than it has now. The wind has been taken out of its sails by the simple demonstration that has been given of the actual fact concerning the present amendableness of the Constitution. The income tax amendment and the amendment providing for election of Senators by the people had very easy going as soon as the movement in favor of these changes became really serious. The resolution about to be introduced by Mr. Chandler, on behalf of the Progressive party, provides not only for facilitating the adoption of amendments at any time, but also for subjecting the whole Constitution to revision by a Convention at intervals of thirty years, beginning with 1920. The plan is not likely to be thought about very much, thanks to the collapse of the superstition of the present unamendability of the Constitution.

It will be interesting to compare the findings of the Senate inquiry into lobby abuses with what the public knows of some in the past. When the Credit Mobilier scandal broke upon Washington, "Sam" Ward was everywhere recognized as king of the lobby, and proved his right to the title by the royal way in which he ruled his domain. Not only did he make no secret of his calling, but he established for it a sort of ethical code which he was never loath to expound. He openly made his headquarters in the rooms of the Appropriations Committees and at Chamberlin's restaurant, where he entertained half-convinced members of Congress out of working hours. By the time the Pacific Mail subsidy investigation came along, it was plain that the lobby had escaped from the control of its handful of barons of the Ward type, and degenerated into a rather motley army of adventure, in which all conditions of men could be found, including sundry off-color newspaper correspondents. It was one of the latter who saved his skin, and at the same time lent a touch of humor to an otherwise grim and sordid story, by his boast that, although he had accepted a large sum of money for use in influencing the opinions of certain Congressmen, he had spent it, instead, in building a good house for himself. In a still later era, investigation disclosed the fact that the place of the old-fashioned lobby had been usurped by a small group of "brokers" who plied their trade by "tipping off the right people" as to how the market in certain industrial stocks was about to move. In 1897 Senator Hale sought to amend the Senate rules so as to limit the "privileges of the floor," always till then extended to all ex-Senators, strictly to those "who are not interested in any claim, or in the prosecution of the same, or directly in any bill pending before Congress." There is more than one way of doing shady work; and whether the lobby of to-day be better or worse than the lobby of the past, we may feel pretty sure that it is not quite so brazen.

Connecticut is content to be the land of steady habits in some matters, but the steady habit which her Legislature has had of sitting from the first of January to the last of September, every other year, has finally become too much for her. This year, her General Assembly met under the limitation of five months imposed by an amendment to the Constitution. Its members seem to have had no difficulty in getting through the grind of bills as well in five months as in nine. The volume of legislation is smaller this year than usual, but this may be accounted a merit. Gov. Fielder has given a hint to the New Jersey Legislature not to be too intent upon enacting laws, as if the world were accustomed to improve in accordance with the growth of its statute-books. Other Governors have sounded a similar warning against the evil of over-legislation. Here, as elsewhere, quality counts for more than quantity. But we shall have to wait a while longer before our law-making bodies abandon the unhappy procedure of dawdling for the first three-fourths of their existence, and spending the final quarter in a whirlwind of roll-calls, leaving to the Governor the responsibility of separating the wheat from the chaff.

There are cases in which Social Justice does not begin at home; as for example in West Virginia. The sub-committee appointed by the National Executive Committee of the Socialist party to study conditions in the West Virginia mine fields has made its report to the central body. Eugene Debs and Victor Berger were two of the three investigators. The most illuminating paragraph in the report of these men, who cannot be accused of prejudice in favor of the present State Administration in West Virginia, is as follows:

> It was under the Administration of Glasscock and not Hatfield that martial law was ordered; that the Military Commission was created; that "Mother Jones" and many others were court-martialled and convicted; and it was also under the Glasscock Administration that an armored train, in the name of law and order, shot up the tents and cabins of the miners.

To say that these things took place under the Glasscock Administration does not mean that Gov. Glasscock was responsible. In all probability his mind, during this troubled period, was far away, brooding on the approaching triumph, or deploring the temporary postponement, of those eternal principles of social righteousness which, in common with the six other Bull Moose Governors, he had forced upon the attention of his country.

How slowly we advance towards home rule for cities is brought out in Attorney-General Carmody's summary of what was done in this State at the recent session of the Legislature. One hundred and forty-five municipal bills were passed, of which the Governor vetoed eighty-five. Even the so-called Home Rule bill is admittedly a makeshift. Part of the responsibility for this situation, here and in other States, is due to Constitutional limitations, but no such explanation will fit the action of the Pennsylvania Legislature in bestowing commission government, willy nilly, upon all of the third-class cities of that State. It is true that only two of the twenty-two municipalities affected by the bill protested against it through their representatives at Harrisburg, but

the principle is as vicious as if every one of them were opposed to it. "Ripper" legislation has been common at Harrisburg of recent years, but it must be said that the motive behind the present bill is a much better one than has usually been the case. Yet what was in the way of merely making it possible for these cities to have commission government if they wanted it, instead of compelling them to take it?

There is a highly contagious form of verbal eczema which besets the vice-Executive of a State when he presides over a commission of inquiry into labor conditions, and manifests itself in colloquies like the following:

"Has not women's employment in the industries enforced women's slavery in the country?" asked Lieutenant-Governor Painter.

"Yes," said Mrs. Robins.

"And are not women workers more firmly in bondage than were the African slaves who were valuable to their owners and properly cared for? Do not employers now know that when they wear out one girl they can get another to take her place?"

"Yes, that's true," said Mrs. Robins.

For a man who is Lieutenant-Governor of Missouri, Mr. Painter is apparently more eager to show than to be shown. It will be noted that he lives just across the river from Lieut.-Gov. O'Hara, who asked a little cash-girl whether she didn't consider the fact of being scolded by the forewoman sufficient justification for taking to prostitution. The little girl, after having the meaning of the unfamiliar word explained to her, politely said, "Yes, sir." Dear reader, when something peculiarly original strikes you in the morning's news, do not assume that it is Bill Haywood or Mrs. Pankhurst. It may be a Lieutenant-Governor asking a judicial question.

"Come West, young man," is the cry from Kansas every year about this time. According to the proclamation of the State Labor Commissioner, 19,000 hands are needed from outside of the State to care for the Kansas wheat crop. Harvesting will begin in a few days in the southwestern counties, and in all of them by July 1. If there should be rain soon, an additional 5,000 persons will be invited to lend their aid in taking care of the harvest. This number of men becomes more realistic when it is noted that it amounts to one-third of the number of volunteers called for in Lincoln's first proclamation. But the temporary character of the work will doubtless weigh heavily, as usual, against the wages of $2 and $2.50 a day and board. Delaware, too, is finding difficulty in getting enough men to pick her strawberries. In their desperation, farmers are offering to pay the fines of intoxicated and disorderly persons who will, in return, pick strawberries. One county jail was discovered to be harboring four able-bodied men who needed a total of $8 to pay their fines. The money was quickly supplied by farmers, who were rewarded by the promise of the lucky prisoners to aid them in getting their berries to market.

In setting out upon the heroic task of reducing the volume of noise in Chicago, the Aldermanic committee charged with the preliminary steps has adopted the classic motto, Divide and conquer. It has divided producers of noise into five classes, one for each of the members of the committee. One Alderman is to investigate the means of suppressing the superfluous din made by motor vehicles, exhausts, engines, gears, and signals; another is to study the relation between noise and railways, pavements, bells, whistles, wheels, rails, crossings, terminals, and cobblestones; a third has for his province marine traffic and industrial plants, their whistles, bridge bells, engines, metal hammerings, and machinery; a fourth is to attend to the noise made by peddlers and delivery men; and the fifth is to have his ears attuned to the sounds of domestic animals, horse-drawn vehicles, blasting, and carpet-beating. One's heart sinks at this catalogue of the forces interested in noise. How can any governing body hope to prevail against them?

Why go to Greenland and East Africa for big-game hunting? See New York first. Why search the China Sea for piratical atmosphere? Take the boat for Rockaway. An eminent jurist has been chasing the dappled deer through the glens of Inwood, perhaps half a mile north of the steam-heated plains of Dyckman, within sound of the tidal roar of the subway and the primeval call of "fore" on the heights of Van Cortlandt. Or take the case of the woman who disappeared in a boat which left Plum Island and was discovered "at Dooley's Bar, in Irish Creek, near Dead Horse Inlet, at the western end of Barren Island," in one of the most picturesquely situated election districts of the city of New York. All that is needed to complete the picture is fourteen sailors on a dead man's chest and a bottle of rum; and that, too, may be forthcoming any day in the land of mountain and stream and fen, waterfall and quicksand, bay and isle and promontory, over which Mr. Charles F. Murphy rules.

As often as the now famous Gary dinners have come into print, it has seemed a pity that no official record should exist of the delightful table-talk that must have marked these charmingly informal assemblies. We might have had a volume fit to take its place with the table-talk of Luther or of Selden, of Dr. Johnson, and that winged discourse in the Mermaid Tavern, when competition—at least in wit and fancy—was not yet dead. What magnificent flights of the imagination these Gary dinners must have given rise to—bond issues of ten million dollars and fifty million dollars, entire industrial plants dismantled or set up, railways bandied about, ore lands, pools, rebates! What sallies of wit at the expense of the exquisitely comic independent, the highly amusing Ultimate Consumer! What subtleties of suggestion when inside interest was pitted against inside interest and pool against pool! It would be a disgrace if all this gayety and *esprit* were lost to the world, and one cannot be too grateful to the Attorney-General of the United States for his endeavors to prevent such a total loss from coming to pass.

It is comforting to be assured by the cheerful militarist that, after all, war under modern conditions is far less deadly than in the old days. We need not question that the horrors of war—just as the horrors of life generally—have been mitigated by the advance of civilization. The horrors of battle, however, are a different matter, and it is very doubtful if a modern engagement, carried out with picric acid and electric wires, is not, morally and mentally, far more distressing than the old-time struggle. Certainly, the pride, pomp, and circumstance of war are things of the past. Compare the description of a battle in

the next war—"the war which is sure to come"—in Wilhelm Lamszus's little book, "Menschenschlachthaus"—the extended line of isolated riflemen, crawling through the grass, pitted against an invisible enemy, in silence broken only by the low rumble of the distant foeman's fire, the buzz of masked machine-guns, and perhaps the whirr of an aeroplane, "death coming on propellers"—with the glitter, the roar, and the music of a battle in "the good old days." Accounts of the Napoleonic engagements—and things were little altered at the time of the Crimea—read as if they referred to a different world. In Gronow's "Reminiscences" we are told of the fateful morning of June 18, 1815—the clear sky and radiant sunshine; the French music bursting out in the distance; the frantic shouts rising along the whole front of the battle; the rattle of the bullets against the cuirasses of the soldiers; chasseurs, red lancers, and carbineers furrowing the plain with lightning, whirling around squares, attacking them on all four sides. We can sympathize with the long-suffering Wellington who reluctantly invited his officers to discard their umbrellas, in whose grateful shade they were standing, though under arms; but there was a certain bonhomie about the peccant umbrellas which is altogether lacking in modern devices.

If we are to take Mr. Harold F. Wyatt seriously, travel in England from now on will be at the cost of fearful danger to life and limb. In the *Nineteenth Century* he tells us that the Liberals have not only flung away the former ratio of British superiority at sea, but have also permitted Germany to forge far to the front in the tremendous conflict for control of the air. As a result, the poor man's home is now exposed to be blasted from the skies. No longer will Englishmen sit at breakfast table with their families and read in personal safety of the doings of their fleets and armies far away. "Their old immunity from personal peril is forever gone. . . . There will not be in all England, and perhaps in all Scotland and Wales, one dweller in a town of any size upon whose roof the levin bolt of death may not descend and slay him while he sleeps." Even the desperate German may pause in the task of loading dynamite into airships when he finds the English chanting in rhythmic emotion, that if this goes on there will not be

> One dweller in a town of any size
> Upon whose head the levin bolt of death
> May not descend and slay him while he sleeps.

Diplomacy has had many hard things said of it. The art of internationally passing counterfeit money, it has been called. But it was the genuine coinage of honest friendship that was exchanged last Friday night at two notable gatherings of diplomats. What Sir Edward Grey had to say, at the London banquet in honor of Ambassador Page, about the relations between Great Britain and the United States, bore every mark of sincerity, and came with added weight from a Foreign Secretary who has just emerged successful from a long struggle to hold the Powers of Europe together in amity. His frank expression of a desire to meet our Government more than half way in every plan to make peace and the peaceful settlement of all disputes secure, leaves in a worse light than ever the opposition of a certain element in our Senate to the renewal of the arbitration treaty with England. The other striking interchange of international civilities occurred at the dinner to the newly appointed American Ambassador to Japan. The few words which Secretary Bryan spoke on this occasion, together with the friendliness and elevated tone of the remarks of the Japanese Ambassador, Viscount Chinda, are of the best augury for the future relations of the United States and Japan.

Cecil Chesterton's big brother, G. K. C., will doubtless have no excessive trouble in showing that to be found guilty of criminal libel by a jury of twelve good men is only a vindication for the libeller. It will come hard for the elder Chesterton to take issue with a jury, an institution which, in common with old October ale, free pasturage, and other features of Magna Charta, he has frequently lauded; still, the trick can be turned. But the members of the Liberal Government, and with them a very large proportion of right-thinking Englishmen, will find consolation in the fact that the Chestertonian paradox has not yet become the established mode of popular reasoning; and that when an editor is found guilty of making poisonous charges virtually involving the honor of members of the Government, it is much better for the prestige of the Government than if the editor's accusations had been justified. The verdict in the Chesterton case may well be followed by other libel trials, as the shortest way in which Cabinet Ministers can cut through the web of ridiculous charges and insinuations which threatens to ensnare the Asquith Ministry.

In the sense that martyrdom is the price willingly paid for a cause one holds dear, Miss Emily Davison, the suffragette who threw herself upon the horses at the Derby, was a martyr. But death, which rectifies so many things, is also a distorter of values. It stands out as an argument to which there is no reply. It automatically sanctifies every cause and thereby exercises a tyranny over the judgment. People have offered up their lives in indefensible causes or have offered them up unnecessarily. In justice to the living, death must be accepted sometimes as nothing more than a testimonial of personal sincerity. Whether the sacrifice is in proportion to the object striven for, whether the act was even necessary for the attainment of that object, must remain an open question if reason is not to give way before fanaticism.

THE RAILWAY RATE DECISION.

Monday's highly important Supreme Court decision in the so-called "Minnesota rate cases," in which the comprehensive opinion prepared by Justice Hughes was concurred in unanimously by the Court, dealt with three main questions. One was the power of Congress over railway rates in general, within a State as well as across the borders of a State. The second was, what constitutes interference by a State with the rules which govern interstate commerce? The third was, what constitutes reasonable rates under the law, and how is such reasonableness to be determined?

The State of Minnesota, through its Legislature and its Railroad Commission, had established maximum freight and passenger rates within the State. The railway companies had assailed this action on these several grounds—that the maximum thus prescribed was an unconstitutional effort, by a State, to affect existing interstate rates prescrib-

ed by Federal authority; that it imposed a direct burden on interstate commerce; and that the rates were in themselves confiscatory. In Minnesota the Federal Circuit Court had upheld all three contentions of the railways; in similar Missouri cases, the Circuit Court had sustained the argument as to confiscatory rates, but not the argument of interference with interstate commerce.

The first question for the highest court to settle, therefore, was the power of Congress in the premises, and from that the possible Constitutional scope of Federal regulation. In this regard the Court sets forth that, since Congress, under the Constitution, has "authority at all times adequate to secure the freedom of interstate commercial intercourse from State control," the power of such national legislation "is not to be denied or thwarted," even by "the commingling of interstate and intrastate operations." To the States is reserved control of "the commerce that is confined within one State and does not affect other States." But where the relations are close between commerce wholly within a State and commerce which crosses its borders, such reservation is definitely restricted as follows:

> The paramount authority of Congress enables it to intervene at its discretion for the complete and effective government of that which has been committed to its care, and for this purpose and to this extent, in response to a conviction of national need, to displace local laws by substituting laws of its own.

Thus Congress, in the Court's opinion, has large powers for action in the matter of rates, even within a State. Such authority, however, must be "by virtue of the actual exercise of Federal control and not by reason merely of a dormant Federal power—that is, one which has not been exerted"; and the Court holds that no such authority has as yet been exerted in legislation. The existing Federal railway rate law did, indeed, explicitly set forth that its provisions should not extend to transportation "wholly within one State." Therefore, the Court concludes, the rate-making power of the State remains unassailable until Congress acts, except in so far as its rates may directly interfere with existing interstate provisions, or may be in themselves confiscatory.

This involves a statement of what constitutes interference with Federal regulation. The Court takes up the contention of the Minnesota railways. Its conclusion is that, to admit the power of State regulation of rates within the State, but to add that such power "may be exercised only in prescribing rates that are on an equal or higher basis than those that are fixed by the carrier for interstate transportation, is to maintain the power in name while denying it in fact." Such an inference would subject the limitation of State authority to the carrier's will. "If this authority of the State be restricted, it must be by the paramount power of Congress"—which has thus far not been exerted.

The question whether the maximum rates, fixed by the State of Minnesota, were or were not reasonable *per se*, stands on different grounds. If they are not reasonable, the Court declares that "they cannot be sustained in any event"; for, though the railway's property has been devoted to a public use, "it is not placed at the mercy of legislative caprice," but rests secure in "the right to receive just compensation for the services given to the public." As applied to one railway before the Court, the Minnesota rates are pronounced confiscatory, on the ground of the narrow margin of profits shown under the pre-existing rates.

In the case, however, of the two other railways in that State, the finding of the lower court, to the effect that the rates were confiscatory, is reversed on the ground of insufficient evidence and of incorrect methods of valuing the property on which the return was to be computed. Into this part of the controversy, which is highly technical, we shall not at present enter, except to note that Justice Hughes's opinion lays down the broad and important principle that the recognized increment in value of railway property, over the original investment, "cannot properly extend beyond the fair average of the normal market value of land in the vicinity having a similar character." It is to be observed, however, that the case against the reasonableness of the rates in question is merely dismissed by the Court as not proven, and that the door is necessarily open for future reconsideration, on the basis of more precise calculations.

The decision, taken as a whole, is of high Constitutional importance. Disappointing as it undoubtedly will be to the railways and to a good part of the investing community, it nevertheless embodies some considerations of positive reassurance. It affirms distinctly the power of Congress to remedy, by its own action, any inequality or undue burden which may result from State regulation of rates. It holds that the question of resultant undue preference between separate localities "would be primarily for the investigation and determination of the Interstate Commerce Commission, and not for the courts"—an intimation which bears very distinctly on the still pending Texas rate cases.

Both these conclusions may be found to have some reference to what will perhaps be the most unsatisfactory outcome of the ruling on "reasonableness"—namely, that to permit higher rates than the State maximum to one railway in that State, while denying them to the railway's competitors, is no real solution of the practical difficulty. Finally, it must not be overlooked that this decision avoids entirely what might have been an unfortunate and unsettling outcome, in the present state of the public mind—we mean an absolute and peremptory overruling of the law-making power by the Court.

THE ATTORNEY-GENERAL AND BIG BUSINESS.

Attorney-General McReynolds is "considering proposing to Congress a graduated excise tax on tobacco manufactures," as a means of fighting the predominance in the tobacco business of the companies that composed the Tobacco Trust prior to its dissolution. How seriously Mr. McReynolds may be considering this project, we cannot say; but there is no doubt that it is widely looked upon as one of the possible moves of the Administration.

The grounds upon which the Attorney-General is moved to contemplate so novel and extraordinary a measure are obvious enough. He is not satisfied that the dissolution decree of the Supreme Court is working the results intended. He was a leading figure in the prosecution of the case, and was not satisfied with the decree at the time it was issued. He thinks that the grievances of the independents have not been redressed by it. And if it be true, as is assumed in the Washington dispatches generally, that he is in favor of curbing the power of the big tobacco companies

by a special punitive or repressive tax, it is a fair inference that he sees no prospect of attaining that end either by the enforcement of the conditions laid down in the decree or by the invoking of any other resources of existing law. It must at least be true that he holds the possibility of meeting the situation by the enactment of any new regulative laws so remote, and the need of dealing with it so urgent, as to justify a sudden plunge of the Administration into a new policy to the application and scope of which no limit can be assigned.

Such a measure would be a great legislative innovation and a departure from any contemplated policy of the Administration. If it be regarded as simply a means of bringing to bear upon a particular corporation, or group of corporations, penalties or restrictions which the Administration finds itself unable to impose through an appeal to due process of law, it can hardly be defended upon any principle of sound government. It must therefore be supported, if supported at all, as the initiation of a policy of restricting the magnitude of business enterprises by the use of the taxing power. Of this policy there has thus far not been in our legislation any trace. To resort to it as a means of dealing with the Trust problem would be one of the most signal acts of public policy. To enter upon such a course lightly, as a mere method of cutting short the difficulties that have arisen in connection with one case, would be justly regarded as a sign of want of sobriety and forethought, ominous of danger in many other directions.

As for President Wilson himself, there are few things concerning which his attitude was made plainer during the campaign. "Big business is not dangerous because it is big," he said in his speech of acceptance, "but because its bigness is an unwholesome inflation created by privileges and exemptions which it ought not to enjoy. . . . It will be necessary to supplement the present law with such laws, both civil and criminal, as will effectually punish and prevent those methods, adding such other laws as may be necessary to provide suitable and adequate judicial processes, whether civil or criminal, to disclose them and follow them to final verdict and judgment. They must be specifically and directly met by law as they develop." And in subsequent utterances he repeatedly affirmed this position—emphatically asserted that the thing to do was to fight, not bigness, but oppressive methods; not to impose arbitrary limitations, but to strengthen and invigorate the law. It is impossible that, in three months, with an infinite mass of urgent business pressing upon him, he can have found time to revise and reverse this deliberate judgment; that he can have discovered adequate grounds for abandoning his purpose to have existing evils "specifically and directly met by law as they develop," and substituting in its stead a policy of meeting them by indirection, through happy-thought devices based on no general principle and reflecting no matured ideas of policy.

Apart from the particular merits of this question, the proposal with which the Attorney-General's name has been connected bears marks of a character that has been far too frequently in evidence in recent years. You see an evil, and you strike at it with a bill; you ask no questions as to remote or collateral effects; you don't bother about underlying facts or underlying principles. Some judges are bad, and they are not easily removed; let them, then, be removable by majority vote of the people. Never mind that English judges are appointed for life, and that English courts are vastly more efficient than ours; never mind about judicial independence; never mind about the question of attracting the highest type of men to the bench. What, should not a bad judge be removed? Then here is Senator Cummins, wanting to strike short sales with a prohibitory tax; and so eager for it that he must get it done at once by means of a rider to the tariff bill. In an entirely different field, we are seeing at Paterson the consequence of quick-fire legislation adopted upon an impulse of ephemeral feeling. Because an anarchist crank killed McKinley, the Legislature must needs adopt a law making it a crime to print anything that shows "hostility to government"; and the result appears to be that it is a crime to make charges of arbitrary and oppressive conduct against the Paterson police! This foolishness may be upset by the higher courts in New Jersey as violating the right of free speech; but did the New Jersey legislators, in their spasm of virtuous indignation, bother about a little thing like the right of free speech? If we are not to reap a large crop of evils as the fruit of the present disposition towards get-good-quick legislation, it will be because there are still left some people who regard broad principles and general policies as entitled to consideration in weighing the merits of a legislative proposal.

NIETZSCHE IN ENGLAND.

Pious Nietzscheans, if there are such, and ordinary human beings will both be ready to congratulate Dr. Oscar Levy on the completion of his great enterprise. At last, after twenty years of editorial labor and anxiety, he has seen the works of his master in English, the most complete edition of the author, we believe, in any tongue but the original. In 1893 Nietzsche's name was first mentioned in one of the books of the unfortunate John Davidson. The next year a group of German, English, and Scottish enthusiasts planned a translation of his writings, and three volumes were actually published in 1896 and 1897. The venture was so disastrous that the publishing house which financed the scheme had to give up business. For six years nothing was done. Then, in 1903, a fresh start was taken with "The Dawn of Day," but again disastrously. In 1907, at private risk, for no publisher could now be lured to the venture, a version of "Beyond Good and Evil" was brought out; and this time there was at least a promise of success. New arrangements were now made with the Nietzsche-Archiv, and in May of 1909 the first four volumes of the present edition were issued. To-day we have the eighteenth and last.

Dr. Levy admits that the results are not perfect, and that errors have crept in despite unceasing vigilance, but we think that few who have used these translations with the German text also before them will begrudge hearty praise for an extremely difficult task on the whole admirably accomplished.

In the preface to the present volume Dr. Levy gives an amusing explanation of his reasons for making England the centre of attack for the new propaganda:

> "This is a difficult country to move, my friend—a difficult country, indeed," said the aged Disraeli once to the young and enthusiastic Socialist, Mr. Hyndman: and

If any one besides Disraeli has ever experienced the truth of this saying, it is we, who have brought this edition to a successful issue. The stoical "ataraxia," of the Anglo-Saxon world is—to put it mildly—something terrible; but why put it mildly? That in matters of the intellect England is a real brick wall there is not the slightest doubt, as some almost ineffaceable bruises on the heads of my fellow-workers and myself will for ever demonstrate to any unbeliever.

But the brick wall was worth attacking. Dr. Levy knew that if the educated class of England took up his doctrine, it would be from no light spirit of curiosity, and that from the very solidity and stolidity of the people he should have gained a tremendous moral support.

And he had, he avows, another reason for turning first to England. "On the Continent everything is muddled in matters of religion; what should be below is above, and what should be above is below." In France and Germany, as a reaction from the Revolution, the party of aristocracy and the party of the Church have become allies against the proletariat. In the one country you will see French officers of good family attending mass regularly as a protest against the atheism of the lower orders, and in the other country you will find the Junkers posing as pillars of the throne and altar, "not knowing, or not wishing to know, that the teaching given out at the altar is, so long as it is delivered without falsehood, subversive of all thrones and all authorities." But in England it is different. There religion is still strongest in the middle and lower classes. Now, such a land is precisely fitted for the Nietzschean campaign; there, and there only, in attacking Christianity the heralds of the new gospel may be sure that they are not lending their strength to the equally hated enemies of aristocracy.

But if Dr. Levy thus makes Christianity the point of attack, he does so with the delightfully impudent assurance that Nietzsche was himself *christianior christianis:* "If there ever was a true Christian, it was he; not only is he not the Antichrist; he is the very opposite of it, he is what Goethe said of Spinoza: 'Christianissimus.'" This is because Christianity by its conviction of sin taught mankind a habit of painful introspection which was totally unknown to the Pagan world, and which led in the end to the eviction of its own false philosophy and the preparation for the Nietzschean truth. Nietzscheanism is thus destined to supplant Christianity, as Christianity supplanted Judaism—and with the same hatred for what it has outgrown.

We have dwelt at length on Dr. Levy's introduction, because on the surface it is so entertainingly saucy, and because beneath its wit it contains a frank and thoughtful exposition of what the followers of Nietzsche are undertaking to do. There need be no particular dread of Nietzscheanism as a sober propaganda; it is too fundamentally deficient in a sense of the values of life, too purposeless, to accomplish much as a religion or pseudo-religion. If Dr. Levy can honestly point to a remarkable extension of Nietzsche's popularity, this growth has come about in a way that can give him little encouragement as a missionary. Nietzsche has become quasi-popular for two reasons: first, as a mere writer, as a poet of startling phrases and occasional insight, but with no systematic doctrine; and, secondly, as one of the innumerable forces of change and of rebellion against the existing order of things. It is a fact, we believe, that nowhere will you find more men who regard Nietzsche favorably or tolerantly than among those Socialistically inclined: they feel and welcome the destructive energy of the man, while caring little that his programme of construction is entirely opposed to their own. It is with the aristocratic Nietzsche in this respect as it is with the anarchistic Walt Whitman; so true is it that the great driving power of a revolutionary association is a community of hatred or fear.

Some confirmation of this view might even be derived from the Index, prepared by Mr. Robert Guppy, which forms the bulk of the last volume. There is, for instance, a certain significance in the fact that the entries under Superman occupy only three pages and those under Valuations only two, whereas Wagner extends to more than six pages and Christian—Christianity to six and a half. Nietzsche was never sure of what he meant by the Superman, and his so-called revaluation of life is intangible because devoid of any positive ideal; but the bitter meaning of his feud with Wagner was without any shadow of uncertainty, and he left no ambiguity in his hatred for Christianity and the present social order.

PROGRESSIVE STRAWS.

Progress is still going on, but it is not showing up brilliantly in the external indications of Progressive party strength. The meagre harvest of enrolment blanks that has thus far been reaped in this city from the distribution of them through the mails, by the Board of Elections, is not an isolated sign; though there is something surprising in the fact that, up to Monday noon, only 2,500 persons had availed themselves of the opportunity. Indications of this sort are common over the country. One of the latest that we have noticed is this most remarkable showing, from Boston:

	Vote for Pres., 1912.	Vote for Gov., 1912.	Enrolment, 1913.
Dem.	43,063	48,684	50,460
Rep.	21,427	18,920	25,854
Prog.	25,533	17,318	834

These figures speak for themselves—a Republican enrolment much larger than the Republican vote for President or Governor, a Democratic enrolment also larger than the vote in 1912, and a Progressive enrolment next to nothing at all.

If it be objected that figures of enrolment are not significant, there is no difficulty in pointing to manifestations of a different kind. The elections held two months ago in Chicago and St. Louis told the same story. In Chicago, the vote for Roosevelt last November was 166,000, with 131,000 votes for Wilson and 75,000 for Taft. Upon the Governorship at the same time the Progressive vote was 113,000, while the Democrats had 168,000 and the Republicans 109,000. But in the spring election in Chicago the Progressive vote was only one-fourth as large as the Republican vote, while the Democrats polled a heavier vote than the Republicans. In the spring election at St. Louis, the Progressives polled only 4,164 votes out of a total of 125,000, although their candidate for Mayor was endorsed by Mr. Roosevelt, and although his own vote in November was nearly 25,000 and that of the Progressive candidate for Governor was nearly 21,000. But most striking, perhaps, of all the results recorded in this matter since November was that in Michigan, a veritable hotbed of Roosevelt Progressivism. It was in reference to Michigan that the Colonel made the most impassioned and per-

sistent of his post-election appeals, crying out against the infamy of the courts in their interpretation of a disputed ballot question. And in the face of all this the Progressive candidates in Michigan came out a poor third in April, though in November Roosevelt had beaten Taft by 62,000 and Wilson by 64,000.

Now, whatever explanation of all this the history of the past few months has presented, the one thing certain is that the Progressive party has not been acting like a great body of citizens fired with the consciousness of a mission and inspirited with the confidence of growing power. There is, indeed, one method of explaining away the facts which may be accepted as in a large measure correct; but the trouble about it is that it explains too much. It comes perilously near to that process which is hit off in the homely saying about throwing the child out with the bath. The Progressives, it may be said, are so well satisfied with Wilson that they see no special need of asserting themselves as a separate party. Here is William Allen White, for instance, and he is but one example among many. "The Progressives are delighted with Wilson," Mr. White declares; "he is their kind of a President. . . . In my speeches I have been saying the handsomest things possible about President Wilson, and his name always gets applause from a Progressive crowd. He gets tho same amount of applause that Roosevelt gets." We hasten to add that Mr. White has no idea of giving up the Progressive party; he is counting on a collapse of Democratic virtue, and then the Progressives will come into their own. But if the state of mind he exhibits has upon large numbers of Progressives the effect of sending them into the Democratic ranks, and if another large body has sagged back into Republicanism, nothing more is needed to account for the things that have been happening.

The real question, however, concerns the strength of the new party as a party. In a sense, "we are all progressives now," to adapt Harcourt's famous saying about Socialism. If it is a satisfaction to the Colonel's followers to claim that everything in the nature of progressive social legislation that may be accomplished in the next decade or two is to be credited to their activities, no one can forbid their enjoyment of that feeling. But the thing that was central in the Armageddon movement of last year was the idea that a party exclusively dedicated to a programme of radical change in these matters was essential to the national welfare. Without that idea, there is no future for the Progressive party; and if it fails to be manifested in the shape of great multitudes of citizens who persistently stand up to be counted as its backers, the Progressive party must fade out of the field of practical politics and become little more than an historical reminiscence.

A PROFESSOR ON THE RAMPAGE.

The Philadelphia *Press* has been printing, with conspicuous display, a series of articles by Prof. Simon N. Patten, prophesying the speedy—and deserved—downfall of New York, and giving a most lurid picture of economic conditions in the East generally. The tone of the articles throughout is that of the expert—not, however, of the economic expert, or of a man of science of any kind, but of the expert in yellow journalism and in the most extreme and irresponsible type of magazine muckraking. That a newspaper of respectable standing should give prominence to such stuff may perhaps be excused on the ground that Mr. Patten has been for twenty-five years professor of political economy in the University of Pennsylvania; to find an excuse for Mr. Patten's writing it one would have to go deeper into the mysteries of creation. It has long been evident that the emission of this sort of rant is part of his very nature.

It is the privilege of any one to deplore the crowding of millions of people into the little island of Manhattan, to denounce the immorality or the luxury of New York, and to point out how much more wholesome, or virtuous, or happy would be the lives of thousands who swell the metropolitan swarm if they made use of the opportunities afforded by the vast unfilled areas of our country. This, and more, Professor Patten might have done to his heart's content, without blame. But he professes to speak as an economist and a scientific student of society; and he undertakes to declare, in this capacity, not only what ought to be, but what will be, and that speedily. "A number of driving forces," he declares, "are operating with fearful rapidity on the industrial life of the East, pressing it, whether it will or no, towards a precipice of financial insolvency." A great struggle, he tells us, is going on between New York and the rest of the country, and "if the country at large wins, New York city will face a slump in values beside which the crises of the past have been a mere bagatelle." Signs of New York's approaching downfall are already visible, for "already the exports of foodstuffs (her chief dependence) have fallen off in favor of Baltimore, Boston, and Montreal."

But the fault of Mr. Patten's articles lies not so much in the wild character of his sweeping statements and predictions as in the ludicrous insignificance of the facts and figures he cites in support of them. Take this matter of food exports, for example. Mr. Patten spreads out a table showing that exports of flour from New York have declined from 3,900,000 barrels in 1880 to 2,600,000 in 1904, while in the same interval the joint exports from Philadelphia, Boston, and Baltimore have increased from 1,600,000 to 3,100,000; and likewise exports of provisions have here decreased from 1,150 million pounds to 980 million, while in the rival cities they have advanced from 430 million pounds to 630 million. Now, if this business is, as Mr. Patten says, this city's "chief dependence," how in Heaven's name has it happened that New York has grown so tremendously in wealth and population—and at a far more rapid rate than the other cities—during these twenty-four years, while the amount of this business has actually declined? One more instance must suffice—indeed, these two are among the very few in which Mr Patten even attempts to back up his assertions by any citation of facts. To prove that a great exodus to the West is on the way, and that it must be rapidly accelerated owing to wage conditions, he says:

> The relative advantages of the East and the West are made plain by the wages paid in the two districts. Some of the latest State reports show that the wages in the West are considerably higher than in the East, as this table will illustrate:
>
> The proportion of men engaged in industry who receive more than $15 per week—
>
> | | In each 100. |
> |---|---|
> | In Massachusetts | 26 |
> | In Kansas | 30 |
> | In California | 57 |

And this pitiful little exhibit of a dif-

ference between Massachusetts and Kansas—with seven times as much difference between Kansas and California—is all he has to present in support of his thesis!

It may seem almost as ill-judged to take notice of eruptions like this of Professor Patten's as to print them in the first place. Often, indeed, one feels that silence is the only proper course with regard to them. But occasionally it seems to be more or less a duty to expose them explicitly, for the benefit of those who may be misled, through the official position of the writer, into attaching weight to them. But it is difficult to deal with them in language that is confined within the bounds of courtesy. What shall be said, for instance, of the holder of an important university chair who is capable of the combined ignorance and effrontery of this explanation of the French Revolution?—

> In 1730 the work of the world was done by hand. The steam engine was invented; machines came into use; the enterprising Britishers found coal and iron side by side; the population of England moved from the villages of the South into cities in the North. Meanwhile, the French continued to manufacture by the old hand processes. Before they realized what had happened, England had an industrial lead of thirty years on them. She took the French markets, impoverished their industries, and created a widespread distress which brought on the revolution. Louis XVI, Robespierre, Danton, and Mirabeau were incidents in a great economic process. The real cause of the political revolution in France was the industrial revolution in England.

It may be impossible for Mr. Patten to keep himself from finding a new key to the history of the past, a new solution of the problems of the present, and a new revelation of the secrets of the future, every other morning. It may be impossible to prevent the publication of these wonderful discoveries, in books or magazines or newspapers. But at least it is possible to warn innocent bystanders of the utter absence, in his explosions, of any trace of scientific or responsible thinking.

THE SPIRIT OF COMMENCEMENT.

In a time of attack upon institutions, attack proportioned to the venerableness of the objects assailed, how does it happen that Commencement Day has escaped? We like to think of our Legislatures as hopeless, to talk of our courts as archaic, to scoff at the Constitution as in its dotage. More to the point is the Niagara of criticism which has been pouring upon our school system, from kindergarten to professional school. College professors, we are assured nowadays, and not least emphatically by members of their own ranks, are to their profession what a pettifogging lawyer is to his, the difference being merely that there is a way of getting rid of the lawyer, while the professor holds on for ever. Yet with the recurrence of June, campuses glitter with all the colors of the rainbow, flashed from the frocks of proud sisters and mothers and sweethearts, and no less from the academic gowns of those to whom, for one day at least, we look up with something of awe.

The mystery deepens when we remember the change that has come over our ideals of education. At one time the thought of anything material in connection with Commencement was as much out of place as the planning of a business deal in church. It was the glory of the youthful graduate that he harangued his parents and friends upon subjects about which he knew rather less than they. This was the very thing they had long been looking forward to as the outward evidence of his inner development. Why should he not declaim for fifteen minutes upon "Success"? How many of his hearers could discuss that topic from so detached a point of view, with such fresh interest and absolute open-mindedness? How many of them could have found anything worth saying upon the subject, "All Is Not Gold That Glitters"? And yet they listened unbored to every word that Tom Smith's daughter uttered about it. For at that primitive period, people were in the habit of expecting graduates to face Life; and it was only natural that, just before they plunged into it, they should give their ideas thereupon. Now we think it better that they should prepare themselves for making a living. Vocation, not avocation, is our watchword. Nevertheless, we display undiminished interest in the mediæval ceremonies by which students receive degrees which we and they know to be meaningless signs of a training which we urge them to outgrow as fast as possible.

Perhaps there is something in the very elasticity of Commencement that constitutes a perennial charm. How can you kill an institution which instantly adapts itself, with unvarying equanimity, to whatever purposes you impute to it? As if to show how far it could go in this amiable direction, it was the occasion, at Emporia, Kan., a few days ago, of a sharply contrasted pair of addresses. The principal of one school, according to a local journal, "gave a short but masterly address, in which was embodied food for thought for every person, as regards incomes." His subject was "The Value of an Education in Dollars and Cents," and he had statistics to prove beyond cavil that the unskilled laborer could never hope to attain the economic heights that lay before the college graduate. This was on Saturday night. Sunday morning another speaker addressed another graduating class on the subject of "Education." But he told his hearers that to measure success by the amount of money earned was a false conception of one's wealth and power. The Commencement spirit finds no difficulty in accepting both of these presentations. Its real interests are elsewhere. "Here are my jewels," it cries, as the long line of youthful faces files by. "The present may be yours, but whose is the future?"

GRAY'S LETTERS.

After years of labor Mr. Tovey has finally brought to a conclusion his edition of Gray's Letters.* In its way, he has accomplished an almost perfect piece of editing; the chronology has been adjusted, the allusions have been hunted down with great patience, the text, where the manuscripts exist, has been reproduced with extreme fidelity. We ought to be, and are, grateful for the fruit of such conscientious toil, and yet, despite ourselves, we cannot escape certain doubts as to the utility of the plan, at least as regards the form of the text. Gray had a peculiar manner of writing. He not only employed the abbreviations common to his day, such as *wch* for *which*, but he had a trick of putting capitals anywhere except at the opening of the sentences. It may be highly valuable to know these usages, but, unfortunately, their effect in cold type is quite different from their effect in script, and to reproduce them exactly on the printed page is to make one of the most literate of men appear almost illiterate.

I.

After all, Mason, the much-scribbling,

**The Letters of Thomas Gray, Including the Correspondence of Gray and Mason.* Edited by Duncan C. Tovey. 3 vols., Bohn's Library. New York: The Macmillan Co. 1909 (2d ed.), 1904, 1912.

vain, place-seeking, simple "Seroddles," as his friend called him, hit somehow on the right idea of biography, as did another foolish syeophant of the age; and I am not sure that there is any better way of getting at the man than by going back to Mason's selection and high-handed manipulation of the Letters, with the intervening bits of narration, sadly written as these are, and with the fragments of verse intercalated which belong not so much to Gray's poetical works as to his poetical life. And Mason in a phrase has given us what is still the best characterization in brief of Gray—"from his earliest years, curious, pensive, and philosophical." Such he was to his friends; such he appears in Mason's Life and in Mr. Tovey's edition of the Letters—curious, pensive, erend panegyrist:

His curiosity was as various as it was insatiable; but above all it made him a lover of books. "He was, perhaps, the most learned man of the age," said Potter, the translator of Æschylus; and the Rev. W. J. Temple, writing in the *London Magazine* soon after Gray's death, had used almost the same words, adding: "He knew every branch of history. . . . Criticism, metaphysics, morals, politics, made a principal part of his study; voyages and travels of all sorts were his favorite amusements: and he had a fine taste in painting, prints, architecture, and gardening"—all of which is no exaggeration, as may be seen from his manuscripts. As for sheer endurance in delight, the Encyclopédie was to him an amusement, while his well-known idea of Paradise was "to read eternal new romances of Marivaux and Crébillon." And this, after weighing the fruit and the pleasures of such an existence, is the conclusion of his reverend panegyrist:

Perhaps it may be said, What signifies so much knowledge when it produced so little? Is it worth taking so much pains to leave no memorial, but a few poems? But let it be considered, that Mr. Gray was to others at least innocently employed; to himself, certainly beneficially. His time passed agreeably; he was every day making some new acquisition in science; his mind was enlarged, his heart softened, his virtue strengthened; the world and mankind were shown to him without a mask; and he was taught to consider everything as trifling, and unworthy the attention of a wise man, except the pursuit of knowledge, and the practice of virtue, in that state wherein God has placed us.

A finer encomium of the curious and philosophical life has rarely been pronounced, yet how strange it sounds to modern ears! It was written not a century and a half ago, and probably to most of those who read it here on this page it will seem to have come from another world, whose virtues are outworn and whose purpose even repels us as selfish indulgence. A century and a half from now which will appear the wiser, Gray's generation or ours?

II.

Whether or not such an encomium of the quiet life can be applied without reservation to Gray is quite another question. There were men of that age who found these rewards; and nothing is more delightful in a humble way than the echoes of the Horatian *fallentis semita vitæ* that we hear now and then from those who knew content in the cloistered walks by the Isis or the Cam. Such, for instance, are the poems of the Rev. Francis Drake, of Magdalen College, preserved in the "Literary Hours" of his friend Dr. Nathan Drake:

Hid from the world, unknowing and unknown,
I seek no other praises than my own,
Heedless to catch the breath of public fame,
And only cautious of avoiding blame.
Here, mid the silent shade, and midnight gloom,
With books I trace the sculptured spoils of Rome,
Range thro' the sacred stores of ancient times,
And revel o'er the scenes of classic climes.

And there were others, the unremembered monks of literature, if not the ambitious scholars, who were satisfied "in active indolence" to "pass the peaceful hours with books and rhyme."

But Gray, it must be admitted, was not quite such an one. The surprising thing in his Letters, when one stops to think of it, is his attitude towards the University in which he elected to pass almost the whole of his mature life. Though curious in matters of architecture, and ready to undergo considerable discomfort in the pursuit of antiquarian knowledge elsewhere, he had, so far as the record shows, no interest in the buildings of Cambridge. He was peculiarly susceptible to the charms of nature in her wilder and her more cultivated aspects, and writes often of these things with romantic conviction. Not Wordsworth himself has expressed the beauty of the country about Skiddaw more lovingly than Gray has done in his journal:

In the evening walked alone down to the lake by the side of Crow-Park after the sunset and saw the solemn coloring of night draw on, the last gleam of sunshine fading away on the hill-tops, the deep serene of the waters, and the long shadows of the mountains thrown across them, till they nearly touched the hithermost shore. At distance heard the murmur of many waterfalls not audible in the day-time [*cf.* Wordsworth, "White Doe," iv, 28]. Wished for the Moon, but she was *dark to me and silent, hid in her vacant interlunar cave.*

He can write feelingly of the grace of gardens, as of those at Hampton—"Every little gleam of sunshine, every accident of light, opens some new beauty in the view"—but for the entrancing loveliness of the Cambridge Backs there is in all his letters, I believe, not a single word.

In fact, when he refers to the University it is oftenest in the captious tone of Walpole gossiping about society, though without Walpole's prolixity of cynicism. We hear much of the spiteful intriguing of the Common Room, of the rowdyism of students, and the discomforts of the place, but of the University as the proud deposit of the scholar's faith, never a hint. It seems to have been to him such a trial of the nerves as the sister University was to a contemporary who published a parody of the "Elegy" in "The Oxford Sausage," with a picture at the head which is evidently meant to represent Gray in a posture of peevish lassitude:

Now shine the spires beneath the paly moon,
And through the cloister peace and silence reign,
Save where some fiddler scrapes a drowsy tune,
Or copious bowls inspire a jovial strain.

Save that in yonder cobweb-mantled room,
Where lies a student in profound repose,
Oppress'd with ale, wide-echoes thro' the gloom
Tho droning music of his vocal nose.

Within those walls, where thro' the glimm'ring shade
Appear the pamphlets in a mould'ring heap,
Each in his narrow bed till morning laid,
The peaceful Fellows of the College sleep.

Nor, in his own pursuit does Gray appear to have found the noblest satisfaction of learning. He read enormously and annotated indefatigably; he drew many delights from the paradise of print, and what speaking things his books were to him may be known from that "great hubbub of tongues" in his study of which he sends so amusing an account to his friend West. Yet in the end those of us who would look for life in our libraries must wonder to see how frequently the terrible word *ennui* drops from his pen. In one of his earliest letters he writes of "low spirits" as his "true and faithful companions," and indeed they, or a kind of "white melancholy," as he calls it, never left him for long. "To be employed is to be happy," is one of his maxims, which in various forms he repeats over and over again, and it is only too clear that a good deal of his reading was in the nature of a narcotic. "I rejoice," he writes to Walpole, "you can fill all your *vides;* the Maintenon could not, and that was her great misfortune"—and his own, he meant to imply. Mr. Tovey quotes from Voltaire the famous passage in Madame de Maintenon's letter which Gray had in mind, and which had impressed Dr. Johnson also: "J'ai été jeune et jolie: j'ai gouté des plaisirs: j'ai été aimée

partout. Dans un âge plus avancé, j'ai passé des années dans le commerce de l'esprit; je suis venue à la faveur, et je proteste, ma chère fille, que tous les états laissent *un vide affreux*." Alas, the word of the poet and scholar of Cambridge was in the end not much different from that of the lady of Versailles: "I cannot brag of my spirits, my situation, my employments, or my fertility; the days and the nights pass, and I am never the nearer to anything but that one to which we are all tending."

III.

There were no doubt particular reasons, apart from the common state of humanity, which helped to fix the white melancholy on Gray. At an earlier day his eager curiosity would have brought a different kind of happiness to him. In the sixteenth or seventeenth century he might have been a Scaliger or a Casaubon, for whom the pathway to truth lay in the mere accumulation of knowledge. Or, if not precisely acquiring happiness, he might have felt that in the sheer continuity of reading he was fulfilling the highest destiny of man. We might have found in his diary, when he had passed a whole day from early dawn till late night over his books, Casaubon's exultant phrase, *hodie vixi*, or on another day the record of wasted time which Mark Pattison quotes with such feeling: "This morning not to my books till seven o'clock or after; alas me! and after that the whole morning lost; nay, the whole day. O God of my salvation, aid my studies, without which life is to me not life." But Gray's lot fell in an age just too late for this religious joy of erudition. If he failed sometimes in his fight against the terrible *vides* of existence, what lover of books to-day shall cast the stone at him? The ability to find continuous comfort in the printed page, without the stimulation of some real or fancied duty, is, indeed, one of the rarest gifts in the world.

For one thing, such a life in books, or such a death (*immorior libris*), requires not only a rare kind of unweariable intellect, but also, with that, a certain lethargy of the imagination. And Gray, though he possessed the former in a high degree, had by no means a lethargic imagination. The best account we have of him is that written by Norton Nicholls, who when a young man at Cambridge was taken up by the older scholar, as was the Swiss Bonstetten, with something like a pathetic desire to enjoy vicariously the hopes and eagerness of youth. Nicholls's acquaintance with Gray, he tells us, began one afternoon in the rooms of a Fellow of Peterhouse, and we can almost feel the keenness with which the solitary poet grasps at a friendship that promises a sympathy of the imagination. "The conversation turned on the use of bold metaphors in poetry, and that of Milton was quoted, 'The sun to me is dark, and silent as the moon,' etc., when I ventured to ask if it might not possibly be imitated from Dante, "Mi ripingeva là dove il sol tace.' Mr. Gray turned quickly round to me, and said, 'Sir, do you read Dante?' and entered into conversation with me." It may have been the sudden regard of Gray at this time that led Nicholls to remember and speak of being awestruck by his "lightning glance." But that was not the only occasion on which Nicholls caught the "fine frenzy" of the poet in Gray:

> One morning [he writes], when I went to him as usual after breakfast, I knocked at his door, which he threw open, and exclaimed with a loud voice,
>
> Hence, avaunt! 'tis holy ground.
>
> I was so astonished that I almost feared he was out of his senses; but this was the beginning of the Ode which he had just composed.

The point is that this stirring imagination of Gray's, though it was sufficiently strong to prevent him from finding content in merely feeding the appetite of an insatiable curiosity, was yet not powerful enough or steady enough to give him a real purpose or to lift him to the serener heights of peace. He was, I suppose, what might be called a religious man. At least there is no word in his Letters to indicate that he ever questioned the orthodox belief of the day. Voltaire was "the great object of his detestation," for whose power of mischief he had a kind of impatient terror, and the King of Prussia's poetry he scorned as "the scum of Voltaire and Lord Bolingbroke, the *crambe recocta* of our worst freethinkers." Even Middleton's skeptical tendency alarmed him, although he admired that writer's literary style. Yet there is no sign that he found any deep source of consolation in his faith or that the beauty of the Anglican service meant anything to his imagination. There is a good deal in his correspondence about ecclesiastical antiquarianism, but, so far as I remember, of King's College chapel, which lay almost at his door and is one of the loveliest things of the world, he never speaks, save once in passing, when he questions the authenticity of an anecdote about Christopher Wren and the chapel roof. Did the magic of those stones have no meaning for him?

A certain idle traveller, one afternoon, sat far back in the nave of that chapel in such a position that, looking along obliquely into the choir, he could see the projecting mullions of the windows, but not the glass, while the westering sun slanted dimly through the colored panes and transformed the whole southern wall into the semblance of a great gleaming opal. And with the spectral light the voices of the unseen priests reciting the vesper service within the chancel and the chant of the choristers seemed to mingle and pour upon the listener a pure and mysterious awe. Did such a scene have no appeal to Gray? or did he merely keep silence? He could in the concealment of Latin verse touch on the deeper and more elusive feelings of the heart, as in the exquisite quatrain he sent to West in a letter:

> O lachrymarum fons, tenero sacros
> Ducentium ortus ex animo; quater
> Felix! in imo qui scatentem
> Pectore te, pia Nympha, sensit.

But was the sense of religious initiation already restricted for him—as to so many it seems restricted to-day—to the romantic solitudes of nature:

> Præsentiorem et conspicimus Deum
> Per invias rupes, fera per juga,
> Clivosque præruptos, sonantes
> Inter aquas, nemorumque noctem?

IV.

Possibly, if West had lived and the correspondence with him, while maintaining its freedom, had matured in judgment, we might have a somewhat different notion of Gray's nature, as indeed his nature itself might have expanded more opulently. Certainly to us who must know him through his Letters, the early death of his closest friend is an irreparable loss. They had been comrades together at Eton, and on separating, one for Oxford and the other for Cambridge, began the correspondence which continued for eight years, closing only with the death of West, from consumption and "a load of family misfortunes." It is easy to smile at the solemnity that sometimes shows itself in these letters: boys of their age and disposition are likely to be a bit portentous when they write about themselves. But on the whole I do not know where one would find a more beautiful or more promising friendship. Nor are the letters without their actual charm. Though the expression may be occasionally pedantic, the ardor for literature and the search for a philosophy of life cannot fail to stir the reader with memories of his own eager youth. Much of the verse that passed between the enthusiasts is in Latin, and if the muse of West was somewhat halting, at least it is not every young man who composes hexameters on his cough—"ante omnes morbos importunissima tussis"—while tossing in bed at four in the morning. Just a month later Gray sends him a letter which indicates a most extraordinary range of reading, including a challenge to West to name the source of a couplet about a dimple, and containing these words, only too sincere: "I converse, as usual, with none but the dead; they are my old friends, and almost

make me long to be with them." West's reply follows:

Your fragment is in Aulus Gellius; and both it and your Greek delicious. But why are you thus melancholy? I am so sorry for it, that you see I cannot forbear writing again the very first opportunity; though I have little to say, except to expostulate with you about it. I find you converse much with the dead, and I do not blame you for that; I converse with them too, though not indeed with the Greek. But I must condemn you for your longing to be with them. What, are there no joys among the living? I could almost cry out with Catullus, "Alphene immemor, atque unanimis false sodalibus!" But to turn an accusation thus upon another, is ungenerous; so I will take my leave of you for the present with a "Vale, et vive paulisper cum vivis."

Only twenty days after that pathetic call to his friend to live for a little with the living, the writer himself was dead. Something no doubt is required of us to-day to feel the charm of these letters; not many of us can recall immediately the lines that follow the appeal in Catullus and give poignancy to it:

If thou neglect me now, and in my misery leave,
Ah, what were men to do? What faith will not deceive?

But not only West, but Gray also, turned to Latin for the expression of his more personal emotions. I have already quoted the stanza, *O lachrymarum fons*, which Byron was to use twice as a motto for his poems, and the *Præsentiorem*, and there are other verses in the letters almost as intimate. Finest of all, and too little known, are the lines to "Favonius" with which he closes the fragmentary work on Locke's philosophy, "De Principiis Cogitandi"—finer and far more intimate in their pathos than the English sonnet, "On the Death of Mr. Richard West," which to Wordsworth seemed so frigid. They lack only the supreme mastery of word-craft, not attainable by any writer in a foreign tongue, and perhaps also the very note of impersonality and universality, to rank with the great "Elegy."

There was nothing in the character or learning of Walpole or Mason or Wharton to supply the place of Gray's dear Favonius. To none of these could he write, as he might have written to West, with that ranging love of literature which takes the great traditional emotions of the past as an extension of one's own inner life. And when Nicholls and Bonstetten came into his circle he was too much older than they to open his heart with the perfect freedom of equality. Nicholls has left a brief but almost Boswellian sketch of his friend, and the wandering Swiss, who when Byron met him at Coppet could only remember Gray as "the most 'melancholy and gentleman-like' of all possible poets," still interests us for Gray's exclamation to him in a London street: "Look, look, Bonstetten, the great bear! There goes *Ursa Major!*" So much only we owe to them. With the passing of West the conversation of Gray became more and more with the dead, and Life, which brings us here for her own ends, and resents any attempt to escape her imperium, took her revenge on him by planting in his heart that white melancholy. If we needed such a lesson today we might learn from Gray's Letters that, however much books may promise us of pleasure and wisdom and encouragement, they cannot, for an ardent and seeing mind, create a tower of escape from the claims of an importunate world.

V.

But it would be doing a grave injustice to one of the finest collections of letters in the language to end on this negative note. If they omit much that we might desire, they are replete with exquisite traits of sentiment and wisdom. If Gray read voraciously, he also read critically, and no one was better able in a sentence or a single vivid phrase to express the very pith and marrow of an author. It was Gray who said of Shenstone that "he goes hopping along his own gravel-walks, and never deviates from the beaten paths for fear of being lost." Could the timid poet of Leasowes be presented more picturesquely and correctly in an image? Still more remarkable is the famous portrait of Sterne: "Have you read his Sermons (with his own comic figure at the head of them)? They are in the style I think most proper for the pulpit, and show a very strong imagination and a sensible [sensitive] heart; but you see him often tottering on the verge of laughter, and ready to throw his periwig in the face of his audience." How Sterne himself, the master of significant gesture, would have relished that inimitable picture! And in the criticism of *genres*, what is greater than this revision of Milton: "Extreme conciseness of expression, yet pure, perspicuous, and musical, is one of the grand beauties of lyric poetry"?

There is wit aplenty in these pages, but there is feeling, too, though commonly much subdued. More beautiful letters of condolence have scarcely been penned than those in which Gray sent his sympathy to friends on the occasion of bereavement. One of his sentences to Nicholls—"In one's whole life one never can have any more than a single mother"—has become a kind of proverb of the heart. Even finer as a whole is the letter to Wharton, which has come down to us with the endorsement of the recipient, "On Robin's Death." I wish there were room for the whole of it:

My Dear Sir:

I am equally sensible of your affliction, and of your kindness, that made you think of me at such a moment. Would to God I could lessen the one, or requite the other with that consolation, which I have often received from you, when I most wanted it! But your grief is too just, and the cause of it too fresh, to admit of any such endeavor. What indeed is all human consolation, can it efface every little amiable word or action of any object we loved, from our memory? Can it convince us that all the hopes we had entertained, the plans of future satisfaction we had formed, were ill-grounded and vain, only because we have lost them?

On one side of his character, in his mordant, cynical attitude towards the persons of the University with whom he lived and in his faculty of sharp critical phraseology, Gray belongs with the wits and continues the tradition of Pope and Swift. On another side, shown more completely perhaps in his verse but indicated also in the descriptive passages of his letters, as in the occasional touches of sentiment and in the enthusiastic acceptance of Ossian, he stands with the new creators of romance. And this composite nature of his mind, while it may be one of the contributing causes of a certain inefficiency in his genius, preventing him from ever quite speaking out, and separating him from the Augustan circle of which Johnson was the deity, explains in part also the fascination of the man and of his Letters. And if the virtue and wisdom which his panegyrist gave to him as the reward of his learned seclusion were not crowned with the perfect gift of content, this, too, is a mark of his sincerity and humanity.

P. E. M.

NEWS FOR BIBLIOPHILES.

On May 18, 1844, under the head of Foreign Affairs, *Punch* published the following:

It is a common idea that the most laconic military despatch was that sent by Cæsar to the Horse Guards at Rome, containing the three memorable words, "Veni, vidi, vici," and perhaps, until our own day, no like instance of brevity has been found. The despatch of Sir Charles Napier, after the capture of Scinde, to Lord Ellenborough, both for brevity and truth, is, however, far beyond it. The despatch consisted of one emphatic word, Peccavi—I have Scinde (sinned).

It will be noted, in passing, that Mr. Punch was taking no chances on his readers failing to see the point. Although the joke has survived down to this day, it is singular that its origin seems to have been lost sight of, and credit for it has been given to many others, including Sir Charles himself; thus, in *Notes and Queries*, December 14, 1907, Mr. Walter Jerrold (grandson of Douglas Jerrold) says:

The earliest publication of this jest of which I am aware is in George Daniel's entertaining medley, "Democritus in London" (1852), where Sir Peter Prolix is made to say:

> What exclaimed the gallant Napier,
> Proudly flourishing his rapier!
> To the army and the navy,
> When he conquered Scinde? "Peccavi!"

Until earlier publication can be proved,

the credit for this perfect pun must remain with George Daniel.

The perfectness of Daniel's pun might fairly be questioned, since it is not original. It is quite probable that, on hearing the news from Scinde, the joke might have occurred to many having a slight acquaintance with Latin, especially to such an inveterate punster as Thomas Hood, who, indeed, did contend for its authorship, according to Spielmann in his "History of Punch" (page 361). Mr. Spielmann, however, is inclined to award the credit to Michael John Barry, one of Douglas Jerrold's contemporaries; but Spielmann, in relating the story of Peccavi, is hopelessly muddled. He calls it "the most finished and pointed that ever appeared in *Punch*, and certainly one of the most highly appreciated and most loudly applauded," and then, instead of giving what I have already quoted, he substitutes this:

> Peccavi, I've Sc'nde, said Lord Ellen so proud.
> Dalhousie, more modest, said Vovi, I've Oude!

The chief thing to be said in favor of this couplet is that it makes Oude rhyme with proud, which I believe is correct. On the other hand, so far as Peccavi is concerned, it is not original; it attributes the saying to Ellenborough instead of Napier, and it couples the Scinde Affair with an event that occurred many years later. Moreover, this couplet is not to be found in *Punch*.

If the following statement is correct, then the young woman who is said to have been paid for the joke, may be regarded as the originator, so far as the article in *Punch* is concerned. This is in *Notes and Queries* November 2, 1907, in an article headed "Peccavi"; "I have Sinde." The following editorial note, which appears in the number for October, 1907, of *The East and the West*, p. 467, deserves a place in *Notes and Queries*, as it professes to give the origin of this historic pun:

> In the article in our last issue, entitled "The Influence of Laymen on Missions," the writer says: "Readers of Indian history will remember the famous laconic message in which Sir Charles Napier announced to the Viceroy his disobedience to orders, and its result in the occupation of Sindh: 'Peccavi.'" Mrs. C. Mackintosh writes to us to say that this message was never sent by Sir Charles Napier, but was invented by her cousin, Catherine Winkworth, the translator of "Lyra Germanica." Catherine Winkworth was then a young girl just out of the schoolroom, and was receiving lessons from Mr. Gaskell, to whom, after discussing with him Sir Charles Napier's conquest, she made the remark; "Peccavi, I have Sindh." On his suggestion, the joke was sent to *Punch*, the editor of which sent her a cheque in acknowledgment.

Another point to be noted is that, to add force to the pun, it was necessary to show that in giving battle to the Scindians, Sir Charles had disobeyed orders—had "sinned"—this appears in the extract just quoted. Now, nothing can be further from the truth, as can readily be seen by consulting "Napier's Life and Letters," by his brother, Sir William, where, in fact, in referring to this fight (Vol. II, p. 328), Sir Charles says: "I have only obeyed my orders." Indeed, he seems to have been most punctilious in procuring his Chief's authority for every step he took. To be sure he acted in opposition to the pleadings of the humane Outram—but Outram was his subordinate.

But from the very beginning there seems to have been a consensus that Napier actually sent the dispatch published in *Punch*—sent, by the way, to a man he had never seen (Life, Vol. II, p. 162). Spielmann relates how a member of Parliament, in the discussion of the Kandahar question, referred to the unexampled brevity of the general's dispatch after he had won his great battle on the Indus, "in the quaint belief that such a message had really been sent." But it is more surprising to find an historian like William Lee-Warner accepting the story. In his chapter on India and Afghanistan in the "Cambridge Modern History," Vol. XI, p. 736, after relating how Napier's task was to enforce a new treaty (a penal treaty, it was called) on the Amirs of Scinde, he goes on to say: "That Napier's conscience was pricked by the enterprise intrusted to him, may perhaps be inferred from the humorous message by which he announced his success—Peccavi." Now if a man in the midst of a great slaughter (5,000 Hindus were said to have been killed at Meanee), could sit down and perpetrate a joke about it (to one, as I have said, he had never seen), he must have had a queer sense of humor or a queer conscience or both, and it so happens that Sir Charles himself directly contradicts Lee-Warner's inference. Writing to his sister the day following the slaughter, he says: "Riding over the plain of Meanee afterwards, I said to myself, am I guilty of these horrid scenes? My conscience reproached me not." (Life, Vol. II, p. 326.)

Then, coming down to a still later publication, we have Mr. Herbert Paul in his "History of Modern England," referring to Sir Charles Napier as the "author" of the famous Peccavi dispatch.

Finally, it is to be noted that neither in the Life of Sir Charles above quoted, nor in the brief biography by Sir William Butler in the English Men of Action series, nor in any of the biographical articles on Sir Charles is there the faintest allusion to this alleged Peccavi message.

WALTER WOOLLCOTT.

Correspondence

BOGUS UNIVERSITY DEGREES IN AMERICA.

TO THE EDITOR OF THE NATION:

SIR: A few years since I received a call one afternoon from a gentleman who was teaching in the vicinity. I judged from his conversation that he was a man of great accomplishments, as distinguished honors seemed to have gathered about him. He was a graduate of a famous German university; he had been literary adviser of the Bibliographisches Institut; he had had an offer of the editorship of the *Allgemeine Zeitung*. He was then a professor in an American university. The ease and fluency with which so many honors had come to this gentleman interested me in his case and led me to write to several places which had been the sources of his successive triumphs. I found that he had been a student at the university which he mentioned, but when he came to present his thesis for his doctorate certain serious considerations arose as to the authorship of the material presented. He was unknown at the Bibliographisches Institut. He had written one or two articles for the great journal, the editorship of which had been offered to him, the direction of which, however, possessed no further knowledge of him. This gentleman had come to this country, had obtained an instructorship in one of our great universities, and from that vantage ground had obtained a leading chair in the university above mentioned. Reference to a contemporary catalogue of the institution with which he was first connected contained among his titles the date of his graduation in Germany. Later I received a second inquiry from the secretary of the above-mentioned German university, saying that the same gentleman had again presented himself for a degree, but that again his thesis had been found unsatisfactory.

A very versatile professor in another of our largest universities always bore a doctorate received from one of the oldest foreign universities. Having occasion to write a biographical sketch of this gentleman, who was then absent from America, I applied to the university in question for information as to the period in which this professor had studied there and the date of his doctorate. I received in reply a letter from the rector saying that he remembered well the gentleman in question, as he was a fellow-student, that the gentleman had studied only one year at the university in question, and that he had never received a doctorate from that university.

A year or two since a professor in charge of a prominent department in one of our leading universities had occasion to recommend a candidate for a vacancy on the staff of his department. A very attractive applicant presented himself, an excellent master of the subject which he desired to teach. His nomination was about to be sent in to the president when the professor chanced to mention the name of the prospective appointee to a colleague. The latter seemed to remember that a man bearing the same name as the candidate had been connected with some public scandal abroad. Inquiry confirmed the identity of the candidate and the foreigner. Not all bearers of bogus degrees are, as has been shown above, foreigners.

A fourth case might be similarly cited, of recent occurrence, where even more serious consequences were involved than the professional fraud. A search through the lists of teachers in our colleges might suggest larger caution in making appointments.

OBSERVER.

New York, June 5.

EARLY VIRGINIA LAWS.

TO THE EDITOR OF THE NATION:

SIR: A collection of very early Virginia laws, apparently unique, and unknown to most authorities in America, has turned up in London, and the present holder of the volume, for reasons best known to himself, declines to give fuller details of its collation and contents. The volume was sold last year at auction in London, and purchased by a well-known dealer who sold it to the present owner some months afterwards.

It was described in the sale as "A Complete Collection of the Laws of Virginia

1662. Folio. With a neat written MS. of 35 leaves entitled 'At a General Assembly Begun at James City 1684.'"

This seems to differ from any edition known to authorities on the subject. The known editions read: "The Laws of Virginia Now in Force. Etc. London 1662." There are apparently two of these imprints of the same year with slight variations. One copy is in the John Carter Brown Library and another in the library of the Association of the Bar of the City of New York. Volumes with the second imprint are in the Lenox and the Historical Society of Pennsylvania libraries.

I have been unable to find any early record of the laws of Virginia for 1684. Those of "Purvis" are supposed to be of that period, but there is no printed date recorded.

Any MS. laws for 1684 would be quite important, and it is to be hoped that the owner of the volume will ultimately give his consent to have a careful comparison made, with a view to determine in what respects it differs from present known editions of Virginia Laws. J. H. WHITTY.

Richmond, Va., June 6.

SEVENTEENTH-CENTURY JOURNALS.

TO THE EDITOR OF THE NATION:

SIR: Students of seventeenth-century journalism must in this country rely chiefly on books about the periodicals, rather than on the papers themselves. For that reason it may be well to note that Professor Kitchin in his life of Sir Roger L'Estrange, reviewed in your issue of May 8, has consistently written *Oxford Gazet* and *London Gazet*, whereas the file of the periodical in the library of the University of Illinois, complete from the beginning to 1700, bears the titles *Oxford Gazette* and *London Gazette*. He usually refers to L'Estrange's *The Newes* under the title of *Newsbook*, occasionally *News;* nowhere does he mention by title the companion paper issued by L'Estrange, *The Intelligencer*, a file of which lies before me.

FRANK W. SCOTT.

University of Illinois, June 4.

THE ROMAN PORTRAITS DISCOVERED IN EGYPT.

TO THE EDITOR OF THE NATION:

SIR: The promised folio or album of the Roman portraits discovered by Prof. Flinders Petrie in 1911, for the Egyptian Research Account (society), is at last published in London, and copies will be distributed in the United States through the courtesy of the Smithsonian Institution. Twenty-four of these portraits (taken from life) will appear produced by the finest color process. It will be a unique volume in the history of archæology, and a prized acquisition to our museums and libraries, costing but $10, the bare price of publication.

Professor Petrie devotes his entire time to the Research Account, whose chief explorations are now at Memphis and Heliopolis. Two illustrated quarto volumes are annually published. Subscribers of but $5 receive a volume. Every cent received by me goes intact to London, where the total costs in the office are but one per cent.; so that 99 per cent. goes to exploration and publication. This is phenomenal economy. Circulars free may be had from the official representative in the United States,

(Rev.) WILLIAM COPLEY WINSLOW.

525 Beacon Street, Boston, May 31.

"LITTLE DERWENT'S BREAKFAST."

TO THE EDITOR OF THE NATION:

SIR: I have only just read Mr. Axon's interesting note on the above subject in "News for Bibliophiles" in the *Nation* for May 8. In it the writer states that the authorship was "a secret known to some; and is revealed in Boase and Courtenay's 'Bibliotheca Cornubiensis.'" There is also a possible reference to it in a letter from Sara Coleridge to Miss Emily Trevenen, printed in the "Memoir and Letters of Sara Coleridge," edited by her daughter, Miss Edith Coleridge, and published in 1873. She writes under date July 12, 1835:

I rejoice, dear Miss Trevenen, to think of your versifying tastes (I am sure I have expressed that sentence as humbly as you yourself would dictate!) As for poetry, in the strict sense of the word, I cannot think that any woman of the present day, whose productions I have seen, has furnished the genuine article from her brain-warehouse, except Mrs. Joanna Baillie.

To this the following foot-note is appended by the editor:

The lady who formed so modest an estimate of her own powers was the daughter of the Rev. Thomas Trevenen, rector of Cardinham, in Cornwall, and member of a good old Cornish family. She was a woman of accomplished mind and truly Christian character, and will long be remembered with affectionate respect by those who enjoyed the benefit of her influence and example. A small volume of juvenile poetry, entitled "Little Derwent's Breakfast," written by her for the amusement and instruction of her godson, Derwent Moultrie Coleridge, and published in 1839, was probably referred to by her correspondent in the present passage.

As "little Derwent" was seven years old when the letter was written, and as that was, in the preface to the booklet, stated to be his age when the poems were composed, Miss Edith Coleridge was probably quite right in her suggestion, although, of course, the poems had not then been published. S. BUTTERWORTH, Major.

Literature

AGRICULTURAL LIFE.

English Farming, Past and Present. By Rowland E. Prothero. New York: Longmans, Green & Co. $4 net.

Mr. Prothero lacks the skill of the phrasemaker which Mr. Jesse Collings displayed several decades ago in his agitation, both in and out of Parliament, for "three acres and a cow." He is, however, a learned, picturesque, and suggestive advocate of small holdings. He has sat at the feet of Cato and a great company of other Latin masters of the science of agriculture, and has conned the works of the English writers on this subject from the thirteenth century to the present day. Here we become intimate with our English ancestors of the remotest periods. Their manner of life is so graphically portrayed that our sensibilities are excited on their account. The meagreness of their existence arouses our pity, and yet we feel that, despite their innumerable hardships, their lot was to be preferred to that of the three classes of British agriculturists—landlords, tenant farmers, and agricultural laborers—during the last century and a half.

Large improvements in the mediæval methods of arable farming were impossible until farmers commanded the increased resources of more modern times. In the Middle Ages agriculture was a self-supporting industry rather than a profit-making business. In the days of the early Edwards, few landowners, except the wealthiest, had built permanent residences on their distant estates. Content with temporary accommodation, they travelled with their households and retinues from manor to manor, and from farmhouse to farmhouse, in order to consume on the spot the produce of the fields and live stock.

The horrors of scarcity in winter at that time are hardly imaginable. There was little to mitigate those dreadful occurrences. Nothing, we are reminded, is more characteristic of the infancy of farming than the violence of its alterations. On land which was inadequately manured, and on which neither field turnips nor clovers were known till centuries later, there could be no middle course between the exhaustion of continuous cropping and the rest-cure of barrenness. The fallow was "un véritable Dimanche accordé à la terre." As with the land, so with its products. Famine trod hard on the heels of feasting. It was not only that prices rose and fell with extraordinary rapidity, but for both men and beasts the absolute scarcity of winter always succeeded the relative plenty of summer. Except in monastic granges, no great quantities of grain were stored, and mediæval legislators eyed corn-dealers with the same hostility with which modern engineers of wheat corners are regarded by their victims. The husbandman's golden rule must have been often forgotten—that at Candlemas half the fodder and all the corn must be untouched. Even the most prudent housekeepers found it difficult always to remember the proverbial wisdom of eating within the tether, or sparing at the brink instead of the bottom. Equally violent were the alternations in the employment afforded by mediæval farming. Weeks of feverish activity passed suddenly into months of comparative idleness.

The break-up of the manorial system accompanied the transition from an age of graduated mutual dependence towards an age of greater individual in-

dependence. It meant the removal of restrictions to personal freedom, the encouragement of individual enterprise, the establishment of the principle of competition in determining both money rents and money wages. From another point of view the results were not entirely advantageous. Against the older system might be urged that it created a lack of opportunity which caused local stagnation. In its favor might be pleaded that it maintained a certain level of equality among the households in village communities, presided over by the lord of the manor. Now, however, the struggle for life becomes intensified; the strong go to the front, the weak to the wall; for one man who rises in the social scale, five sink. From the fourteenth century onwards the agricultural problem of holding the balance, even between the economic gain and social loss of agricultural progress, has puzzled the wisest of legislators.

By 1485 one great agricultural change was virtually completed. Feudal landowners, instead of pursuing the patriarchal system of farming their own demesnes by the labor services of their dependents, had become receivers of rents. Home-farms and "assart" or reclaimed lands were cultivated, not by the lords of the manor through bailiffs and labor-rents, but by freeholders, leaseholders, copyholders, and hired laborers. Further changes were close at hand. With the dawn of the Tudor period began the general movement which gradually transformed England into a mercantile country. The amount of money in actual use was increasing; men possessed more capital, could borrow it more easily, and lay it out to greater advantage. Commerce permeated national life. Feudalism was dead or dying, and trade was climbing to its throne. The Middle Ages were passing into modern times.

On the agricultural side, the spirit of trading competition gave fresh impulse to an old movement which, in spite of a storm of protest, continued in activity throughout the Tudor period, and after a century and a half of silent progress became once more the centre of literary controversy before it triumphed at the close of the reign of George III. That movement is described as enclosure. Whatever form this movement took, its general drift was towards individual occupation of land. It was always, and particularly in the sixteenth and eighteenth centuries, directly opposed to the open field system of farming in common.

Agriculturally, the period which opens with the Battle of Bosworth and ends with the early years of Elizabeth was, like all transition periods, full of suffering for those who were least able to adapt themselves to altered conditions. The ruin of noble families by the Wars of the Roses, the lavish expenditure which Henry VIII made fashionable, the rise in prices, and the difficulty of raising rents, compelled many "unthrifty gentlemen" to sell their estates. The break-up of landed estates, and their passage into new hands, favored the introduction of the commercial impulse. The landholders whose "unreasonable covetousness" was most loudly condemned, were mainly speculators in land, men who had made money in business, had capital to invest, could afford the expense of enclosures, and were determined to make their estates pay. Among the results of this conquest of agriculture by the new spirit of commercial competition there may be noticed, first, the clearer recognition of the advantages of farms held in individual occupation, large enough to make the employment of capital remunerative; secondly, the substitution of pasture for tillage, of sheep for corn, of wool for meat; thirdly, the attack upon the old agrarian partnerships in which lords of the manor, parsons, freeholders, leaseholding farmers, copyholders, and cottagers had hitherto associated to supply the wants of each village.

We are now in position to catch the full force of the argument that underlies this work. Time has strengthened two convictions which the author held thirty years ago. One was, that the small number of those who owned agricultural land might some day make England the forcing-bed of schemes for land-nationalization, which countries where the ownership of the soil rested on a more democratic basis repudiated as destructive of all forms of private property. The other was, that a considerable increase in the number of peasant ownerships, in suitable hands, on suitable land, and in suitable localities, was socially, economically, and agriculturally advantageous. Thirty years ago British agriculture was nearing the end of the period of depression which lasted from 1874 to 1885. After a brief interval of amelioration, it plunged into the disasters of 1891-1899. On the whole, the problems are about the same to-day that they were a quarter of a century ago; time has only accentuated some and modified others. There has been a partial recovery of agriculture from acute depression; but, on the other hand, a resemblance is noted between the two periods in the paralyzing effect of the uncertainty of the political outlook, which, in Mr. Prothero's judgment, is infinitely more menacing than in 1888.

To most onlookers, he declares, it should seem the part of ordinary prudence, without further loss of time, to frame a comprehensive programme of land reform on broad and generous lines while maintaining the principle that private ownership is the only satisfactory system for progressive land-cultivation. The centre of power has shifted. It is no longer landowners or tenant-farmers, either alone or in combination, who hold the key to the rural situation. It is the agricultural laborer. It seems inevitable, to the author of this work, that in the near future sacrifices will be asked both from owners and occupiers of land.

CURRENT FICTION.

The Inside of the Cup. By Winston Churchill. New York: The Macmillan Co.

No American novelist of the younger generation has seemed so steadily to fulfil and to increase the promise of his youth as Mr. Churchill. The popular success of his earlier stories might easily have led merely to a contented reproduction of their merits and faults. Their merits belonged to them as the work of a born story-teller. Their faults were faults of crudity, such as are seldom outgrown by writers who have not been forced by circumstances to cast them off. "Richard Carvel" and "The Crisis" were incredibly raw in many ways. Not only was the action often conventional or forced; the style was that of a half-educated person. Syntax was rickety; grammar not seldom went by the board. Here was a writer capable of amusing the mob with the kind of music the mob likes, with the aid of a sort of rough mouth-organ such as the mob loves. Why should he not be satisfied with himself?

The answer to the question is that he had the making and the will of an artist. He has made use of the criticism of others, and has developed a criticism of his own. He has taken his time. Instead of "working twenty-four hours a day," doing double shifts in the literary workshop, and turning out copy at all costs to meet and keep a popular demand, he has labored slowly and with pain. Instead of furnishing a novel or two a year, after the fashion of the confirmed best-seller, he has published one every two years or so. He has found time to study, to think, and to grow. The result has been that up to the present time each of his novels has been in one sense or another a distinct advance upon its predecessor. In vigor of conception, in grace and finish of style—a perfectly simple and natural style, there is little in common except the famous initial C between "Richard Carvel" and "The Crisis" on the one hand, and "Mr. Crewe's Career" or "A Modern Chronicle" on the other.

We say that up to the present this steady advance has been unbroken. We cannot speak with so much confidence of the place of "The Inside of the Cup" in Mr. Churchill's total work. It is an earnest book; great pains have been

taken with it; it deals with a very real and important problem of our time—perhaps the most important of all problems. But it deals with that problem rather too obviously. It contains not only a theme, but a thesis; not only a problem, but an attempt at its solution. And the writer is so intensely absorbed in his theory that he subordinates everything else to it. The result is less a novel than a tract. That was true, it may be said, of "Robert Elsmere," which reflected the religious unrest of the nineties, somewhat as this novel reflects our own. But as we recall Elsmere himself, he was, with all his quibblings and anguished scruples, a human being. We believed in his existence, and were interested in his religion for his own sake. The Rev. John Hodder, on the contrary, strikes us as the most unreal person Mr. Churchill has introduced into his pages. And this is because he is less interested in him than in what he stands for.

Hodder is an athlete in college, studies law, and is on the threshold of a career as a pleader when he is "called" to the ministry. He becomes a priest of the Protestant Episcopal faith, accepting the dogmas of the Church as the embodiment of true religion. After some years' incumbency in a quiet parish, he is invited to a fashionable city rectorship. The vestry which rules "St. John's" are rich and worldly men; they have chosen Hodder because he is "strictly all-wool orthodox, and can be counted on to keep the parish moving quietly in the old ways." Unfortunately, he has "unorthodox hair," and the smouldering fire of an independent personality to which his creed has hitherto given no play. He is altogether ignorant of the new light thrown by modern science and philosophy upon that creed. The plain thing happens. He wakes to a sense of the shortcomings of his church and his creed, and is shortly at odds with the plutocratic vestry. Here he parts company with the Elsmeres. Instead of leaving the Church of his own volition, he not only determines to remain on general principles, but refuses to resign at the request of the vestry. The bishop upholds him; and we leave him rector of a new St. John's, no longer the subsidized possession of the wealthy and corrupt, but a home for mankind.

This is all interesting, and in its way moving. But the fact remains that we do not care for Hodder. His speech is the speech of parsons; he has no vernacular and little humor, and it is useless for his creator to assert that he has bowels. Mr. Churchill has strong convictions as to the function of religion in modern life. And we believe that his convictions are in the main sound. It is right that he should hold them and wish to convey them. But we believe he has chosen the wrong means of conveyance. The serial publication of the story aroused so much comment as to call forth an "afterword" for the book. "Nothing," says Mr. Churchill, "could have been farther from my mind than to pose as a theologian, and were it not for one or two of the letters I have received, I should have supposed that no reader could have thought of making the accusation that I presumed to speak for any one except myself. In a book of this kind, the setting forth of a personal view of religion is not only unavoidable, but necessary; since, if I wrote sincerely, Mr. Hodder's solution must coincide with my own—so far as I have been able to work one out." Very well: but Hodder's solution should not have been a matter of debate and sermonizing, it should have been a matter of experience. His enlightenment comes from without, not from within. One person after another takes him by the button and astonishes him by telling him truths only a blind man in his position could have failed to see. And from first to last he is always preaching or preached to. Consequently, the story fails to move of itself, fails to be a story of persons and events. It is a discussion in the form of a novel about Christianity as it is and as it should be.

The Judgment House. By Gilbert Parker. New York: Harper & Bros.

"This book," says Sir Gilbert, in a prefatory note, "does not present a picture of public or private individuals living or dead. It is not in any sense a historical novel. It is in conception and portraiture a work of the imagination." Nevertheless, a historical novel in one sense it is, since it deals with an episode of recent history, and professes to account for that episode. The Boer War is precipitated by the treachery of a half-caste servant of the hero, Rudyard Byng. Byng is that type of hero so frequently met in current English fiction, the South African multimillionaire. He is a rough diamond, a man stark and untrammelled, generous of frame and of spirit. Back "home" with his three millions, he is accepted for them by polite London, and presently falls in love with a finished product of civilization, one Jasmine Grenfel, beautiful and accomplished beyond her years—"so well-poised and yet so sweetly childlike"—as one of her admirers says, "dear Dresden-china Jasmine." She is hard-betrothed to a Londoner of her own circle, but Byng carries her off. She marries him for the power his money will bring; and therewith the trouble begins.

Up to this point the story, written in Sir Gilbert's later and more sophisticated manner, bids fair to be a serious study of a situation between two real human beings. But, the situation once expounded, the romancer steps in and busies himself with a plot involving intrigues and coincidences, climaxes and curtains—all the machinery of the fiction of incident as contrasted with the fiction of interpretation. Krool, the half-breed villain from the Transvaal, with his satanic nature lighted by a gleam of heroic virtue, is plainly akin to certain popular figures we have met—have been in the habit of meeting—in this writer's earlier stories, to Pretty Pierre and the rest. And whether Byng and Jasmine, with their faults and aspirations, their drifting apart and final reunion, have reality for the reader, depends chiefly on the reader's will to find reality in the conventional extravagances of popular fiction.

JOHN BIGELOW'S MEMOIRS.

Retrospections of an Active Life. By John Bigelow. Vol. IV, 1867-1871; Vol. V, 1872-1879. New York: Doubleday, Page & Co. $7.50 net.

What we said of the first three volumes of Mr. Bigelow's reminiscences we must repeat of these added two: they sin grievously in bulk. Here are a full thousand pages covering only twelve of the least eventful years of Mr. Bigelow's life. Such a mass of matter can be got together only by indiscriminate and catch-all methods. In fact, the author's desk was swept clear of everything—diary, letters, speeches, newspaper clippings—in a spirit of large leisure hardly known since the Triassic age of literature. Only now and then did the compiler betray a scruple. He printed one letter eight pages long, from a man of no account, about things of no account, and remarked that it really was "voluminous," though he hastened to add that "it will not be found a line too long to any one who reads it through." But nobody can read it through. It would be easy to give many specifications of the intolerable inclusiveness of these volumes. Enough to say, however, that they would have been three times as valuable if one-third as portly. To make an end of venting our spleen, we will only note the occurrence of many misprints and some blunders.

Out of public life at Paris, these volumes show us Bigelow dropping diplomacy to take up literature. It was before leaving Europe for the United States that he got on track of the original manuscript of Franklin's Autobiography which he acquired, and which led to his editing Franklin complete. He wrote copiously about monarchy in France, and concerning modern democratic tendencies—books, pamphlets, magazine articles, and addresses running freely from his pen—and kept up his English and French correspondence. Between him and W. H. Huntington many

letters passed. Huntington was for a long time the correspondent of the New York *Tribune* in Paris. He was a man of original humor and had a lively style, which seemed to prick Bigelow, in his replies, into an unaccustomed sprightliness. The correspondence of the two is the most extensive and, on the whole, the best in the volumes. Bigelow's brief and unhappy experience as editor of the New York *Times*, falls within this period, but is here dispatched hastily. More space is given to the ripening of his friendship with Samuel J. Tilden, and to his dip into politics under that leader's promptings. But all this is more fully covered in Bigelow's "Life of Tilden."

In strict importance and in interest, the extracts given from Bigelow's diary surpass the letters. There are no political or personal revelations of great consequence. One thing of the nature of a curiosity may be cited. Under date of April 5, 1871, Bigelow recorded that Mrs. Bancroft had told him "a story of her husband, who had then gone out, which I had not suspected. She said Johnson, the late President, had a high opinion of Bancroft, and sent for him to prepare his first message." The truth of this was established much later by the evidence of manuscripts in the Congressional Library. Bigelow continued on good terms with Seward, and some of the sayings of that statesman, here set down, make good if often challenging reading. In 1867 Seward said to Bigelow: "Lincoln never knew nor cared anything about the foreign relations. . . . He never questioned anything I did about the foreign relations." But Seward must have forgotten his famous dispatch to England, stricken through by Lincoln's pen, as set forth in facsimile by Nicolay and Hay. Some one asked Seward to write his recollections of public life. He replied, "in a very impassioned manner": "You present to me, sir, the most loathsome task that I could possibly undertake." What Seward had to say in advising Bigelow against choosing Washington as a place of winter residence, was both sagacious and piquant:

> A man is of no account here who does not represent a power behind him. Old Jackson knew that so well that the moment he ceased to be President, he lighted his pipe, mounted his horse, started for Tennessee, and never appeared in Washington again. President Pierce planned to stay here after the inauguration of his successor until the weather in New Hampshire should become comfortable. Before he had tarried a week as a private citizen, when he rode as usual up Pennsylvania Avenue no man he passed raised his hat to him or appeared to know who he was or to care. Marcy, too, after he had been Secretary of War, continued to reside in Washington, but was soon entirely overlooked. . . . I would not stay here a day if not in office. . . . I always held on to my country home at Auburn because, come what come might, there I could be sure of ranking with the first. . . . Go to Orange County and make that your home. There dispense your hospitality and from there you may be felt. But don't come here to be kicked under the feet of Government clerks.

Bigelow's diary and letters are naturally full on the subject of the disputed Presidential election of 1876. It can hardly be said, however, that they throw any fresh historic light upon that vexed controversy. After all was over, and Tilden was beaten—cheated, of course, Bigelow always called it—his friend and intimate made this suggestive record in his diary:

> The fact is, an invalid, whatever may be his intellectual ability and experience, always lacks something that is indispensable for leadership. Tilden should have taken the field, so to speak, immediately after the election, gone to Washington, moved amongst, inspired, and directed them. If that had been done, his election would have been a matter of course. But it was impossible. A man who must have a man rub him every morning and evening for an hour or so; who must take a tonic or some other medicinal preparation before each meal; who must ride a couple of hours every day and sleep or rest an hour after it; who, as he once said to me, never knew what it was to eat a square meal in his life or to feel the joy of abounding health; how could such a man be expected to go to Washington, to live there at a hotel, and have not a moment he could call his own for several weeks in succession, and wind up perhaps at the last in a prison? Three days of such a life would knock him up entirely.

Vulgate Version of the Arthurian Romances. Vol. VI. By H. O. Sommer. Washington: The Carnegie Institution.

This volume contains the two concluding branches of the Vulgate cycle of the prose romances, namely, "Les Aventures ou la Queste del Saint Graal" and "La Mort le Roi Artus." Both of these romances have already been edited, the first by Furnivall (1864), the second by Bruce (1910). But Furnivall's edition of the "Queste," being a publication of the Roxburghe Club, has never been generally accessible, and, besides, Dr. Sommer's edition gives the variant readings of the British Museum MSS. and of one of the MSS. of the Bibliothèque Nationale, No. 342, whose value has been brought into prominence by Bruce's edition of the "Mort Artu," as this last member of the cycle has also been called. In our review (May 26, 1910) of the first two volumes of this work we pointed out that, for the "Mort Artu" as for the "Estoire del Saint Graal," the MS. which forms the basis of Dr. Sommer's edition (British Museum, Add. 10292-4) offered a somewhat abbreviated text. In the present volume Dr. Sommer tacitly acknowledges the justice of this criticism by incorporating (in brackets) into the body of his text the fuller readings of other MSS. and, indeed, at the turning-point of the story (the plot of Arthur's nephews to catch Lancelot with Guinevere) by substituting for the text of this MS. that of the British Museum MS., which, as was observed in Bruce's edition, stands closest to MS. 342 of the Bibliothèque Nationale.

The plan of these volumes naturally allows no scope for the discussion of the problems which are connected with the romances here printed. This has not deterred the editor, however, from many confident pronouncements. For instance, the problem of the relation of the "Queste" and the "Mort Artu" is not to be settled by the few lines which Dr. Sommer devotes to it at the bottom of page 204, especially as his own view of the matter requires the setting aside of the whole manuscript tradition. Italics have no power to convert assertion into argument, and these questions will have to be settled on the old basis of evidence and reason. One may remark incidentally that no one expects acknowledgments from Dr. Sommer—else it would surprise the reader who is familiar with these matters to find him pointing out, as if it were his own discovery, that the very important account of Gawain's killing of Bademagus, which is missing from all known MSS. of the "Queste," is preserved in the MS. 112 of the Bibliothèque Nationale, although this fact was noted (for the first time) in Bruce's edition of the "Mort Artu." On the other hand, it is inept for Dr. Sommer to speak indefinitely, as in the case of the passage concerning Arthur's translation to Avalon, of what is recorded in "by far the larger number of the MSS. I have seen," when in the edition just named the readings of every MS. in the British Museum, Bodleian, and Bibliothèque Nationale (except MS. 122, omitted by oversight), are recorded with exact reference to folio and column.

The two branches included in the present volume are the shortest of the whole cycle, but they have supplied more material to modern literature than all the rest put together. In point of literary merit there is nothing in the remaining branches to equal the "Mort Artu," except the earlier portions of the "Merlin" and "Lancelot." Even in the "Mort Artu" the descriptions of fighting assume too large a place, but, on the whole, it maintains a higher level of interest than the rest. Here, for the first time, we have the stories of Lancelot and Elaine, of Sir Bedivere and the sword, and, generally speaking, in all substantial particulars, the story of the love affair of Lancelot and Guinevere, in the form in which it has become so familiar to the modern world through Malory and Tennyson. In the same way,

the "Queste," here printed, is mainly responsible for modern conceptions concerning the Holy Grail. The old French romance, however, is itself dull reading. The only advantage it possesscs over most branches of the cycle is in its more coherent plot. But the popularity of the central conception is due manifestly rather to the hold which religion has had on the minds of mcn in all agcs than to any literary excellence of this particular romance.

Dr. Sommer announces here his intention of adding to his series the publication of the "Merlin" continuation of MS. 337 of the Bibliothèque Nationale and some fragments that have been preserved of the French originals of the Spanish and Portuguese "Demandas." The former is well known through Freymond's very minute analysis, but the text itself will, of course, be welcome. In our own opinion, however, Dr. Sommer would be performing an even greater service if he should complete the materials that are extant for the study of the composition of the "Lancelot" by rendering accessible the variant version (still unprinted) of the beginning of Part II of this romance.

Notes

In response to numerous appeals, the London *Times* has determined to begin an issuc of reprints of its special articles in handy volumes at the price of a shilling each. There has already appeared the series on "Labour and Industry in 1913." Others in the press are on "The Golf Courses of the Riviera" and "Some French Cathedrals." The publisher is John Murray.

"The Samson-Saga and its Place in Comparative Religion" is the title of a volume by Dr. Smythe Palmer, which Sir Isaac Pitman & Sons are bringing out.

The Oxford University Press will soon publish a critical edition of the Purâna text of the dynasties of the Kâli age in ancient India, prepared by F. E. Pargiter. It is based on the version common to the Matsya, Vâyu, and Brahmânda Purânas, supplemented from the Vishnu, Bhâgavata, and Garuda Purânas. The printed editions and some sixty MSS. have been collated. A translation, a full introduction, and an index are supplied. These texts are the only literary record of the chief dynasties that reigned in Northern India from about 1000 B. C. to A. D. 330.

Miss Marion Polk Angellotti, author of "The Burgundian," has written another historical romance, which the Century Co. will publish this month under the title of "Harlette." Harlette is a peasant woman with whom Duke Robert of Normandy was infatuated.

Volume VI of "The Graphic Arts Year Book," forthcoming, treats the general subject of advertising on the editorial lines suggested by the Associated Advertising Clubs of America. It may be noted that Mr. Tobey, of Hamilton, O., who is publishing the volume, had his establishment almost destroyed by the great floods.

The house in which George Borrow lived at Norwich is to be kept as a permanent museum. A Borrow celebration will be held in that town on July 5.

Special phases of library work will be considered by the librarians of the United States and Canada at their thirty-fifth annual conference at Hotel Kaaterskill, in the Catskills, June 23 to 28.

On Thursday of last week the French Academy awarded the Grand Prize of Literature, amounting to $2,044, to M. Romain Rolland for his novel, "Jean-Christophe," a work of monumental length tracing the career of a musical composer. M. Rolland was successful over MM. Psichari and Clermont.

The Statesman's Year-Book for 1913 is the jubilee volume of this valuable publication, since it first appeared fifty years ago. In commemoration of this fact, the introduction contains a retrospect of the principal events in the history of the world during the last half-century, and maps of the different continents in 1863 and 1913, showing especially the marvellous growth of railways in all parts of the world, except the Turkish Empire. The only change in the main body of the work is that a separate notice is given of each Canadian province. Considerable additions have also been made to the agricultural statistics.

The geographic and economic history of Michigan is outlined with many interesting and suggestive facts, in the May Bulletin of the American Geographical Society, by Mr. George J. Miller, of the University of Chicago. Many readers will be surprised to learn that its settlement, which began at Detroit in 1701, was delayed by the belief that the interior was a vast swamp which might well be left to the fur-bearing animals and to the trappers and hunters. Till 1830 there was very little growth. The article is illustrated by nine charts showing the distribution of population in the different counties during the last hundred years. Attention is also directed to the expedition sent out in March by the University Museum of Philadelphia to explore the vast forests of the Amazon where primitive peoples still roam, as they did before Columbus, untouched by civilization. Much geographical work will be done, but the special studies will be of the native arts and industries, social organization, religious beliefs, and linguistic relationship. Material will be collected for an exhibition to illustrate the life of the Amazonian tribes. It is the last great unexplored tract of the earth's surface.

"The R. L. Stevenson Originals" (Scribner), by E. B. Simpson, follows Scott and Dickens in the series of popular accounts of where authors found their characters. The present is a very original book in one respect: instead of studying Stevenson's treatment of material it gives an account of his life, living-places, and friends. In a soprano voice the author recites the oft-repeated story from his frail childhood to the last day in the Pacific, sometimes with a quaver of sympathy, frequently with that note of quaintness in expression which is supposed to give the literary tone. Most of the narrative bears little relevancy to the supposed topic in hand, as the story of his affectionate regard for his nurse "Cummy." Some of it is told with more detail in other volumes, as the account of the Appin trial, used in "Kidnapped," which Mr. McKay has given at length in his "Notable Trials." A veil of sentiment is cast over the outlines of the biography, but from various easily accessible sources appear glimpses of R. L. S. that stick in the memory as characteristic of his boyish disposition. There are, too, a large number of reproductions of portraits, autograph letters, and photographs which bring his friends and his surroundings home to the reader. On this account, if not on others, the volume will be welcomed by numerous members of the Stevenson cult.

There is no other development of the long-continued struggle between paganism and idealism which John Kelman, D.D., believes to be the theme of his "Among Famous Books" (Doran) than is involved in frequent references to paganism and idealism in all of the ten lectures that make up the book.

"College Sermons" (Longmans), by Langdon Cheves Stewardson, ex-president of Hobart College, possess the qualities which should characterize religious discourses to students—simplicity and directness of expression, candor in confession of faith and statement of difficulties, earnestness of moral appeal, and elevation and nobility of spiritual aspiration. There is no cheap appeal about them, no flattery, no straining for eloquence or effect, but they hold attention and lift the spirit by force of thought and the compelling truth of the ideals they set forth. The volume is a sufficient answer to the cavil one sometimes hears that broad churchmanship has lost its faith and its power of evangelic utterance. The sermons were preached at Lehigh University, where their author was formerly chaplain, at Hobart College, Columbia University, and the University of Michigan.

"The Bend in the Road" (Harper), by Truman A. DeWeese, shows one of our modern tendencies towards the country. It is a pleasant volume of informal essays, preaching the wisdom of the business man who, while maintaining his city employment and winter residence, provides himself with a refuge in the country, where ten acres supply summer happiness. We are amused at the description (accurately illustrated) of the author attacking a mullein with a mattock, but on the whole the book is full of sound sense. It is not "practical": only of the culture of grapes do we get a close glimpse, and in general the author shies when he finds himself explaining his methods. He offers wholesomeness, contentment, and the way to a cheerful old age.

The aim of Mr. J. H. P. Murray in writing "Papua or British New Guinea" (Scribner), the Australian Territory of which he has been Lieutenant-Governor since 1906, was to "excite a sympathetic interest in the little-known but often attractive inhabitants of a beautiful and fertile land." A brief description of the geographical features of the country and its history is followed by a detailed account of the different tribes. Some idea in regard to their numbers may be gained from the fact that

on one occasion he counted seventeen different languages spoken by a boatload of natives, "some of them probably differing as much from one another as English and Chinese." Through the methods employed the Government has succeeded in winning the confidence of the natives, who "are on the whole a law-abiding people." Raids, head-hunting, cannibalism, and village warfare have virtually ceased, and the general happiness has been increased. The exploration work of the miners, missionaries, and Government officers, especially that of former Lieut.-Gov. Sir William MacGregor, is described at some length. The concluding chapters treat of the development of the Territory, which is rich in natural resources—the total output of gold being about six million dollars. There are also copper, coal, and petroleum deposits. Its sparse population and the consequent lack of labor are the chief causes of its limited development. The one strong impression left by the book is the wonderful contrast between conditions in Papua and those in the adjoining colony of Dutch New Guinea. This is largely owing to the very different natural conditions, but much credit must also be given to the wise and truly paternal methods of the English in governing natives of low degree. There are thirty-eight reproductions of photographs (an especially interesting one being of cat's cradle as played by two native girls), and a map.

J. D. E. Loveland's "The Romance of Nice" (Stokes) is one of the usual books written about a place more famous for its picturesqueness than for its historical importance. Mr. Loveland has gleaned the legends, the bits of history, and the recent gossip, and has added descriptions of the neighboring provincial places which strangers visit. His story, though amateurish, will interest readers not too exacting. He does not always write correctly. He uses "Guelf*ic*," for instance, which is as bad as "Ghibelli*nic*" would be; but he is industrious, and he has chosen several excellent illustrations.

A third edition of Percy E. Newberry and John Garstang's "Short History of Ancient Egypt," first issued in 1903, bears the American imprint of E. P. Dutton & Co. The preface, which is dated September, 1911, does not indicate that the text has undergone revision, and a cursory examination fails to show material changes. On the contrary, some statements to which exception was taken when the book first appeared—for example, the account (pp. 18, 19) of military successes ascribed to Narmer—remain unchanged, save, in this case, for the footnote, confusing when taken in connection with the text, that "the identification of Mena with Narmer is now to be inferred from the certain identity of Atet, his successor, with Aha." As a brief summary of early Egyptian history, the volume is readable and informing; but in a work which professes, as this does, to embody important new points of view, the reader might fairly ask some indication of what is documentary fact and what is the authors' interpretation. It is to be regretted that the publishers did not give the book a more attractive form.

A useful addition to the philosophical library issued by the Open Court Company is a volume containing the text of La Mettrie's "L'Homme Machine," with a translation, "Man a Machine," founded on the version made by Miss Gertrude C. Bussey. The text is taken from a Leyden edition of 1748 (the first edition is of the same year and place), and typographical errors have been corrected by Lucien Arréat, of Paris. Extracts, in English, from "The Natural History of the Soul," and explanatory notes have been adapted from a thesis written by Miss Bussey. The translation, for which in its present form Prof. M. W. Calkins is responsible, follows the French closely and, so far as we have examined, faithfully. La Mettrie, for his relation to English Deism and French materialism, has considerable historical interest.

"Fanning's Narrative; being the Memoirs of Nathaniel Fanning, an officer of the Revolutionary Navy, 1778-1783," edited and annotated by the late John S. Barnes, has been reprinted by the Naval History Society of New York. The Society has shown commendable enterprise, for the earlier editions of 1806 and 1808 are now extremely rare. The edition of 1825, to which Buell refers in his Life of Paul Jones, was never published, but existed, as did so much of the romance of his book, solely in the imagination of the biographer. His pretended quotations from that edition were pure fabrications, as was his elaborate plan, which he attributed to the pen of Paul Jones, for the establishment and regulation of the American navy, and which high authorities have called the "moral and intellectual charter of Annapolis." Other biographers of Paul Jones have used Fanning, but, as the editor shows, with more caution than was necessary, for Fanning was Jones's secretary or clerk, handled much of his correspondence, and, moreover, evidently kept a diary or journal from which he refreshed his memory as he wrote this narrative. His is the most detailed and circumstantial account in existence of the encounter between the Bon Homme Richard and the Serapis, and Fanning's position in the tops gave him an advantage in witnessing the struggle. He is frankly an admirer of Jones, but tells some stories of his peccadilloes, in which Fanning, with a rough sailor's morality, saw no harm. The narrative is valuable not only for its picture of the life of an American privateersman and its account of Jones's famous cruise, but for the observations made in France just before the Revolution.

The reader of "Camp and Tramp in African Wilds" (Lippincott) will be convinced that the Central African savages are brave, generous, trustworthy, with strong family affections and keen observers and lovers of nature. The author, Mr. E. Torday, had abundant opportunities for studying them during his six and a half years' residence in Africa. The first four years were spent in the extreme southeastern part near Lake Tanganyika and the remainder in the central part in the basin of the Kasai. While not concealing the savage traits of the natives, he brings out their good ones. When the vanquished in a wrestling match which he organized burst into tears of rage, the other, "with a fine gesture, handed him over the prize he had just won, saying, 'Now don't be angry any more; you got the licking and you shall have the prize, too.'" In one village through which he passed a little boy, born blind, was a universal favorite. During his two journeys across the state he can "honestly say that he has never come across a tribe which was not naturally good-tempered." Their frequent tribal wars, he adds, are as a rule "no more deadly than mediæval tournaments." He maintains that "the native has as minute a knowledge of birds, beasts, and plants as is possessed by the most enthusiastic collector in Europe. . . . In powers of observation they are strikingly superior to Europeans. . . . If a partridge calls, they can show you the very bush in which it is sitting, though it may be two or three hundred yards away." The book is attractively put together with 42 reproductions of photographs and an excellent map.

Mr. John Macy entitles his volume of critical essays "The Spirit of American Literature" (Doubleday, Page)—ironically, for he immediately declares that "the American spirit in literature is a myth." The chief reason he assigns is that we write and speak English over here, and—what is more important, since authors gain their ideas and inspiration, not from the life around them, but from books—that we have long read English poems and novels. The humble reader instantly discovers in Mr. Macy a critic at once original and profound, who looks quite through the deeds of men, and their books, too. The critic himself would probably attribute his superior vision to a conspicuous pair of Socialistic goggles. The accepted and conservative is everywhere hooted out of court as "the stupidity of learned doctors and acknowledged teachers of æsthetics." Quietly humorous and picturesque transcripts from life are negligible, since they do not draw "the grand passions, sexual or other." Mr. Howells does not know life because he would not know "how to sit down and eat his grub with a bunch of workmen and find out what they think of things." Viewed in this spirit, various American authors from Irving to Henry James file past. Hawthorne's romance, the enlightened critic finds, does not "convince the reader whose fancy has been clarified." Of Whitman we learn, "In no other volume of poetry, in neither Dante nor Shakespeare, are so *many* motives of life so powerfully suggested, blent, interfused, as in 'Leaves of Grass.'" Mr. Traubel is pronounced a greater biographer than Boswell.

In statement of fact Mr. Macy's book swarms with errors. It is ingeniously full of them. In dealing with his most admired poet, Whitman, about whom we should suppose him to possess the fullest and most accurate knowledge, he declares, "He edited the 'Brooklyn Eagle' in 1874-8." Probably he means 1847-8, but it is very well established that Whitman's connection dates from 1846. He continues, "The next year he tramped over the country west to the Great Lakes, south to New Orleans, supporting himself by free-lance contributions to newspapers." Now Whitman himself tells of the bargain made between acts in the Broadway Theatre for his connection with the New Orleans *Crescent* and of his trip thither in 1848, *not* the next year. His wanderings were *up* from New Orleans. Mr. Macy adds: "During the war he wrote for the newspapers and was volunteer nurse in the hospitals at Washington." This slip-shod

statement misleads. His residence in Washington dates from December, 1862, when he went thither to seek a wounded brother. The next sentence reads: "He was clerk in several departments of the Government at Washington from 1865 to 1874, when he was stricken with partial paralysis." The records show only *two* departments in which he worked, the Indian Bureau of the Department of the Interior and the Attorney-General's office. Every one knows of the charges of immorality which led to the change to the Attorney-General's office. The partial paralysis referred to in this sentence came in 1873.

Even less defensible, if possible, are Mr. Macy's misstatements concerning William James, at whose feet he sat and whom he regards with a deep personal admiration. A sentence reads, "He died in Cambridge, Massachusetts, August 26, 1910." One would suppose that memory of an event so recent about one he loved would remind him that Professor James died at his summer home on Lake Chocorua, New Hampshire. A few sentences further on we read the extraordinary statement that "he gave the Gifford lectures at Edinburgh in 1899-1911." This is evidently a case for the Society for Psychical Research. When Mr. Macy begins to mention dates of publication, there is simply no keeping count of the errors.

To persons interested in Greek study it is gratifylng that Macmillan should have found it desirable to bring out a new issue of Professor Frazer's "Pausanias." This book, a true masterpiece of rich and sane scholarship, was reviewed in two issues of the *Nation*, in December, 1898, the year in which it appeared. Scholars were quick to recognize its very high merit and to realize that no good library of the classics could be without it. The second edition is merely a reprint of the first, with the correction of a few errors, and the addition of a few references in the Indices. Professor Frazer states in a prefatory note that he hopes he may at some future time be able to add a supplementary volume or volumes, which shall take note of recent excavations. Scholars will earnestly wish that his hope may be realized. In the meantime some regret may be felt that the *Addenda* of Vol. V could not have been increased by a few pages of classified bibliography covering the excavations in Greece since 1898. Such a bibliography would have greatly enhanced the immediate practical value of the book to students.

The Rev. Charles Augustus Briggs, D.D., professor of Christian symbolics in the Union Theological Seminary, with which he had been connected for nearly forty years, died at his apartments in that institution on Sunday. He was born in New York in 1841. He studied at the University of Virginia from 1857 to 1860, at Union Theological Seminary from 1861 until 1863, and at the University of Berlin from 1866 to 1869. He had received the degree of D.D. from the following colleges: In 1875, from Princeton; in 1884, from Edinburgh; in 1894, from Williams, and in 1901 from Glasgow. In 1901 Oxford honored him with the degree of D.Litt. He was ordained to the Presbyterian ministry in 1870, and from 1870-1874 held a pastorate at Roselle, N. J. Dr. Briggs joined the teaching staff of Union Seminary in 1874, and first came into prominence in 1891, when he was transferred from the chair of Davenport professor of Hebrew to that of Biblical theology. On the occasion of his transfer he delivered an address on "The Authority of Holy Scripture," which brought such adverse criticism from the religious press that after the complete text appeared the New York Presbytery appointed a committee to consider the address in its relation to the "Confession of the Faith." The attack was made against both man and institution, and because of the breach that followed the Presbyterians lost not only Dr. Briggs but the Union Theological Seminary. He was the author of several books on theological subjects, among them "The Case of Dr. Briggs," in three parts, and "The Fundamental Christian Faith"; the latter was reviewed in the *Nation* of May 22, this year.

Lucius Harwood Foote died last week in San Francisco. He was born at Winfield, N. Y., in 1826; was educated at Western Reserve, receiving the degree of A.B. in 1850 and that of A.M. in 1853. In 1882 he was Minister to Korea, and the following year, in the revolt at Seul, distinguished himself in the protection of the Japanese and other foreigners. For his services he received personal messages of thanks from the Emperor of Japan, the Emperor of Korea, and the Government of China. Mr. Foote was the author of "Red-Letter Day and Other Poems" and "On the Heights."

Science

The Flight of Birds. By F. W. Headley. New York: Charles Scribner's Sons.

Now that the era of practical aeroplanes is close upon us, a book such as this can command a wide attention. In a volume of some one hundred and fifty pages Mr. Headley has given briefly and clearly the main facts concerning the flight of birds, with interesting side notes on the efforts which mankind is making to imitate them. The first six chapters deal with the mode and method of flight, Gliding, Stability, Motive Power,' Starting, Steering, Stopping, and Alighting. Succeeding chapters discuss the Machinery and Rapidity of Flight, Varieties of Wings, and the Relation between Wind and Flight. Although the study of flight involves a thorough knowledge of higher mathematics and physics, the author has kept his treatment of the subject popular.

From the first it is clear that what man has to think about, the bird does instinctively, and that the only real comparison between the efforts of birds and men is when the former are sailing or soaring. The comparison of birds of varying size brings forth many points of view, which will be new to most readers. One is that in proportion to his weight, the big flyer requires comparatively very small supporting surface. Thus if a swallow had proportionately a stork's allowance of wing surface, it would have but two inches on each side, while a gnat would have more than four and a half square yards for a single pound of weight.

The author discusses the automatic safeguards which birds possess, the frequent cases of body twisting and of steering with feet instead of with the tail, which explain a bird's control of direction even when the entire tail has accidentally been lost. As regards stability, Mr. Headley states truly that a bird does not maintain a steady, careful equilibrium, but makes a constant readjustment to every gust and vagary of wind. The bird does not "fly stupidly into a telegraph wire," but simply does not see it until too late to evade it. In the Machinery of Flight we have a review of well-known facts of the structure of bones, muscles, and feathers as adapted to flight; which calls for no especial mention. Mr. Headley still maintains the theory that soaring, such as the slow upward spiralling of vultures, is made possible by upward currents. It is probable, however, that we have as yet no clue to the real solution of this wonderful phenomenon.

The chapter on Pace and Last sums up our knowledge of the rapidity and extent of flight and endurance of birds on migration and at other times. A French homing pigeon has a record of one hundred and six miles an hour. The migrants which travel many hundreds of miles oversea without rest, undoubtedly subsist upon the fat stored within their own bodies. A bird with a very slow stroke—say, one hundred and thirty to the minute—if on the wing only twelve hours, must contract his flight muscles more than ninety-three thousand times! From such facts as these one may appreciate the wonderful adjustment of a bird's heart, lungs, and senses.

Many photographs, chiefly of pigeons, taken in all conditions and phases of flight, help greatly to explain the text.

Many people are deterred from the cultivation of lilies by the fear that these stately plants may not respond readily to such treatment as amateurs can bestow. H. S. Adams has prepared a useful handbook which should remove this fear. It is entitled "Lilies" (McBride, Nast), and comprises within some hundred duodecimo pages about all the information any amateur gardener requires for the selection and management of the more desirable varieties. The author is explicit in regard to all important features of caring for these plants from first to last, and presents his suggestions in such plain language that no one can go astray. The photographic illustrations are up to the average of black-and-white figures, and are well selected. To all readers the chapter on Lilies that Are Not Lilies will prove exceedingly attractive.

John McLennan's "Manual of Practical Farming" has been reissued by the publishers in the Macmillan Standard Library,

the sale of the book during the past three years apparently justifying this popular form. We can repeat what in substance we said on the book's appearance. It succinctly covers the wide field of farming, combining with sound practice enough of theory to give the farmer confidence in new-fangled notions. It is too much to expect that the book, or others of the same kind, will ever change the practice of the older generation of our agriculturists, but put in the hands of younger men it should greatly improve the old style of farming. The reduced price of the book (50 cents) should extend its popularity.

The same pleasant style of Martha Evans Martin's earlier work, "The Friendly Stars," is apparent throughout her new book, "The Ways of the Planets" (Harpers). She has done for the heavens what Mrs. William Starr Dana's writing on our common wild flowers has done for botany. After careful reading one should be able to recognize the greater planets quite as easily as one can tell asters from ironweed. The author gives vivid comparisons which easily fix related ideas, as, for instance (p. 18), "From the nearest star it takes light more than four years to come to us. From the nearest planet light comes in less than three minutes, and from the farthest one it makes the journey in a little more than four hours." Difference in speed between the "slow-journeying planets" and the "flying stars," which seem to us eternally fixed, is well illustrated on pp. 24-25. Ignoring the "capture theory," the author clearly outlines the spiral nebula hypothesis, accepting the agreement of most astronomers that "the whole solar family, including the sun and all the planets, has been evolved from a great nebula, which, in one form or another, at one time filled practically the whole of the immense space from the sun to the outermost planet of the system." The motions of planets, always a confusing subject to the lay mind, with their advances, loops, and apparent retrogressions, are very simply presented. Also, the paths of the planets along the ecliptic and their progress through the constellations of the zodiac are plainly set forth with a chart. The separate chapters on each planet contain all necessary information. Mercury is treated picturesquely: "the same weight of feathers that would compose a pillow here would make a whole feather bed on Mercury" (p. 107). Various debatable theories, at least those in respectable standing, are recounted without prejudice and described as "still open." Of these the rotation of Venus is one (p. 142); and of the hotly waged battles over Mars, a fair story of Flagstaff theories is given, to which is added the statement that to many persons differently constituted they form "too complete an explanation" (p. 177). Dates when the planets may be conveniently seen are frequently given, sometimes in tables, occasionally in the text. The reader grasps the distinction between density and mass when he learns that Saturn is the only planet which could float in water. The myriads of small planets are set forth in popular language, though not so graphically as in Miss Clerk's concise phrase, "easier to catch than to keep." Comparatively few slips, typographic or other, occur, though *canalli* (p. 174) is a rather curious error. And why (p. 87) is Mercury made masculine and Mars neuter? There are a few excellent reproductions of photographs taken at Mt. Wilson and Yerkes, with a convenient table of symbols, and a fairly large index.

Dr. L. Forbes Winslow, founder of the British Hospital for Mental Disorders, died Sunday in London. He was born in that city in 1844, and was educated at Rugby and Downing College, Cambridge. Dr. Winslow had been engaged in the principal lunacy investigations during the last twenty-five years in England, and had also been retained in several homicide cases. He was the author of "Manual of Lunacy," "Mad Humanity," "Eccentricity of Youth Leading to Crime," "Fasting and Feeding," "Uncontrollable Drunkenness," "Spiritualistic Madness," "Handbook for Attendants on the Insane," "Lunacy Law in England," "The Suggestive Power of Hypnotism," and "Recollections of Forty Years."

Music and Drama

Clara Schumann. By Berthold Litzmann. Translated by Grace E. Hadow. New York: The Macmillan Co. 2 vols. $8 net.

About a year after the death of Clara Schumann—the widow of the great composer, and famous herself as a pianist and writer of songs and pianoforte pieces—Berthold Litzmann was asked by her children to write her biography. For divers reasons, he declined the task, which was then entrusted to Julius Allgeyer, who, however, died before he had got beyond Clara's girlhood. Herr Litzmann thereupon agreed to undertake the work. He had at his disposal no fewer than forty-seven manuscript volumes of Frau Schumann's diaries, besides countless letters written by her to her husband, as well as to Brahms and other friends, together with the replies. Out of this superabundant material Herr Litzmann constructed three volumes. The translator has wisely condensed these into two. The first includes the most romantic of all musical love stories—Schumann's long and desperate struggle for the hand of Clara Wieck, whose father resorted to the most amazing measures to thwart his designs. In the second, the tragedy is related of Schumann's mental decline and death, and the same volume has much to say about the widow's subsequent friendship with Brahms and her experiences as a concert pianist and teacher. About her were grouped Joachim, Bargiel, and other foes of Wagner and Liszt, whose antics and opinions, as recorded in these pages, give further interest to Litzmann's volumes, making them, indeed, a moving-picture show of many interesting episodes of musical peace and war during the years comprising Clara Schumann's life, 1819-1896.

Her father, Friedrich Wieck, had intended from her babyhood to make an artist of her; hence his wrath when he found that she loved Robert Schumann even more than him, and wanted to become a Hausfrau. He could not foresee that she was capable of rising higher both as pianist and composer than any other woman had ever risen, and yet be the devoted, self-sacrificing mother of seven children. She was only nine years old when Robert, aged nineteen, as a pupil of her father, first met her. The diary, started for her by her father, begins about this time and vividly narrates all the details of the five years' courtship. Schumann was madly in love with her, and the torments inflicted on him during these years doubtless had much to do with undermining his health and bringing about his mental collapse. His failure as a conductor, after his marriage, further hastened the catastrophe. He was, like some other great composers, not a good conductor, for he "listened to the music in his own mind rather than to the actual performance." Violent altercations ensued, and at last he was requested to resign his position at Düsseldorf. This was not only an artistic humiliation, but made it necessary for his wife to work the harder as a pianist, since, although he was near the end of his career, he could not support the family from the sales of his compositions. He was, indeed, far less known than she was. "Are you musical, too?" he was asked, about this time, by the King of Holland after she had played at a royal *soirée*.

Most of the details regarding Schumann's illness have long been known, but none are so pathetic as those written by his wife and widow in her diary, now first made public. His death left her with a family of four girls and three boys, the oldest being only fifteen, while the youngest had never seen his father. In these days of grief the friendship of Brahms was a great solace. They had met when Schumann was still living. At the time of his death, she was thirty-four, Brahms twenty-two. Together they had witnessed his agony: "Johannes and I spent the whole day out there, going in and out of his room, but often only looking at him through the little window in the wall. He suffered dreadfully, though the doctor would not admit it. His limbs twitched continually, and he often spoke vehemently. Ah! I could only pray God to release him, because I loved him so dearly."

The friendship between Clara Schumann and Brahms is almost as interestingly told in these pages as her courtship with Robert. Though she travelled much, to support her large family by recitals, they met wherever it was possible, and often made long tours on foot together. Like her husband, she took to his music passionately from the beginning, and soon there was hardly a musical god beside him. The fervor of the most rabid Wagnerites pales into in-

signifieanee by the side of her frenetie enthusiasm for Brahms. She quarrelled with her friend Jenny Lind because that great artist refused to worship at the same shrine. She broke lances for Brahms daily. In Hamburg, his birthtown, she was so happy because he conducted for her that not even "the stupidity of the audience," which gave "no mark of sympathy" and did not even show "proper respect" for him, annoyed her. His music moved her to tears. More and more it monopolized her affection, until, in 1884, we find this entry in the diary: "How sad it is that there is no one but Brahms whom one can look up to and admire as an artist."

By artist she meant not only Brahms as a composer, but as a pianist. Wagner found Brahms's playing "wooden," but to her he was far superior to all the others, including Liszt, Rubinstein, and Bülow. In the first volume are recorded some enthusiastic remarks on Liszt's playing, but after Brahms (who loathed Liszt) appeared on the scene, she also detested him. His compositions she found "the most dreadful stuff," particularly the sonata which he dedicated to her husband; while as for his playing, "there is no longer any music, nothing but a diabolical buzzing and banging." Bach's chromatic fantasia he played "horribly." Rubinstein she liked personally, and she enjoyed his "Oecan" symphony, but he, too, could not play the piano; he "played Beethoven's G major concerto abominably." Bülow seems to have been quite beneath contempt. To her, he was "the most wearisome player," and he "thumped," while his famous and much-used analyses of the works of Bach and Beethoven so "disfigure" them that they are "hardly recognizable." Moreover, Bülow was a friend of Wagner, and Wagner disputes with Liszt the title of the arehfiend in music. The thousands who are now enthusiastically celebrating the Wagner centenary will surely pause on reading Clara Schumann's prophecy, made in 1876, that Wagnerism is "a passing intoxication." She could not deny that even those who really understand musie find beauties in it, "but," she adds, "they deceive themselves." Had not Brahms, the "only artist," written to her after hearing "Die Meistersinger": "I am not enthusiastic myself—either about this work or about Wagner himself"? And had she not heard the Wagnerian operas and found them bad?—"Tristan" being "repulsive"; "Rheingold" like "wading about in a swamp"; while "boredom predominated" in "Die Walküre," and so on.

A list of Clara Schumann's own compositions is given in the second volume; some of them had considerable vogue for a time. Of greater interest are the eleven pages devoted to a list of the works she studied or played in public in the years 1824 to 1889. Her experienees as a concert pianist in Germany, France, and England make interesting reading, and the devotees of Brahms will eagerly peruse the letters he wrote to Clara Schumann. In one of them he says: "To my mind, longing is one of the most pleasant of feelings; it thrills so sweetly that a sense of well-being pervades one."

The overture to Wagner's "Tannhäuser" was played by the London Philharmonie in 1854, when it was nine years old. It took the opera twenty-two years longer to reach London.

Rosa Newmarch writes in the *Russian Review* that at present music in Russia has rebounded from the national ideal, and not, in her opinion, entirely to its detriment. The obligation to write always in a patriotie spirit, to choose only national subjects for opera and programme music, to set every line of the Russian poets to music, and to model every melody on the folk-tune pattern, gave to some of the later music of the nationalists an air of monotony and perfunctoriness. The younger generation grew a little weary of the burden of nationalism, and ceased to concern themselves with the solidarity of a particular school whose position had been won, and whose mission was accomplished. Something like a complete revolution has now taken place, and Moscow—once reproached for its cosmopolitanism, and lukewarm attitude towards the patriotic enthusiasms of the modern capital—is now upbraided for its conservatism and continued adherence to the traditions of Tchaikovsky.

Thirty years ago, Saint-Saëns conceived the plan of writing an oratorio about Moses, but it was not till last autumn that he carried it out. It will have its first performance next autumn, in England. The work is divided in several parts: The Promise, The Offence, The Punishment, Death of Moses. The point of the drama lies in the disobedience of Moses when he "lifted up his hand and smote the rock."

Mr. George Moore's play, "Esther Waters," which he has made out of his well-known novel of the same name, now appears in printed form (Luce & Co.). It was produced in London a year or more ago, by the Stage Society, with only moderate success, and is not likely, without radical modification and improvement, to find its way again speedily to the footlights. This does not mean that it is a work without substantial merits of its own. It is informed with definite and solid purpose, is veracious in its details, and contains some effective theatrical incidents, but it is slow in action, and without freshness of fact or invention to give interest to sordid and familiar themes—except in one or two spirited race-course descriptions. As in the case of innumerable earlier stage adaptations of moving tales of fiction, the story, stripped of its literary adornments, is revealed as an ordinary and unattractive skeleton. It is true that the personages in the play are all recognizable types, and that they are consistently and logically handled, albeit with a somewhat too mathematical precision, but they are cast in such common moulds, and are conducted through such obvious courses, that they are incapable of provoking either curiosity or suspense. The literary skill of their creator, or reproducer, is manifested in the appropriateness of the dialogue which he puts into their mouths, and it may be granted, very readily, that his representation of the incalculable mischief done to the manners and morals of the British working classes by the betting mania which rages among them is very little, if at all, exaggerated. His knowledge of the seamiest side of the lower sporting world, its language and its habits, is intimate and peculiar, and he paints the horrors of baby-farming—as they used to be when "Esther Waters" was first written—in vivid colors. But he has nothing new or enlightening to say on any of these topics, and something more than the illustration of notorious facts by means of conventional puppets is essential to the making of live and potential drama. On the score of propriety, there is not a word to be said against this piece. The plain speaking in it, if not altogether necessary, is never unwholesome. But it is not useful, because the harping is nearly all on one string, and is consequently monotonous and dull. Of all the characters in the cast there is not one that carries any sympathetic appeal. Even Esther herself, in her stage form, only excites a vague eommiseration as the unfortunate victim of weakness, ignorance, and environment. Her lack of individuality, the mere fact that she is only one of the mass—however deplorable and significant that may be to the social student—deprives her of value as a dramatic figurc.

The general critical verdict of London is not particularly favorable to the Othello of Forbes-Robertson—now Sir Johnston—but it finds an enthusiastic admirer here and there.

"Ariadne in Naxos," the combination of Molière and Richard Strauss with which Sir Herbert Tree has been experimenting at His Majesty's Theatre in London, seems to have attained only a success of euriosity. It appears that Strauss supplied not only the opera, but a musical accompaniment to Somerset Maugham's compressed and distorted version of "Le Bourgeois Gentilhomme," which preceded it. One critic writes:

> Lulli, to be sure, wrote a good many incidental songs for its original (1670) form, but that music was confined to the people on the stage; there was nothing in the nature of Richard Strauss's running commentary from the orchestra. Last night you had a meadow of musical margin to a rivulet of dramatic text. And so mueh the better!

Fred Terry's health is at last said to be fully reëstablished. He has been acting in the English provinces, and is now appearing at the London Coronet in "Sweet Nell of Old Drury," with Julia Neilson, of course, as the heroine.

Sir John Hare, the famous English aetor, has just entered his seventieth year. He made his first appearance on the professional stage at Liverpool, in September, 1864, so that next year he will be able, if he ehooses, to celebrate his theatrieal jubilee. The stage can ill afford to lose permanently so delicate a comedian.

According to the London *Times*, this

year's spectacle at Olympia, illustrating scenes between the death of Cromwell and the restoration of Charles II, is a remarkable achievement.

Art

A Catalogue of the Ancient Sculptures Preserved in the Municipal Collections of Rome. The Sculptures of the Museo Capitolino, by Members of the British School at Rome. Edited by H. Stuart Jones, M.A. Oxford: Clarendon Press, 1912. Part I, text, $5.75; Part II, 94 collotype plates, $15; together, $19.25.

The absence of scientific, up-to-date catalogues of the Municipal Collections in Rome has hitherto been a serious hindrance to the student of ancient sculpture. The guides by Helbig and Amelung have filled the needs of the ordinary traveller by furnishing descriptions of the more important monuments; but neither aimed at exhaustive or at comprehensive treatment. The task undertaken by the British School at Rome, of making good this omission, is, therefore, one that will find general favor, the more so as the work promises to be of high merit. The first volume, at any rate, which has now appeared, and which deals with the sculptures in the Capitoline Museum, is worthy of the best traditions of English archæologists. The magnitude of the work undertaken can be gauged by the fact that this volume was started in 1904 and has since kept the various members of the School, who are its authors, busily engaged for eight years.

The plan of the book is as follows: It consists of two parts—a demi 8vo volume of text and a royal 4to volume of plates. In the former every piece of sculpture is described and criticised, both æsthetically and historically; while the latter supplies at least one illustration of every number. The material is arranged, not chronologically, but according to the locality in which it is placed, so that the visitor can visit gallery after gallery, with the catalogue as his guide, without danger of confusion. In the introductory note, written by H. Stuart Jones, the editor and Dr. Ashby, the present director of the School, a concise history of the growth of the collection is given, as well as valuable bibliographies of older books describing or illustrating the Capitoline sculptures.

Such a detailed treatment of the subject necessitated not only a thorough study of each individual piece, but a careful examination of all the old records and inventories of the Museum—a task which must have involved much patience and concentration. That the book was worth doing is its great compensation, and moreover, having been done thoroughly, much of it will probably never have to be done again. Another matter for congratulation is the full series of illustrations, which shows that the authors were fully alive to what is being more and more recognized, namely, that a catalogue giving descriptions without illustrations is of very limited value.

There is one omission in this book, however, which every student of archæology will feel. With the vast amount of material treated by the authors, they had a unique opportunity of studying the various phases of Roman sculptural art. An introductory chapter dealing with the results of these investigations would have been most valuable, as at present the literature on this subject is both scanty and generalized. No such account has been attempted in this catalogue. It is hoped that this omission will be supplied in one of the succeeding volumes of the series. These are to deal, respectively, with the sculptures in the Palazzo dei Conservatori and with those of the Magazzino Archeologico on the Cælian; the Vatican sculptures being already treated in a similar way by Dr. Amelung.

It is impossible in a volume of such large scope, involving the treatment of so many items, to avoid some omissions. It seems almost captious, therefore, to draw attention, for instance, to the absence—in the description of the famous old woman drinking—of the obvious references to similar genre figures, of which the most important is the Old Market Woman in the Metropolitan Museum.

The "Studio Yearbook of Decoration" (Lane) surveys the recent domestic design of England, Germany, Austria, and Hungary. France is omitted apparently because nothing notable is doing there. England's novelties are chiefly of the retrospective sort; the best designers seem completely antiquarian in temper. In interesting contrast is the decoration of Germany and Austria which rejects the "Period" forms and strikes out in the direction of simple and abstract arrangements of color and mass. Many of these interiors are charming and look livable. As is usual with these special numbers of the *Studio* the text is by several competent hands, and there are many plates, some colored.

Mr. Frederick Bradbury has just published, through Macmillans, a handsome volume on the "History of Old Sheffield Plate, being an Account of the Origin, Growth, and Decay of the Industry, and of the Antique Silver and White or Britannia Metal Trade, with Chronological Lists of Makers' Marks and Numerous Illustrations of Specimens." He defines Old Sheffield plate as "the term used to describe articles of flat and hollow-ware for table or domestic use, made of copper coated with silver by fusion; the period of its production dated from near 1743 and lasted for about 100 years; it was then gradually supplanted by electro-plate." One Boulsover (not Bolsover) is generally supposed to have invented this process and to have put it to use in making buttons, boxes, etc. Tinning interiors was the next step, being added by Joseph Hancock. In this form the process may be said to be a modification of a method known long before, namely, close plating, or covering steel or similar metal with silver. The invention of double plating occurred between the years 1763 and 1770. Mr. Bradbury traces the early manufacture of old Sheffield plate to various places. There were no makers in Ireland or Scotland. In 1773 assay offices were opened at Birmingham and Sheffield, and while the marking of silver was no doubt greatly in evidence, both silver and Sheffield plate were turned out by the same firms. It is interesting to note, in considering the matter of expense, that one business house had twenty tons of dies. The author takes us to New York early in the last century, when the Sheffield plate industry flourished. The plate was also made in France, Russia, and probably Austria. But between 1852 and 1858 the end came; the majority of the factories were sold, and the dies were melted down for the value of the metal. Meanwhile, between 1830 and 1840, German silver had begun to supersede copper for the purpose of fusing metal; electricity also was used to spread silver and gold over inferior metals. The firm of Christofle, of Paris, employed this latter process first in France, and when the patent expired in 1860, the trade greatly increased.

The author gives excellent advice on how to judge old Sheffield plate and on how to ascertain dates of specimens, and says something about the designers. Collectors are often puzzled why comparatively few specimens bear any marks whatever. It appears that in London space was left for the mark of the retailer, and for this reason the practice of putting on the maker's mark never became universal. Next are given the approximate dates of manufacturers' earliest connection with the fused plate industry previous to 1773. Mr. Bradbury touches on other industries related to old Sheffield plate—the manufacture of silver, old Sheffield and silver-handled cutlery, ivory for handles, antique silver in Sheffield, the Sheffield assay office, the Britannia or white metal industry, founded about 1769, and the origin of pewter. He has rendered a very real service by this attractive book.

From Charles Sedelmeyer, of Paris, we have received a richly illustrated brochure called "The Adulteress before Christ, a Picture by Rembrandt." This canvas, which through M. Sedelmeyer's mediation passed from the Consul Weber collection into the Walker Gallery at Minneapolis, was challenged by Dr. Bredius. After a long controversy and largely on the authority of the famous restorer, Professor Hauser, Dr. Bredius admitted error. M. Sedelmeyer now draws elaborate parallels between The Adulteress, which he regards as the central portion of a larger composition, and other works of Rembrandt, and genially moralizes the critical war. The problem of authenticity, which obviously concerns vendor and purchaser,

seems to us devoid of wider significance. This is a very poor picture; if Rembrandt's, quite one of his least inspired. Every confrontation with genuine works made in this monograph tells severely against The Adulteress. In fine, it seems to us not greatly to matter who painted it.

Finance

THE BREAK ON THE STOCK EXCHANGES.

The severe and general liquidation on all of the world's great stock exchanges this past week—as a result of which, even before last Tuesday's heavy break on the Supreme Court's railway rate decision, New York prices went down 5 and 6 points further for many of the most important shares—was in one respect peculiar. In Europe, it came immediately on the heels of the news that the formal peace treaty had been signed between the allies and Turkey; in this country, it followed closely after a period of prolonged stagnation, which outwardly bore the signs of an overdone "bear movement" and of a market which had been "sold to a standstill."

On the foreign stock exchanges, prediction had long been familiar that the turn for the better would come when the Balkan hostilities were definitely ended. On our own, it was a common saying that a month of lifeless markets, coming at the end of a long and severe decline, meant traditionally that the upward turn must be near at hand. Yet the week was marked, both abroad and here, by a series of days of heavy selling at the expense of values, and by the deepening of financial depression.

The case of Europe is not difficult to understand, in the light of the precedent of other wars. Actual signing of peace is, in the first place, reasonably certain to have been "discounted" already on the stock exchanges; but it has also been found that financial conditions generally, in the countries affected by the war, were not necessarily altered by the fact that the war was definitely over. The financial and industrial boom which came along with the signing of our own peace treaty with Spain, in August, 1898, was merely resumption of the forward movement which had been momentarily interrupted by the three-months' war, and which was itself dependent on wholly different causes. The conclusion at Portsmouth, in August, 1905, of the terms of peace between Russia and Japan, came, for one thing, rather unexpectedly, but it also happened to coincide with a brilliant harvest and a speculative rise in prices on all sorts of markets.

But the notable case in point was the sequel to the peace treaty at the end of May, 1902, between England and the Boers. Consols had fallen, during the two-and-a-half years' fighting, from 111 to 97; it was said that now, at any rate, recovery in those and in other English securities ought to come. Instead, a renewed and continuous decline began; consols themselves touched 95¾ in June, after the news of peace; 94½ in August, 92⅞ in September, and went below 87 in the next few months. With them, the English markets generally fell into depression, which was presently reflected, and with much severity, in New York.

The plain reason of the defeat of London's hopes in 1902 was that financial optimists had failed to distinguish, as causes of the preceding depression, between the influence of the war itself and the influence of reaction from an extravagant and overdone "promoting boom" which the outbreak of that war had punctured. The problem of the present moment, on the European Continent especially, lies in the question, just how far that second influence prevails to-day.

On occasions of this sort it will sometimes happen that financial reaction will be all the more severe, because hopes had been entertained of better things when peace should have been signed. When there are plenty of prospective sellers waiting for such an occasion to dispose of their securities—as there usually are—and when the expected outburst of enthusiasm elsewhere does not come, the actual good news will be received as the very worst news might have been, a month or two before.

To some extent, at least, this action of the European markets governed the past week's action of our own Stock Exchange. How far the resultant break on the New York market was caused by such foreign influences, and how far by apprehensions arising from the home situation itself, will probably always remain a matter of debate. In the present case, conclusions will naturally depend to a large extent on the course of events at home, between now and the end of the year. But the initial influence of financial Europe on our own situation does not admit of doubt.

It is nowadays a matter of general recognition that the collapse of prices in New York, which began in the late summer of 1911, was immediately caused by heavy liquidation from Berlin and London, due to the acutely strained relations which then arose (unknown to the world at large) between the German and English Governments. But that liquidation happened to coincide with harvest disappointments here, in the very same months, and with intimations of an Anti-Trust suit against the United States Steel. This not unusual precedent has been followed this past week; the foreign liquidation came in the face of a disappointing cotton crop estimate, of news that the growing winter wheat had been more or less impaired, and, this week, of a Supreme Court decision, regarding State and Federal rate-making, which was disappointing to the railways. In the face of such coincidences, it is never possible to prove, to the satisfaction of a financial community, which set of influences predominated.

Undoubtedly, behind all other influences there stands at present, both in Europe and in America, the fact that demand for capital, especially for new securities, seemed to be greater than the immediately available supply. To find the way out from such difficulties, the line of least resistance is frequently the release of capital by thoroughgoing Stock Exchange liquidation. The duration of such a liquidating movement often depends on the extent to which it has already eased that money market. That will sometimes be achieved with unexpected rapidity; but sometimes it will also be attended with temporarily unpleasant incidents in the general situation.

The Price of Inefficiency

By FRANK KOESTER

Author of "Hydroelectric Developments and Engineering," etc.

This book lays bare in searching analysis and startling deductions, national ills and weaknesses due to inefficiency, Governmental or non-Governmental, and largely responsible for the high cost of living and other harsh conditions. Comparisons with the methods and results of other countries give point to both constructive and destructive criticism. *Octavo*, $2.00 *net; postpaid*, $2.15.

THE EDUCATION OF TO-MORROW

By ARLAND D. WEEKS, M.A.

A vigorous overhauling of educational ideals to show what sort of curricula are best for an economic democracy. It contends for a closer relation between education and the life interests, if not the vocations, of the community. 12*mo*. $1.25 *net*.

BOOKS OF THE WEEK 629

WOOL-GROWING AND THE TARIFF

By CHESTER W. WRIGHT, Ph.D.
Assistant Professor of Political Economy in the University of Chicago.

With charts, 8vo, 354 pp., $2.00 *net.*

The history of wool-growing in the United States from colonial times to 1907. The volume is a contribution of the first importance to the economic history of the United States, and to the understanding of the tariff situation.

HARVARD UNIVERSITY PRESS
CAMBRIDGE, MASSACHUSETTS.

A CATALOGUE of books and pamphlets on economic, social and political science now ready. H. WILLIAMS, 105 E. 22d St., N. Y.

The publication is announced of a volume of "Anniversary Papers" by colleagues and pupils of George Lyman Kittredge in honor of the completion of his twenty-fifth year of teaching in Harvard University. The book contains forty-five contributions by distinguished scholars in honer of their friend and teacher. It also contains a bibliography of Professor Kittredge's own writings, and a portrait frontispiece. A limited edition only has been printed, and a part of this edition not previously subscribed for is offered at the publication price, $5.00 per volume. The book will not be reprinted.

ANNIVERSARY PAPERS

462 *pages, quarto.*

Stamper's Textbook on the Teaching of Arithmetic

By **Alva Walker Stamper, Ph.D.,**
Head of the Department of Mathematics, State Normal School, Chico, Cal.

$1.00.

This book gives to teachers and prospective teachers a greater breadth of view in the teaching of arithmetic, some practical suggestions as to methods, and a brief but comprehensive review of subject matter. It contains an interesting history of the subject; an account of the reasoning involved in arithmetic; a brief treatment of the scope and value of algebra and geometry in the elementary school; a general lesson plan, with ten plans worked out in detail; advice as to modes of instruction and detail of routine work, etc. The work is carefully planned, the methods are up to date and practicable, and the subjects related to actual life.

AMERICAN BOOK COMPANY
NEW YORK CINCINNATI CHICAGO

WALT WHITMAN'S ANOMALY

By W. C. RIVERS, M.R.C.S., L.R.C.P., D.P.H.

With photographs of Whitman and Doyle.

Cr. 8vo. 2/6 net.

The Sale is restricted to Members of the Legal and Medical Professions.

LONDON:
GEORGE ALLEN & CO., Ltd.,
44-45 Rathbone Place, Oxford Street, W.

THE GREAT ART GIFT-BOOK OF THE YEAR

ART By Auguste Rodin

(Translated from the French of Paul Gsell by Mrs. Romilly Fedden.) With over 100 illustrations in photogravure and half-tone. Buckram, $7.50 net; three-quarter levant, $15.00 net; carriage additional. A book which takes its place at once as the most important art book in years. It covers practically the whole range of art, and abounds in memorable analyses of the works of the masters of painting and sculpture, ancient and modern. *Send for descriptive circular.*

10 WEEKS IN EUROPE FOR $300

BOOK ABOUT IT, $1.10 POSTPAID.
DODD, MEAD & COMPANY,
FOURTH AVE. AND 30TH STREET, NEW YORK

Educational

The **MASSAWIPPI SUMMER SCHOOL,** at North Hatley, Que., now in its sixth year, offers a delightful opportunity to study German, French, Spanish, Italian, Portuguese, Greek, Latin, Mathematics, Elementary Law, Magazine Writing, Public Speaking, and Piano Playing, under competent instructors, by a beautiful lake, just north of Vermont. The **PREPARATORY DEPT'T** has been most successful in preparing boys and girls for school and college entrance examinations. For illustrated booklet, address DR. C. U. CLARK, Yale Station, New Haven, Conn.

The Misses Kirk's College Preparatory School
PENNSYLVANIA, BRYN MAWR.

Prepares for Bryn Mawr and other colleges. Certificate privileges. Number of pupils limited. Special schedule arranged for each. Percentage of pupils who have entered Bryn Mawr College unusually large. Gymnastics, outdoor sports. 15th year opens Oct. 2, 1913.

ITALIAN HOME SCHOOL

MARCHESA ILDA ROERO DI CORTANZE receives into her home a limited number of English and American girls for purposes of study, travel, and cultivated social life. VIA MARIA CRISTINA 8, ROME. American correspondent, Mrs. R. K. PECK, 36 Cherry Street, Lynn, Mass.

The WOLCOTT SCHOOL, DENVER, COL.

Superior climate. Accredited with Eastern Colleges for girls. Fine music advantages. Gymnasium.

The Nation

NEW YORK, THURSDAY, JUNE 19, 1913.

The Week

The rejection by the Senate Finance Committee of Senator Hitchcock's proposal to imbed into the tariff bill a graduated tax on manufactures of tobacco, brings to a satisfactory close an incident upon which Attorney-General McReynolds can hardly look back with pleasure. Precisely in what degree he was responsible for this project is uncertain, but it cannot be denied that he permitted it to bear in a greater or less measure the character of an Administration idea. If, as a mere by-product of a tangle growing out of a legal prosecution, the Attorney-General, without express authorization by the President, thought it proper to "suggest" a novel and serious departure in the policy of our revenue laws, he has a very singular conception of the functions of his office; and on the other hand, if he acted with the sanction of the President the Administration was playing with edged tools in a very thoughtless way.

There has been no evidence of any widespread public interest in the newspaper-publicity law, the validity of which was upheld by the Supreme Court last week, and the decision itself will make no great stir. It rests the whole question on the right of Congress to specify the conditions under which newspapers and periodicals shall be admitted to the privileges of second-class mail. The Court specifically dissociates its opinion from the view that Congress could under the Constitution do anything to abridge the freedom of the press. It is obvious, however, that the decision suggests the possibility of using the postal laws in a punitive way, and not only against newspapers. The Court's assertion that it is not to be supposed that Congress would attach any provision to an appropriation bill not strictly germane to it, reads like a bit of elaborate sarcasm. Newspapers have had no objection to furnishing the information now to be required of them. And reputable publications long since ceased to print disguised advertisements. The sole reason for attacking the Constitutionality of the publicity law was that it seemed to contain a dangerous principle. But this the Supreme Court specifically and solemnly denies. It construes the law narrowly as a mere postal regulation, and disclaims any intent, or any right, on the part of Congress to exercise "arbitrary power" over the press.

The one clean-cut and accurately thought-out section of the new banking bill, as thus far outlined, is that which provides for the so-called "regional reserve banks." This section is known to emanate from the Banking and Currency Committee of the House of Representatives, whose chairman and other members have given long and careful study to the problem. The plan evolved is exceedingly interesting; it is entirely conservative in principle, and it presents some definite advantages which the Aldrich plan did not possess. Simply stated, its purpose is to create substantially fifteen or more central banks in the United States, each with its special scope of operation in one of the banking "regions" or "districts" into which the whole country is to be divided. Capital for each of these "regional reserve banks" is to be subscribed by the banks of its district; which will choose the majority of its managing board (the President of the United States to name the minority), will deposit a part of their cash reserve with it, and will be entitled to rediscount, with the central district bank, commercial paper acceptable under the banking law's provisions. These central institutions are presumably to hold deposits only of subsidiary institutions and to lend their own credit only to such institutions.

The Aldrich plan proposed district associations of the sort, geographically distributed in precisely the same way. Each of them was to possess the same power of general supervision over banks in its district as is proposed in the present scheme. But they were merely intermediate cogs in the machinery. They were to be incorporated, but not capitalized; they were to hold no reserve money of other banks; they were to engage in no rediscounting. The largest power in that direction which was to be conferred on such "local associations" was the function of guaranteeing commercial paper presented by a subsidiary bank for rediscount with the national reserve institution. All such functions as issue of notes to individual banks, custodianship of reserves for such banks, and rediscounting of their commercial paper were placed by the Aldrich plan in the hands of the national institution. The difference between this plan and the new proposals is that now the centralizing functions are to be performed by each specified district of the country for itself and through its own central institution—not through a governing board for the whole nation. There is much to say for this change of base. When the Aldrich scheme was under discussion, financial critics pointed to the fact that its chief weakness was lack of adaptability to a country of so great area, and of so widely varied business interests, industrial conditions, and commercial methods, as the United States.

Instead of going to Albania, he is going to Argentina. That hustling people of the southern hemisphere has once more shown its enterprise by obtaining the services of the most eminent efficiency expert of the age. "T. R.—Consulting Engineer to Effete and Growing Civilizations," may yet come to be a familiar business card in the advertising columns. After teaching the Kaiser how to maintain the balance of power in Europe, teaching France how to combat the decline of her population, and teaching England how to rule India and Egypt, it ought to be a simple matter for him to trace out for the Argentinians the lines of their future development in a short course of lectures with stereopticon views. One lecture on how to turn Buenos Ayres into a city beautiful; one lecture on widening the channel of the La Plata; one lecture on the development of the natural resources of Patagonia; and the place of Argentina among the nations will be assured. Perhaps there will be a lecture on running the Trusts, with moving pictures of the Beef Trust, which, we believe, is already comfortably domiciled in Argentina.

Mayor Gaynor of New York puts forward his claims for renomination. With them this does not seem to be the time to deal seriously. But if the people of the city were of the philosophical, and occasionally cynical, temper of their Mayor, it is easy to imagine the sort of remark they would make on Mr. Gaynor's expressed desire for reëlection. They would say that the love of office surely does exercise a strange fascination over fallible mortals. Jefferson was right: few die and none resign. A man in important public position may complain and groan about its hardships, and protest that he is looking forward to the day when he shall lay down its duties and escape from its ignominies, but when the time comes he is as anxious to hold on as the next fellow. Probably there is something about this in Epictetus. Anyhow, there is force in what Lord Rosebery said: "After a short tenure of high office, the holder almost invariably thinks himself admirably fitted for it." But these politicians come and go, the soul of the city might say if it had a voice, and I keep on my way unmoved by all their fret and fever. When the large forces of its municipal life are truly considered, New York might be justified in borrowing a phrase from Emerson, after the Mayor's pleasing fashion, and say to him: "Why so hot, little man?"

Real progress in penal reform seems to have been a result of the investigation into conditions at the Maryland penitentiary. A year ago the sole purpose of the discipline at the institution was apparently punitive. Now, without weakening this fundamental element, attention is given to the prisoners' improvement. A few days ago, a night school for illiterates was started. Attendance was not compulsory, but every one of the 260 eligibles is reported as being willing to take advantage of the instruction offered. One-third of them are white men, and their teacher is an associate who is serving a sentence for defrauding by means of false bills of lading. His intellectual qualifications for his present task would appear to be sufficient. The inducements to learn to read are rather naïvely stated as being a certain diversion that the process of study affords the prisoner, and the reward of being allowed to read.

Much interest is manifested in all sections of the country in the case of Alexander Scott, the Paterson Socialist editor who has been convicted and sentenced on a charge of inciting "hostility to government." So far as we have observed, the press of the country, with little or no exception, regards the case as involving in a very vital way the right of free speech. There does not appear to have been, in the articles complained of, any incitement to violence. Scott charged the police with wanton brutality; "the police Anarchists," he declared, "not only believe in lawlessness, but they practice it. They don't waste words with workingmen—they simply crack their heads." But so far as we have seen in the reports of the trial, it is not charged either that he proposed that the workingmen should crack the policemen's heads or that in point of fact any such violence occurred as a consequence of his words. He was convicted and sentenced on the basis of a freakish law passed by the New Jersey Legislature after the assassination of McKinley, which made the promotion of "hostility to government" a crime. It remains for the higher courts of New Jersey to decide whether such a law, with such an interpretation as this sentence appears to put upon it, is possible under the Constitution of that State.

Among the latest objects of scrutiny in the revaluation of values—as Nietzsche would call it—which is now under way in so many fields, is the high-salaried man. People have begun to ask whether a fifty-thousand-dollar salary always denotes a corresponding degree of efficiency. The charge has been made that under the fostering care of the tariff our industries have become over-managed and over-salaried. Now the railways are under fire. The 'Frisco receivership has brought up the question whether $75,000 a year for the chairman of the board of directors and proportional salaries for other officials are essential to the careful administration of a railway property. Stockholders in the Chicago Railways have organized a protective association, with economy as its platform. The association declares that a saving of not less than half a million dollars a year in salaries and fees can be effected without detriment to the management of the company. Translated into terms of dividends on stock, it makes a very impressive showing.

At first sight, one-quarter of a goal is so narrow a margin of victory, as polo games are scored, that it seems hardly worth while to look for any definite explanation of the result of Saturday's match. Luck would account for it. Or if a formal reason is demanded, it might be argued that one-quarter of a goal is possibly less than the advantage which the home team always has over the invader. Or in the specific case of the American polo team, it is no more than the natural advantage which a four-man team including three men who have played together for nearly half a dozen years holds over four men who never played together before, which is said to be the case with the English challengers. But all speculations based on a quarter-goal victory are vitiated when the quarter-goal lead is acquired by the same team which in the previous game scored a lead of 2½ goals. In other words, it is not arrant Chauvinism to suppose that, if something more than a quarter of a goal had been necessary to an American victory on Saturday, that extra margin would have been forthcoming. Between two well-matched opponents victory will go to the one with a capacity for something like a religious frenzy. And that is a gift which is peculiarly this nation's when it plays.

Once this national talent for seeing red on the playfield is recognized as a prime factor, we are at liberty to make acknowledgment of such contributory causes as have been mentioned. The record set by the Meadow Brook team is an illustration of how international athletic supremacy frequently moves in cycles, dependent upon the appearance of exceptionally gifted performers in this country or in that. The history of Australasia versus the United States in tennis during the last half-dozen years offers evidence on this point. The Antipodes shot up into tennis prominence with the emergence of remarkable players like A. F. Wilding in 1906 and N. E. Brookes in 1907. In 1906 Australasia took 2 matches to our 3. In 1907 Australasia took 3 matches to our 2. In 1908 it was again 3 to our 2. In 1909 it was 5 to 0 against us, with Maurice Mc-

Loughlin not yet in the fulness of his powers. In 1911 it was again 5 to 0 against us. Then Wilding and Brookes passed from the scene, and McLoughlin came into his own with the recent result of 4 to 1 against Australasia. Until the present national champion's wrist loses its cunning, there is not much doubt that tennis supremacy will dwell on this side of the Atlantic.

From Northwestern University, plainly seeking to attract students to its doors, comes the estimate that a college education has a value of $25,000. Those who examine the logical and statistical basis of this assertion may wish that Charles T. Crane was still alive, for Mr. Crane could prove conclusively that even graduates of the most practical courses at the State universities lagged behind their comrades in the sort of usefulness measured by dollars and cents. Even those who make no claim to Mr. Crane's mantle must see flaws in the figures. In estimating upon the salary-increase of graduates who got $867 the first five years, and $1,862 the second five, the Northwestern University considered neither the age nor the rate of salary increase of "the average salaried man of Chicago," who receives $1,202 annually. But the really curious thing about these claims of Northwestern, one of the bulwarks of endowed and liberal education beyond the Alleghanies, is not the method of proof. It is the fact that it should consider such a basis of appeal to prospective students worth presenting, except as a pendant to a more intellectual approach.

The germ of specialization may infect too many of our universities, but so long as the Chautauqua assemblies flourish, we shall not lack breadth. Here is ex-Gov. Folk, for example, setting out to address an audience in Birmingham, Ala., on "The Fight for a State." Somewhere in his talk, he does tell what he did to clean up St. Louis, but he is not presenting the results of an investigation to a seminar. He is making a Chautauqua address. And so he touches upon woman suffrage, white slavery, graft, and the future of the republic. No Chautauqua address is complete without a reference to the United States Senate. Unfortunately for the most scintillating rhetoric, that body has allowed itself to undergo a change, but it may still point a moral. It is now a shining illustration of the ancient truth that the world moves, and that, accordingly, we need never despair. All this in the course of a single address would seem the wealth of Golconda to a student who had just listened to the ninth lecture on the sounds of the vowel *a* in Old Norse. When, in addition, we read in the programme of apparently impossible feats of legerdemain and sacred concerts, we feel that we have found the explanation of the admittedly high average of intelligence among us.

The "chactic" condition of English education has recently been under discussion by Lord Haldane and other members of Parliament. Sir Philip Magnus, M.P. for the University of London, takes a more cheerful view of the existing situation than does Lord Haldane. He admits, however, that two changes are necessary. These are the removal of the grievance of Non-Conformists, and the linking up of elementary with secondary education. By this latter, Sir Philip means something in the way of vocational training. A large number of children between the ages of thirteen and seventeen are seeking employment in "blind alley" occupations, being unprovided with instruction that would enable them to look higher. Not all of this deficiency is to be laid at the door of the school system. Part of it is directly due to the unwillingness of parents to avail themselves of facilities that already exist, such as day and evening continuation schools. The details are relatively unimportant here. What strikes one is Sir Philip's eagerness that progress shall not outrun itself; that portions of the system as it is shall not be lopped off in haste, to be regretted at leisure; and especially, that variety and flexibility shall not be sacrificed to a demand for a "national" system of education. This may well be the ideal for other countries than England.

On Sunday the German Emperor completed the twenty-fifth year of his reign. During the recurrent periods of severe international strain that marked the progress of the recent war in the Balkans, common gossip had it that the Kaiser was ardent in the work of conciliation because his heart was fixed upon rounding out a quarter century of peace on the throne. This is only an easy way of recording the popular impression that the Kaiser of to-day is not the War Lord of as late as half a dozen years ago, whose fervent utterances made for anxiety among the nations. It may very well be that William II was as ardent a friend of peace twenty-five years ago as he is to-day. History must judge him by his acts, and the record stands that his reign has not been marred by war. But the rattling of the sabre is almost as bad for people's nerves as dread war itself, and for a dozen years it is not to be denied that the Kaiser did keep Europe on the anxious seat. Within the last few years, however, there has been a notable change. The fiery phrases, the metaphorically clenched fist, the metaphorically uplifted sword, have disappeared from the day's news. The Kaiser's manner, like his intentions, has grown pacific. His latest appearances before the public have been in the rôle of prudent father to a somewhat impetuous heir-apparent, and of a statesman working zealously in behalf of the maintenance of international peace.

The contest between the aeroplane and the dirigible continues with unabated zeal. As if in direct retort to Count Zeppelin's magnificent flight from Baden to Vienna, comes the astounding performance of a single day's flight by aeroplane from Paris to Warsaw. The mastery of the air thus continues to move forward in spite of temporary discouragements. Just when the future of the Zeppelin seems to be established, comes a catastrophe which raises doubts with regard to its practical efficacy. After a depressingly long list of aeroplane killings, comes a remarkable accomplishment like that of one day last week. As for the progress of aeronautics in warfare, the subject is still in a highly speculative state. Dirigibles were tried out by the Italians in Tripoli and aeroplanes were sent out by the Bulgarians over Adrianople, but the results in both cases seem to have been negligible. Nevertheless, the German War Office is backing its faith in Zeppelin with large appropriations, and the British authorities have recently announced the perfection of a heavier-than-air machine of extraordinary promise.

THE WIDER POINT OF VIEW.

Gen. Hancock's fatal but, in a sense, absolutely truthful remark in 1880 that the tariff is "a local issue," has had abundant confirmation during the past few weeks. Particularly has the inquiry into the existence of a tariff lobby brought out the fact of the intensely local nature of the demands in regard to separate items in the tariff schedule. We see how a bill for protection necessarily presents the appearance of a grand conglomeration of regional interests. That this invites to bargaining and log-rolling, stands out on its face. You vote for my pet duty and I'll vote for yours. That is the ancient rule of protective-tariff legislation. Every Representative, every Senator, fights eagerly for his own locality. But where does the nation come in? Who speaks for it? Can a broad national policy possibly result from the heaping up and the mixing together of ten thousand parochial claims?

That question has long vexed American statesmen, and in other matters than the tariff. To translate insistent localism into nationalism is enormously difficult. This is clearly revealed by the ins and outs of the tariff discussions at Washington, and especially by the detailed accounts of the activity of the lobby. That word we here use in no offensive sense. Thus far there has been brought out no evidence of the use of corrupt methods. And we should not think of denying the right of any business affected by the impending tariff changes to seek to be heard by Congressional committees, either in the person of its owners and managers or in that of agents. In some cases, the organization and the effort in behalf of certain interests have gone very far, and have entailed great expense. Ex-Gov. Carter, of Hawaii, testified that the sugar-growers of the islands had already raised and spent $100,000 for the purpose of keeping a duty on sugar; and the implication was given that as much as $800,000 would be forthcoming if necessary. That is a large sum, and its outlay would inevitably be open to suspicion. But on that aspect of the matter we do not dwell at present. The sugar-growers are only a striking example of a special interest striving to get a certain thing done, or undone, in a general law. And there are hundreds of others. Mill after mill, town after town, section after section, has its representative or its lawyer or its ex-Congressman button-holing and conferring and pulling and hauling in Washington in order to get a locality taken care of. The country is supposed somehow to get along without being taken care of by anybody in particular.

In fact, however, somebody in particular ought to do it, and, in the present instance, is endeavoring to do it. President Wilson has been, half seriously, accused of being the chief of the lobbyists. No one, alleged Senator Townsend, has brought so much pressure to bear upon Congress, in tariff matters, as has the President of the United States. The charge is evidently one that requires qualification. Senator Simmons, chairman of the Senate Finance Committee, issued last week a sort of disclaimer for Mr. Wilson. The latter's activity in tariff legislation, he asserted, has not been nearly so extensive or urgent as had been said. But there is no denial that the President has taken a keen interest in the tariff bill. Two of its outstanding features, free wool and (ultimately) free sugar, were made a part of it at his specific request. And no doubt he has employed his prestige as leader of the party, and his official authority, to obtain the full Democratic support for his distinctive tariff policies. By so much, Mr. Wilson may well plead guilty to the charge of lobbying.

But no one should fail to note the sharp difference between his kind of lobbying and the other. About him there is nothing local. He is not looking to any particular district, and thinking only of the tall chimneys smoking there. If President Wilson is a lobbyist, he is a lobbyist for the nation. He puts himself at the national point of view. If he has any constituency in mind, it is that of the great body of the people who have no special interest and no special spokesman at Washington. Mr. Wilson makes himself their spokesman. In working out a plan for tariff reduction which shall contain at least a few benefits for the consuming masses, he necessarily separates himself from the clamor and urgings of this local industry and that special business, and seeks to think and act in a national sense and spirit. We do not maintain that he is absolutely right in every detail. But we do insist that his general attitude is correct and praiseworthy.

Somebody surely has to do this. It was the ideal of Daniel Webster that Congressmen should divest themselves of purely local prepossessions and selfishnesses, and legislate as if they personally represented the entire country. Webster himself was not always able to live up to this. And the power of localism in Congress has not declined since his day—not, at least, in tariff matters. But if Webster's idea is to be restored and vivified, who is more clearly indicated as the man to do it than the President of the United States? In him, if in anybody, the voice of the nation can make itself heard. And President Wilson leaves no doubt of his determination to speak in all the great affairs that come before him, not for a class or a region, but for all the people and the whole land.

ORATORY AND THE NEW HOUSE.

Two months' trial of the new arrangement in the House of Representatives may be an unsafe basis for prophecy, but, if current signs are to be trusted, the present method of seating seems likely to reduce the quantity and improve the quality of discussion. In the old days, if the seat of the debater lay pretty well back in the hall, enough members would wheel about in their swivel chairs and face him to create at least the impression of a willing audience. Now that there are no swivel chairs, and listeners have to risk dislocating their spines in order to face a speaker whose seat is behind them, it is necessary for one who would look his hearers in the eye to proceed to the arena, or open space in front of the Clerk's desk, much as a Deputy addresses the French Chamber from the Tribune.

The man who is compelled to do this is apt to give a little real study to his theme. It is one thing to take the chances of a sporadic and scattered fire of comments or questions from the floor, but quite another to face a compact battery as an orator must who goes down into the arena to speak. There he is in the focus of all eyes instead of an object of passing curiosity for a few. Those of his colleagues who are inclined to criticism or ridicule are encouraged in the impulse, as a group

of marksmen are inspired by an inviting target set directly within range of their guns. Unless his logic is sound and his conclusions well grounded, his opponents soon make a rather sorry spectacle of him.

There is a phase of the psychology of eloquence which should be illustrated under the new seating arrangement. One orator is at his best when he is in the centre of his audience, addressing them on the same level; another is at a marked disadvantage unless he is on a platform, exhorting from above down. The late William L. Wilson, by all odds the most brilliant debater the House knew in his era, was of the first-mentioned type; William J. Bryan is a notable example of the second. Though Wilson addressed the chair formally from his seat as the rules required, he would pace the nearest aisle back and forth while he was in the full flood of an appeal to reason, and no one on the same floor with him—not even his best intrenched adversaries—escaped the fascination of his personality so close at hand, although he was of anything but commanding stature and not at all robust of frame or lungs. But while his reputation in the House was at its highest, he was called to preside over the Democratic National Convention of 1892; thousands of persons fought their way into the hall for the sole purpose of hearing this modern "Little Giant," only to express their bitter disappointment after the event. Perched aloft, far removed from contact with the crowd which always fired him, he seemed utterly out of his element. It was not simply that his voice was almost inaudible, but he was emotionally distracted by his own sense of ineffectiveness, and his carefully prepared "keynote speech" went for naught except to the extent that the general public read it afterward in the newspapers.

Bryan, on the other hand, while he was in the House and accustomed to speak from the midst of a multitude, was ranked as an elocutionist rather than as an orator. It was not till his "cross of gold" speech in 1896 that his full powers were recognized; and that deliverance was made from the stage of the Coliseum in Chicago, where, with the cultivated instinct of the preacher, he was hammering his ideas into his audience from above. Roosevelt is a speaker of the Bryan type, who does far better from a raised place whence he can talk down to his hearers than from a lower plane in the middle of a mass of men. One of the few living orators of note who are able to do equally well in either relation to an audience is Bourke Cockran, although his manner of address differs according to the position in which he stands.

We may look, therefore, for a period of "trying out" for the old orators as well as for the new benches. The arena of the House has some of the characteristics which commend a platform to a certain class of speakers—more especially those who are didactic rather than argumentative in style—but has the disadvantage of being a little lower instead of higher than the rows of seats in front of it. But in so far as its situation is likely to make a speaker feel that he owes a serious discussion to his fellows and not a mere stream of words set running to consume a specified number of minutes, its effect on debate can hardly fail to mean a distinct improvement in the larger issues of the House.

WHERE ARE THE NEW NATIONALISTS?

Almost all phases of political opinion have received expression, from one spokesman or another, since the Supreme Court's decision of the Minnesota railway rate cases. Ex-President Taft has made public his view of the meaning of the decision, and tells how it should be followed up by Congressional action. Democratic and Republican leaders have been interviewed. The newspapers of the two parties have spoken their mind. But from one quarter we have had nothing but silence, and, as the Irish judge said, precious little of that. We refer, of course, to the Progressives, who were born New Nationalists. Far be it from us to urge them to speak when they choose to be silent. Taciturnity is so rare on their part as to be especially grateful. Yet we cannot refrain from wondering how they can possibly keep still when so sharp a challenge has come, through this Supreme Court decision, to one of their pet doctrines, and also what would seem to be such a fine opportunity to rise and assert their principles and announce their purpose to fight for them.

We say this, because no one who has read the Osawatomie speech of 1910, or the "Charter of Democracy" and the "Address" to the National Progressive party at Chicago, can have forgotten that one of the great tenets of the New Nationalist faith is the sweeping assertion of Federal power in the regulation of the railways and all other corporations engaged in interstate commerce. Again and again has Col. Roosevelt lashed out impatiently at the contention that the States could do anything worth while in such regulation. The nation must take hold of it. To leave it to the States was only a suggestion of the bosses or the wicked interests. "Interstate commerce," he asserted at Chicago, "can be effectively controlled only by the nation." And he railed at the platform of the Baltimore Convention as demanding, in effect, that a "futile attempt" be made "for the States and national Government to exercise forty-nine sovereign and conflicting authorities." For this Col. Roosevelt had nothing but contempt, as being merely "an archaic construction of the States' rights doctrine," and really a "most flagrant violation of the Constitution." Citations like these could easily be multiplied.

Well, the question has now emerged from judicial arbitrament. The highest court has held that the nation might, through act of Congress, assert and exercise full power over railways engaged in interstate commerce, forbidding the States to meddle with such corporations at all, but that, in fact, it has not done so. Failing such national action, the States have large regulatory powers. Far from being in flagrant violation of the Constitution, they are in accord with it, so the Supreme Court decides. Minnesota has, at present, the right to compel even interstate roads doing business within the State to submit to regulation of their service and their rates, provided that the result be not confiscatory. And as everybody knows, other States are rapidly developing, through Railroad Commissions, Public Utilities Commissions, and other bodies, a higher and more effective control of railway activities within their borders. It is one of the marked administrative developments of the day. That it is Constitutional the Supreme Court decides. Whether this decision was right or wrong, whether it will be followed by evil consequences or by good, it is not

BERKELEY PUBLIC LIB

necessary here to discuss. Our sole intent at present is to call attention to the way in which one of the central doctrines of the New Nationalism has been hamstrung by the Supreme Court, and yet the New Nationalists are silent!

What a splendid chance they would have to reinforce their demand for the recall of judges, or, at least, of judicial decisions! We could almost write the familiar clarion sentences ourselves, dwelling upon the absurdity of allowing fossilized minds to keep alive dead theories and enforce flint-lock legislation upon a machine-gun age. In addition to this, how appealing is the opportunity laid before the New Nationalists to come forward as the champions of exclusive Federal control of the railways! The Supreme Court set that open door before them. It pointed out that a great extension of the powers of the Interstate Commerce Commission was possible, if only Congress chose to make it. What more natural, then, what more inviting, than for the Progressive New Nationalists to leap into the breach? They could take up the cause as their own. They could set on foot a movement to induce Congress to proceed to obliterate the powers of State Railway Commissions, and concentrate all governmental control in Federal hands. Why do they not at once do this?

Alas, we very much fear that they are pausing in order to consider the political expediency of such a course. They note the canvass of sentiment on the subject in Washington. They read that there is absolutely no hope of obtaining any action by Congress against the States. And the reason for this is not far to seek. The States are pretty well satisfied with things as they are. They like the effect and promise of their own local control of the railways for local benefit. What Minnesota Representative or Senator would have a chance of re-election if he were to come out for a law undoing what the State has done, and what the Supreme Court has decided could lawfully be done? The truth is that another Progressive principle is evidently at work. This is the right of the people to rule—to have what they desire. Just now, they wish the States to keep and even extend such a power to regulate the railways as they actually possess. Any man or any party proposing to take it away from them would fare badly at their hands. If the Progressives tried it on in the very States where they are strongest, they would be left even a worse third at the polls. This is, we believe, the true explanation of the New Nationalist silence, though under such great provocation to speech.

THE THRUST BEHIND PARTIES.

The troubles through which the Liberal party in England is just now passing are suggestive of some of the difficulties—as well as opportunities—which everywhere confront government by party. We do not refer here to the Marconi and other scandals which are embarrassing Mr. Asquith's Ministry. These are more an excuse for attack than a reason for condemning or overthrowing. But real concern is undoubtedly felt by many Liberal leaders and large numbers of their followers over the condition of staleness into which their party seems to have fallen. It has been seven years in power. During that period it has had many notable struggles and victories. The list of legislative measures to which it can point is long. Yet somehow all this is now, as it were, discounted by the English public. Old-age pensions, a minimum wage in certain industries, workingmen's insurance against sickness or lack of employment—yes, yes, the electors say, these things are all very well in their way, but what are you doing now, what do you propose to do next year?

That this vague feeling of dissatisfaction has penetrated the Cabinet itself is clearly shown by a speech of the Solicitor-General, Sir John Simon, at Oxford a couple of weeks ago. He made it just after the Liberals had suffered what amounted to two defeats in bye-elections, at Newmarket and at Altrincham. But it was the duty of the party, argued the Solicitor-General, to take such reverses as the signal for renewed aggressiveness; and he went on to outline, in what must be at least a semi-official way, the forward policy to be pursued. He said:

> It ought to be the essence of the Liberal temper that it takes more interest in the future than in the past, and, moreover, the very fact of advance is sure to provoke some resentment. But, if we lose an outpost at Newmarket, and are repulsed in an attack on Altrincham, we must reply by an advance all along the line. And it must be a prompt advance and a bold advance. Do not let us be unduly disturbed by timorous doubters, who always regard every fresh step as a leap in the dark, and who discover in every street corner a parting of the ways. The courage and determination of the Liberal army were never more keen. We are magnificently led by our incomparable generals. We are anxiously awaiting the order to go forward. It is the peculiar glory of Liberalism that the successful application of its principles in one field only paves the way for advance to the next. The great twin brethren of free trade, Cobden and Bright—as Mr. Trevelyan reminds us in the new biography we are so eagerly reading—never regarded their principles as limited to the freeing of industry and commerce. They looked forward to the day when a similar crusade for economic independence and the abolition of arbitrary restrictions would be preached and fought for the land.

Of this programme itself, it will be time enough to speak when we see its details. They have only been hinted at in the speeches of Lloyd George. A radical land policy might, indeed, be made a rallying cry for advanced Liberals, and a few Conservatives with the whole of the Labor party could be drawn to its support; but it is plain that it would repel Liberals of the Whig school. All these things, however, are yet on the lap of the gods. The thing of present interest is the visible demonstration that parties cannot stand still. They are pushed on by forces too mighty for them. What they have done is regarded as only an earnest of what they are bound to do in the future. A programme carried out is necessarily a programme to be discarded, and a new one must be devised.

It is altogether likely that our own parties will soon be showing that they are subject to this inexorable law of politics, as it seems to be. Particularly will the Democratic party be apt to be put in a position, after another year, where it must indicate certain lines of a forward policy. Its first work was inevitably that of fulfilling the promise of putting through the long-delayed reduction of the tariff. If, in addition, it should be able to write on the statute-book a law greatly improving our currency and banking system, the achievement would undoubtedly be noteworthy and gratifying. But the party would be deceived if it thought that after that it could rest on its oars. Tariff revision, currency reform, would speedily be discounted, just as is the work of the Liberal party in England. Political accomplishment of that kind ranks with what the moralists call negative virtues.

If you have them not you are disgraced, but if you have them, they are of no particular credit to you. If the Democrats did not revise the tariff and do something for rational banking, they would be regarded as cumberers of the ground, and would be kicked out of office; yet doing those things will not suffice to keep them in office. Such large projects of social reform as President Wilson touched upon with so much eloquence in his Inaugural will before long press for consideration; and the right choice among them, with the proper means and methods of embodying them in legislation, will have much to do with the future of the Democratic party.

In such circumstances of unstable party equilibrium, the responsibility resting upon a political leader is very great. If he is an honest man and a true patriot, he will be all the time asking himself, not what will be a taking party cry in the elections, but what will be a sound policy for his country. He will seek to discriminate between winning a party victory at the polls and causing the principles of his party to triumph. What the demagogue will do, we know. Plato has described him to us as one who thinks of the public only as a wild beast whose ravenous demands must instantly be satisfied. But it is for the statesman, with a mind and a constancy above the clamors *civium jubentium*, to discover in the confused disquietude and aspirations of the day the opportunity to take occasion by the hand and guide his party and his people into a liberty which shall be at once broader and more secure.

IS LIFE BECOMING A FLATLAND?

When Burke declared that he did not know the method of drawing up an indictment against a whole people, he was speaking as a statesman, he was discussing a question of governmental policy. As a leader of political thought, as a critic of the events and currents of his time, he did not hesitate to draw up the most sweeping indictments not only of a whole nation, but of a whole generation. It is a proceeding full of hazard. Few generalizations about mankind are more than half-truths; and those in which men in middle or advanced life indulge when they compare the newer world round them with that of which they cherish the remembrance or the tradition are peculiarly liable to this defect. But while there are half-truths that are worthless, or worse than worthless, there are half-truths that are of great value. On some subjects it is almost impossible to put forward effectively a sharply marked and keenly felt judgment except in the form of a half-truth.

What President Butler, in his Commencement address, said of certain tendencies that seem dominant in our time appears to us to fall into this category. To charge the present age with want of thoroughness smacks almost of the paradoxical; the intense discipline that is involved not only in the pursuit of the exact sciences in their present state of development, but in the perfection of the mechanical arts and in the high organization of industrial production and of business management, comes to mind at once. Is it possible that with all this intensity of effort directed to special ends, we are guilty of a certain want of depth, or thoroughness, in relation to the larger concerns of life and thought? "Sound and disciplined thinking," says President Butler, "is hard to sustain in an atmosphere filled with the snapping sparks of rapidly following emotional outbursts; . . . absorption in current topics (which to-morrow may be neither current nor topics) leaves no place for the genuine study of that history and that literature which have withstood Horace's *tempus edax rerum*. Every ruling tendency is to make life a Flatland, an affair of two dimensions, with no depth, no background, no permanent root." Few will subscribe to this statement as a literal truth; but many will see in it the broad indication of a real defect of our time, and more might ponder with profit the question which it raises.

Evidences of a certain lack of instinctive feeling for the deep-going nature of the largest things of life are to be found in many directions, but perhaps nowhere more strikingly than in connection with reformatory agitations affecting the most intimate concerns of personal life. Men of serious character and of high standing as scientific specialists propose measures of regulation and control of the right to marry, apparently without any consciousness of the profound disturbance of ideas lying at the very base of human life and character which their proposals involve; and in some instances Legislatures have passed laws, not indeed of such far-reaching character, but yet of most serious import and pointing in that direction, with little more sense of the gravity of what they were attempting than if it were the granting of a franchise or the levying of a tax. Like phenomena are seen in the field of politics. Ohio, for example, might very possibly have decided in favor of the sweeping and radical changes embodied in her new Constitution, even if the questions involved had been discussed with the utmost deliberation and thoroughness; but as a matter of fact they were not so discussed. Indeed, if one wishes to find confirmation of President Butler's view, one has but to look up Lincoln's speeches, with their close and patient reasoning, their persistent grappling with the exact facts of the Constitutional and political situation, and contrast their style and method with anything that in these latter days is addressed to general audiences on any subject of controversy.

To recognize this tendency "to make life a Flatland" is not necessarily to write one's self down a hopeless reactionary, buried in things of the past. If this defect of the time is part of the price paid for an awakening to social needs, to the claims of the great unfavored masses, such as the world has probably never before witnessed, one may note it as a thing to be deplored, while granting that the gain far outweighs the loss. And it is for the representatives of university ideals, above all, to speak out in this matter. They still have their old duty to perform, however much it may be overlaid with the new duties which in recent years have been so urgently pressed upon them. And in a long view it may be found that that old duty is still of greatest moment not only to the intellectual elect, but to the whole world of men.

The forces that make for social betterment, for the assertion of the claims of the masses, for the improvement of governmental ideals and governmental methods, have a sweep so mighty, and draw upon resources so inexhaustible, that, in helping them on, the universities play an honorable part in a work great indeed, but a work which would go on whether with their help or without it. But to that element in life in which

the higher interests of the intellect are supreme, to the keeping alive of ideals of distinction and aspiration and achievement which make life something else than a Flatland, the universities are called to contribute something the absence of which would be calamitous to the whole world. It is not of any class, but of all humanity, that it is written that man does not live by bread alone.

THE POET LAUREATESHIP.

LONDON, June 6.

It seems a pity that the vacancy has occurred in summer. To discuss the claims of possible candidates would have been such an entertaining and edifying pastime for the long winter evenings. The competition might even have suggested an idea for a new card game. Only four days have passed since Alfred Austin's death, and already seventeen names, at least, have been mentioned for the succession. The entries for the poetical Derby include writers as diverse as Rudyard Kipling and Austin Dobson, Mrs. Meynell and John Masefield, Thomas Hardy and Richard Le Gallienne. It may be as well to complete the list while one is about it. The other names put forward are those of William Watson, Stephen Phillips, Alfred Noyes, Henry Newbolt, Robert Bridges, W. B. Yeats, Maurice Hewlett, Arthur Symons, Laurence Binyon, Alfred E. Housman, and W. H. Davies, the "super-tramp." If any reader of contemporary verse cannot find here a favorite to back, his tastes must be eccentric indeed.

Several of these press nominees are disqualified, however, for one reason or another, before the race begins. Kipling, for instance, is such a violent Tory partisan in politics that his appointment by a Liberal Government is almost unthinkable. In the case of others a difficulty arises from the incompatibility of their Muse with the associations of Buckingham Palace. For the Laureateship is not so much a national office as a court post. There is what the *Daily Chronicle* calls "a serving-man flavor" about it. If you look for it in *Whitaker's Almanack*, you may search in vain through the academic and literary sections of the book. It is not to be found even among the knighthoods and orders. You must turn to the section "His Majesty's Household" and the subsection "The Lord Chamberlain's Department." After discovering who are the lords in waiting, the grooms in waiting, the extra grooms in waiting, and the gentleman ushers, you will arrive at this:

> Gentleman Usher of Black Rod, Admiral Sir Henry F. Stephenson, G.C.V.O., K.C.B.
> Poet Laureate, Alfred Austin.
> Surveyor of the King's Pictures and Works of Art, Lionel Henry Cust, M.V.O.
> Keeper of the King's Armory, Guy Francis Laking, M.V.O.

And so the roll of honor continues, with the grooms of the great chamber, the keeper of the swans, the page of the chambers, the pages of the presence, the pages of the back stairs, etc., until it winds up with the leader of the music. It takes one back to the time when Fanny Burney thought herself lucky to be appointed second keeper of the robes to Queen Charlotte.

It would be absurd, of course, to describe the Laureate as a mere magnified lackey. He is not even expected nowadays, as some occupants of the post were, to celebrate every royal marriage or birth in an obsequious ode. Still the requirement of being able to sing in buckles and knee breeches is a distinct handicap to a modern man of genius. It mattered little to Tennyson. Whitman's description of him as a "feudal" poet was perhaps an exaggeration, but at any rate his whole method of thought was in harmony with the environment of the palace, and there was no touch of insincerity when he celebrated in his poetry the virtues of the Prince Consort. Today there is no one of Tennyson's rank as a writer who could bring himself without painful effort to utter such sentiments as those in the dedication of the "Idylls of the King." The real problem of filling the present vacancy is that our inspired poets are too inspired to fit the post, whereas the lesser sort would only accentuate the difference between a court functionary and a prophet of the national life and character. Alfred Austin had genuine literary merits, but it would have been better for his ultimate reputation if he had been content with the comparative obscurity of a minor poet. As the *Manchester Guardian* has put it, the pedestal on which Lord Salisbury set him became inevitably a pillory.

Strong support, therefore, is given to the proposal that the Laureateship should be recognized as an anachronism, and that advantage should be taken of the present opportunity to abolish it. It could hardly have been brought to an end at Tennyson's death without a general sense of loss, but Alfred Austin's tenure of it has meant so little that no one would now seriously miss it. This very fact, however, is also used as an argument on the opposite side. A well-known literary critic is distressed at the thought that an office which has been held by Jonson and Dryden, by Wordsworth and Tennyson, should end "in mere eclipse." If it lapses at all, it should be "in a blaze of glory." There are some, too, who think the present a singularly inappropriate time for its abandonment, in view of the hopeful outlook for a serious poetic revival. It would be a great mistake, in their opinion, for poetry to be shorn just now of its most conspicuous public acknowledgment.

Accordingly, another suggestion is that the Laureateship should be continued, but should be removed from the jurisdiction of the Lord Chamberlain and made truly national. The Laureate of the future, instead of watching the domestic history of the reigning sovereign, would derive his poetic impulses from the varying fortunes of John Bull. But here, again, there are practical difficulties. "The wind bloweth where it listeth." How are you going to insure that the divine afflatus shall always set in the same quarter as the gusts of popular feeling? The recollection of William Watson's indignant sonnets on England's desertion of the Armenians or of William Vaughn Moody's lines "On a Soldier Fallen in the Philippines" is enough to remind us that the poet has sometimes had it laid upon his conscience to remonstrate with "his sinning land where she stumbled and sinned in the dark." And, after all, what real benefit does either literature or the nation gain from the setting apart of an official poet? It would be just as reasonable to "retain" a national sculptor, or a national painter, or a national architect, or a national musician.

It is unnecessary to record all the other various proposals for dealing with this perplexing post. Space should be found, however, for mention of the suggestion made sarcastically by S. L. Hughes, one of the wags of the House of Commons. Why not, he asks, revive the now extinct office of court jester and combine it with that of the Poet Laureate? Why not, indeed? "There have been occasions," Mr. Hughes points out, "when the Poet Laureate of the day has added much to the gayety of the nation." It is surely time that conscious humor had its turn. The reconstitution of the post on these lines would at least enable the nation to express its gratitude for the wholesome exhilaration it receives every Wednesday from the witty and scholarly Owen Seaman.

H. W. H.

THE NATURALIZATION OF JAPANESE.

TOKIO, May 25.

When Percival Lowell remarks in "Occult Japan" that the lack of originality of the Japanese is very striking, and the decorous demeanor of the whole nation betrays the lack of mental activity beneath, he meant that the Japanese are materialistic; and this point has been strengthened by many other writers. Walter Dennings, of unrivalled wealth in Japanese acquaintance, says somewhere:

> The lack of idealism in the Japanese

mind renders the life of even the most cultivated a mechanical, humdrum affair, when compared with that of Westerners. The Japanese cannot understand why our controversialists should wax so fervent over psychological, ethical, religious, and philosophical questions, failing to perceive that their fervency is only the result of the intense interest taken in such subjects. The charms that the cultured Western mind finds in the world of fancy and romance, in questions themselves, irrespective of their practical bearings, is for the most part unintelligible to the Japanese.

This lack of idealism is founded on the general lack of imagination of the Japanese mind. It is wrong, let me speak as a Japanese, that we have often been written up in the West as a most imaginative people by irresponsible writers whose little Japanese knowledge made them write much. Lafcadio Hearn, whose literary impulse often struck the very truth of a matter, singular enough, through the magic of its being half-truthful, remarks in one of his letters:

> In Japan the law of life is not as it is with us—that each one strives to expand his own individuality at the expense of his neighbor's. But on the other hand, how much one loses! Never a fine inspiration, a deep emotion, a profound joy or a profound pain—never a thrill, or, as the French say so much better than we, a *frisson*. So literary work is dry, bony, hard, dead work here.

Now, how did we Japanese happen to become so materialistic, unimaginative, and unemotional? The whole blame, if blame somebody we must, should go, first of all, to Confucius, whose ethical teaching almost killed our original Japanese passion and feeling; even Buddhism appealed to us from its materialistic expression rather than its spiritual speculation. (Therefore, our Japanese Buddhism is not the Indian Buddhism.) The fact of our being unemotional, unimaginative, and materialistic, is seen most strongly in relation to women; when I tell you that there is no great love story in long Japanese literature in the Western sense, you will understand how the difference in our Japanese ancestral history and education renders what you call the true soul-sympathy in the West well-nigh impossible. Old Japan taught us ethics, but not emotion or love; if we ever attain to life's real emotion and love, it will be when the materialistic saturation turns at once its reverse side from its great hatred of its own self. Such is the Japanese spiritually. Now suppose such a Japanese with such ancestral history happened to live in America and become a naturalized American citizen (supposing that right were also given to the Japanese). Is he able to assimilate himself with America?—that is the important question we should like to dwell on.

I have no doubt that true assimilation can come only from intermarriage; now to ask more directly, can Japanese love the American women admirably and honestly?—the women psychically as well as physically larger than their home women, besides being born and bred so differently from themselves? Hearn says in a letter to Chamberlain: "I am now convinced that the deficiency of the sexual instinct (using the term philosophically) in the race is a serious defect rather than a merit, and is very probably connected with the absence of a musical sense and the incapacity for abstract reasoning." What will be the result if a Japanese marries an American woman? The answer is short: collision, that is all. Even where there is no terrible clash, certainly there will not be a true harmony of understanding between them. How can they thoroughly understand each other since they were born from different roots? Lafcadio Hearn was only a rare perfect specimen of one who successfully adopted another country; but I have the fact (how sad is Hearn's heart!) that in his later years he looked back longingly towards America, and even declared that he had found out at last, after his long residence in Japan of some fifteen years, that he knew nothing of Japan and the Japanese. If the West finds it difficult to understand the East, that is to mean to say that the hearts of the East and West can never join together so easily. Kipling sings:

> Oh, East is East, and West is West, and never the twain shall meet,
> Till earth and sky stand presently at God's great Judgment seat;
> But there is neither East nor West, Border, nor Breed, nor Birth,
> When two strong men stand face to face, tho' they come from the ends of the earth!

It is better to make East and West live independently, at least at present; but let the true Americans and the true Japanese stand face to face on the same ground without asking each other where they come from, whether East or West. We Japanese even claim in America an equal treatment with other Western people; but as for the question of American naturalization being extended to Japanese, I doubt, as a Japanese, whether it would not be a damaging affair equally for America and Japan.

To disturb the Japanese insularity physically as well as spiritually through such a Japanese (now, suppose, a Japanese-American) is a very serious thing to consider for Japan herself. If it is understood that any Japanese can become naturalized in America, I believe that many young Japanese, mainly to escape from military duty, would try to enter the country across the ocean. Certainly militarism is never the best policy for any country; but after long consideration, I should say that it would be the second best for Japan at present. The American naturalization extended to Japanese would be a damaging affair for Japan. Indeed, naturalization has no meaning whatever, if the people in the place cannot be assimilated with the country which they go to adopt; already in that point, we Japanese have no right qualification. But shall we never in the future attain that qualification? The time will be changed in the next fifty years under the Western education and invading civilization; our Japanese minds will certainly make the foreign assimilation easy; so I think that that question of naturalization should be left to the wise hand of time and wait for some fifty years. Even without our asking it, I am sure that America will give it to us; perhaps then we shall be able to answer more truthfully and properly to her invitation. YONE NOGUCHI.

Correspondence

THE COST OF HIGH WAGES.

TO THE EDITOR OF THE NATION:

SIR: The latest evangel preaches that higher and still higher wages is the panacea for all the ills of the community. No one points out the fearful cost of those who, unable to meet the advancing charges, are compelled to sacrifice their special work for unsuitable tasks. Train a man or a woman for a special vocation, and then place him or her under conditions that demand all of time and vigor in alien but unavoidable tasks; can one imagine a more oppressive situation for the individual or one that entails a more serious economic loss upon the community? It is a fact that in the intelligent middle class of our communities in the North and West, particularly among the married women of this class, the routine tasks of their lives limit seriously or prevent the more productive activities for which they have training. Unless we take the position that women who marry must accept the details of housekeeping as their special vocation, we must admit that a great host of women are, each in a home very dear to her, paying a terrible price for their homes in undesired forms of labor, in the expenditure of thought and strength in channels foreign to their training and preference.

In three-fourths of the homes of college professors, the cultured wives are occupied with the lower grades of household labor—house-cleaning, setting tables, answering door-bells—filling their time and exhausting their vigor in the non-consecutive details which belong to the maid-of-all-work. The wives of ministers are in no better case. The universities are training for special forms of skilled labor an ever-increasing multitude of women who must, if they undertake home-making, exchange their vocations for an unskilled occupation because the compelling necessities of daily life will demand all their limited strength, or at least will leave at their disposal no connected periods of time such as the consecutive tasks of special skill require. That intelligent women feel the stultifying effects of their round of petty detail and

yet recognize their inability to undertake serious constructive work, the activities of many women's clubs attest, the programme testifying to their intellectual hunger and yet by its desultory and amateurish character confessing their inability to undertake anything of a formative nature or of worthy accomplishment.

The women are the greatest sufferers, but not the only ones. No sensitive man can see unmoved the dwarfing of nature and the loss of opportunity that a gifted woman has accepted who devotes her energies to the petty details of the unskilled labor in his home. Further, he himself is not wholly free from personal loss from similar causes. It is true that the unavoidable demands for unskilled labor are not so imperative with him as with his wife, and can often be satisfied without destroying the possibilities of skilled employment. In his case, the mal-adjustment of life more often becomes evident through the loss of reasonable satisfactions which he denies himself to avoid the drudgery of unskilled labor. For most men the home garden has disappeared, the adornment of home grounds is greatly restricted, favorite occupations for diversion which involve routine and unskilled labor are given up lest their demands for time and strength should encroach upon the requirements for the special vocation. Home conveniences are not provided unless the income permits of a considerable outlay for their purchase, social and civic duties are omitted since time is taken up by more imperative calls, economic purchasing which requires time or thought, the father's part in the training of children and in the maintenance of a wholesome home life, and many other duties which our forefathers discharged have become impossible. True, the causes of these changes in the man's life are due to many influences, but not least among these is his inability to defend the higher duties of life by obtaining from others the performance of the lower and unskilled tasks without too serious an inroad upon his income. The handy man about the place, the village laborer who could be safely reckoned upon for any unskilled labor, is no longer obtainable, therefore the master of the house must perform such labor himself or undertake nothing that involves it.

What is the remedy? The American seeks by changes in home conditions to convert unavoidable labor into avoidable, and to that end frequents boarding tables, restaurants, cooked food shops, cafétarias, or closes his home and dwells in an apartment house with wall beds and a six-by-eight kitchenette. He strives to solve his problem by denying his household the spaciousness and comforts of the home of his fathers that his wife as well as himself, by denying herself the comforts dependent upon unskilled labor, may find opportunity for the pursuit of her special vocation. An interesting corollary of this solution is the fact that children become impossible elements under the conditions in many apartment houses.

These solutions entail a staggering loss upon the community: they involve the acceptance of conditions that are assumed to be unalterable, and in no wise remove the cause of these conditions. The obstacle that prevents efficiency in the special avocation, that renders the management of the home difficult, and denies us an easy conduct of life in comfort, with grace and dignity, is the disproportionately high price of unskilled labor. We are striving to bar out foreign unskilled labor, especially that Oriental labor which is most suited to the needs of service in our homes. The theorist declares it desirable that every wage earner should be able to maintain his family on the plane of life that labor in the lower grades of skill has attained, and is singularly blind to the loss and sacrifice this doctrine causes in the ranks of skilled labor where the product is of greatest worth to the community. Each trade union cries unceasingly for the exclusion of unskilled labor from all races except its own, hence the less desirable immigrant from eastern Europe finds an open door, while the faithful house-servant from the Orient knocks in vain or gains admission in such scanty numbers that demand lifts his wage out of the reach of modest incomes. When Japanese dishwashers receive $60 a month and Chinese servants can command almost any price from $40 upwards, as in the West, what better evidence can be given to prove that there is real deprivation and suffering through the lack of such labor as these servants perform? Have we not dodged this fact long enough? Are we not ready to face it and inquire why we should exclude desired help and continually raise the wage of the unskilled? to ask whether the sacrifice of cultured women in their homes, or the exchange of the home for the apartment or boarding house, or the loss of home comforts incident to such high wages, is necessary or just?

CHARLES DAVIDSON.

Claremont, Cal., June 11.

IRREVERENT WIT.

TO THE EDITOR OF THE NATION:

SIR: Permit me to express my appreciation of the letter of Mr. Willis Boyd Allen, in the *Nation* of June 5. Few things in the life of an age will more clearly set forth the character of the people than its sense of wit and humor. Tell me what you laugh at and I'll tell you what you are. The wise argument of courtesy in the matter may touch many, sad to say, when the higher plea will not. I am sure that I am only one of many who thank you for opening this attack upon one of the most flagrant evils of the day, the indulgence in irreverent, discourteous wit. Our public taste should demand something better than *Life* and *Judge* and *Puck*.

F. A. KAHLER.

Holy Trinity Lutheran Church, Buffalo, N. Y., June 12.

[Several other clergymen have written to us in the same tenor.—ED. NATION.]

A LIFE OF KEATS.

TO THE EDITOR OF THE NATION:

SIR: Will you do me the favor to make it known among your readers that I am engaged on a new and what I hope to make a standard and complete critical biography of the poet Keats, and that I shall be very grateful to receive notes of any unpublished material, autograph or other, which may be in the hands of American collectors? With some of these gentlemen I have the pleasure of being already in communication, but there must be others who can help me in my purpose if they will, and it is to them that I now wish to make appeal through your columns. SIDNEY COLVIN.

35 Palace Gardens Terrace, London, W., June 6.

PROFESSOR MURRAY ON GREEK RELIGION.

Four Stages of Greek Religion. By Gilbert Murray. (Columbia University Press.) New York: Lemcke & Buechner. $1.50 net.

Whatever Mr. Murray has to say on things Greek is always sure of a respectful hearing. He disclaims the purpose of giving in this volume a connected history of Greek religion, yet its rise, progress, and decay at critical periods are relentlessly analyzed. His title suggests a needed caution to those who refer casually to "the Greeks" as if sprung fully grown from the head of Zeus. Although he can offer (see p. 152) no new guide to "the uncharted" (a recurrent term), his agnosticism is neither arrogant nor patronizing. To Miss Harrison's "Themis" and her "Prolegomena" he makes cordial acknowledgment, but it is a relief to read (Preface, p. 7): As "she has by now made the title of 'Olympian' almost a term of reproach, . . . I have ventured to attempt to explain their historical origin and to plead for their religious value." He is even willing (cf. p. 97 with p. 20) to distinguish between superstition and religion, and he cites with sympathy "the beautiful defence of idols by Maximus of Tyre." But the distinction, when drawn, seems only half-hearted and negative. Pertinent generalizations, explaining both the Greeks and their gods, are too numerous to catalogue.

The first stage he entitles "Saturnia Regna." In this part there is a keen discussion of data gathered by comparative study of other peoples and of the traces of early Greek superstitions. The Olympian gods are not primary. Behind them is "a dark primæval tangle of desires, fears, and dreams." When the three great Athenian festivals—the Diasia, the Thesmophoria, and the Anthesteria—are examined, the anthropomorphic gods vanish and we are left with the sediment of a snake, or a sow, or a Bull's Shed—the house of a divine animal. Out of superstitions, terror, and tabus are gradually evolved oracles and gods. The "process charged with the emotion of pressing human desire, projects its anthropomorphic god or dæmon." Mr. Murray offers his own explanation of the peculiarly Greek development of local oracles. If the Old Men

of the Tribe, he interprets, cannot explain in a given case what is Themis, we must ask advice of the great ancestors in their sacred tombs. Next, special tombs of special ancestors give way to what he seems to describe as a Chthonian Trust. Then the oracles in a panic resort to remedies of pain and blood as senseless and inhuman as the sins of the modern world in burning witches and heretics.

The second stage is entitled "The Olympian Conquest." The "new" gods, as is pointed out, are, more or less openly, recognized as supervening upon an older order. Far from regretting with Miss Harrison the passing of tabus and totems, Mr. Murray recognizes this period as coincident with the high-water mark of Greek religion. While there is "hardly any horror of primitive superstition" unrepresented, he asserts that "there is hardly any height of spiritual thought attained in the world that has not its archetype or its echo in the stretch of literature that lies between Thales and St. Paul." If the monotheism of Xenophanes, Parmenides, Æschylus, Euripides, Plato, and others could really have imposed itself upon the world, it "would have been," he urges, "a far more philosophic thing than the tribal and personal monotheism of the Hebrews." As it was, the Olympian religion achieved the following: It debarbarized Greek worship in the leading states, mitigating the horrors of "Urdummheit"; it permitted progress; wrapped religion in Sôphrosynê; made for intercantonal concord; and developed sheer beauty. And it not only repressed the primeval brute in its own inheritance, but beat back, for a time, the "beastly devices" of the heathen without. The author contrasts, *inter alia*, the "sexless Valkyrie" of the "Iliad," called Athena, with the many-breasted Artemis of Ephesus. In later antiquity, apart from the unpopular Epicurean school, it issued "in a sort of apotheosis of good taste, . . . or else it collapsed into helpless mysticism."

Mr. Murray contends that the Homeric poems, and through them the Olympian gods, did not exercise any widespread influence until the sixth century. He claims that they were purged of the grosser survivals and that the old Achæan gods were equipped with new names reflecting the factors in this later age. This revolutionary theory, which we can here only hint at, will have to run the gantlet of much criticism. To the author, however, it is the kernel of his interpretation of this stage of Greek religion.

The third stage is the Hellenistic-Roman period. The author designates this phase as "The Failure of Nerve." The traditional religion of Hellas was "bankrupt" by Plato's time. Between the time of Epicurus and St. Paul there was a rise of asceticism, of mysticism, a loss of faith in normal human effort. Men halt at the parting of the ways—the life of the patient and good citizen in sympathy with the world contrasted with the ecstatic vision of the saint. The Greek city-state, the kernel of Hellenism, has fallen with the Macedonian conquest. Yet "Rome was herself a Polis as well as an empire" and "the Stoical ideal of the World as 'one great City of Gods and Men' has not been surpassed by any ideal based on the nation." Both Stoic and Epicurean were almost free from popular superstitions; both got rid of the myths; but both let these same gods out of Tartarus, though putting them under strict parole. Mr. Murray, throughout the book, betrays especial admiration for the doctrine of the Epicureans. Their "glory it is to have upheld an ideal of sanity and humanity stark upright amid a reeling world." When the Olympians were dethroned Chance or Fortune was elected to the vacancy by popular acclamation —again a "denial of the value of human endeavor."

In discussing the Hellenistic worship of the heavenly bodies the writer harks back to the reference in the "Republic" to the sun as the author of light in the visible world, and connects it with the ultimate "triumph of Mithraism as the military religion of the Roman frontier." As a matter of fact, there is no such confusion in Plato. The sun is merely an earthly symbol of the Master Light—the Idea of Good.

In skirting the more critical contacts with early Christianity, Mr. Murray shows no disposition to trample carelessly upon the beliefs of others, but, as in his treatment of sun-worship, he traces back, for Gnostics and Christians alike, the conception of their Sôtêr to Plato and his Ideal "Righteous Man." Appreciation of St. Paul, often lacking in orthodox writers, is evident, both elsewhere and here, when he speaks of his "clean antiseptic quality." Much in this chapter tempts discussion. "Astrology fell," he says, "upon the Hellenistic mind as a new disease falls upon some remote island people." Allegory, he argues, permeates all Hellenistic philosophy. The striking, and certainly little known, words of Diogenes, an Epicurean of Cappadocia about 200 A. D., inscribed on the wall of a portico, are translated in full. The preamble is too long to cite, but the message itself is terse: "Nothing to fear in God: Nothing to feel in Death: Good can be attained: Evil can be endured."

The fourth part of the book centres upon Julian the Apostate and his Neo-Platonic friend Sallustius. It is entitled "The Last Protest." Any new light thrown upon the cross currents of this perplexing period is grateful. The author analyzes the conflict between Christianity and Paganism. The former he thinks of "as a sort of semi-secret society for mutual help with a mystical religious basis." The denatured Paganism which Julian tried to galvanize into life had the hopeless task of explaining the old myths through mystery and allegory. "The explanations given by Sallustius and Julian are never rationalistic. They never stimulate a spirit of skepticism, always a spirit of mysticism and reverence." Julian's supreme concern, he adds, was to prove, what the Christians denied, that the Gods *are*.

The proletariat Christian and the imperial, but monastic, Pagan both represent mysticism. The treatise of Sallustius, with its washed-out Platonism, is translated in an appendix, being, as Mr. Murray puts it, a semi-official catechism or creed. Far better support for the Pagan ideal and its real love for Sôphrosynê is given by citations from other sources. The author again reverts to the Epicureans and their lofty character. He points out how extremes meet in the common unpopularity shared by them and the Christians. This might have been further illustrated by Lucian's reference to the common ban placed upon both by Alexander the False Prophet in the second century.

In view of Mr. Murray's intimate frankness it may not seem unsuitable to describe the book itself as The Latest Protest against orthodoxy and atheism alike. In a striking figure at the end he speaks of creed written upon creed like a palimpsest. Although his readings of the scroll may call for further emendation he strives with the patience of an acute and high-minded scholar to decipher the half-legible characters of the earlier writing.

CURRENT FICTION.

[TWO BOOKS OF FAERY.]

The Crock of Gold. By James Stephens. New York: The Macmillan Co.

Lore of Proserpine. By Maurice Hewlett. New York: Charles Scribner's Sons.

Peter Pan's question about belief in fairies was taken by his friends in the audience as a delightful bit of whimsy. Even the children who shouted assent were consciously engaged in the pleasant game of make-believe. Santa Claus is never wholly endearing till he has begun to be a myth. Yet here are two books about fairies written by grown-ups for grown-ups, quite as if the world were still both young and credulous.

"The Crock of Gold" is a fairy-tale with Irish setting and accent; but the god Pan figures in it as well as the god Angus. Its satiric quality and its philosophy are German rather than Irish. As with all good fairy-tales, you

may find what you like in it—an amusing series of impossible incidents, an allegory, or in a broader sense a criticism of life. A crock of gold is the most cherished possession of the Leprecauns, because, explains one of that harmless little people, "do you see, a Leprecaun has to have a crock of gold so that if he's captured by men folk he may be able to ransom himself." The loss of their treasure by a certain tribe of Leprecauns has its effect on the action of this tale, but we could have got on very well without it or them. For the persons of chief interest are the Philosopher and the Thin Woman and their two children, "who live in the centre of the pine wood called Coilla Doraca." The Thin Woman is a sort of witch who has married the Philosopher to get back at him for having answered the three questions which nobody had ever been able to answer. But he proves a match for her, at first because he is impervious as a philosopher, and later, after his experience among gods and fairies, because he is appealing as a man. As an aged male Alice in a new sort of wonderland, he has adventures involving a humorous philosophy worthy of study. And one never knows when among the whimsicalities of the book one may chance upon a simple human passage of almost lyrical power, such as the quaint lament of the "old woman on a stick" whom the Philosopher meets for a moment by the wayside, and meets no more.

Mr. Hewlett's book is even less easily classifiable. On its face a record of personal experience with nymphs, dryads, gods, and fairy wives, it is furnished with a preface in which the author discreetly admits that he does not know whether "the things in this book" are true or not. But one fact he is sure of: "If a thing is not sensibly true it may be morally so. If it is not phenomenally true it may be so substantially. And it is possible that one may see substance in the idiom, so to speak, of the senses. . . . It is a fact, I believe, that there is nothing revealed in this book which will not bear a spiritual, and a moral, interpretation." We confess that we are unable to supply such an interpretation; and to tell the truth we do not wish to feel the need of it. Why not take the book as a delightful bit of make-believe, so artful as to lead one to the verge of belief itself? Mr. Hewlett persuades himself, let us say, that he has seen wood-creatures and creatures of the air, singly and in companies; that he knows something of their dress, their social habits, their sports, loves, and ceremonies; their relations to human kind. He tells a long and circumstantial story of a London messenger boy who was an incarnation of Hermes, and whose strange influence over the humdrum mortals of the modern world culminated in the carrying off of a maiden of title to Pheræ in Greece, where long ago a temple of the god had stood. He chronicles several instances of "fairy wives" whom he has known or known of—unhuman creatures mated to men; and, not content with this, gravely asserts that there are undoubtedly several hundred thousands of such beings in the United Kingdom alone. Oddly enough, he excepts the acknowledged home of fairy-lore; he has "no evidence of fairy wives from Ireland," though "a great number out of Wales."

In one respect Mr. Hewlett's fairy-folk differ radically from the anthropomorphic creatures of common legend. They are totally unmoral:

> The fairies are of a world where Right and Wrong don't obtain, where Possible and Impossible are only finger-posts at cross-roads; for the gods themselves give no moral sanction to desire and hold up no moral check. The fairies love and hate intensely; they crave and enjoy; they satisfy by kindness or cruelty; they serve or enslave each other; they give life or take it as their instinct, appetite, or whim may be.
>
> But there is this remarkable thing to be noted, that when a thing is dead they cannot be aware of its existence. For them it is not, as if it had never been.

Is this satire? Does Mr. Hewlett employ the method of Swift in holding up by indirection what he takes to be the essential basis of human life, divested of its shams? As to his paganism, he has always been sufficiently explicit. . . . But we lay down this curious book with the lingering hope that it is not a mere stalking horse—that here may actually be a man of our time who does "believe in fairies."

A Step on the Stair. By Octave Thanet. Indianapolis: The Bobbs-Merrill Co.

Short stories reprinted singly in book form are commonly found to be in a vein of popular sentiment. This tale of Miss French's is of a different sort. It adds another to the numerous recent attempts to describe the experiences of a soul just after its release from the body. Actual death does not occur, and spirit returns to body after an experimental excursion into the unknown country. Remembrance is vague, but the soul has learned that the state after death represents nothing permanent or sure—"This is but a step on the stair," says the mother of the newcomer, who is his guide. "We leave it as we left the life below; but joyfully and not in fear, for each step is higher on the stair." Half-reluctantly the soul of this traveller leaves its new freedom to turn back to human duties, recalled by the skill and persistency of a physician and friend who will not let the body be dead. In idea and spirit the sketch greatly resembles the longer narrative of Mr. A. C. Benson, "The Child of the Dawn," reviewed recently in these columns (July 25, 1912). In both instances the attempt is to get rid of the popular idea of the soul after death as (to quote Mr. Benson), "a sort of amiable and weak-kneed sacristan in the temple of God."

A GREAT LADY.

The Letter-Bag of Lady Elizabeth Spencer-Stanhope. Compiled from the Cannon Hall Papers, 1806-1873. By A. M. W. Stirling. With numerous illustrations; in two volumes. New York: John Lane Co. $10 net.

The editor and compiler of these volumes is a grandson of the lady whose name he uses to bind together his varied collection of letters and anecdotes, drawn from the family archives of the Spencer-Stanhopes of Cannon Hall. This work is, he says, not only a sequel, but a conclusion, to his two earlier books of similar character, "Coke of Norfolk and his Friends" (1906) and "Annals of a Yorkshire House" (1911). Lady Elizabeth Spencer-Stanhope was a daughter of Coke of Norfolk. The earlier picture showed him in his public character. He is seen in these letters as a country squire, the head of a family that laughed at and adored him—"Majesty" by nickname, the testy and affectionate ruler of his clan. But he appears only incidentally in these pages, which are actually a continuation of "Annals of a Yorkshire House," taking up the family chronicle as preserved in the Cannon Hall papers, at the point where the Annals laid it down.

A majority of the letters in the present collection were written by or to John Spencer-Stanhope, who in 1822 became the husband of Lady Elizabeth. Their preservation was due to her: hence the title. John was third child and second son among the fifteen children of Walter Spencer-Stanhope of the "Annals"; and as his elder brother was an idiot, became heir of Cannon Hall. In 1806 he was in his twentieth year, a rather serious young man with a group of lively sisters. Many of the earliest letters are from the liveliest of them all, Marianne. She was noted for her sharp wit in a period when repartee was required of the lady of *ton*. At forty she became the anonymous author of "Almack's," most admired satire of its day, in which she hit off, once for all, the foibles and chief characters of the most fashionable circle of the period, of which she was a member. She and her almost equally clever sisters seem to have been even more feared than admired by eligible young men, and the few ineligibles who applied, or appeared about to apply, were quickly

disposed of by the worldly though affectionate mother of fifteen. Marianne, the only one to escape spinsterhood, made a discreet marriage of middle age, which turned out not badly.

John Stanhope as a young man had a strong desire to travel, and in 1810 set out for Spain and Greece. It was a perilous time for an Englishman to be travelling, and he presently found himself a prisoner of Napoleon. His letters written during the year or two which passed before he succeeded in escaping are full of interesting detail about the social Europe of that day, and about the conditions of the Napoleonic régime. The editor has wisely used his discretion in giving the substance rather than the letter of much of this "correspondence of an exile"—as indeed he does throughout the work. It is an extraordinarily vivid mass of contemporary gossip and anecdote which he succeeds in presenting. Lady Elizabeth Coke was half John Spencer-Stanhope's age when she became his wife. She looked up to him with awe, and lived up to her immediate resolve never to call him anything but Mr. Stanhope. Yet she was not only a girl of mind, and worthy on that ground of the Stanhope connection; she has a very pretty humor of her own, founded, unlike that of Marianne and her sisters, on good humor. And her awe of her spouse does not keep her from writing to him with ease and spontaneity of the little affairs of their common life and acquaintance. That acquaintance included not merely the local intimates of a great county family, but most persons of the first social and political distinction throughout England. Almack's, that last stronghold of London exclusiveness, was always open to the Stanhopes. The gossip of this family is the gossip of an aristocracy sure of itself, and calmly aware of its inferiors. The worldliness of Mrs. Stanhope, the mother of fifteen, is often amusing, sometimes fairly appalling in its completeness. "The proper thing," or, as it was then called, *ton*, had never a more unabashed worshipper. And the foibles and indiscretions of the right people seldom strike her as foolish or wrong. Once, to be sure, we find her faintly demurring to a fad of the moment. In 1810 it occurred to some one to make a fashion of shoemaking. Says Mrs. Spencer:

> Marianne is busy learning to make shoes. Archy was so pleased that he has begun. The shoemaker says he does very well, but he thinks Lord James understands better. The Master is a Scotchman. What think you of Princess Charlotte learning the trade? It rather discomposes me, as it is not an amusement for a Queen of England.

One mark of breeding belongs to this correspondence as a whole—a simplicity and lack of strain very different from the "literary" style, certainly, of its earlier years. It is clear that these people write to each other as they speak, with the result that we get an impression of reality, of direct contact and acquaintance, which is rarely given by old letters. The record is like a shifting, vivid "kinemacolor" of two social generations which are, as Mr. Stirling says, of "a date so near our own that it has all the charm of similarity—with a difference; and it is just this likeness and unlikeness which lend such piquancy to their experiences."

Poems and Songs. By Richard Middleton. New York: Mitchell Kennerley.

Poems and Songs: Second Series. By Richard Middleton. The same.

The Ghost Ship and Other Stories. By Richard Middleton. The same.

The Day Before Yesterday. By Richard Middleton. The same.

Perhaps the best approach to Middleton's poetry is through his prose, as included in the two latter volumes of the series, "The Ghost Ship" and "The Day Before Yesterday." In some respects his prose style is better, if anything, than his poetic. It is clear, direct, and unmannered. Some of the nobler qualities of English prose it lacks; but it has many of the minor charms and graces. And if it is slighter and less significant than his verse, it serves, at all events, to reveal the characteristic mood of the verse and its dominant spirit.

On the whole, then, Middleton's prose is marked by a kind of artificial childishness or naïveté. It is whimsical, even elfish. In this manner "The Ghost Ship" itself is a little masterpiece. But this manner, which seems like a *tour de force* in his stories, is seen to be quite habitual and natural in the obviously autobiographical sketches of boyhood and youth which compose the bulk of his prose writings. It is delicately fanciful; but it lacks the genuine simplicity and good faith, the conviction and seriousness, of childhood.

No; in spite of a curious witchery, a sort of impalpable, moonlight magic, Middleton's prose has no subject; it is pretty nearly destitute of mind. And if his verse seems better off in this respect, it is because the blood and the senses supply a kind of substitute for theme and conviction. At bottom it is characterized by the insubstantiality which constitutes for its author the main attraction of childhood and which lends his prose its elusive little air of factitious ingenuousness. Not that his poetry is ingenuous; it is quite in another key. But nevertheless it is this childlike shrinking from intellectual responsibility, this mood of reverie, of fluid consciousness, which is as significant for his poetical as for his prose mood.

In a single word, then, the prominent trait of all Middleton's work is his distaste for actuality and his search for some outlet or escape therefrom—a trait to which the circumstances of his death supply a melancholy comment. Now, of this amoralism—if we are willing to understand by the term amoralism the very prevalent desire to evade reality and its responsibilities, the refusal to face it and master it—there are two principal forms to-day. The one seeks to dodge the burden of reflection by recourse to a kind of instinctive or spasmodic violence—to passion in the general and popular sense; it substitutes convulsion for resolution, and is illustrated by Mr. Masefield. The other takes refuge in voluptuousness—in a hedonism, more or less refined according to the character of the subject, wherein passion in the narrower acceptation of the word is likely to play a large though not necessarily exclusive part.

Of this latter sort is Middleton's amoralism. In prose it is the innocent sensuality of childhood which gives him his opportunity; in poetry it is love, for it is hardly too much to say that love is the one motive of his verse. But it is withal the illusion of love that fascinates him—the love born of a weakness or a want. About his paganism, as it has been called, there is something *mol* or flaccid. It is not Leigh Hunt's "gingerbread lubberland," of which Carlyle speaks so contemptuously, for sin and sorrow enter it liberally. And yet enter it as they may, they are rather sentimental fillips than stern and reckonable visitants. It is for these reasons that Middleton's "Irene," with its elegiac close, is the most thoroughly characteristic thing that he has done:

> Oh, lovely days long dead! there falls on me
> In this dim world I may not understand
> An echo of your sweetness; in my hand
> One frail, sad rose inspires eternity
> With dreams that are no more, and from the sea
> That beats upon this gray perplexéd land,
> Blows rumor of some merry drunken band
> That keeps your revels still in Arcady.

Sixty Years in the Wilderness: More Passages by the Way. By Sir Henry Lucy. New York: E. P. Dutton & Co. $3 net.

A correspondent, writing to Sir Henry Lucy while chapters from his "Sixty Years in the Wilderness" were running in the *Cornhill Magazine*, commented that there were many oases in his desert. It would not be too much to say that, whatever aridness Sir Henry himself may have found in his sixty years of wandering, in this second volume of reminiscences that he has given us there are for the reader nothing but oases. "Toby M.P." of *Punch* has known

everybody worth knowing in the political world for two generations, and in England politics and society are, or have been in the past, so intimately connected that such a statement is tantamount to saying that there has hardly been a prominent figure in London during the past forty years with whom the author has not had acquaintance.

Sir Henry's position as the reporter of Parliamentary debates for *Punch* has given him a unique standing. A strong Liberal by conviction, he was for some time editor of the *Daily News;* but it is as "Toby M.P.," the friendly critic of all parties alike, that he addresses his audience. What strikes one most in these reminiscences is the large tolerance of the author. Not only is he above party prejudice, he is above individual prejudice, which is not to say that he has not his likes and his dislikes. He has in part the same quality of mind that was possessed by the late Henry Labouchere, "Labby" of beloved memory, of whom he was a warm friend. There is something of the same veneer of cynicism, overlaid on the same true chivalry that rallies him instinctively to the support of any who have been wounded by the sword of circumstance. What he has to say of Parnell and of Sir Charles Dilke is illustrative of this quality.

A book of this description lends itself to liberal quotation, but we have space for only a few of the good things contained in it. An interesting literary revelation is on pages 4 and 5, where Sir Henry Lucy shows by the damning evidence of parallel columns how Disraeli stole his description of a Derby race in "Sybil" from an old number of the *Sporting Magazine*. A characteristic story of Lord Charles Beresford, which we fancy has not before been told, concerns the time of the Dogger Bank incident, when the Russian fleet, on its way half around the world to make a last effort against Japan, overcome by an attack of nerves, fired upon some British trawlers in the North Sea. At Gibraltar Lord Charles Beresford, in command of the Mediterranean squadron, was awaiting the arrival of the Russians with decks cleared for action. At the height of the crisis, Lord Selborne, the First Lord of the Admiralty, was startled to receive the following private message from the British Admiral: "Most awkward mistake; awfully sorry. Have blown up the Russian fleet; thought they were trawlers." One of many reminiscences of Gladstone, interesting at the present time to diplomatic circles in Washington, tells of his portentous discovery that Pilsener beer was an excellent beverage "that might be taken at luncheon with refreshment and without subsequent regret." One result of this discovery, that might have been unfortunate had the mistake not been discovered in time, was that the G. O. M., sitting down after luncheon to answer a communication from Mr. Pulitzer of the *World*, started his letter "Dear Mr. Pilsener." A story of the late Duke of Devonshire, which confirms the popular impression of him as suffering continually from an excessive ennui in the discharge of what he conceived to be his duty to his country, tells how Sir William Harcourt found him "with his eyes bunged up and his cheeks swollen with neuralgia," and bored to death with his medical attendant, Robson Roose, who also was in the habit of physicking Labouchere. "Always," complained the Duke, "imploring me to take care of myself for the sake of the country. I told him I'm damned if I would. Expect he says exactly the same thing to Labby."

Though no promise is held out of a third volume of reminiscences, one cannot but surmise that the material collected by "Toby M.P." in the course of sixty singularly fruitful years in the wilderness is by no means exhausted, and hope that he has more good things in store for us in the future.

A Modern History of the English People. By R. H. Gretton. Vol. I, 1880-1898. Boston: Small, Maynard & Co. $2.50 net.

Mr. Gretton has essayed a difficult task, in which he has been but moderately successful. The writing of contemporary history is beset by many pitfalls. It is easy to fall into diffuseness, when living memory and superabundant records thrust forward a confusing array of facts. He who resists this temptation will instantly find himself put to it to justify his theory of selection and exclusion. Then there is the problem of the form of narrative. Shall one take several salient features of the period and write a chapter about each, telling the story continuously from beginning to end? Or shall one elect annals?

The author has chosen the latter method. He covers the two decades year by year. This necessarily gives his pages the appearance and something of the scrappy dryness of an annual review. True, Mr. Gretton introduces a certain variety. He looks before and after sufficiently to knit the threads of one chapter to those of another. And he has gone into the biographical as well as the chronological records, so that personalities and an occasional anecdote break the monotony of his recitals of fact. But monotonous the volume frequently is. The author obviously has a political and social philosophy of his own, but it is hardly able to get itself free from his material. We see it only in hints and bits. Possibly, when his survey is completed in a second volume, he may take a longer breath and characterize with more fulness the main tendencies of the time which is treated in his history. But so far we see the movement merely in snatches and fragments.

By his very title Mr. Gretton plainly sought to convey that his predominant interest would not be political. And he does indeed faithfully set down inventions and their influence, social changes, educational developments, the shifting fashions of amusements and sports, popular fads, passing "crazes," and so on. Yet all these things have a way in his pages of coming to affect the conception or practice of government, so that, in the end, the reader feels that it is, after all, a book chiefly about politics. Mr. Gretton's pace is too rapid to permit him to give large impressions. He strives to be impartial, and we have found him highly but not invariably accurate. His book is one to be valued for reference more than to be kept by one as a resource.

Notes

Late this month Houghton Mifflin Co. will bring out: "O Pioneers," a story of Western life, by Sibert Cather; "The Life of John Bright," by G. M. Trevelyan; "The Hand of Petrarch," a collection of short stories, by T. Russell Sullivan; "A Scout of To-day," by Isabel Hornibrook; "The Life of William Ernest Henley," by L. Cope Cornford; "History of Belfast, Maine," Vol. II, from 1875 to 1900, by Joseph Williamson; "Industrial Education, its Problems, Methods, and Dangers," by Albert H. Leake; "Problems of Educational Readjustment," by David Snedden; "The Home School," by Ada Wilson Trowbridge, with an introduction by Randall J. Condon. Later in the season this firm will publish "Newspaper Writing and Editing," by W. G. Bleyer.

The publication is announced by Ginn & Co. of a volume of "Anniversary Papers," by colleagues and pupils of Prof. George Lyman Kittredge, in honor of the completion of his twenty-fifth year of teaching in Harvard University.

Putnam's announcements include: A reprint of the first three volumes (entitled respectively, "Adolescence to Manhood," "Scientific Career Inaugurated," "Dynamic Sociology") of "Glimpses of the Cosmos," a work by the late Lester F. Ward; "The New Agrarianism," by Charles W. Dahlinger; and the following Cambridge books: "English Monasteries," by A. Hamilton Thompson; "Theocritus, Bion, and Moschus," translated into English verse by Arthur S. Way; "A Descriptive Catalogue of the Manuscripts in the Library of St. John's College, Cambridge," by Montague Rhodes James; "Prima Legenda," first-year Latin lessons, by J. Whyte, and "A Greek Vocabulary," for use in schools, by T. Nicklin.

Mr. Edwin Björkman's new volume of essays, "Voices of To-morrow," to be published by Mitchell Kennerley, deals in great part with Strindberg, the authorized edition of whose plays was translated by Mr.

Björkman. Other "voices" are Björnstjerne Björnson, Selma Lagerlöf, Francis Grierson, Maeterlinck, Bergson, George Gissing, Joseph Conrad, and our own Robert Herrick and Edith Wharton.

"The Apocrypha and Pseudepigrapha of the Old Testament in English," with introductions and critical and explanatory notes to the several books, edited, in conjunction with many scholars, by Dr. R. H. Charles, is about to be published by the Oxford University Press. The work is in two volumes, and there are twenty-eight contributors. This will be the first complete English edition of the non-canonical Jewish literature of the two centuries before and the century after the birth of Christ, and the index alone will occupy 140 columns.

Edward S. Corwin, of Princeton, will bring out in July, through Holt, "National Supremacy: Treaty Power versus State Power."

In the autumn John Lane Co. will issue Prof. Stephen Leacock's new book, "Behind the Beyond."

August publications of the Century Co. include "John Barleycorn," by Jack London, and Alexander Irvine's "My Lady o the Chimney Corner," a story of Irish peasantry.

"Wild Grapes," a new story by Marie Louise Van Saanen (Madame Algi), is in preparation by Moffat, Yard & Co.

Mr. Cecil T. Carr has edited for the Selden Society a volume of "Select Charters of Trading Companies." These comprise forty-one grants made by the Crown between 1530 and 1707. The work will soon be published.

The Selden Society will also publish shortly the third volume of the "Eyre of Kent," 6 and 7 Edward II, edited by W. C. Bolland.

The first part of Martin Anderson Nexo's "Pelle the Conqueror," a Danish classie, is to be brought out by Sidgwick & Jackson in an English translation.

Routledge will have ready in the autumn "A Dictionary of Universal Biography," by Albert M. Hyamson. There are about a quarter of a million brief entries.

Among the birthday honors are a baronetcy for Mr. J. M. Barrie, and knighthoods for Dr. J. D. McClure, Mr. Claud Schuster, and Dr. A. W. Ward.

The "Selected List of Municipal and Civic Books" (New York: American City Bureau) is more than a catalogue of the 345 volumes named in its pages, since each of these books is briefly described, and in many instances its position in reference to disputed questions indicated. More than half of the books noted have appeared within the past three years.

In his discursive accounts of Italian cities Mr. Edward Hutton has reached "Ravenna" (Dutton). He writes with especial enthusiasm of the Dark Age, when Ravenna "held during an appalling interval of terror and doubt the most precious thing in the world"—to wit, the corpse of the Roman Empire. Though we may differ from him as to the preciousness of that corpse, no one can deny that it was these centuries of the Early Christians and Ostrogoths and Byzantines that bestowed on the city its enduring significance. Mr. Hutton discusses history, art, religion, or what you will with the facility and assurance of the practiced decanter of information. Though he writes loosely and is never authoritative, he may be recommended to travellers who desire an outline of Ravenna's story and monuments. Some of the illustrations, by Harald Sund, are unusually good.

The fourth volume of the "Cyclopedia of Education" (Macmillan), edited by Prof. Paul Monroe, includes titles from Liberal Arts to Polyhedron. A large amount of useful information is contained in the articles on various topics of educational history and biography. Dr. Abraham Flexner's presentation of the defects and needs of American medical education should have a stimulating influence in extending the results of the examination of the medical schools of Europe and America, which he made for the Carnegie Foundation. A considerable portion of the volume is taken up by presentations of State systems of education, these articles being by Elwood P. Cubberley, professor of education in Leland Stanford, Jr., University. The topics treated under each State are Educational History, Present School System, School Support, Educational Conditions, Teachers and Training, Secondary Education, and Higher and Special Education. The systems of twenty States are there considered. Of the noteworthy articles may be mentioned Horace Mann, by Will S. Monroe; Educational Aspect of Modern Missions, by James L. Barton; Military Education, by Eben Swift; and Pestalozzi, by Henry Holman. In the article on Libraries, by Charles K. Bolton, of the Boston Athenæum, the statement of the Biblical book of Ezra that Darius scarched the library of Babylon for a Jewish decree is quoted as historical. The verse might be cited to show that such an institution as a hall of records was known at the late date of the origin of the book of Ezra, but the statement quoted is certainly unhistorical. One might have expected in a Cyclopedia generous in inclusion of biographical material a slight mention of the late Dr. D. K. Pearsons, benefactor of American higher education to the extent of above $5,000,000. The historian Livy, the friend of so many generations of college freshmen, receives no notice, but to Education for Nursing is accorded eight pages.

"The Vital Study of Literature" (Sergel), by William Norman Guthrie, holds out an alluring promise. It seems to offer in place of the numerous profitless methods of studying literature now in vogue one that is really effective. Its avowed purpose is to reduce the race of "educated illiterates" to extinction. Evidently the author comes from Mount Sinai, or has ascended the highest peak of Pisgah. His plan is the very simple expedient of getting out a descriptive catalogue of masterpicces. In it there will appear no biographical details, no historical explanations, no estimates by great critics dead and gone—in short, nothing which the publishers find most interesting to the race of educated illiterates. It totally ignores what seems to many now a really vital way of reading literature, a consideration of the ideas, of the implicit philosophy, of the author. The essay develops by a very profuse employment of language six canons: grasp of stuff, composition, construction, style, modernity, symbolic suggestiveness. Aside from the confusion of thought evident in these tests, one wonders whether Mr. Guthrie has heard of the canons of seventeenth-century criticism and of how devitalizing they were. He should at least have heard of the notorious rigor with which a certain Thomas Rymer applied them to one of our English dramatic masterpieces.

As an illustration of this method Mr. Guthrie furnishes—what? Translation! One would imagine that the last thing in the world you could get an illiterate to do would be to translate. Not at all, according to this authority, for he at once studies translations from the *Hebrew*. But he does not apply his canons. On the contrary, the method is historical and linguistic. In speaking of Coverdale's translation of the Bible he says: "Respect for the integral imaginative unity was not in his philosophy, or in that of any scholar of his times." The same is true of his discussion of Dante Gabriel Rossetti's translations. In comparing Arnault's "La Feuille" with Leopardi's "Imitazione" and Rossetti's "The Leaf," he uses the biographical method very largely. In short, the critie does not seem to have unlimited faith in his own canons. None of the avowedly critical papers in the volume applies these six tests. In a courageous effort to elucidate William Blake's symbolism, he aetually declares that to understand him one must master "by sympathetic study the literature that influenced him." The drift of Maeterlinck is explained by a contrast with Henry Mills Alden's "The Study of Death." Indeed, interesting and acceptable as some of the judgments are, none of the eleven papers betrays any special originality in eritical opinion and none whatever in critical method.

In the volume of Transactions of the Royal Historical Society for 1912 (London: Office of the Society), the president, the Venerable Archdeacon Cunningham of Ely, discusses the significance of the family as a political unit, especially in Scotland, where the family continued longer than anywhere else to be a unit for the exercise of political functions or, as it may be otherwise expressed, the organ through which the activities which we call political were carried on. Dr. Cunningham shows that no proper understanding of Scottish history can be obtained unless the element of personal attachment is taken largely into the account, and he utters for the benefit of students of British history the following word of warning: "Scottish history has suffered from being studied as If it were a faint reflection of the history of England, where national organization was so prominent from the time of the Conquest, and where there is a long story of true national life. But Scotland," he adds, "has never been merely a feeble imitation of England; her development has been in many ways independent, and it cannot be properly understood if we persist in viewing it with eyes that are adjusted to the English focus."

In the same volume Prof. C. H. Firth continues his contribution to the ballad history of the early seventeenth century; C. K. Webster furnishes a new study of Castlereagh's foreign policy, and quotes ex-

tensively from the Foreign Office papers to prove that Castlereagh was the real upholder of the equilibrium of European territorial power; and H. G. Richardson, in a careful investigation of the parish clergy of the thirteenth and fourteenth centuries, shows that these men constituted a regular part of the agricultural village, holding acres in the open fields, suing and being sued in the manorial courts, and in other respects standing as peasant priests taking their places among the more prosperous freemen and copyholders of the community. A paper on the Commonwealth charters follows, and the volume closes with two suggestive essays bearing on commercial history, one by Professor Szelagowski and N. S. B. Gras, of Harvard, on the Eastland Company in Prussia, 1579-1585, and the other on the Records of the English African Companies, by Hilary Jenkinson, an excellent survey, though the writer is quite wrong in thinking that these records were "practically unknown" until he examined them.

There seems to be no good reason why that clever but inconclusive German pamphleteer, Maximilian Harden, should appeal to English readers, yet within two years two collections of his articles in the *Zukunft* have been translated into English—the latest under the title of "Monarchs and Men" (John C. Winston Co.). Harden does not usually bow before the great, but his worship of Bismarck knows no abatement, as witness his ninety pages on The Emperor William II, and his dislike of the Emperor Frederick III and of Gen. Waldersee is as pronounced as ever. Of the former he says: "We have grown to distrust the martial fame of princes since even the Crown Prince Frederick William became a weighty hero," and of the latter: "He is a figure to which you will find no equal in the history of the Prussian army; a pious assassin out of the pages of some criminal novel." A sentimentalist at bottom, like so many rhetoricians of his stripe, he has a warm heart for the Vienna burgomaster, Karl Lueger, whom he absurdly overrates, while he is rather puzzled by the popularity of the unemotional King Edward, whose matter-of-fact common sense he clumsily sums up in the phrase: "There was not in the whole United Kingdom a more industrious commercial traveller or a better merchant." The articles on Czar Nicholas II, Francis Joseph, and Albert of Saxony are commonplace, with all their superficial learning and occasional pungency, while the imaginary deliverances of Tolstoy and Rockefeller are the worst example of Harden's inflated bombast. In the article on Briand, as he often does, he runs analogies into the ground. "In his earlier years," he says, "Briand was, like Danton, a lawyer, and it looked as if he would become a Babeuf"—and thereupon he devotes exactly one-half of the article to Babeuf. The most interesting of the essays is the one on Leo XIII, where the subject lends himself to the treatment—the inklings of mysterious occurrences and suggestions of profound state secrets by which Harden holds his German audiences. The translator has done his part well, but he has not the remotest idea of the transliteration of Russian names.

Albert Gubelmann's "Studies in the Lyric Poems of Friedrich Hebbel" (Yale University Press) are intended, as appears from the sub-title, first to draw attention in a general way to the sensuous elements in Hebbel's media of expression, and, secondly, to exhibit his employment of colors, sounds, silence and solitude, and the tactual sense, for æsthetic purposes. Two introductory chapters on the poet and his æsthetic theory are written with full knowledge of Hebbel's own confessions and of the many recent attempts to systematize these. The chapters, which may have their uses for the general reader, are not distinguished for any illuminating presentation of facts familiar to the specialist. In the chapters that follow, however, there is a new collocation of data derived from thorough examination of the poems in question. The result is calculated to contribute to an understanding of Hebbel rather than to a better appreciation of his works, and undoubtedly the total impression justifies the author's opinion that "too little has been said about Hebbel's acute sensibility and his passionate surrender to the impressions of objective reality." There may, indeed, be a far-reaching significance in the fact that out of 278 instances of color, Hebbel uses red 83 times and golden 45. Otto Ludwig got a sensation of red from Schiller's poems, and of golden brown from Goethe's. But it is hard to find value in all the details of such statistics, and the statistician has to be exhaustive. Dr. Gubelmann has done his work with exemplary devotion. In the present groping for methods in stylistic investigation, every honest effort is welcome. Whether in this case the product is an adequate reward for the toil, time only can determine.

Wilbur F. Gordy's "American Beginnings in Europe" (Scribner) is an attempt to embody in a textbook the recommendations of the Committee of Eight of the American Historical Association, regarding the history programme for the sixth grade. In order to impress upon the child that "our national history is a part of the history of the world," the story of American "beginnings" is carried back to Greece and Rome, and brought down through the Middle Ages to the period of discovery and early European occupation. Mr. Gordy's book, in other words, is an elementary survey of the history of western Europe to the end of the sixteenth century. Whether pupils of the grade for which the book is designed will get from it much idea of the continuity of history, or come to think of Europe as existing for any other purpose than to produce an America, is at least problematical; but for Mr. Gordy's execution of his difficult task we may express a hearty commendation.

To those who desire a brief, well-written sketch of American history on unconventional lines, and who can excuse a title that does not particularly describe the contents of the book, Edwin W. Morse's "Causes and Effects in American History" (Scribner) may be commended. Mr. Morse's apparent contempt for "the bare facts of history"—is it not about time to discard that meaningless expression?—and his professed purpose "to supply to the imagination a key to the real meaning of the evolutions . . . of the historical pageant," arouse at the outset a suspicion that he either does not know his subject or else has a thesis to defend. On the whole, however, the narrative is straightforward, there is an abundance of fact and incident, skilfully grouped, and the frequent generalizations and conclusions are well grounded. The most obvious defect of the book, from the standpoint of one who really wishes to understand American history, is its neglect of political and constitutional development; a defect not sufficiently offset by interesting chapters on industrial growth, the "high tide of American commerce," and the progress of literature, the fine arts, and education.

Samuel B. Howe's "Essentials in Early European History" (Longmans) follows the suggestion of the Committee of Five of the American Historical Association and of the New York State Regents in their recent "Syllabus," and includes in one survey the ancient world, the Middle Ages, and modern Europe to the end of the seventeenth century. The book has sterling merits. The compact narrative is interestingly written; the facts are typical, and the difficult problem of continuity is handled with more than ordinary success. Mr. Howe has evidently approached his task in a genuine historical spirit. He is not afraid of names and dates, so long as they are important; and he does not depreciate the past in order to give his work a modern ring. His treatment of the Protestant Reformation is a commendable example of fairness and historical perspective, and the chapter on the English colonies will be appreciated. There is a wealth of pictures and maps, most of the former being of actual historical objects or places. The treatment of reading references is particularly novel. Instead of appending to the several chapters lists of books useful for teachers or mature students rather than for high-school pupils, and not readily obtainable outside of large libraries, the references are confined mainly to a few carefully chosen and inexpensive works, the contents of which are analyzed for the purpose of the topic in hand. The book can hardly fail to help on the growing interest in general European history as a high-school study.

Maurice Louis Muhleman, economist and financial expert, died last Thursday in Bronxville, N. Y. He was in his sixty-first year. Mr. Muhleman had been for nearly thirty years in the service of the Treasury Department, fourteen years in Washington and fifteen in New York city, as Deputy Assistant Treasurer of the United States and cashier at the Sub-Treasury. He retired from the Treasury Department in 1901, and since then had devoted his time to the preparation of treatises upon monetary and financial matters. As a student of banking methods, he had written much in advocacy of a central bank, and upon this subject the financiers of Wall Street and the Government authorities regarded him as an authority. He wrote "A Plan for a Central Bank," "Governmental Supervision of Banks," "The Money of the United States," "Monetary Systems of the World," "Treasury System of the United States," "Banking Systems of the World," and "Monetary and Banking Systems."

The death, at sixty-five, is reported from Turin of Arturo Graf, who for thirty years was a professor in the University of that town. He helped to found the *Giornale Storico della Letteratura Italiana*, and wrote, in addition to delicate lyrics of a

somewhat pessimistic tone, "Attraverso il Cinquecento," "Foscolo, Manzoni e Leopardi," "L'Anglomania e l'influsso Inglese in Italia," etc.

Sunday Suppers. By Alice Laidlaw Williams. New York: Duffield & Co. $1 net.

Candy-Making Revolutionized. By Mary Elizabeth Hall. New York: Sturgis & Walton Co. 75 cents net.

The difficulty with most cook-books is that they are mere collections of recipes —often in bewildering numbers—the proper use of which presupposes the knowledge of an experienced cook. This objection cannot be made to Janet McKenzie Hill's book. Her connection with the Boston Cooking School evidently opened her eyes to the fact that there are things which must be taught beginners before they can make practical use of recipes. She begins, therefore, with first principles, explaining the object of cooking, telling how to build a fire, and other things about the kitchen range. The different processes of cooking—roasting, broiling, frying, boiling, etc.—are discussed in a separate chapter, and attention is given to a number of preliminaries that are usually overlooked, such as how to draw and clean a fowl and how to take care of vegetables. How much better, for example, the vegetables placed on most tables would be if the cooks followed this simple advice: "Keep in a cool place, closely wrapped in paper or in a closed vessel (a tin pail is a convenient utensil) to exclude the air." There is a time table telling how long different foods should cook, and explaining why there are differences. The philosophy of canning vegetables and fruits is expounded. Directions are given for determining the freshness of fish and the quality of meats. The best ways of brewing coffee and tea are discussed, the writer regretting that today the individual housekeeper scarcely ever takes the time to roast her own coffee. Those who like onions, but cannot digest them, will be interested to know that if parsley is cooked with them, the tendency to flatulence is counteracted. Salt codfish is also, we are told, good for dyspeptics. Glimpses are given of gastronomic history like this:

It is said that the Emperor Charles V visited the grave of the man who systematically introduced into the Netherlands the preservation of herring by salting, smoking, and drying them, as a benefactor of mankind. Lucullus, at great expense, connected a lake near Naples with the sea, in which he might keep sea-fish alive.

In her last chapter Miss Hill discusses such topics as marketing, care of food and cooking utensils, the hospital and the etiquette of entertaining. This last topic opens Linda Hall Larned's "The Hostess of To-day," but by no means makes up the bulk of her book, which, like the volume just considered, consists chiefly of recipes. The so-called "fancy cooking" is rarely attempted in Miss Larned's book; she believes that "the cookery that requires hours of time and the skill of a chef is not often successful in the home kitchen." General directions are given for serving breakfasts, luncheons, dinners, and suppers, formal as well as informal.

The chafing-dish is now seldom ignored in any cook-book. Alice L. James gives 164 pages of her volume to it. For luncheons, for Sunday night tea, for after-theatre suppers, for all occasions when the cook is out or the stove cold, nothing is so convenient as the chafing-dish, in which, in a few minutes, diverse hot dishes can be made with denatured alcohol as fuel. Omelettes and rabbits, creamed dishes, oysters, Finnan haddie, and a hundred other dainties can be had in a moment, and it is real fun to cook them. Indeed, it seems to be the mission of the chafing-dish to ennoble the cook's art and make it fashionable. Miss James devotes her first chapter to its "mysteries"—the proper way of manipulating it—and follows this up with thirty-five menus, each accompanied by several pages of directions. Having disposed of this matter, she gives a chapter to the making of sandwiches—of almost everything edible, be it marine or terrestrial, animal or vegetable.

"Fifty-four Chafing-Dish Recipes, Old and New" is the sub-title of Alice Laidlaw Williams's little book, "Sunday Suppers." Beginning with the first Sunday in January, but without much reference to delicacies in season or out, she provides a menu for every Sunday in the year, with one more for good measure. A humorous headpiece goes with every menu, together with a few poetic lines, usually facetious, like Lewis Carroll's

> Now if you're ready, Oysters, dear,
> We will begin to feed.

From chafing-dish cooking it is but a step to what Mary Elizabeth Hall regards as the "most delicate brand of cookery—the making of confectionery." It is not the making of ordinary commercial sweets that her book is concerned with. She purposes to revolutionize candy-making by using vegetables as a basis. Women on the farm or in the village can gather potatoes, sweet potatoes, carrots, parsnips, beans, beets, tomatoes—even onions—and convert them into confectionery as sweet as that which they buy in the shops, free from injurious coloring matter and preservatives, and very much cheaper. The evil effects of overindulgence are obviated, because, "before an undue amount of sugar is consumed, the very mass of the vegetable base has satisfied the appetite." Moreover, decorative candies that formerly required more skill than most amateur confectioners possess, can thus be made by any one who can model clay or use a cooky cutter. Oriental paste and stuffed fruits are also considered, and there are hints for the caterer and the teacher of children.

Dr. George L. Walton, who some years ago wrote the valuable little treatises "Why Worry" and "These Nerves," will soon issue, through Houghton Mifflin Co., "Calm Yourself."

Cambridge books in Putnam's list include: "Elementary Experimental Dynamics for Schools," by C. E. Ashford; "The Laws of Thermodynamics," by W. H. Macaulay; "Four-Figure Tables," by C. Godrey, and "Elementary Algebra," by the same.

"William Carleton," not content with showing us, in "One Way Out," the way for a city man to succeed in the city, now undertakes, in "New Lives for Old" (Small, Maynard), to demonstrate how a countryman should make good in the country. Going with his wife to a town where the native Americans are sluggish, poorly nourished, addicted to patent medicines, and nearly bankrupt, in a single year he succeeds in rousing them, by the offer of a few prizes and a little advice, to self-respect, energy, and model farming. The book ends with a vision of an ideal country community. As in his earlier book, Mr. Carleton describes the disease more satisfactorily than the remedy, so that one feels a doubt whether he has lived the life that he portrays. He has apparently never heard of spraying, nor has he made the acquaintance of that simple tool, the wheel hoe; yet, in spite of the lack of these indispensables, he raises "bumper crops" of apples and potatoes. Nevertheless, taken with the warning that it can work only slowly, his new panacea is more nearly the true remedy for the ignorant farmer than was his earlier one the salvation of the discouraged clerk. Only a few of us can become bosses of construction gangs; but any typical backward country community can, by using modern methods, greatly improve itself. Mr. Carleton shows how to get in touch with experiment stations, and reveals the help which these State institutions are ready and anxious to give. He points the way to better farming credits, to better marketing methods, and to better home conditions—not the least of which is winter amusement. Marvellous as is his millennium, it is at least a conception of the possible.

Patrick A. Quinn, who died last week at his home in Newark, N. J., aged seventy-

five, was the author of several books on agriculture, among them "Pear Culture for Profit" and "Money in the Garden."

Drama and Music

"The Wallet of Time," a title suggested by Shakespeare's

> Time hath, my lord, a wallet at his back
> Wherein he puts alms for oblivion,

has been chosen by William Winter for a two-volume book of reminiscences of the American theatre from 1791 to 1912. Moffat, Yard & Co. will publish the work in September.

The "Dramatic Index," of which the fourth annual volume, for the year 1912, has just been published (Boston Book Company), is, within its obviously limited scope, a convenient and apparently trustworthy book of reference, although some of the information in it might easily elude the inquirer who did not know under what head to look for it. The claim of its prospectus, that it "unlocks the enormous treasure-house of dramatic literature and criticism in the periodicals of America and England," is scarcely justified by the facts. What it does is to furnish a complete list, alphabetically arranged, of all plays produced in this country and England since 1908, with dates and places of performance, the names of the authors, references to critical comments in contemporaneous periodicals, with lists of plays and books on dramatic subjects published during 1912. All this matter is useful to persons concerned in the daily business of the theatre, although of comparatively small value to the general or special student. The book also devotes a large amount of space, much of which might be much more profitably occupied, to the enumeration of third and fourth-rate actors and actresses, their portraits, and press notices in professional theatrical journals whose printed opinions are entirely negligible. If the record were complete, the case would be different. The conspicuous defect of the book—inseparable from its scheme—is that its references ignore all publications more than five years old. As far as they go, they are full, and, upon cursory examination—a closely critical inspection would involve more labor than they are worth—seem to be accurate. It is a pity that so well-printed, laborious, and precise a work should not have been inspired by a broader intelligence. As it is, it will be precious chiefly to the "profession."

It is rare to find a student of the Elizabethan drama who does not lose the sense of proportion in appraising the works of that period, and we cannot but regard it as an instance of this deficiency when Herbert F. Schwarz has gone to the trouble of reproducing in facsimile the old quarto (1654) of "The Tragedy of Alphonsus, Emperour of Germany" (Putnam)—a third-rate production which was already acessible in the editions of George Chapman. Notwithstanding the catchpenny declaration on the title-page of the quarto, the play is certainly not from the pen of that dramatist. To be sure, the style is not altogether destitute of the idiomatic vigor which is seldom entirely absent from works of its class, and in one or two scenes—especially those between Alphonsus and Alexander, where subtlety is matched against subtlety—it rises somewhat above the average in the handling of a dramatic situation, but, taking the play as a whole, it is obviously crude melodrama and nothing more. A curious feature of it is the frequent introduction of German—both High and Low, accurately distinguished—into the dialogue. As might have been expected, the printer of the quarto often mangles the language which he did not understand.

Mr. Schwarz does not discuss the questions of authorship and date. The interest of the play, however, depends to a large extent on the solution of these questions. In no event could its literary merit be regarded as considerable, but if certain critics were right in maintaining that it belongs to the Pre-Shakespearean drama, it would distinctly gain in historical importance. The editor's introduction is limited to the discussion of various melodramatic features of the play, to which he adduces parallels from the life and literature of the time. These are interesting, as far as they go, but with a little more research in the records of iniquity, both authentic and legendary, of Renaissance Italy, he could surely have given better illustrations of the most striking of these features—namely, the strange modes of poisoning that figure so largely in that age. As the editor states in his preface, his purpose in his Notes has been "to draw as largely as possible upon the records of contemporary travellers for the elucidation of the references made by the dramatist to conditions characteristic of the Germany of his day." The number of quotations, however, from such sources is not large. These notes include, too, Elze's emendations of corrupt passages in the German speeches.

The Drama Guild of Chicago has printed a number of the masques, pageants, and plays produced under its direction, and some of them are astonishingly good of their kind, especially those in which Thomas Wood Stevens and Kenneth Sawyer Goodman are collaborators. Among the best are "The Daimio's Head," an uncommonly quaint and characteristic Japanese fantasy; "Montezuma," dealing with the death of that monarch and the triumph of Cortez, and "The Masque of Quetzal's Bowl." All these are well suited to the spectacular purpose for which they are designed, exhibit imagination and no little literary cleverness, together with an excellent sense of theatrical effect. They are far superior to any of the lighter forms of musical or dramatic entertainment supplied by the regular commercial theatre. "Cæsar's Gods," by the same authors, a Byzantine masque, illustrating the conflict between paganism and Christianity at the court of Julian the Apostate, is rich in spectacular and dramatic incidents, and contains several passages of striking eloquence, but is of uneven merit and shows less originality of invention. In "The Chaplet of Pan," by Wallace Rice and Thomas Wood Stevens, a bit of pseudo-classical May Day romance, there are some very pretty lines, but the situations, if humorous, are somewhat trite and labored. "A Pageant for Independence Day" (Stevens and Goodman), in which the Town Crier fills up the historical gaps and stimulates patriotic fervor after the fashion of Chorus in "Henry V," offers much more illumination and much less buncombe than most of the ordinary exercises for that occasion. "Dust of the Road," a one-act play by Kenneth Sawyer Goodman, is a little work of notable simplicity and effectiveness and most potent moral, founded upon the legend that on Christmas Eve in every year Judas Iscariot has the chance of redeeming one sinner in extenuation of his great offence. It handles a delicate subject with tact. "Ryland," a one-act comedy in which Messrs. Stevens and Goodman are again joint authors, illustrates the closing scene in the life of William Wynne Ryland, the famous English engraver, who was executed for forgery, where the bitterness of death is enhanced by Angelica Kauffman's disavowal of the passion which he supposed her to entertain for him. It is a cruel and somewhat morbid little piece, but is composed with skill and written with insight. Taken altogether, these productions constitute a record of considerable ability and indicate an artistic impetus in Chicago which New York may well envy.

"The song of songs," according to Julia Culp, is Beethoven's "Adelaide." "One must stand breathless before its loftiness, its grandeur, its nobility of sentiments. Such a song for *bel canto*, too! I am thrilled every time I sing it," she remarked to Walter Kramer of *Musical America*. Beethoven himself, she may or may not know, was quite ashamed of this song after he had reached his years of artistic discretion and would have been glad if he could have destroyed all the copies of it in existence.

New Yorkers are not permitted to hear "Carmen" as often as they should. It is a curious state of affairs, because everybody else likes Bizet's opera. In Germany it is even more popular than any of Wagner's works. In the list of last year's performances throughout the empire Strauss's "Rose Cavalier" naturally comes first, with 526 repetitions. (Judging by the fate of its predecessors, it will have about fifty next year.) "Carmen" comes second, with 426 performances; "Lohengrin" third, with 394. Fourth in popularity was "Mignon," which was heard oftener even than "Tannhäuser." The Germans like French opera. In New York "Mignon" has not been sung since the days of Conried.

Zurich celebrated the Wagner centenary by an open-air performance of the folk-festival scene in the third act of "Die Meistersinger." It was near that Swiss city that Wagner lived and composed during a part of the "Tristan" period.

Whatever the public and the critics may think of the professional cacophonist, Arnold Schönberg, some of his colleagues seem to admire him. Richard Strauss and Ferruccio Busoni are two of the judges (the conductor, Bruno Walter, being the third) who gave him the Gustav Mahler prize. This prize was established in memory of Mahler a few years ago. It represents the interest on the sum of 55,000 crowns, which is to be assigned annually to some composer, and amounts to perhaps $350. It may be worth noting that Strauss and Busoni have this in common with Schönberg, that whenever they are at a loss

what to say they perpetrate a crashing discord. As Goethe would have put it:

Denn immer wo Ideen fehlen
Da stellt zur rechten Zeit die Dissonanz sich ein.

"Festival Prelude" is the title of Richard Strauss's latest composition. It was composed by request to be performed at the opening of the new Konzerthaus in Vienna.

Art

PERSIAN MANUSCRIPTS.

Lovers of art and students of literature and history will find much to interest them in a collection of Persian manuscripts recently presented to the Metropolitan Museum of Art in New York by Mr. Alexander Smith Cochran, of Yonkers.

Mr. Cochran's interest in Persia was first aroused by a journey he made through that country six years ago in company with a friend who had long been a student of subjects relating to Iran. Some time after his return to New York he enriched the Museum by the gift of an extremely rare Persian rug which now may be seen displayed in one of the galleries, not far from the Morgan collection of paintings. His present donation fills four large cases occupying the greater part of the Persian room that adjoins the latter collection. It comprises a group of twenty-four manuscripts, some of which are in certain respects unique.

Persian illuminated manuscripts are growing rarer every year, as connoisseurs and collectors well know, and are ever increasing in value because of the exquisite miniatures with which the finer ones are adorned. In this realm and in the line of artistic embellishment, Persia was able, four and five centuries ago, to produce specimens of art that have never been equalled elsewhere in their particular way. The Persian scribes, moreover, were unrivalled masters of calligraphy, because the art of beautiful handwriting was cultivated as one of the highest of refined accomplishments. The bindings likewise in which the Persians chose to clothe the works of their best writers were often masterpieces of workmanship.

It is true that for a time Persia had to borrow from China certain elements, including grace of line and other features which were to be developed further with subtle skill by Mongol artists in Transoxiania and Turkistan; but she made these all her special property in the realm of art. She was prepared in turn to hand to Mughal India her refined gifts which made the artists at the courts of the Emperors Akbar, Jahangir, Shah Jahan, and Aurangzib the greatest portrait miniaturists of the world. The studies of such scholars as the French critics Blochet and Huart, the German authority Sarre, the Scandinavian Martin, whose standard work on the "Miniature Paintings of Persia, India, and Turkey," was published a few months ago in two splendid volumes, render possible a truer judgment of the worth of the present fine collection.

From the standpoint of literature, before turning to the artistic side of the collection, it may be noted that this valuable body of codexes represents the works of the greatest Persian classics. There are five different manuscripts of the famous epic poet Firdausi, who flourished at the date 1000 A. D.; six codexes contain the entire works of Nizami, or parts of the writings of that celebrated romantic poet of Persia who died about the year 1203. Next Rumi (1207-1275), renowned above all in the East as the Persian mystic poet, is represented by a volume copied two centuries after his death and well worthy of note. Then Sa'di (about 1194-1291 A. D.), the centenarian poet and moralist whose name is certainly the best known in the Orient, outside of his country, claims two other fine illustrated and illuminated codexes. The Indo-Persian poet, Amir Khusrau of Delhi, who won well-deserved fame in Hindustan in the thirteenth century through his new castings of Nizami's romantic types, is seen in a beautiful little book, dating from the time of the last of the Mughal Emperors, and bearing witness, by its exquisite paintings and finish, to the fact that the few Westerners who may have paid a visit to his tomb near Delhi can best appreciate the reverence in which this Persian-Indian minstrel was held.

The list is not yet exhausted. Persia's far-famed lyrist Hafiz, in the fifteenth century, one of the great musical bards in all literature, has five hundred and more odes incorporated in a small codex, delicately outlined by ornamental flowerets and adorned by small miniatures to illustrate the subjects. The works of Jami, the last classic poet of Persia, the year of whose death corresponds with the date of the discovery of America, are here in four manuscripts, one of which is peculiarly valuable, as it belongs to Jami's own lifetime.

Outside the realm of Persian works, there are two very rare illuminated and illustrated manuscripts in the Jaghatai Turkish, or language of Eastern Turkistan. They both contain lyric works of the laureate-minister and poet-statesman Nawai, who died in 1501, after a renowned career at the court of Herat in Afghanistan prior to the foundation of the Empire of the Mughals in Hindustan. His fame lasts through his poetry, and one of the copies here presented was transcribed a year or two before his death. We can imagine the interest which it had for courtier friends.

No collection belonging to the Muslim realm of Persia, Central Asia, and the adjacent domains would be complete without a fine copy of the Quran. The oldest manuscript in the Cochran collection is a specially valuable specimen of the Mohammedan Scriptures, dated June 29, 1427, which was transcribed by the hand of Tamerlane's grandson, Ibrahim Sultan, son of Shah Rukh, and brother of Baisunghar, the famous royal bibliophile. To illustrate the Sacred Word by pictures would be against the spirit of Islam, but exquisite ornamentation might be lent to the text itself in the form of chaste embellishment, especially to grace a copy of the Quran transcribed by a prince's hand. Not only that, but this copy descended through the line of the Great Mughals till it reached Aurangzib, the last of these famous emperors in India. He was then a prince in his nineteenth year, and had not yet sat upon the throne. On the back of the last left, Aurangzib records the history of the copy and the date when he made the memorandum of his reading it, in 1638 A. D., two centuries after the manuscript had been transcribed. The court gilder embellished the pages with ornamental gold around his handwriting.

A remarkably precious manuscript of the Haft Paikar of Nizami, containing a romantic epopee on the subject of the Sasanian King, Bahram Gur ("that Great Hunter"), who reigned in the fifth century of our era, furnishes not only a cherished transcript of a masterwork, but formed a gift fit for a king, as it was presented to Akbar the Great by a grandee, whom he had appointed to be Governor in the Panjab. A regal memorandum in a painted medallion on the first page records that it was offered as a special tribute to his Majesty. The year of the gift was 1580, at which time we know that Akbar was at Lahore in the Panjab. The imperial seal and other memoranda attest the fact, and prove the royal ownership; and we know from court records that the works of Nizami were among the Emperor's favorite reading. The volume descended to his grandson, Shah Jahan the Magnificent, as shown by an official signet. But the manuscript has an additional value and interest, as it contains five rare miniatures by Bahzad, the most famous of all Persian painters, whose death occurred about fifty years before. The miniatures are all genuine, as each is signed in the authentic minute handwriting of Bahzad, so fine, as was characteristic of him, that a microscope is needed to decipher the name.

The artistic value of the collection has been indicated already, and we may be sure that books which formed part of the libraries of Oriental potentates and emperors, as shown by seals and memoranda, were choice copies. The fin-

est in the entire set is a magnificent manuscript of the works of Nizami, transcribed by the famous calligraphist Sultan Muhammad Nur, who completed the transcript in the year 1525. This superb codex, which is sumptuously embellished, came from the library of the Safavid Kings of Persia and was among the treasures of the later Shahs. It is written on heavy gold-frosted paper, with a different marginal color to distinguish each of the five long romantic poems, and is encased in the original flap-cover, which is a specimen of rare beauty in the way of binding. But beauteous above all are the fifteen miniatures with which it is adorned. They are from the brush of Mirak, the celebrated pupil of Bahzad, and most famous of all the Persian artists after his master. Regarding this manuscript Dr. Martin writes in terms of the highest praise, when he says: "It is second to none of the same period; there are certainly larger ones in existence, but none of finer quality with such a profusion of architecture and such charming coloring." The views of the seven different palaces in which Prince Bahram Gur visits the seven princesses, his wives from the seven realms of the world, are particularly notable. Of the artistic treatment of these themes Dr. W. R. Valentiner, of the Museum, says:

> These subjects, which demand a different color scheme for each miniature to correspond with the different colors of the palaces, black, yellow, green, and so forth, have always been among the favorite problems of the Persian painters, but never has higher decorative value been given to these manuscripts than by Mirak in this Nizami, in which the hue of the walls in the different palaces is the motive upon which is built up an exquisite symphony of color.

There are points of art to admire in other manuscripts of the set. We may note, for example, the expression of the faces, so remarkably caught in miniature, in a seventeenth-century copy of a Persian classic, Sa'di's *Bustan*, or "Garden of Perfume," which belonged to the library of Shah Jahan and of his son, Aurangzib. The borders of its pages, with extra-decorated insets, are unusually ornate; and it is interesting to observe from the well-worn condition of this copy, with its sixteen official seal-impressions and memoranda, how extensively it was read.

Another manuscript of special value, and more than a hundred and fifty years older than the preceding, as its date is not far from 1465, is one of the four copies of Jami's poems in this collection transcribed a quarter of a century before his death. It is a *Diwan*, or select volume of his lyric and mystic verses, and, besides being richly illuminated, is adorned with sixteen beautiful miniatures, which show strongly the influence of Mongol art, and are important for a study of painting at the time.

The art of calligraphy by the side of miniature painting may be illustrated by another copy of Jami, transcribed by the illustrious penman Mir Ali, in 1523 and 1524; also by the poems of Nawai, copied in 1500 by the hand of the renowned Ali Mashadi.

Imperfect as is this account, it would be still more lacking if some notice were not taken of a special variety of art, shown by five of the manuscripts, in portraying scenes from Firdausi's Shah Namah, Persia's great national epic, composed nearly a thousand years ago. Students of literature are familiar with the tragic episode of Suhrab and Rustam through Matthew Arnold's adaptation of the story in which the unknown heroic son is unwittingly slain in single combat by his warrior father, Rustam. Art connoisseurs will scan with interest the delineations of this fearful scene as drawn by the different artists. Nor will any critic of the brush fail to overlook, among other miniatures, one by Aqa Nuyan in a later seventeenth-century Shah Namah. In it the artist depicts the grief of King Faridun, who, somewhat after the manner of Gorboduc or distantly like Lear, has divided his realm among his three sons; and, in consequence of the bloody internecine strife that arose among them, receives on a golden salver the head of his youngest and best beloved, slain by the elder brothers. Only a great miniaturist could so perfectly convey the poet's conception of a parent's heart-rending sorrow.

Allusion has previously been made to a lovely little manuscript bound in red leather, of the Delhi poet, Amir Khusrau, as an example of Indian-Persian miniature art. It dates from the time of the last of the famous Mughal emperors, Aurangzib, the hero of Dryden's drama. His grandsire, Jahangir, "the Great Mogul," boasted a knowledge of technique in art that could distinguish if a different brush gave the concluding finish to an eyebrow in a portrait. The delicacy of touch in the miniatures of this particular manuscript bears witness to the nonpareil of workmanship attained by the several artists of Aurangzib's court who have affixed their signatures to the paintings.

A concluding paragraph must suffice to bring to notice a series of single-page paintings, most of them not drawn from manuscripts, but specially prepared as examples of art. Among those from India, during the Mughal period, may be mentioned the fine portrait of the Emperor Jahangir; another in which he is depicted as reverently paying his respects to a pious dervish; still a third represents in splendid style his son, Shah Jahan, mounted on horseback. Dr. Martin chose two of these to be among the six which he selected for reproduction in colored plates in his second volume. The Cochran set contains some thirty other single-sheet paintings, but enough has been said to show the importance of this artistic, literary, and historic collection.

A descriptive catalogue is preparing for publication by Prof. A. V. Williams Jackson and Dr. Abraham Yohannan, and will soon appear. A. V. W. J.

"Perspective" (Van Nostrand), as the author, Ben. J. Lubschez, says, is intended for the struggling student who is endeavoring to better himself by hard study, and who yearns, not for the knowledge of the science and theory of perspective, but rather for the ability to make a perspective drawing. For such purpose he thinks it best to use what he calls the "laboratory method," attempting to teach the student first to make a perspective drawing, and then to "study its grammar and rhetoric."

Robert-Louis-Mary Carrier-Belleuse, the noted French painter and sculptor, died in Paris on Sunday. He was a chevalier of the Legion of Honor and had done much decorative work in France and the United States. He was sixty-five years old.

Finance

"PSYCHOLOGICAL MARKETS."

At a certain stage in any prolonged movement on the Stock Exchange, whether up or down, the situation passes under the control of psychological, rather than financial or industrial, influences. Facts and coolly-matured conclusions cease to govern the course of the market, or the attitude of individuals in regard to it. Such considerations are replaced by the free play of imagination. That condition comes about not unnaturally, at such times, for the reason that logical inference from the facts has failed to affect the market.

In an excited rise, the sober critics will have shown, by appeal to commonsense and to the ordinary grounds of judgment, that prices are absurdly high, that all possible good news has been overdiscounted, and that no sensible investor should buy stocks under the circumstances. But the market goes on rising, nevertheless — sometimes through mere momentum from the preceding advance, sometimes because of a frenzy of speculation—and the Wall Street community thereupon concludes, either that powerful forces, wholly overlooked, are at work advancing prices, or else that some occult influence, never before encountered, is under the market. That was the story of 1901, for instance, or of 1905 or 1906.

When, on the other hand, in a prolonged and disheartening decline, conservative judges have begun to warn

the market that the fall has already gone unreasonably far, that prices of good stocks are absurdly low, and that all possible bad news has been overdiscounted, and when the market still goes on declining, a similar resort to play of imagination follows, and in the opposite direction. Wall Street cuts loose entirely from sober reasoning, and gives itself up to the two alternative suppositions—either that something of which no one has ever thought is threatening the country, or else that some malign power, which nothing can resist, has ranged itself against the market. At such times, imaginative Wall Street, and the imaginative Congressional hunters of the Money Devil, come fairly close together in their superstitions.

But the very fact that sentiment and imagination have at such times become the paramount influences in a market means that actual news and real events will no longer be judged in their correct proportions. For good or evil, as the case may be, their importance will be judged in accordance with Wall Street's own hysterical condition. This was the case on two noteworthy occasions in the past week; the outcome was the best possible test of the character of the market.

After the close of the Stock Exchange on Monday, June 9, the Supreme Court's decision of the Minnesota rate cases was handed down. It was not a sweeping decision for either party to the suits. The State Commission's lowered maximum rates were not pronounced unconstitutional, on the railways' ground that they impeded interstate commerce. But there were two important reservations—one, that Congress might at its will extend the Federal power over traffic within a State; the other, more vaguely intimated, that the case might have had a somewhat different aspect if the Interstate Commerce Commission, an arm of the Federal Government, had joined in the suit against this State, as it did in another pending suit, against the State of Texas.

Both these reservations embodied an advance towards the railways' chief desire; the orderly and harmonious regulation of both State and interstate rates. In all other respects, the Minnesota rate decision left the situation exactly where it had been before—certainly no worse. Yet the overnight news of the decision was made the effective cause for an all but panicky break on the Stock Exchange, which spread uneasiness over the whole community. The truth was, the market was in a mood to fall.

After the Stock Exchange had closed on Wednesday, another overnight announcement came. It was the Treasury's declaration that it stood ready, if the banks desired, to issue the "emergency banknote currency" provided by the Aldrich-Vreeland act of 1908. The announcement was in point of fact perfunctory. No likelihood existed that any bank would ask for such facilities. There was not any shortage of circulating medium, and, unless in such historic money hoarding as that of 1907, no shortage could arise which would make possible the use of banknote issues, taxed by the Government as they would be under the Aldrich-Vreeland act, according to length of time outstanding, from 5 to 10 per cent.

Furthermore, there had never been the slightest doubt that, if any real emergency had arisen, a request by the banks, in accordance with the law, would have met with the Treasury's approval. Yet this routine announcement from the Treasury had the result of turning the next day's stock market into a wild stampede of rising prices, in the course of which Wall Street people metaphorically shook hands again, and assured one another that the worst was over.

It may have been "over," or it may not. That question would be hard to answer, unless one were to know exactly what was "the worst." If it was the state of mind which prevailed in the stock markets of Tuesday and Wednesday, when the presumption was that a decline with no determinable check or end was under way, the verdict of the Wall Street community was correct. Perhaps the chief result of the week's extraordinary market, in which the extremes of unfounded inference have been run, will turn out to have been some restoration of mental equilibrium—as a result of which future occurrences, whether financial, industrial, agricultural, political, or judicial, will be measured with more attention to their actual significance.

Simkhovitch's Marxism vs. Socialism

By V. G. SIMKHOVITCH, Professor of Political Science, Columbia University. 12mo. $1.50 net.

Furnishes a thorough and intimate knowledge of all the intricate theories, problems and difficulties of modern Socialism.

Marx's Socialism is based on his interpretation of economic history and economic tendencies. The economic tendencies of to-day are quite different from what Marx expected them to be, and Socialism from the standpoint of Marx's own theory is quite impossible. Marxism has thus turned against Socialism; and the revisionist, the reformist, the Back-to-Kant, the syndicalist and other movements represent a quest for a possible new meaning of the word.

Byzantine and Romanesque Architecture

By THOMAS GRAHAM JACKSON

Two volumes, *with 165 plates and 148 illustrations*

An account of the development in Eastern and Western Europe of Post-Roman Architecture from the fourth to the twelfth century. The work both describes the architecture and explains it by the social and political history of the time. The illustrations from drawings by the author and his son add great artistic value to the volumes.

Volumes I and II, each 294 pages, crown quarto, half vellum; two volumes, $12.50, postpaid $13.25.

AMELIA E. BARR'S Autobiography

All The Days of My Life

"The red leaves of a human heart"

Dr. Henry Van Dyke says in a letter to Mrs. Barr: "Your book is full of human nature. It tells your own story as a woman who has earned her living and her place in the world by faithful loving and by good work. Your patience, your bravery, your wonderful industry shine out in silent beauty. You are not afraid to speak frankly of those spiritual experiences which are the most potent factors of life. Your victory as a woman, your success as a writer, have been won through faith."

JOHN BACH McMASTER'S

final volume of

A History of the People of the United States

Volume VIII will complete this monumental history of the people from the Revolution to the Civil War. It is essentially a history of the people. As each volume was published it immediately became a recognized classic of American history. Professor McMaster's 38 years of preparation has resulted in the production of a masterpiece.

$2.50 *net per volume.* $20.00 *net per set.*

The Flowery Republic

BY

FREDERICK McCORMICK

The famous war correspondent tells the entire story of the Chinese revolution as seen from "the inside." Aside from its historical value, this volume is an exceptionally interesting and entertaining account of the experiences of a special writer. Illustrated. $2.50 net. Postpaid, $2.70.

Two Good Books on the Suffrage Question

By W. L. GEORGE

Woman and Tomorrow

The burning question of Feminism is brilliantly discussed by Mr. George, a man who understands women and who knows what they want.

$1.25 *net.* *Postpaid,* $1.37.

By EDWARD S. MARTIN

The Unrest of Women

The "other side" of the woman question, showing their various desires and disclosing the cause and cure of the present disturbance as the author sees them. $1.00 *net.* *Postpaid,* $1.10.

"Mr. Thurston has come very near to writing a masterpiece like 'The Vicar of Wakefield.'"

The Open Window

An exquisite love fantasy by

E. TEMPLE THURSTON

Illustrated. $1.35 *net.* *Postpaid,* $1.47.

An historic revelation

The Southerner

A tremendous romance of Abraham Lincoln and the Civil War. An epoch-making novel.

By THOMAS DIXON

Illustrated. $1.35 *net.* *By mail,* $1.47.

WOOL-GROWING AND THE TARIFF

By CHESTER W. WRIGHT, Ph.D.
Assistant Professor of Political Economy in the University of Chicago.

With charts, 8vo, 354 pp., $2.00 *net.*

The history of wool-growing in the United States from colonial times to 1907. The volume is a contribution of the first importance to the economic history of the United States, and to the understanding of the tariff situation.

HARVARD UNIVERSITY PRESS
CAMBRIDGE, MASSACHUSETTS.

NOW READY

PICARD'S LA PETITE VILLE

Edited by JOHN C. DAWSON, Professor of Modern Languages in Howard College, Birmingham, Alabama.

The best of Picard's comedies, and the first to be published with English notes and vocabulary.

The text is that of the original edition of 1801. It is primarily a satire on life in the small town, and throws many interesting sidelights on post-Revolutionary France.

It will prove both instructive and entertaining for second-year reading.

16*mo*, 179 *pages*, 40 *cents*.

The Nation

NEW YORK, THURSDAY, JUNE 26, 1913.

The Week

It is not necessary for the *Nation* to say that it thinks President Wilson should have vetoed the Sundry Civil bill, with its vicious "rider." All general legislation tacked upon an appropriation bill is bad in theory and in effect. So clearly was this recognized by the framers of the New York Constitution that they positively forbade "riders" of any kind on appropriation bills. If the law is to be changed, let it be done directly and openly, not by trick or covert methods. And the particular rider on the Sundry Civil bill was peculiarly offensive and dangerous, since, in addition to furtively meddling with the Anti-Trust act, it sought to exempt two classes of citizens from the equal operation of the laws. Mr. Wilson himself frankly declares that this is "unjustifiable in character and principle." He adds that if he could veto this item of the bill by itself he would. In our opinion, he should have used his veto in the only way open to him, sent the whole bill back to Congress as Taft did, and raised the issue sharply before the whole country whether legislation of this kind is to be tolerated under a government that professes to know no favored classes. Not having chosen to do this, he has at least sought to make his position clear before the country. Besides condemning the rider, he declares that it will not prevent the Department of Justice from prosecuting violations of the law "by whomsoever committed." It has funds other than the sum earmarked in the Sundry Civil bill, by the use of which it can "enforce the law"; and the President says that he can "assure the country" that it will be enforced.

In order to remove misconceptions, Chairman Glass has given out a summary of the provisions of the Banking and Currency bill. The measure will have three main purposes—provision of a means for rediscounting commercial paper of specified types; provision of a basis for elastic note issues properly safeguarded, and provision of machinery for doing foreign banking business. This, in itself, is a clear, wise, and simple undertaking; and so far as regards the machinery for rediscount and for doing a foreign banking business, the provisions as outlined are effective. Whether elastic note issues in any proper sense would be provided, is another question. Mr. Glass thus explains:

> Every national bank is allowed to continue its note issue exactly as at present, and, in addition, Federal reserve Treasury notes are authorized to be issued to an amount not exceeding $500,000,000.

The difficulty with our present banknote currency has all along been the fact that it would not expand and contract in response to the needs of trade. But just how would "elasticity" in any proper sense be procured by leaving the $755,000,000 outstanding banknotes exactly in their present status, while throwing into circulation new notes in an amount ranging from $1,000,000 to $500,000,000? Unless our present volume of banknote currency is hopelessly inadequate, this would necessarily be a measure of potential inflation; and it would be so, even if it were absolutely safeguarded by its collateral and its gold reserve, and were taxed with a view to insuring its early redemption.

It is reassuring to learn, from Chairman Glass's statement, that these new notes are to be neither legal tender nor available for bank reserves. But the amount of tax or "interest charge" to be imposed on such additional currency is left discretionary with the national board—a highly questionable provision. The functions and powers proposed for the central Federal Reserve Board appear to be precisely what they were in the earlier draft of the bill. They include the mandatory power of fixing the weekly "bank rate" for the district institutions. Let it be observed that the proposal is not even that a change in the district bank rate, up or down, when voted by the district board, must be ratified by the Federal committee. The decision may originate in the national board, and would be absolutely final. This, and the further provision that the national board may not only "permit" one district central bank to rediscount for another in a different district, but may "require" it to do so, place extraordinary powers in the hands of the Washington commission. That the principle underlying the expedient of a district institution, organized to supervise and rediscount for each section of the country, would be largely impaired by this extreme concentration of plenary power at Washington, is only one of the possible objections. All of the provisions to which we have referred, however, admit of easy improvement or amendment.

On its face, the telegram of resignation sent to President Wilson by District Attorney McNab, of San Francisco, seemed to disclose a highly scandalous situation. The explanation from Washington put the matter in a better light, but still left much to be deplored. Doubtless the Secretary of Labor was, as he says, actuated by a desire to promote the efficient working of his Department when he asked the Attorney-General to postpone the trial of Caminetti until autumn, so that his father, the recently appointed Commissioner-General of Immigration, might have time, before going to California to help in the son's defence, to get sufficiently acquainted with his new duties to be able to combine an inspection of the Pacific Coast immigration stations with that parental concern. But even if it is, as Secretary Wilson says, "nothing unusual to grant a postponement of trial where an immediate trial would seriously inconvenience either party," surely this practice is itself a source of one of the most serious abuses under which our system of criminal justice has so notoriously suffered. No grown man belonging to the poorer and less influential classes of society could dream of getting a four months' postponement of his trial on the plea that he could not get his father to help him with the case any sooner. This younger Caminetti is not a boy, but a married man. He is accused of an outrageous crime; he has the good fortune of being able to command all the legal talent that money can procure; under a law that is no respecter of persons, it is difficult to see any justification for treating him otherwise than as any man under the same accu-

sation would be treated. This is the view of the matter which the President himself seems to take. His open letter to the Attorney-General, while commending Mr. McReynolds's conduct of the Department, demands that the trial shall be prosecuted immediately and unflinchingly.

The motto of the sugar-growers at Washington seems to have been: "Millions for defence and what's a cent or two more of tribute per pound for the consumer?" Here's a feeble industry battling for its tender young life and pouring out money like water in the process. Pleasant is the lot of a sugar agent at Washington. The salary is generous and expense accounts call for no vouchers. Oral accounting has been the proper thing in the beet-sugar circles. "If an auditing board, as you intimate, is to check you up, some skill will be necessary in extending account items." There was plenty of money for entertaining and favorably impressing susceptible Congressional committees, plenty for supplying the country newspapers with patent insides, plenty for the proposed acquisition of a big Chicago newspaper, body and soul, especially the soul. There is nothing remarkably new about the revelations at Washington. It is another picture of protection squatting beatifically over her tender brood—the manufacturer of the generous hand, the vendible or weak legislator, the lobbyist in his various manifestations as buttonholer, whisperer, convivialist, and distributer of patent insides. If only the money and the energy thus expended had been devoted to the fostering of the sugar industry in the canefields of Louisiana, or the beetfields of Michigan, instead of in the corridors of Congress, how much easier their present state of mind would be!

The Panama Exposition at San Francisco is to set a new fashion in colors, according to *Scribner's Magazine*. The Chicago fair was a white city. The San Francisco fair will be all aglow with rich color. Mr. Jules Guérin, who has charge of this department, has said: "When I went to California to study the problem of color, I saw the vibrant tints of the native wild flowers, the soft browns of the surrounding hills, the gold of the orangeries, the blue of the sea; and I determined that, just as a musician builds his symphony around a motif or chord, so must I strike a chord of color and build my symphony on this. The one point upon which I have insisted is that there shall be no white (save, perhaps, a man visitor's shirt front or a woman's summer frock). The pillars, statues, fountains, masts, walls, and flagpoles that are to contrast with the tinted decorations, are to be of ivory-yellow, rich and soft in tone. I have even personally superintended the dyeing of the bunting for flags and draperies." The rooms of the exhibition buildings will present a pattern of red tiles, golden domes, and copper-green minarets. The roof colors will be reinforced by the rich coloring of intervening courts that will be filled with greenery and gorgeous masses of bloom. Their color scheme also will be under Mr. Guérin's control. "Imagine," says he, "a gigantic Persian rug of soft, melting tones, with brilliant splashes here and there, spread down for a mile or more, and you may get some idea of what the Panama-Pacific Exposition will look like when viewed from the distance, say, of the Sausalito Heights across the Golden Gate."

The inquiry into the Stamford disaster has again brought to the front the question of the relation between labor-unions and that degree of discipline which is essential to safety in railway travel. The appeal made by Mr. Bardo, general manager of the New Haven system, before the Interstate Commerce Commission, based on the difficulties under which the management has labored, cannot be accepted as completely sound, but it has in it some elements that deserve consideration. When Mr. Bardo says that the efforts of the management to bring about a high state of discipline have been frustrated by the demoralization in the force caused by the steady fire of criticism to which the company has so long been subjected, the answer is obvious. Certainly, if the demoralization and other dangerous conditions had not been already in existence, as shown by repeated accidents, the criticisms would not have been made. As for dictation by the unions, it was the business of the company to draw the line, in yielding to such dictation, at the hither side of the point where human life is endangered. This may not be the easiest thing in the world, but it can be done by a management strong enough to be equal to its responsibilities. Nevertheless, the whole matter is one of the factors that seriously affect the question of safety, and it ought to be thoroughly looked into by the Interstate Commerce Commission.

After the Harvard-Yale race the talk was of rival strokes. After the Poughkeepsie regatta the talk was still more than ever of rival coaches. The men who rowed in the boats on the Thames and the Hudson come in for comment only as to the degree of success with which they mechanically applied the coach's ideas. Since 1900 Cornell has won the Poughkeepsie race ten times, confessedly because of Courtney. When Cornell fails to win, Syracuse leads, presumably because of Ten Eyck. Possibly, it is the mere monotony of Cornell victories against which a non-Cornellian rebels, but one sometimes wonders what a boat race would be in which the men were not buried beneath the technique. As a mere novelty, the experiment of a race between coachless crews, trained under an elected captain who himself sits in the boat, would be of interest. This might be applying I. W. W. principles to the highly organized game of rowing, but, like the I. W. W., it would be exciting.

"Prof. James Geddes, of Boston University, red, at the ninth annual meeting of the New England Modern Language Association, a paper entitled 'Oral Instruction in Modern Languages.'" No, dear reader, in spite of a certain want of coherence in the preceding sentence, which makes you pause at this point and read again and wonder, neither the author nor the compositor has sinned. We are quoting from the latest number of the Simplified Spelling Bulletin, and there is no intention to convey the meaning that Professor Geddes is something more than blond, or that he is a member of a red invading army as opposed to a blue defending army. The idea is that he, as most of us would say, "read" a paper at the meeting of the Language Association. When the preterite "read" becomes "red," the question arises how much ver-

bal complexity will ensue from simplified spelling which adds to our already generous stock of words spelled alike, but diverse in meaning. When "blue" and "blew" have been simplified into "blu," a sentence like "Men with faces pinched from the cold blu, violently, upon their fingers," will cause trouble. It is odd that philology, already on the defensive, should go out of its way to make itself ridiculous.

It is a strange and a painful thing to read that in any city of the United States a school board should refuse to appoint a woman as teacher in the public schools on the express ground of her being a member of the Catholic Church. This is what was done, however, a few days ago, in Charlotte, N. C., when two young women who had been teaching in the schools were, in the face of an extraordinary public protest against the proceeding, refused reëlection by the board, the vote standing ten to five. The Charlotte *Observer* states that both "were rated among the most efficient in the service of the city," and it seems entirely clear that the action of the school board was based solely on the ground of the religious convictions of the two teachers. The demonstration of right feeling at the public meetings, attended by Protestant ministers as well as lawyers and business men, must be set down to the credit of Charlotte; but the people of that city should not rest content until they have brought about a reversal of the official act of intolerance.

About the only things lacking to perfect existence on board the latest ocean liners is a Futurist exhibition of paintings and a Mayoralty campaign; and even these may come in time. Everything else the Imperator apparently has —palm room, swimming tank, roof garden, cabaret, tennis court, and fair opportunities for golf. There are always enough song-artists of good class crossing the ocean to supply the passengers with grand opera free of charge. Wireless has brought the Stock Exchange into every corner of the Atlantic. The Utopia for which mankind has been seeking so long may literally turn out to be a Utopia in the sense of being found on board a ship which is permanently nowhere. The scientific engineer and the expert in municipal efficiency need not step on shore at Southampton or Hamburg. The highest discipline and order are to be found right on board. Seasickness in the future seems destined to be confined to the top of the Singer Tower and the Ferris wheel at Coney Island.

Ex-Secretary Root's words, at the banquet in this city to Dr. Muller, of Brazil, on the duty of international courtesy, deserve the widest application; but there was somewhat especially fitting in their being inspired by an embassy from one of the most polite of nations and races. Americans do not often reflect upon the Anglo-Saxon bluntness and the Western brusqueness that too frequently characterize their attitude towards other peoples. Still less often do they see anything practically valuable in the connection which other countries maintain between public and private courtesy. Yet no better examples exist than Brazil or Argentina, where ideals of good manners have been preserved in rare degree. As Mr. Root said, the assumption by the people of more and more direct powers in government throws upon their shoulders the responsibility for a new generosity of attitude towards other nations. And public courtesy can gain much more than immunity from international friction, or even advantages in commerce. Another distinguished Brazilian, Senhor Aranha, Minister to France, is author of a novel dealing with the interplay of Old and New World forces, which Guglielmo Ferrero calls the greatest American book. One of its theses contrasts the European currents from which South America derives "its unchangeable sensibility, the troubled source of poetry and religion," and all its chief social impulses, with the tiny trickle of North American influence in practical and business affairs; and one of its implied conclusions is the immense predominance—despite the growth of American trade and capital—of European leadership. This is not as it should be.

M. Poincaré's visit to London comes so soon after George V's journey to Berlin that the temptation is natural to interpret the second event as a deliberately planned offset to the first. If the talk of increasing friendliness between Great Britain and the German Empire has been made to mean a loosening of the *entente cordiale*, here is the reply. Actually, it is only absurd to peer into the inner significance of every move by the rulers of the allied, friendly, or hostile nations of Europe. Even royalty makes gestures at times which have no particular significance. The French President's journey is therefore neither a reply nor a threat, though it is undoubtedly intended as an affirmation of Anglo-French friendship, which is now entering on its second decade. Of the change which has come about during the fifteen years since Fashoda we need no better index than that Rudyard Kipling should be writing to-day of Great Britain and France

> Wheeling girth to girth
> In the linked and steadfast guard set for peace on earth.

We are far from the time when the crew of the Clampherdown stood out to sea,

> On a cruiser won from an ancient foe,
> As it was in the days of long ago,
> And as it still shall be!

It requires a little effort to recall that only a few years ago one of the most conspicuous and persistent items in the news was the tale of extraordinary increase of pauperism and of unemployment in England. This lasted for perhaps two or three years; and not only was the impression as to the actual extent of the phenomena grossly beyond the truth, but nearly everybody seemed to take it for granted that here was an appalling new difficulty of a deep-seated and permanent character. Among the men who kept their head, we remember, was John Burns, a circumstance of great importance, since he is president of the Local Government Board. Well, the statistical statements on both pauperism and unemployment have now, for two or three years, been steadily quite the reverse of all that we were hearing at the time referred to. In pauperism the latest returns for England and Wales show a total (indoors and out-of-doors) of 17.4 per 1,000 inhabitants, for the month of April, as compared with 18.9 for the corresponding month of last year; while in the same month unemployment among trade-union members was down to 1.7 per cent., which is the best for any month on record, the lowest hitherto recorded having been 1.8 per cent., in November, 1912.

THE NEW DIPLOMATS.

Counting President Wilson's recent diplomatic nominations as confirmed and accepted, we have to-day no less than five men of letters to represent the United States at European courts. London has W. H. Page. Rome has Thomas Nelson Page. Dr. Van Dyke is appointed to The Hague. Maurice F. Egan, now Minister at Copenhagen, is reputed to be in line for promotion. President Schurman, of Cornell, is our Minister at Athens. Mr. Meredith Nicholson, also, was asked to go to Lisbon. If Mr. Wilson keeps up the pace set by the nomination of four bookmen in a row, the conditions obtaining when Motley, Lowell, John Bigelow, and Andrew D. White were ministers plenipotentiary, and Bret Harte and W. D. Howells combined the pursuit of literature with the performance of consular duties at Glasgow and Venice, will be reproduced in kind if not in degree. None of the new men we have mentioned measures up to Lowell or Motley or even to Harte or Howells, but their number is goodly. And if the Wilson Administration applies the literary standard to the consular service as well as the higher diplomatic posts, the effect on this country may be as beneficial as on our prestige in Europe. Ambassadorships and Legations for successful writers and editors, humbler consular posts for writers who still have to make their way, might render the files of our State Department a treasure-house for the future student of American literature.

If the choice confronting Mr. Wilson were one exclusively between appointing men of great wealth and men who have achieved distinction in a field which at once commends itself as offering very satisfactory preparation for diplomatic office, there would be few people indeed to take issue with the President. Incidentally, the choice of men of moderate wealth whose interests lie in the intellectual domain is one way of dealing with the vexed problem of adequate housing for our Ministers abroad. A scribbling fellow is not expected to keep up the state of a multi-millionaire. Mr. Page, in London, can afford to live much more humbly than his predecessor, without injuring American prestige. It is not display that will be expected from Dr. Van Dyke at The Hague or from Dr. Egan, if he should be translated to one of the important European capitals. There is, of course, the serious danger that Congress may take advantage of this very situation to justify its niggardly behavior. Any old hole is good enough for the intellectual chap. Plain living and high thinking, you know. But for the moment it must be counted as a relief that we can send men abroad who need not blush for the economic straits to which the richest country on earth subjects its foreign representatives.

One serious objection to the appointment of men of the kind Mr. Wilson has selected must not be overlooked. They represent an improvement over the old system. They do not represent an improvement over the system of diplomatic representation that we ought to have. We refer to the placing of the diplomatic service on a professional basis. A beginning in that direction has been made. It would be a pity if it should remain only a beginning. We have spoken before this of the advantages which the assurance of permanency in the service would hold out to men of high ability and training. We have such men now in the persons of Edwin W. Morgan, our Ambassador to Brazil; W. W. Rockwell at Constantinople, John B. Jackson at Bucharest, and an entire group of Latin-American Ministers, Hitt in Nicaragua, White in Honduras, Einstein in Costa Rica, Heineke in Salvador, and Dodge in Panama. If diplomacy is to be made a career, it is plain that the men who look forward towards rising in rank with time have a highly formidable competition to face, whether it be competition from the money bags or from the writers and college professors. Adequate though we find President Wilson's appointments so far, we doubt whether any amount of literary or academic prestige—except in special cases—could outweigh the claims of special training and experience.

But here again it is an actual condition that confronts Mr. Wilson. Our diplomatic system cannot be made over in a day. We take it that men in the service who have expressed the wish to remain and who have done their work well are not in danger of being summarily displaced. The question is whether there are enough such men at present to fill out the lists. As for the highest posts in the service, there will always be occasions when the professional is passed over for the amateur. Even Great Britain did so in the case of Mr. Bryce.

MISSOURI'S QUEER INSURANCE DOINGS.

Missouri is not, just at this moment, particularly happy over the results of her legislative wisdom in the matter of fire insurance. The leading insurance companies of the world refuse to continue doing business in that State, owing to the unreasonable character of recently enacted legislation, and it is found impossible to provide for renewals of expiring policies. Hence merchants are experiencing great difficulty in obtaining credit, the security furnished by their possession of merchandise and other property being impaired for want of insurance facilities; and large Eastern lenders of money are declining to invest in Missouri mortgages for the same reason. The St. Louis *Republic*, referring to the recent big fire at Springfield, Mo., points to the difficulty that confronts the merchants of that town in their endeavor to resume business, declares that "the State owes it to these Springfield merchants and property owners to put an end summarily to an intolerable state of things," and calls on the State officials for "action which shall make possible once more in Missouri that protection to homes, factories, stocks of goods, and other inflammable property without which credit is dried up and modern business activities impossible."

If, in undergoing these troubles, the State of Missouri could cherish the consciousness that it was suffering for faithfully upholding some high principle, this might be ample compensation for any loss her people should sustain. But an examination of the case compels one to the conclusion that her position is hardly more respectable than that of the famous gentleman in Sam Weller's story who blew out his brains to demonstrate the great principle that "crumpets is wholesome." The Missouri politicians, or, for aught we know, the Missouri business men, seem to have got it firmly fixed in their heads some time ago that the insurance companies must be forced to submit to very severe legislation. Just what that should be, they did not seem to think made much dif-

ference; only it must be something very stringent. The insurance companies had, up to 1911, been subject, like any other corporations or individuals, to the State's general Anti-Trust law; in that year an act was passed which took them out of the operation of this law, and required the companies to file rates with the Superintendent of Insurance, his approval of them as just and reasonable being necessary; in other words, State regulation of rates was substituted for competition. In the present year that policy was reversed, and the companies were again put under the operation of an Anti-Trust law; not, however, the general Anti-Trust law, but a special one relating expressly to insurance. Of this, the crowning feature was the following section:

> In any proceeding against or prosecution of any insurance company under the provisions of this article, it shall be *prima facie* evidence that such a company is a member of a pool, Trust, agreement, confederation, or understanding to control, effect, or fix the price or premium to be paid for insuring property against loss or damage by fire, lightning, or storm, if it be shown that such company or any agent or representative thereof writing insurance has used any insurance rate, or made use of or consulted any ratebook, paper, or card containing an insurance rate, prepared, published, kept, or furnished by any person, association, or persons or bureau employed by, representing or acting on behalf of, any other insurance company or association in and about the making and publishing of insurance rates for use in any portion of this State.

The companies had been content to do business under the Anti-Trust law, or to do business under the State-regulation plan; but at this preposterous enactment they balked. They took counsel together, and promptly concluded that they would cease to write insurance in Missouri so long as they were placed under the operation of a statute which flew in the face of the most elementary facts of any business, and particularly of the insurance business. And now the State of Missouri has for some time been engaged in the extraordinary task of trying to compel the companies to continue in business against their will, by force of legal proceedings. The legal points that have come up in the suit are highly interesting, but the interest of the purely legal side of the matter is, for the layman, altogether overshadowed by what can hardly fail to strike him as the plain horse-sense of the matter. The argument turns, in the main, on two things—the question whether, in point of fact, the provision above quoted from the law is outrageous and oppressive; and the question whether, in any case, the companies have a right to decide for themselves whether they shall continue to do business in Missouri or not.

The second point is more narrowly legal than the first, though the obvious elements of the nature of all business seem almost conclusive as to the absurdity of compelling a person to carry on a business he has no desire to continue; but there is the further question of the lawfulness of a concerted decision to give up business, and this does give room for reasonable dispute. The first point, however, is of an interest far wider than this matter between Missouri and the companies. The preposterousness of the ban placed upon the slightest approach to any mental contact between one competitor and another may, indeed, well serve as a *reductio ad absurdum* of that view of the Sherman Anti-Trust act for which some Spartan statesmen have clamored: the view that it was to be interpreted absolutely, and with no reference to what the Supreme Court has denominated "the rule of reason." As is stated in the brief for the companies, "this law prohibits to insurance companies what is not prohibited in any other kind of business, and what is essential to intelligent competition, knowledge obtained by fair means of the terms on which their competitors are doing business." If some legal satirist had wished to draw up a burlesque statute to show what was the logical consequence of the fanatical view of the Sherman act, he could hardly have done better than to produce this Missouri enactment; and the fact that the Legislature of a great State could put it on the statute books in sober earnest is proof of the fearful and wonderful things of which our lawmaking is capable.

SENSITIVENESS ABOUT CORRUPTION.

In the charges against English Ministers, now threshing out in the House of Commons, there is much more than a party matter. An attempt has, indeed, been made to get party capital out of the affair. Political human nature being what it is, the Conservatives were certain to use the scandal for all it was worth—and a good deal more. But behind all the rumors and recriminations and public agitation, there has existed a wholesome sentiment. It is that the smell of corruption must never be found on the garments of members of the Government. No suspicion of private interest swaying their public acts can be tolerated. It was not always so in England. Merely to mention the names of Bacon and Marlborough is enough to remind the reader what went on "in the good old days." But for two generations, at least, the tradition of the complete integrity of English Ministers, and their entire incorruptibility, has been firmly established. And it has been one of the most precious possessions of English public life. If it had been tarnished by any members of Mr. Asquith's Cabinet, they could not too soon be exposed or too severely held up to general reprobation. By so much, at any rate, there was a proper motive in the Parliamentary inquiry now brought to a close.

A satisfactory ending seems to be arrived at. The original charge of what amounted to gross personal corruption against Sir Rufus Isaacs and Mr. Lloyd George has been withdrawn. They were accused of having speculated in the shares of a company with which a Government contract was at the time pending. In plain language, they were said to have used their official knowledge in order to fill their private purse. But all this is now abandoned. The Chesterton suit for libel showed that not a scrap of legal evidence could be brought into court to sustain the public allegations of fraud or official connivance in the matter of the Marconi contract. All such imputations are left out of the minority report. The most it alleges is that Ministers of the Crown broke the rule against having any financial dealings with a man or a company holding a contract with the Government. But on this point the statements of the Attorney-General and the Chancellor of the Exchequer are such as to disarm their opponents. Asserting their innocence of intent, they admit the indiscretion. Especially do they confess their grievous error in not making a clean breast of the whole affair when it was first brought up in the House. That was, indeed, an act so incredibly shortsighted as to fall into the category of

things worse than crimes; and the suffering which it brought on Sir Rufus Isaacs and Lloyd George one can only say that they richly deserved. But now they are making the fullest amends within their power, and are doing it in the handsomest manner.

This latter aspect of the whole matter is noteworthy. The two Ministers, partly through their own folly, were placed in a cruel position. Yet never for a moment did they seek to brazen it out. They bared their breasts to the fullest inquiry. They voluntarily turned over to the committee their bank accounts, and every shred of private information bearing on the charges. Their one desire was to have all the facts brought out; and when the report was at last laid before the House, clearing them of the loose and foul accusations, they used the occasion not for vainglorious boastings or partisan taunts, but for serious speeches on the absolute importance of keeping public life pure. Their frank confession of extreme carelessness, and their expressions of regret for not having at the earliest moment taken the House into their confidence, fittingly closed their treatment of the affair.

This unhappy incident in England has recently had its counterpart in Hungary and in Italy. The Hungarian Prime Minister resigned a short time ago because it was shown that he had accepted a large sum of money from banks in relations with the Government, not for himself, but for the treasury of his party. In Rome the Chamber has had under consideration the report of a committee that inquired into the frauds in connection with the building of the Palace of Justice. The matter was brought close home to some officials, and in consequence two Deputies have already resigned. Peculation and graft have been cynically said to haunt democratic government. To this it can be rejoined, first, that corruption under absolute government has been much worse, and, furthermore, that democratic government at least develops keen sensitiveness to the evil. Our public life is to-day by no means immaculate; but nothing that may be uncovered at Albany or Washington can rival the "festering news" which made patriotic Americans like Lowell heartsick as they read abroad of the widespread corruption shown by the Credit Mobilier and Pacific Mail inquiries. Since those days we have unquestionably had much less official dishonesty, with a great deal more popular revulsion and repugnance in connection with what corruption is shown to exist.

"RISING HOPES" IN PUBLIC LIFE.

Few in this country took much note of the death of George Wyndham, a couple of weeks ago, but the English papers were filled with long and grieving obituary notices of him. The appreciation broke through party lines. Wyndham was a Conservative, but nobody welcomed his maiden speech in Parliament more heartily than that stout old Liberal, Sir William Harcourt; and Liberals to-day write of him with a sense of personal loss. One reason for this universal feeling of sadness is that there was a tragedy in Wyndham's career. He died at fifty, which is young for an English public man. And for ten or twelve years he had been in a kind of eclipse, due mainly to political causes, but partly also to private failings. Yet he had a most brilliant beginning. Handsome, winning, talented, literary, with a marked oratorical gift, he was early pointed to as one of the "rising hopes" not only of his party but of public life in England. It was thought certain that he would go far. In his early life he was one of a group of young men—two of them are to-day Lord Curzon and Lord Selborne—whose future was much speculated about by their friends. They used to be surer of Wyndham than of any of the others, on the ground that he had "a touch of genius." His fate, however, was to show more than a touch of tragedy.

There have been, of course, many such instances of blighted hopes and careers either cut short or frustrated. They serve, when they occur, to make the struggles of political life seem more than ever like shadows pursuing shadows. People in this country who remember William E. Russell, of Massachusetts, can hardly mention his name, even now, without a sigh. He was so bright and eager a personality, the future seemed to be beckoning to him so confidently, his party and his country appeared to have so great need of him; yet without warning he was taken. In his case, too, the feeling of public loss was not confined to his party associates. All mourned for the rising star untimely sunk below our political horizon.

In all such cases we instinctively look about for such comfort as we can find. That which political philosophers offer is confessedly pretty cold. Their comments amount to little more than variations on the old theme of the uncertainties and vanities of human life. They will remind you that nothing is more fallible than political prophecy. We speak confidently of the high distinction which would have been won, and the great patriotic service rendered, had not death suddenly cut the thin-spun thread; but how do we know that something else would not have intervened—some unlucky drawing in the political lottery, a breaking down of the moral fibre, the paralysis of will—if life had still been vouchsafed? Wyndham, for example, was virtually a failure eight years before he died. And as for the futility of prediction, we might note the fact that, about twelve years ago, a writer who thought that Wyndham might succeed to the leadership of the Conservative party and the premiership, also thought that his most dangerous rival for those honors would be—Winston Churchill! Plainly, the casting of political horoscopes is not so exact a science as astronomy.

Public life, like the life of the race, is forever striving to renew and perpetuate itself; and one of the most pleasing and reassuring things about the entry into politics of men of high promise is the way in which they are received by their elders. The common superficial notion is that there is jealousy and even repression by the Ibsenish master-builders in political life who fear that the younger generation knocking at the door may push them from the scene. But experience does not bear this out. The aspirant has, of course, to go through his time of scrutiny and testing. But as soon as he shows that he has the true stuff in him, he is certain to get encouragement and aid from the older men. When Albert J. Beveridge, to take an example, went to the United States Senate, there was the best disposition in the world, on the part of Senators like Hoar and Spooner, to give the young man every opportunity. If he failed, it was not because of any lurking hostility to him; not because he entered the Senate young, but because

he entered it bumptious, and because the defects which he from the first displayed became more offensive and incurable as time went on. In general, the attitude of the actors already on the political stage, or about to leave it, is one of almost fatherly interest in those who bid fair to carry on the great tradition. This is one reason why the unexpected quenching of a rising hope in public life carries with it so poignant a regret.

George Wyndham was at one time Chief Secretary for Ireland. It is a post which many other statesmen with a fondness for literature have held in our day—Mr. Bryce, Mr. Birrell, John Morley, to mention no others. It was Morley who described the Secretary's office as "that grim apartment in Dublin Castle, where successive Secretaries spend unshining hours in saying no to impossible demands, and hunting for plausible answers to insoluble riddles." The citation may serve to remind us what arduous and repugnant labors public life thrusts upon the young genius. Those as well as the possibility of chagrins and a truncated career he has to face. Yet none of these things seems to dim the fascination which high and influential office continues to wield upon aspiring youth. In their ardors, their devotion, their magnificent contempt for obstacles, each generation sees the promise that the long line of torch-bearers will not fail.

COLLEGE SIXTY YEARS AGO.

Dr. James C. White, Harvard, '53, has printed in the *Harvard Graduates' Magazine* the second and final instalment of the diary which he kept when an undergraduate. In publishing this record it is possible that Dr. White had no other motive than to give entertainment. He betrays no bias of a wistful retrospect, but the reader can hardly fail to make some comparison of college life then and now. An obvious advantage of sixty years ago was the small enrolment—the class that graduated in '53 numbered ninety—as well as the high level of the faculty. Among the teachers, as Dr. White explains in a postscript, "were Professors Walker, Longfellow, Felton, Peirce, Lovering, Jeffries Wyman, Agassiz, Gray, Child, Lane, and Cooke. With such men we were in constant and intimate relations as pupils after our freshman year. Can it be wondered at that we loved the College and remain satisfied and thankful that we received such a training as such men gave us?" The Harvard faculty to-day includes several prominent names, but its general average has of necessity been lowered, owing to greater numbers and the specialization of the age. And the contact of student and professor has not the former intimacy. Norton's struggle to maintain the old way virtually died with him, in spite of all the thought that is still given to the problem.

Though the entries in this diary are largely matter-of-fact, they often call up delightful pictures. We hear of Longfellow's reading from "Faust":

> It was the scene in the beer cellar, and he gave us a very interesting account of student life in German universities, their drinking-songs, duels, corps customs, etc. He is charming in every way, the best-dressed of our teachers, a blue frock coat, gay waistcoat, light trousers, large bright neck handkerchief, side whiskers, and a winning smile.

It is hard to imagine Longfellow with anything less than that full gray beard which from time immemorial has been the awe and inspiration of childish readers of "Hiawatha." It is a pity that it was not there to set off the twinkle which must have been in his eye on another occasion cited:

> At Italian recitation this morning Longfellow said that in a Spanish church a man had been noticed always to kneel with his hands uplifted and covered with a cloak. Many worshippers had at times missed articles from their persons, and it was finally discovered that out from below these apparent hands there came others forward which made themselves busy. I will now give you the application of the story, he added. I have noticed that several of you hold up a little copy of Dante, but keep your eyes directed upon something (a pony) in your lap.

Professor Cooke, of the department of chemistry, also appears to have had an eye for the humorous. One morning after a jollification in Holworthy, which was furthered by six gallons of punch, Professor Cooke, who lived in that building, was asked if the noise disturbed him. "No," he replied, "but the odor did." Upon which young White comments: "This from a man whose daily atmosphere is sulphuretted hydrogen!" Sales, the Spanish teacher, "wears his head powdered, and has a queue; so with his horned spectacles, he represents an old Castilian."

Yale, even at that early day, was Harvard's dearest foe. One entry says: "Have been hearing from one of the crew [was it his good friend Charles W. Eliot?] an account of the recent boat race, and that we beat Yale in rowing, billiards, and drinking." This last item leads the author to explain in a note that intoxication was much more in evidence in college then than it is now. It was not unusual, he says, to see students in the Yard or at recitation in a "jolly" condition. And once the diarist was dropped three ranks in his class for "holding down a neighboring student under the influence of too much ale who wanted to stand up and address the professor." For the improvement which has since taken place many things are doubtless responsible. To athletics, with all its sins upon its head, must be given some credit. Systematic indulgence in sport certainly prevents systematic drinking. But in another respect it is easy to see that the absence of the athletic craze was of great benefit. Students were left with time for outside reading. To-day even those who are not members of college teams can scarcely fail to be demoralized for intellectual enjoyment by the spirit of play which the afternoon imposes. Such an entry as this is not infrequent: "After prayers I returned to my room and read until six o'clock." One can feel also a certain thrill behind the brief lines: "The first number of Dickens's 'Bleak House' has appeared to-day," and "Have been reading 'Henry Esmond,' Thackeray's latest." It may be noted that young White, who was early inclined to science, had a surprising range of interests, though with such a distinguished set of teachers perhaps it is not surprising.

One other point brought out in the diary suggests an interesting comparison. The author remarks that most of the college came of pure New England stock, and implies that it was governed by long-standing Boston traditions. Since then, especially in recent years, Harvard has striven to shake off this "provincialism." It is inevitable, of course, that with the present facilities for travel the university should draw upon the whole country. Yet some look with distrust upon any effort to range Harvard alongside the Western State universities. With a big enrolment has come the attempt at a large cosmopolitanism. This is natural. Even deeply

intrenched Oxford has begun to feel similar stirrings. Yet it may be questioned whether Harvard would not do well to cling to the old standards of the intellectual life. The time may come when universities will react against present tendencies, and if Harvard slips away from her old moorings and the tide does turn back, she will have lost much. It may even be that President Hadley's good-humored reproach that "you can always tell a Harvard man, but you can't tell him much," may be construed as praise.

SELF-DEVELOPMENT FOR BABIES.

Parental despotism is of two kinds. It may take the form of ordinary cruelty or of excessive affection. Of these the second is far more inimical to the welfare of the child, if we remember that the one inalienable right of our babies is the liberty to develop their own individuality. Harshness, in fact, is very frequently a help to the unfolding of infant character. It calls forth resentment, opposition, self-assertion, and so lays the foundation of a strong personality. Whereas affection only bribes or cajoles the young soul into adhesion to standards which it would not always accept of its own initiative. Old-fashioned people are in the habit of suggesting to their children that they ought to love their parents, instead of waiting for the sentiment to manifest itself spontaneously. When Smith hands his youngest born a doll and says, "Do you love your daddy?" he is guilty of a double crime against the child. In the first place, he is laying a basis for the dangerous notion that the child ought to love his father for no other reason than that he is father. In the second place, he is creating the impression that fatherhood expresses itself through the purchase of dolls and toy pistols, instead of by cultivating a judicious aloofness which leaves the child free to respond in kind if his nature so impels him.

Why hide the truth? Bringing up babies means too often keeping them down. It is bad enough that the child, living within the closed circle of the home, is subjected to silent influences which it is ill prepared to resist. We must not accentuate the tyranny of its environment by bringing direct pressure to bear on the child. Truly enlightened parents will strive to reduce even the silent influence of the home to a minimum. One cannot help admiring the young couple who refer to their girl baby as "It," because, as the mother puts it, "we would not impose any check on the development of our child's sex individuality." Even under the best of circumstances marriage is an imperfect institution for the free development of child character. The very fact that it is an institution puts it into opposition to the idea of liberty. Marriage is usually concluded between two persons beyond the adolescent state whose characters are fairly well established and whose outlook upon life is fixed. How can there be any perfect sympathy and understanding between such adults, subscribing to a standardized view of the universe, and the child whose very business it is to surrender itself, with M. Bergson, to the unceasing flux of life? It is one of the anomalies of existence that the spirit of the child must unfold itself to the adventure of life in the company of two people who have settled down. But presumably we must reconcile ourselves to this fact. Not every child can hope for an environment so favorable to the development of a free individuality as Topsy enjoyed, for instance.

It will be observed that when we speak of freedom for the baby, we refer to freedom of the soul. In its physical development it is only right that the baby should be strictly standardized. Fortunately, we are moving in that direction. Enlightened parents will no longer be content with a fat baby noticeably addicted to crowing in the daytime and conspicuously exempt from colic at night. The eugenists have seen to it that Bertillon shall not have labored in vain. Chest and girth measurement, skin texture and muscular flexibility, dental development and vocal range, have all been formulated and prescribed. The baby's right to self-development does not mean that it has a vested right in its adenoids and tonsils. It may be, of course, that if allowed to grow up with defective breathing apparatus it would give us another Keats or Robert Louis Stevenson. But that is a chance we cannot take. As a general rule, it may be laid down that the more we standardize the body the greater freedom we give to the soul. So that the eugenic schedules really operate for the growth of free individualities.

Personality, character, initiative, the *élan vital*—that is what we must expect of our babies. It is true that many babies, imperfectly emancipated from the laws of heredity, will insist on leaving their individuality undeveloped. They will keep on growing along old-fashioned lines, manifesting a thoroughly inconsiderate delight when their fathers come home from business at night, even without bringing dolls and toy pistols. If the habit of preferring parents to strangers is persistent, if a strong inclination to pick up phrases and gestures from the elder children declares itself, the enlightened parent will meet the situation firmly. The child will be trained to be individual. He will be put on a character schedule. From 9:30 to 10 he will be required to think for himself. Half an hour in the afternoon may be set aside for self-assertion. That training will accomplish anything is shown plainly by the numerous systems for developing individuality which have been taught to thousands of grateful customers in return for sixteen cents in stamps.

FRENCH HISTORY.

PARIS, June 15.

"Le Procès du Neuf Thermidor" (Bloud; 3.50 francs), by André Godard, is a book of original study; but its originality may disconcert readers who have not yet made acquaintance with the changes wrought daily, from completer study of documents, in the myth of the French Revolution. It is not so much the rehabilitation of Robespierre, for Albert Mathiez, in more brilliant researches, has carried this much further along traditional Jacobin lines. The present work rather brings to mind Huxley's fear that the Church would end by capturing the doctrine of Evolution. André Godard has hitherto been known by his "Christian Positivism," of which there is an English translation. Here too he writes as a frank partisan, but so that his research and reasoning may be easily weighed:

> The moral balance sheet of the French Revolution constitutes a tremendous problem. Must we wish, were it possible, that it had not been?
>
> . . . Far from appearing as a homogeneous *bloc*, the Revolution reveals itself as an amalgam of social truths and falsehoods, of fruitful enthusiasm and homicidal dementia.
>
> For long, perhaps for ever, those who cannot content themselves with merely taking sides in history will ask, at the

tragic hours of Thermidor—Was Maximilien Robespierre crime struck down by justice, or was he persecuted virtue?

Without any doubt, he was the one and the other.

Dr. Gustave Le Bon, who represents psychological methods which are the latest in scientific history, confesses:

Robespierre, the most influential man of the Revolution and the one most studied, remains in spite of all the least explained. . . . I am quite willing to suppose in him the existence of a kind of personal fascination which escapes us now.

And Lord Acton, who knew more of the Revolution than any other Englishman until now, wavers:

[Robespierre] went to death taking his secret with him out of the world. For there has always been a mysterious suspicion that the tale has been but half told, and that there is something deeper than the base and hollow criminal on the surface. Napoleon [who owed much to him] liked him and believed that he meant well. Cambacérès, the arch-chancellor of the Empire, who governed France when the Emperor took the field, said to him one day, "It is a cause that was decided but was never argued!"

Our author takes these words of Cambacérès for a motto and argues Robespierre's case. He has written a suggestive, not a conclusive, book—a sort of Christian demolition of the Christian legend of Robespierre:

The painter David, who on the eve had sworn to Robespierre to drink the hemlock with him, drank only the shame of his own apostasy. But his conscience protested, and he brought up his sons in the cult of the vanquished. One of them one day said to him sadly, "Thirty years, father, have gone by since the 9th Thermidor, and the memory of Robespierre is still accursed." David replied, "Patience! the day of justice has not yet come."

"Fouquier-Tinville" (Perrin; 5 francs), by Alphonse Dunoyer, is also a new and original contribution, from the documents in the National Archives, to the history of the public accuser of the Revolutionary Tribunal. It marks a step forward in the authentic history of the French Revolution, of which that Tribunal was an essential part. Particularly, it helps to a solution of that lasting enigma in the history of civilization—the Terror. In this way, it is a more valuable book for the immediate purposes of history than the speculations of M. Godard about what Robespierre really meant. We have here the exact detail, from the official records, of the part taken by the public accuser in the Terror. His own defence, when he in turn had to face the guillotine, was already known. We are henceforth in a position to check his defence by the documents in the case. The first part of the book relates conscientiously all that is known of the "Public Accuser," that is, the history of the man until Robespierre disappeared and he became himself "the Accused." In the latter rôle he is the subject of the second and more novel part. Altogether, we have here a consecutive history of the great Revolutionists face to face with their victims of the Terror, to which they themselves in many cases succumbed in turn; and a defence by their chief legal agent, fighting step by step for his own life.

The worst of these men, Carrier, who ordered the *noyades* of Nantes, when he was brought up for trial, cried out in protest—"Everything is guilty here, even to the presiding officer's bell!" Those who made and led the Revolution cannot throw off their responsibility for the Terror. As a witness in his favor, Fouquier-Tinville cited Carnot, one of the members of the Committee of Public Safety whose orders he had executed. Carnot sent word he was too ill to testify. The Accused wrote solemnly: "I have never done anything except in virtue of laws emanating from the Convention." His entire defence he summed up in these words: "I was the agent of the Committees of government. What would you have done in my place?"

Our author writes soberly, compassionately even, with nothing of the partisan:

Sombre and enigmatic figure, this, of Antoine Quentin Fouquier-Tinville. For a long time his name has symbolized, in the memory of men, all the past of the Terror. And for a long time still, I believe, this tragic name will remain the symbol of the "judicial assassinations" [the word is of Boissy d'Anglas in 1795], which were committed by the tribunal of the 10th March, 1793. . . .

Here, in last analysis, is what I think of him.

There is a conflict within him. The balance has been broken between that which is himself at bottom, *bourgeois* and humane, and that which is the functionary and magistrate, the agent of the Committees of Public Safety and General Surety, the priest of Revolutionary justice. Between the magistrate and the private man, within him, in the tribunal of his conscience, there were terrible conflicts. We have the proof of it in his letters to his wife. He was good to his wife and to his children. He loved them tenderly. . . . [But] he had a despotic character. He has the bringing up, the entire education, and habits of a lawyer and public prosecutor, of a man nourished and bred in chicanery and procedure. . . . He confounds his rôle as public accuser with his old habits of legal practice. He wishes to win his suits, and he won them all during the Terror, with a high hand, until the 9th Thermidor.

But he lost one—his own—in spite of a desperate defence, full of talent, holding out against a whole régime. The public vengeance was waiting for him. He was hooted down. Too much blood has flowed. And Paris had had enough of seeing so much blood flowing—daily.

There is no proof of the prevarications thrown up against him. And he died very poor, leaving his wife and his children in cruel want and misery.

"Bleus, Blancs et Rouges" (Perrin; 5 francs), by G. Lenôtre, is a book of six authentic stories of the French Revolution in the provinces, where the Terror was not lightest. This author has earned a unique place for himself among historians of that turbulent time; but he thinks it necessary to answer, in a preface of 17 pages, a critic who accused him of "romantic inventions." And he now gives footnotes with due references and explanations, to show that his "exact particulars" are genuine history. The reading world long ago justified his historical sense and the French Academy has given him recognition. Of his seventeen volumes already published, none has less than fifteen and one has forty-eight editions.

There are shifting sidelights in these new footnotes. For example, we learn that men of both sides of Renan's family—his mother's uncle and his father's father—were Revolutionists actively engaged in the hunt for non-jurying priests and in the guillotining of a mother whose sole offence was her refusal to give them up. It is quite as natural that the grandson of this woman, Taupin, should be a Jesuit priest (still living) as that Renan should have worked out his own heredity.

One story is of a "goddess of reason" who died as late as 1858. She was buried with religious service from her parish church of Notre Dame, where she had received such honor sixty-four years before and where she had been married to an ex-priest by revolutionary rites. Mistral has described such a provincial goddess of reason whom he remembers from his childhood, a single generation standing between us and the historic orgy. No romance can rival in pathos another of these unkempt tragedies, wherein a young girl is guillotined with eight others, and the mother asks to mount the scaffold last, that she may strengthen their hearts to the end.

S. D.

NEWS FOR BIBLIOPHILES.

In an article which Henry Hart Milman contributed to the *Quarterly Review* in March, 1842, he says:

It would not be difficult to form a volume called "Poemata Illustriorum Virorum" which would comprehend names of the highest distinction in every profession, and in the highest walks of public life—the well-remembered prize exercises at school or college, as well as the "Nugæ Metricæ," as they were called by more than one distinguished scholar who has indulged in this style of writing. It is curious how many of our great poets have been distinguished for their Latin verse: Milton, Cowley, May, Addison, Johnson, Cowper, Gray, occur immediately to recollection, and modern names would not be wanting.

And as an example he cites the handsome volume of Lord Grenville. Of this rare

book it will be of interest to give a brief account:

NUGÆ
METRICÆ.
Nos Hæc Novimus Esse Nihil.
MDCCCXXIV.

This is a tall quarto extending to 89 pages. Ten years later three more pages were printed. This appendix is not always to be found with the original, which was printed at Oxford for private circulation. The edition was restricted to 250 copies, and, of course, none was offered for sale. There is no clue in the book to the authorship, but it is known to be the work of William Wyndham Grenville, Baron Grenville, whose title died with him. He was a son of George Grenville, whom Pitt nicknamed "Gentle Shepherd," and a brother of the first Marquis of Buckingham, and of the famous book-collector Thomas Grenville, who bequeathed to the British Museum a library which is one of the glories of the national collection in London.

Grenville was born in 1759, and was educated at Eton and Christ Church, Oxford, where he gained the prize for Latin verse. He entered the House of Commons in 1782, in 1789 was Speaker, and in 1790 was created Baron Grenville. He was an active politician and was the head of the unlucky Ministry of All the Talents. In 1823 he retired from public life to his seat at Dropmore, where he returned to the literary amusements that had charmed his early days. He was, like most public men, sometimes inconsistent, and was indeed a curious mixture of liberalism and conservatism, but it is to his credit that he sacrificed his political career rather than renounce his desire to emancipate the Roman Catholics from the unjust laws which then oppressed them. It is to his discredit that he voted for the bill of "pains and penalties" by which the Prince Regent sought to get rid of his wife; and to his credit that he opposed the slave trade and the imposition of the corn laws, which were passed in 1815, while the House of Commons was guarded by the soldiery.

Whatever [says Dean Milman] may be the proper intrinsic merit of the verses to which we allude, much of their charm consists in their having afforded amusement to the declining years of Lord Grenville; they are a grave and a grateful testimony to the value of such studies from the highest authority. To those who had the advantage of witnessing the tranquil dignity of Lord Grenville's retirement this testimony cannot but be singularly valuable. Deliberately retiring at an earlier period than is usual from public affairs, withdrawn from the passions of political life, with no assumption of philosophic disregard, but with an earnest though contemplative interest in all that concerned the civil and religious welfare of his country—

With all that should accompany old age,
As honour, love, obedience, troops of friends;—

in the gardens of Dropmore, his own exquisite creation, exercising almost a parental care over the university [Oxford] of which he was the Chancellor, and overlooking from his grounds the school [Eton] from which he was educated; entering into all the literature of the day, and discussing a new novel of Walter Scott's with the warmest delight and the soundest judgment—Lord Grenville reverted to those classical studies which he never neglected with fresh delight, and occasionally threw off in his leisure hours these very elegant "Nugæ."

They include Latin translations from James Thomson, Euripides, Milton, Dante, Ben Jonson, Samuel Johnson, and Ariosto. There are two epitaphs on dogs, one of whom was the only living creature who escaped from a shipwreck off Tenby and who swam ashore carrying with him the pocketbook of his master, who perished. There are several versions from the Greek anthology. There is also "a playful Correspondence in Homeric Verse about some French lamps" with Henry Richard Vassall Fox, third Baron Holland. When Grenville proposed to print this, Holland replied with the English poems which were printed in the addenda of three pages, already mentioned. These are so rare that even Dean Milman does not appear to have seen them. One of these, a Sonnet, sent by Lord Holland, may be quoted:

Grenville (whose polished verse Latin or Greek,
Is brighter far than Lamps you celebrate,
Yet smells not of them) marvel not tho' late,
My pert Essays, provoked your Muse to speak,

That now, when grown less circumspect, you seek
To mar your verse, with mine—I hesitate:
For who would season sweet with gall? Who wait
With unwashed hands to deck fair Virgin's cheek?

Haply who deem that swarthy handmaids near
Set off the whiteness of a Lady's skin,
Or mingled Lead makes Gold more pure appear,
Might credit from ungenerous contrast win.

But you, whose jewels need no foil, forbear;
Lest strains that made you smile, should others
tempt to jeer.

Perhaps as a sample of Grenville's Latin verse it may suffice to give his version of the well-known epigram of Æmilianus:

Sume puer, tibi quae praebent dona ultima laetis
Materni, vita deficiente, sinus!
Sume Miser! tua te non ipsa in morte relinquit,
Sed vivum exanimo pectore mater alit.*

Of Grenville's English verse a translation from Ariosto may be cited:

None ever learnt, 'midst fortune's smiles
The undissembling heart to know;
When faith sincere, and flattery wiles,
Alike in outward seeming show.
'Tis when our giddy wheel goes round,
Scattering aloof the servile train,
That friends are proved, and faithful found,
And even in death unchanged remain.

It is not to be contended that Grenville was a poet, but it is interesting to see a man whose life was mainly spent in the political struggles of a somewhat sordid time finding refreshment at the fountains of literature. WILLIAM E. A. AXON.

*It is a matter of interest that a copy of Grenville's "Nugæ," obtained by the good offices of Lord Brougham, set the Lord Chief Justice Tenterden writing Latin verses again after a pause of thirty years. Some specimens may be seen in Sir Egerton Brydges's "Autobiography" (I, 418).

Correspondence

CHAUCER'S "DOCTOUR OF PHISIK."

TO THE EDITOR OF THE NATION:

SIR: The most significant lineament (to filch a pun from the Autocrat) of Chaucer's "Doctour of Phisik" (Prologue to "The Canterbury Tales," A, 411f.) has hitherto entirely escaped attention through the failure of editors to read aright that seemingly simple line:

His studie was but litel on the Bible.

One commentator observes: "This probably refers to what follows. The Doctor spent little time in considering the lilies of the field or in reflecting on the dangers of purple and fine linen." Another calls to his aid Sir Thomas Browne, who confesses of himself and his fellow-physicians: "The villany of the Devil takes a hint of infidelity from our studies and, by demonstrating a naturality in one way, makes hy mistrust a miracle in another. Hence the proverb, 'Ubi tres medici, duo athei,' despite the twenty-nine medical saints and martyrs in the Roman calendar." A third detects "a truly modern flavor about the jibe." Now there seem to be the best of reasons for dissenting from all these views. So far is Chaucer from availing himself of a merely conventional gird at the traditional skepticism of the physician-class, that the true implication of the line is revealed only hy a study of contemporary unfaith. No verse in all the Prologue has a more definite connotation. The Doctor's "study was but little on the Bible," not because he is a typical physician of any or every age, but because he is a fourteenth-century Arahist and astrologer.

This opinion is sustained by a score of passages in Ernest Renan's scholarly volume of nearly fifty years ago, "Averroës et L'Averroisme" (1866). His illustrations prove beyond a douht that among certain of the orthodox of Chaucer's century the great Arahian scholar-physicians and their followers are anathema. At the time of our poet's birth no less than three famous Italian painters, Orcagna, Traini, Gaddi, under the spell of St. Thomas Aquinas, hail Averroës as Antichrist and degrade him to the depths. A French poet of this very date, the author of "Le Tomhel de Chartrose," loudly laments the wide influence of "the cursed Averroës—who was, with all his power, the enemy of our faith, and who chose the life and death of a beast—for no one now lends his ears to hearing sermons from the Bible." Can we wonder then that our Doctor, who derived the larger part of his authority from Arabians—Averroës and six others, Haly, Serapion, Razis, Avycen, Damascien, and Constantyn—should be open to the reproach of neglecting Holy Writ? Of course it does not follow in the least that all widely read physicians of the day were in reality unbelievers. John Gaddesden, who quotes in his "Rosa Medicinæ" the same authorities as Chaucer's Doctor, held a stall in St. Paul's Cathedral in 1341. But our line makes a strong protest against the suggested identification of the fictitious figure with this medical divine.

The chief witness of the disregard of the Word by contemporary physicians is the illustrious humanist to whom Chaucer owed much, Francis Petrarch. At his town of Padua, "medicine, Arabism, Averroïsm, astrology, and infidelity had become almost synonymous terms" (Renan). In his long-winded "Invective Against a Certain Physician," Petrarch accuses the object of his attack of preferring Averroës to Christ, and urges him to begin a contemplation of the person of the Saviour. Again, in one of the best of his later letters ("De Rebus Senilibus," V, 3), written about 1366 to Boccaccio, Petrarch gives a breezy account of a visit from another Averroïst, doubtless a physician, too: "He was one of those who think they live in vain unless they are constantly snarling at Christ or His divine teachings. When I cited some

passage or other from the Holy Scriptures, he exploded with wrath, and with his face, naturally ugly, still further disfigured by anger and contempt, he exclaimed, 'You are welcome to your two-penny church fathers, etc.'" Indeed, the Arabian physicians are ever the good Petrarch's abhorrence; and the charlatanism and vanity of their disciples are often portrayed by him in a manner that suggests Molière and Lesage. The best commentary upon the fine raiment of Chaucer's Doctor is found in another letter to Boccaccio ("De Rebus Senilibus," V, 4), mocking at the superb clothing, magnificent horses, and flashing jewels of physicians, who were surely not "esy of dispence."

The "Doctour of Phisik" is, like all of his class, an astrologer. And, in the fourteenth century, astrology is often branded with infidelity. Tiraboschi's mammoth "Storia della Letteratura Italiana" (V, II, chap. ii, 15), cited by Renan, gives the full verdict in the case of Cecco d'Ascoli, who was condemned by the inquisition at Bologna to discard all his books of astrology and to hear every Sunday a sermon in the church of the Dominicans, because he had spoken against the faith. Three years later, in 1327, he was burned and, like Averroës, was pictured by Orcagna in Hell. Against the background of this orthodox distrust of Arabism and astrology—a distrust which died slowly despite the Averroism of Baconthorpe and Burley—Chaucer's comment upon his Arabist and astrologer, who, inconsistently enough, takes his holiday upon the Canterbury Road, seems not only natural, but inevitable: "His studie was but litel on the Bibel."

Editorial disregard of everything that could illuminate our line is rendered triumphantly complete by the neglect of the early-sixteenth-century foil to Chaucer's Doctor, the Sir John Duclow of "Colyn Blowbol's Testament" (Hazlitt's "Remains of Early Popular Poetry," I, 91f.). This worthy, we are told, "commenced" at many universities of great reverence—and yet "in phisike he cowth no skille at all." Then, far more to our purpose, follow halting verses, which certainly owe much to Chaucer's phrase and yet are very different in their purport:

> Hereby menne may welle understonde and see,
> That in scolys be lad take degre,
> And was welle laboured in the rough Byble,
> Ffor he loved in no wise to be idele.

FREDERICK TUPPER.

Burlington, Vt., June 20.

THE INTERNATIONAL HISTORICAL CONGRESS.

TO THE EDITOR OF THE NATION:

SIR: May I venture to make some corrections of fact in the interesting and valuable account of the International Historical Congress contributed to your columns May 1 by a distinguished authority?

Prince Henry of Battenberg has, I think, been dead a number of years; it was Prince *Louis* of Battenberg who dealt with the attitude of "the Admiralty towards naval history." Professor Egerton was in the chair at a meeting of the colonial subsection (*not* "section"), and delivered an address. It was not, however, a "presidential" address; the only vice-president representing the colonies was Sir Charles P. Lucas. "Mr. Perrin, of the Admiralty, on the English side, and M. de La Roncière, on the French," could not have "read papers that were stimulating and suggestive," because, as it eventually turned out, neither was present at the Congress, nor were any papers read for them, nor were *précis* of such papers provided.

I fully recognize the difficulty of surveying the labors of an entire congress, and I venture, therefore, to correct these errors in detail.

HAROLD W. V. TEMPERLEY,
Secretary to Section IV, Modern History, including Subsections, Naval, Military, and Colonial, in the International Historical Congress of 1913.

Cambridge, Eng., June 1.

TO THE EDITOR OF THE NATION:

SIR: I am greatly indebted to Mr. Temperley for his corrections. The mention of Prince Henry of Battenberg for his brother, the First Sea Lord, was manifestly a slip of the pen, for one may not easily forget the lamented death of the younger prince in connection with the Ashanti War. To have called Professor Egerton's address from the chair a "presidential" address was an error without excuse, as was also the use of "section" for "subsection." The papers that I characterized as "suggestive and stimulating" in the naval subsection were five, not two, in number, and as the papers in that particular section were reported to me as unusually interesting and as the newspapers included Mr. Perrin among those present, I assumed that all the papers listed in the programme came within the category of those described by my informant.

The Congress was very elaborately organized, and any survey of its work was bound to be more or less a coöperative affair. I regret that my account contained any misstatements; but writing as I did on shipboard, without chance of verification, I rendered myself liable to a certain amount of error in matters of detail.

CHARLES M. ANDREWS.

Yale University, June 18.

THE WICKED VANS.

TO THE EDITOR OF THE NATION:

SIR: I desire to utter a word of strong protest against a pernicious tendency in modern American novel-writing. Ever since the early days of the harmless but silly Van Bibber, the American romancer has drawn upon the Van species for his supply of villains. Mrs. Wharton and Upton Sinclair are the last two writers to use perfectly good Dutch names for evil purposes. In the cheaper magazines and in the "movies," whenever the preposition Van is seen, we instinctively hear the soft music of the theme which announces the entrance of the Chief Crook and Millionaire. A few years more of this sort of thing and the very respectable Membership List of the Netherlands Club will read like the catalogue of the Rogues' Gallery of fiction.

We respectfully propose that the American Authors forget us for a while and pay some attention to the O's, the Mac's, the Ski's, the de's, and the Von's.

H. W. VAN LOON.

Washington, June 21.

Literature

MODERN ENGLAND.

The Taylor Papers: Being a Record of Certain Reminiscences, Letters, and Journals in the Life of Lieut.-Gen. Sir Herbert Taylor. Arranged by Ernest Taylor. New York: Longmans, Green & Co. $5 net.

The Making of Modern England. By Gilbert Slater, Principal of Ruskin College. Boston: Houghton Mifflin Co. $2.50 net.

Stolen Waters: A Page in the Conquest of Ulster. By T. M. Healy, M.P. New York: Longmans, Green & Co. $3.25 net.

Sir Frederick Maurice: A Record of His Work and Opinions. With eight essays on Discipline and National Efficiency. Edited by his son, Lieut.-Col. F. Maurice. New York: Longmans, Green & Co. $3 net.

An eminent French student of English institutions, M. Boutmy, maintains that the well-known inclination of Englishmen to jump up and down and shout for liberty is not due to any particular love of liberty, but to the desire, natural enough to men living in a cold, foggy climate, to make themselves warm and comfortable by getting the blood to circulate freely. However that may be, it is certain that England long enjoyed the reputation of being, more than most European countries, the land of liberty, and of possessing institutions which procured, with marvellous efficiency, the happiness and prosperity of a free people. At no time, perhaps, was her fame in this respect more assured than during the years after 1815. The virtues which Voltaire and Montesquieu had celebrated in the eighteenth century were proclaimed in even more uncompromising terms by Niebuhr early in the nineteenth:

> The ever-growing perfection of the British freedom and Constitution since 1688 affords the noblest picture of collective national wisdom and virtue that history can offer. Without a single form being altered or abolished, the possession of freedom has gradually spread through the whole nation. The greatest freedom existed in all things, the greatest freedom a people ever enjoyed. Never, perhaps, was a land in better circumstances than England at the time of the French Revolution. She was the pride and envy of the world.

If intelligent foreigners were so well pleased with English institutions and achievements, it is small wonder that Englishmen themselves were often quite complacently satisfied. And, indeed, the period after 1815 was characterized by a tremendous accentuation of the spirit of provincial egoism, at least in the upper and middle classes: having avoided the plague of revolution, and having la-

bored so generously to save Europe from its effects, they stood high in their own estimation and were inclined to assume a certain air of condescension towards foreigners.

A typical representative of this spirit was Lieut.-Gen. Sir Herbert Taylor, one of the most excellent and upright of men, and an able one, some of whose papers are now published. The "bulk of his official memoranda was destroyed after his death"; and probably some of the most interesting papers were so disposed of. At least, many of the letters which remain are neither very interesting nor very important, having to do with the punctilios of royal intercourse; for Sir Herbert was, during many years, private secretary to George III, Queen Charlotte, and William IV. Fortunately, this does not apply to all of them. The military historian will find the letters written in connection with the campaigns of 1793-94 and 1813-14 of some use. Of greater value still is the correspondence between the King and the Ministry in May, 1832, relating to the proposed creation of new Peers for carrying the Reform bill. But quite the most interesting part of the book is the journal which Sir Herbert kept on a journey through France in 1837, which contains, among many other things, a detailed report of a long conversation with Louis Philippe.

In the journal, more perhaps than elsewhere, the narrow provincialism bred by the Napoleonic struggle is revealed. Taylor was conservative by nature, and the character of his occupation doubtless confirmed him in the disposition to hold to the established order. One would not infer, either from the letters or the journal, that he had lived through one of the great transforming epochs of the world's history. When he died in 1839 he was apparently still firm in the belief that the Revolution was a dangerous *émeute* which, thanks mainly to England, had been put under foot finally. In 1837, wishing to build a house near Cannes, he recognizes the "risk of revolution," but is "persuaded that none producing such effects as that which occurred in 1793 is to be apprehended." The good general was one of many in England to whom it never occurred that there was something in the Revolution to comprehend as well as to apprehend.

Few of the letters, except those mentioned, touch upon the great question of Parliamentary reform in England. What Sir Herbert's own position was scarcely appears. As secretary to the King, it was not for him to express any independent opinion. But we know that he was not very keen for it. His attitude towards reform in general was that of many of his class, and is delightfully exhibited in a letter from Camden inspired by the prospect of church reform—a letter containing views which Taylor pronounced "sound and constitutional." "I think the Church as at present constituted," writes Camden, "so essential to the stability of the monarchy, so essential to the religion and morality of the country, . . . and . . . that its dignitaries are so respectable, and its ministers so well educated, well conducted, and pious, that I should myself very unwillingly promote any change." One recalls that Ruskin wished to keep the judges, if only for the fine effect of their wigs.

In respect to reform, the difference between Whig and Tory was after all slight enough. The Reform bill once passed, it was accepted in good faith by the Tories, and both parties drew together in resistance to all radical propaganda: it will be remembered that Grote retired from Parliament because, as he said, it was "no use defending Whig conservatism against Tory conservatism." A moderate liberalism was, indeed, the strongest tendency of the time. After 1815 none could deny that institutions were bound to change, while few were ready to maintain that the Jacobins had ushered in the golden age of which the philosophers dreamed. For half a century the main motive, with all except the incurably reactionary, was to find a middle way between reaction and change, to justify at once the Revolution and the Restoration. It was a reconciliation which no absolute dialectic could by any means effect; which could, however, be effected by seeking an explanation of political institutions in terms of their history; and so the age turned with feverish intensity to the study of the past. From the historical point of view, it was not difficult to regard the state as a product of inevitable though gradual change; and hence in history the generation after 1815 found an effective bulwark against obscurantism on the one hand and radicalism on the other, a means of justifying the transformation of the old régime without resorting to Jacobinical principles. To put historic rights in the place of natural rights was indeed one of the main achievements of the nineteenth century.

For this purpose, the political experience of England was most serviceable. To all who held to the golden mean in preference to extreme principles, either of divine right or of popular sovereignty, to all who adopted, in whatever form, Hegel's notion of the *Zeitgeist*, whose works, as Lord Acton says, "were always good and whose latest work was best," the history of English institutions appeared almost in the light of a God-given example, proving beyond peradventure that the happiest peoples, as well as the strongest, were those who advanced by evolution rather than by revolution towards the goal of freedom. Hence it was that such men as Niebuhr found the "ever-growing perfection of the British Constitution and freedom" such an admirable thing; and this interpretation of English history, put into classic form by Macaulay, has held, almost to our own day, undisputed possession of the field.

Such an interpretation of English history was the more readily accepted because, the main problems of government being in that age political, the interest of the historian was chiefly centred in the life of the state; so long as history was conceived as past politics, it was not difficult to regard English history as a steady progress towards liberty. But for the last quarter-century social problems have been in the ascendant. History is therefore conceived more in terms of social conditions; and historians concern themselves less with the mechanism of government than with the general welfare—less, one might say, with the freedom of the free than with the happiness of the unfortunate. From this point of view, English history is open to a very different interpretation, and the statement of Niebuhr that "the possession of freedom has gradually spread through the whole nation" seems a bizarre perversion of the truth.

Mr. Slater, at least, is one of those for whom the traditional view is altogether unsatisfactory. It might be objected that Mr. Slater is not an historian at all, but only a student of economic history. It may be so. But students of economic history are sometimes a little in advance of historians proper, and Mr. Slater's interest in economic questions only makes his book on "The Making of Modern England" the more significant as an illustration of the influence of modern conditions on the study of history. To begin with, Mr. Slater's ideas with respect to the purpose of studying the past are quite modern. "History," he says, "may be studied, like any other science, under the influence of a noble curiosity, with no end in view beyond the attainment of clearer knowledge of the past"; but "for the citizen, historical study with the ulterior object of gaining light on the future and guidance in the present is an imperative duty; and my desire is to help the growing number who feel this." It is, in fact, from the point of view of the present movement for "social betterment" that he approaches the study of the history of England. Does it appear to him as "the noblest picture of collective national wisdom and virtue that history can offer"?

Far from it! In the first chapter he sets forth, very soberly and with full knowledge of the facts, the conditions under which the people of England were living in 1815. And he finds that it was not a "merry England" then; but an England which was not inaccurately

described by a contemporary placard appearing at the time of the Spa Fields riots: "The present state of Great Britain. Four millions in distress! Four millions embarrassed! One million and a half fear distress! Half a million live in splendid luxury!" Few historians now deny or ignore the fact that in 1815 the majority of the English people were in distress: but many pass it off as the temporary result of the great war and the disorganization of industry incident to the return of peace. It is the merit of Mr. Slater that, without ignoring the temporary influences, he regards the condition of England in 1815 fundamentally as the result of economic changes which had been going on since the sixteenth century. He sketches with a sure hand the process, of which the "Glorious Revolution" marks the first stage and the industrial revolution and the Napoleonic wars the culmination, by which the landowning and moneyed classes eliminated the yeomanry and appropriated to themselves the economic and political control of England. The colonial and maritime expansion of the eighteenth century, far from being the result of a "growing freedom," was possible only through the exploitation of the masses by the classes: the price of empire, in Mr. Slater's view, had to be paid; its price was the disfranchisement and impoverishment of the nation.

To those who look at English history in this light, the exploitation of Ireland appears less exceptional than it is often represented to be. In its dealing with Ireland, Mr. Slater would probably say, the ruling class was only more ruthless and less legal than it was in its dealing with England. At all events, Mr. Healy, in his book entitled "Stolen Waters," has thrown some new light on an obscure and devious by-path of Irish history. In 1911 the Law Lords, by a majority of one, declared that Charles II had conveyed Lough Neagh, the "largest and most fishful lake in the three kingdoms," into private hands. It was this decision, apparently, which led Mr. Healy to collect all the evidence showing title to Lough Neagh, and to the river Bann which flows out of it. The investigation takes us back to the beginning of the seventeenth century, when James I induced certain Londoners to engage in the planting of Ulster in return for fishing rights in Lough Foyle and in the river Bann. Mr. Healy then reveals, with too much detail, perhaps, the methods, clever and tortuous and fraudulent, by which Sir Arthur Chichester, Lord Deputy of Ireland, appropriated to himself the river Bann, Lough Neagh, and much other valuable property upon which he founded the fortunes of the family whose descendants are still living, and who now gain an additional advantage by the decision of England's high court of justice. The book is not pleasant reading, but it illuminates the manner in which the English aristocracy has "governed" Ireland; and is a confirmation, in its way, of Mr. Slater's interpretation of English history in the eighteenth century.

Mr. Slater, however, is primarily interested in the nineteenth century, which he regards as marking a kind of *revanche*—the mere beginning of a movement for the overthrow of class privilege and the establishment of radical democracy. He sketches briefly the political history connected with the extension of the suffrage, and at greater length the history of the labor movement, of poor law and factory legislation, of educational reform, of the campaign for public health, of the development of industry and the revival of imperialism. His story is the advance of democracy. But he is not ready to admit that democracy has yet achieved the "splendid triumphs" which many writers concede to it. On the contrary, "politically, democracy is still in actual fact only attained in an imperfect degree, and in a very unsatisfactory form; while industrially and socially it exists only as a feeble beginning." Democracy's task, the establishment of social justice, is for the future: "To put industry on a new basis, on a basis fundamentally just, instead of one fundamentally unjust, is a task of enormous magnitude, but nothing less is demanded of the twentieth century."

The task which Mr. Slater lays on the twentieth century is certainly no light one. And of all the obstacles to its accomplishment, many people—and among them the Socialists, with whose ideas Mr. Slater is most in sympathy—are inclined to think militarism the greatest. In England, at least, the means for establishing social equality are greatly limited by the cost of national defence. Nevertheless, Mr. Slater admits the necessity of national defence, and welcomes imperialism in the sense of believing that imperialism is a necessary stage, and one which he hopes to pass as soon as possible, on the way to disarmament, the establishment of a world federation, and the triumph of human brotherhood.

It was from a quite different point of view that the late Sir Frederick Maurice regarded the military problem. As a professional soldier and scientific student of the art of war, he had little belief in the possibility of disarmament, except doubtless as a splendid ideal for the far distant future. Social salvation seemed to him to depend upon the regeneration of the individual from within by the cultivation of the commonplace virtues; and he was strong in the belief, which he urged with much originality and charm of style in the essays, and particularly in the one entitled "The Zeitgeist under Drill," that universal military service on the German plan was one of the most effective means of achieving the desired result.

An advocate of military training for its social effects, Maurice was under no illusion as to the necessity of being effectively prepared for war; and in this respect he represents the modern attitude as contrasted with that of the early Victorian period quite as well as Mr. Slater does. Maurice's father, the famous F. D. Maurice, used to illustrate the conservatism of that day by a story of the Waterloo veteran, who, when any one mentioned military reform, was apt to relate the following incident: "When I was at the Battle of Waterloo, Sir Alexander Dickson rode up to me. Says he to me: 'Mr. Smith, do you know that you are wasting your ammunition?' And I to him: 'I do, Sir Alexander Dickson.' With that he rode away, and we won the Battle of Waterloo. Any change of the most trifling description is to be deprecated." Something of this spirit remains, perhaps, even now. But the idea that England can be depended upon to "muddle through" is fast disappearing. Maurice's life work was to protest against it. In his writings, and in his lectures at the Staff College, he constantly urged the need of a thorough study of military history, especially of recent military history, and the necessity above all of bringing modern scientific knowledge to bear upon the organization of the army and the art of war. The experience of England in South Africa, and the rise of the "Teutonic peril," have given point to Maurice's teachings; for at present, while the principle of the double standard for the navy is accepted as a matter of course, compulsory military service for the army is a much-mooted question.

Thus in England, as on the Continent, the pressing problems at the opening of the new century are militarism and Socialism. They are not strikingly different in character from those which presented themselves for solution a century ago; but they have become infinitely more intricate. Meanwhile, the attitude of Englishmen generally is much less assured, as they contemplate these problems in 1913, than it was in the days of the Duke of Wellington; whereas, abroad, England is far from being regarded as "the pride and envy of the world."

CURRENT FICTION.

The Old Adam. By Arnold Bennett. New York: George H. Doran Co.

While Mr. Bennett's most serious-minded public (for he has a half-dozen publics) is waiting for the long-delayed sequel to "Hilda Lessways," and wondering whether the complete Hilda-Clayhanger trilogy will prove itself worthy, after all, to take its place beside the

"Old Wives' Tale," that versatile writer seems quite content to pursue his activities as an entertainer. Is he like the actor of parts who succumbs permanently to the easy charms of vaudeville, or is he giving a part of the twenty-four hours dedicated to his day's work to the pursuit of what is for him "the legitimate"? As a doer of "turns," at all events, he is a "head-liner." If "The Old Adam" is a turn, it is an extremely amusing one.

It is, in fact, a sort of sequel to an earlier performance of the same type—a tale of Denry the audacious twenty years after. Edward Henry Machin, Denry for short, will be recalled as the famous "card" of Bursley, who, with no marked endowment except a well-timed impudence, rises from his humble post of lawyer's clerk to be a power in the Five Towns. After twenty years he finds himself settled down as local magnate, householder, and father of a family. The little Nellie of his youthful romance is the stout and efficient mistress of his home. Money still rolls in, but his satisfaction in it wanes. Life is dull, middle age and respectability have possessed him. The old Adam, however, still inhabits his interior, and emerges to some purpose in the episode here recorded. A dog-bite and Chopin's Funeral March are at the bottom of it. How Alderman Machin, of Bursley, is led to beard the social and financial lions of London; by what flukes and impertinences of chance he becomes founder and proprietor of a theatre off Piccadilly, and exponent of the advanced drama; how deserved failure threatens him, and how he wrings success from failure by living up to his reputation as a card—becoming, in short, a "card" on a metropolitan scale—all this is the substance of a most amusing tale. And always in the background is the grim figure of Denry's old mother, unmoved and sardonic spectator of his feats, the one person in the world to whom Richard Edward Henry Machin, alderman, financier, and "card," is nothing in the world but a mischievous and rather unreliable boy. In her, if in no other figure here, the reader who wishes to take his Bennett seriously may find, drawn with the fewest possible strokes, a portrait worthy of the hand which produced the Baines and the Clayhangers.

The Fear of Living. By Henri Bordeaux. New York: E. P. Dutton & Co.

"La Peur de vivre" was first published in 1902, and went through numerous editions in succeeding years. American readers of the present version in English will incline to wonder why the book should have been taken so seriously in France. It is ingenuous and earnest, but, to the alien, neither striking as a story nor overwhelming as a parable. Its theme had long been a commonplace of Anglo-American fiction. Yet it was hailed in Europe as an evangel. René Doumic pronounced it "a new and daring departure." The grounds of his surprise are that the author of this narrative actually "thinks that a life in which one has suffered, struggled, and worked for others, not for one's self, that a life whose years are counted by emotions, sacrifices, devotions, and renunciations, is a well-filled life. He says it, he believes it, and, while we read it, he makes us believe it. It may be absurd, extravagant, and romantic in the last degree, but it is not commonplace." A further astounding fact about the story is that its characters are "almost all respectable people," while "it is a dogma in our literature that respectable people are not interesting." Finally, breathes M. Doumic, this unparalleled writer has produced a realistic work in which beauty and virtue usurp the time-secured places of ugliness and vice.

That M. Doumic did not exhaust the meaning of the story is shown by the author's preface, here reprinted, which was written some three years after the book was first issued. This preface contains liberal quotations from Mr. Roosevelt's "The Strenuous Life," which appeared, we recall, a year or two earlier than "La Peur de vivre." M. Bordeaux's chief quarrel is not with the wicked, but with those who inhabit the wretchedest circle of the Dantean or Rooseveltian inferno, those who are not vital, or "strenuous," enough to be either good or wicked. For the rest, we wonder that M. Doumic did not enlarge upon the phenomenon of our author's sufficiently evident opposition to the studiedly mercenary and studiedly childless French marriage.

Gettysburg: Stories of the Red Harvest and the Aftermath. By Elsie Singmaster. Boston: Houghton Mifflin Co.

Several of the stories here collected have appeared in the magazines. The group together affords a romantic picture of Gettysburg, the place and the memory, by a member of the younger generation. Miss Singmaster has lived in Gettysburg for many years without that disillusion which so often comes to the dweller at a shrine. It embodies for her the glory and the sorrow of that great dead strife. Its topography and its ancient legends have retained their glamour for her. And she knows at first hand the returning veteran and his entourage—the reunions, anniversaries, and dedications which give so many field-days to the little Pennsylvania town. The veteran is in a sense proprietor there: "Even now, after almost fifty years, the shadow of war is not yet fled away, the roaring of the guns of battle is not yet stilled. The old soldier finds himself appreciated, admired, cared for, beyond the merely adequate return for the money he brings into the town." Miss Singmaster does not unduly idealize this dwindling type. She records his foibles as well as his virtues. But she ardently believes that he is a type worth having, that what he did was worth doing. So the old blind gunner, whose name is to be found neither on the pension list nor on the State monument raised on Gettysburg field, is content to have done his part in the defence of a great cause. "It is not a question of reward, sir. I would endure it all again, gladly—everything." The spirit of the Gettysburg Address is behind all these tales—the struggle was not for nothing, the dead have not died in vain. "Is not all this business of war mad? . . . It is a feeble, peace-loving, fireside-living generation which asks such questions as these." We have said that Miss Singmaster's work is romantic: it is so in the best sense. She writes with a restraint and a sense of fitness in mood and word which keep her clear of the exuberance and sentimentality with which our magazine fiction is wont to "exploit" similar materials.

THE FUTURE LIFE.

A Critical History of the Doctrine of a Future Life in Israel, in Judaism, and in Christianity; or, Hebrew, Jewish, and Christian Eschatology from Pre-prophetic Times Till the Close of the New Testament Canon. By R. H. Charles. Second edition, revised and enlarged. New York: The Macmillan Co. $3.50 net.

The changes in this new edition consist of corrections of inaccuracies in references and dates, revisions, and additions; the principal addition is in the discussion of the nature and function of apocalyptic (p. 173 ff.); there is also an account of the so-called Zadokite Party, a curious Jewish sect described in recently discovered manuscript fragments edited by S. Schechter. The materials thus collected form an admirable introduction to the study of Jewish and Early Christian ideas of the future life, and Dr. Charles's treatment is candid and clear, with many interesting criticisms and remarks. Ancestor-worship, however (chapter i), he credits with a larger religious rôle than it is entitled to.

The development of the idea of immortality is described here, as in the first edition: first, the Old Semitic conception of a colorless existence of all the Israelite dead in Sheol, then the demand for a higher individual immortality, and finally the synthesis of these two conceptions in the doctrine of resurrection, in which the individual lives as a member of the resuscitated nation.

That this was the general line of progress is clear, but Dr. Charles's statement of the details of the movement and its governing conceptions presents difficulties. There is a disposition (chap. ii and *passim*) to represent religious individualism as a product of monotheism; there would be as good reason for reversing this order of cause and effect, but the fact is that the two Hebrew conceptions were parallel formulations of ideas that grew naturally out of the national enlargement of thought. This latter element of the religious development is here and there passed over by Dr. Charles, and a quasi-personality is ascribed to a body of beliefs or to a literary form. Thus, "Yahwism" is said (p. 53 f.) to have destroyed the false view of the future life, and is credited in general with the creation of the higher religious conceptions. Now, "Yahwism" at any one moment was the current creed of the people who worshipped Yahweh as their god, and it varied with all the intellectual fortunes of the nation. It at one time contained the false view of the future life, and at various times many other false views—it was the creation of the Israelitish people. It cannot be supposed that Dr. Charles does not recognize this fact—he says, indeed (p. 13) that "the national god is the personification of the genius of a people, the embodiment of its virtues and its vices on an heroic scale." Naturally, then, we expect him to add that the Yahweh of early Israel was a morally crude deity, instead of which he affirms (p. 15) that "the essential superiority of Yahwism to the neighboring Semitic religions lay not in its moral code, in which, indeed, it was unquestionably superior, but in the righteous character of Yahweh, which was progressively revealed to his servants." It would be difficult to frame a sentence contradicting more decisively than this the facts in the case. Dr. Charles identifies the Yahweh of Moses and David with the absolute God, whom he thus makes responsible for the savagery of the early times. Apparently, he has in mind the view (which, however, is not clearly expressed) that there was in the Israelitish people a germ or tendency of thought that inevitably ripened into the later ethical monotheism and other high beliefs. Doubtless there was a tendency, a devotion to the national god, but it had in itself no moral content, and the development can be understood only by taking into account all the cultural influences to which the people were subjected from without.

The comparison between the rôles of prophecy and apocalyptic (p. 173 ff.) is interesting, and due stress is laid on the contribution of the latter to the doctrine of the future life—to it, he observes, we owe every advance on the Old Semitic ("heathen") conception of Sheol: "the belief in a blessed future life springs not from prophecy but from apocalyptic." This is true in the sense that Jewish thought did not deal with the larger conception of the future till it had settled, under prophetic guidance, the question of the national cult, the ethical conception of the national deity. This question settled, the Jews found themselves in a world of new ideas concerning immortality, under the stimulus of which they slowly worked out views that were colored by their monotheistic faith. It happened that at this time the apocalypse was a favorite literary form, and it lent itself easily to imaginative constructions of the future life. Without discussing the historical conditions that led to the prevalence of the apocalyptic form, Dr. Charles points out that its pseudonymous character was a necessary consequence of the fact that belief in current inspiration was dead and the prophetic canon closed, so that to get a hearing a writer had to claim the authority of some great name of the past. In succeeding chapters the various beliefs, Jewish and Christian, concerning the nature and extent of the resurrection and the character of the post-resurrectional life are given in detail and with full citation of documents. Certain of the author's interpretations of Old Testament and New Testament passages (for example, Ps. xlix, 15, lxxiii, 24, 1 Cor. xv, 45) are open to doubt, but the general treatment is satisfactory.

Dr. Charles has made an elaborate study of the Biblical terms "soul" and "spirit" and worked out a theory that is peculiar to himself. He holds properly that in the greater part of Old Testament and New Testament these terms are synonymous, but maintains that, according to a view which followed logically from Gen. ii, 7 ("God blew into man's nostrils breath of life and man became a living soul"), the two differ from each other in essence as well as in function—the soul is the result of the indwelling of the spirit in the material body, is merely a function of the material body when quickened by the spirit, and is annihilated when the spirit is withdrawn (p. 41 ff.). It is hard to see how this construction of man's interior nature can be got from the passages cited. The Genesis verse says only that God breathed into a man-shaped mass of clay which then became a living soul, that is, a living creature—man's soul is God's breath, but there is no difference between the soul and this breath (which Charles identifies with the human "spirit"). Nowhere in the Bible is there found a belief in the annihilation of the soul (certainly not in Mt. x, 28). The Old-Semitic view of existence in Sheol as inert is retained in late Old Testament writings (Isa. xxxviii, 18, Eccles. iv, 10), while the old necromancy (as when the ghost of Samuel predicts Saul's death) disappears before enlightenment; but the continued existence of the soul after earthly death is taken for granted in Old Testament and New Testament. There seems to be no real dichotomy of soul and spirit either in Old Testament or in New Testament. The spirit or breath that God withdraws from beast (Ps. civ, 29) or man (Eccles. xii, 7), death then ensuing, the vital principle, is not different in essence from the soul. Hebrew psychology discerned two sides of interior life, and the term "spirit" was chosen (on what grounds we know not) to designate the vigorous active side—naturally it is used for the interior principle of the deity. Naturally, also, it is the term chosen by Paul to designate the side of man that enters into intimate relations with God—only, he holds (1 Cor. xv, Rom. viii) that this capacity belongs not to the unassisted human spirit, but to this spirit quickened by the divine spirit, the two being, as it were, fused into one. So in the Old Testament the thought of the prophets is produced by the "spirit of God" which comes on them or is poured out on them, and becomes psychologically a part of them.

Notes

The Index of the *Nation*, January 1 to June 30, will be printed with the issue of July 3.

The first volume of the "Bibliography of Modern English History," the compilation of which was undertaken by a joint committee of the American and British Historical Associations, is announced by Ginn & Co. The work will continue Gross's "Sources and Literature of English History to the Middle Ages."

Hall Caine's new novel, "The Woman Thou Gavest Me," will be published by Lippincott in August.

Among the announcements of Little, Brown & Co. are the following: "The Joy of Youth," a story by Eden Phillpotts, devoted to Italy; authorized American editions of "The Survivor," "The World's Great Snare," "Those Other Days," and "For the Queen," which represent the earlier work of E. Phillips Oppenheim, and a new book with an Oriental setting, by Rowland Thomas.

To the Modern Heroines series will be added this summer by Sturgis & Walton "Heroines of Modern Religion."

Dutton is about to bring out in English "The Adventurous Simplicissimus," by the seventeenth century Hans von Grimmelshausen.

The four hundredth anniversary of the discovery of the Pacific Ocean was commemorated by the Royal Geographical Society at its April meeting. The *Geographical Journal* for June contains Sir Clements R. Markham's address in which he told briefly the tragic story of the Spaniard, Vasco

Nuñez de Balboa, who forced his way through the dense Darien forest, and climbed alone a peak in the early morning of September 25, 1513, from which the wide expanse of the ocean burst upon his astonished gaze. Balboa called it Mar del Sur (South Sea), and it was Magellan whose weeks of experience of a calm sea led him to name it El Mar Pacifico. An interesting historical map of the peninsula illustrates the address. Among the other contents of the number is an account by Capt. E. M. Jack of that part of British East Africa, little known because of the difficulty of access, which lies adjacent to the German and Belgian territory. It is a mountainous region of great beauty, with a healthy and invigorating climate which makes it "eminently suitable for Europeans." The accompanying map is the result of the work of the Anglo-German-Belgian Boundary Commission, "the only known case," said Major Leonard Darwin, "of a boundary commission where three great Powers have joined together to simultaneously delimit the boundaries where their frontiers met."

In "Mark Twain and the Happy Island" (McClurg), Elizabeth Wallace presents an intimate record of the philosopher-humorist in the serener days of his later life—days that he spent in Bermuda, whither he was accustomed to go when the turmoil of the North proved too irksome. Mr. Clemens was no sight-seeing tourist, although he permitted one of his child friends to pilot him along the peaceful roads behind the donkey, Maude, which moved sedately at all times and sometimes grew quite stubborn. The author reveals Mark Twain's sympathetic interest in children and the little devices he invented to gain their confidence. She tells also about the evenings when he gathered his friends about him and read aloud to them. "In one hand," she writes, "he held his book, in the other he had his pipe, which he used principally to gesticulate with in the most dramatic passages." Although he did not care much about poetry, he confessed a weakness for Kipling's verse, saying, "I guess he's just about my level." Albert Bigelow Paine furnishes the introduction, and there are a number of good illustrations of Mark Twain and Bermuda scenery.

"Travers' Golf Book" (Macmillan), by Jerome D. Travers, is both frankly and accurately named. For, in addition to an account of the author's golfing career, it is an exposition of the game—as he plays it. His likes and dislikes and personal idiosyncrasies are made, we will not say the standard, but the point of departure for each discussion. The net result is that his readers are told to go and do as he does. Would that they could! They cannot, for he is a golfing wonder. He attains the most astonishing results in ways often irregular. For example, in the final round of the national amateur championship, which he won, he scarcely touched his wooden clubs. That was because he can use his iron *à merveille*. But this is a feat; it is not golf for the ordinary mortal. So of his dismissal of the spoon and his slighting of the cleek: he does not like those clubs, and hence he condemns them. It is this thrusting forward of the personal equation which gives his book unusual interest indeed, but deprives it of the right to be regarded as an all-round and thoroughly sound treatise on golf.

The title of Mr. J. F. Fraser's "Panama, and What It Means" (Cassell) might properly have been "Panama, as an Englishman Sees It," for it embodies all the views and criticisms of the canal which have found utterance abroad. American writers have for the most part been unequivocally enthusiastic over the $400,000,000 "American ditch." Mr. Fraser is unstinting in his praise of Col. Goethals and his work, but beyond that his opinion is, to say the least, reserved. In several chapters towards the close of the book, Mr. Fraser carries the reader a little beyond the wonders of the Gatun Dam, the Culebra Cut, and the Miraflores Locks. One of these chapters is entitled the Future of the Pacific; another, West Indies and the Canal; still another, What Is the Use of It All? In discussing the future of the Pacific, the writer points out the advantages which the new waterway must bring to our own Western States, but he strongly inclines to the idea that the greatest benefits will accrue to Latin America. With a population of 70,000,000 and an area far greater than that of the United States, the prospect of South America is vastly brightened by the promise of water navigation through the isthmus. Mr. Fraser dwells on this prospect with notable cheerfulness. In the chapter What Is the Use of It All? his reply is, in effect, "Nothing, so far as we Englishmen are concerned." He looks upon the manifest advantages of the Suez Canal as far too great to be abandoned for the altogether unproved advantages of the Panama route, especially in light of the possible abrogation of the Hay-Pauncefote Treaty. His conclusion is that in the end, with a high tax on foreign shipping preventing free use of the waterway, the canal must cost the American people $20,000,000 annually, while schemes of defence must call for maintenance on the isthmus of an army with a peace standing of 20,000 men. For compensation he accedes the advantages which the canal will offer in time of war, in enabling an American fleet to pass over-night from the Atlantic into the Pacific. But he does this grudgingly, holding that "with developments in modern warfare it would be nothing short of marvellous if during a conflict with a first-class Power the United States were able to keep the canal free from mishap and open to the quick transfer of warships from ocean to ocean."

An excellent little book is Mrs. Aubrey Le Blond's "The Old Gardens of Italy: How to Visit Them" (Lane). She gives concise information about the date of construction, names of designers, and owners of nearly a hundred gardens, with a brief description of the architectural features. In addition, she tells how each garden can be reached and from whom permits should be procured. A small half-tone accompanies each description. We note one misprint: Poggio Imperiali for Imperiale.

In his monograph on "Paul the First of Russia" (Lippincott), Kazimierz Waliszewski maintains the same tone of gossip that has distinguished his earlier volumes on Russian topics. His point of view is expressed in the following sentences:

Alexander's weakness once more emphasized the great part which personal and apparently accidental factors play in the development of the laws of history. The temperament of the individual and its influence on our destinies are themselves no doubt merely a resultant of the same forces by which the lives of nations are governed, but the principle of these combinations almost entirely eludes analysis and has all the appearance of pure chance (p. 477).

The chapters dealing with court intrigues are lively and entertaining, those on the assassination of the Emperor are masterly; those that sketch the progress of Suvorov's Italian campaign or of Paul's negotiations with France are baffling to the reader: "The principle of these combinations almost entirely eludes analysis, and has all the appearance of pure chance." Writing on the basis of wide reading and careful research in memoirs and archives, Waliszewski has produced a work of scholarly value. His tone is temperate and impartial. Of the unfortunate Paul, whom he regards as hovering on the verge of madness, if not actually a lunatic, he gives a portrait touched by kindliness; without hiding his cruelty and folly, Waliszewski emphasizes certain lovable traits in his character, and some permanent profit that has resulted from his capricious innovations. For the son Alexander, reserved, evasive, respectable, and hypocritical, Waliszewski has scarce a good word; success such as his is even more repugnaut than the wretched failure of his father.

In "Scientific Management in Education" (Publishers' Printing Company), Dr. J. M. Rice, then editor of the *Forum*, has brought together a series of pioneer investigations previously reported in the *Forum* during the years 1896-1904. His motive was to discover what could be expected from the schools and how far the curriculum could be extended to include the subjects demanded by "the new school of education" without detriment to the three R's. For this purpose he formulated three tests, or examinations, in spelling, arithmetic, and English composition, respectively, which were given to some hundred thousand pupils in a number of schools in several cities. His discussion of the results is most instructive, in spite of the fact, as it seems to us, that his tests show the usual fatal tendency to reveal mainly the not unexpected or the negative. Thus it appears that good results in teaching are not dependent upon the time given to the subject, not upon home study, not upon method, not upon the social status of the pupil, nor upon the personality of the teacher—though he fails to ask whether personality has a chance to operate under the present organization of the schools. The one fact that emerges positively from his spelling contest is that much of the time given to formal drill in this subject is wasted; and in general the wide divergence of results in different schools, with the absence of any specially favoring conditions in those which ranked high, seems to show that, for the time expended, much more might be accomplished in all the subjects. Yet this only verifies the conclusions of most parents who have undertaken to teach their children at home. And when he suggests that the astonishing differences in different schools revealed by the test in arithmetic were due to the fact that the children were unable to grasp the problems in terms in which they had not

been specially drilled, he simply states a well-recognized source of exasperation for teachers in all grades, from the kindergarten to the college; state your question a little differently, and your well-trained pupil is at sea. But this only raises the question whether one great trouble with our schools is not that the pupils are merely children.

Yet no skepticism with regard to figures should obscure the fact that Dr. Rice has written a sober and thoughtful book and that his tables are deserving of careful study. His main conclusion (not precisely deducible from the tables) is that the fault lies with the supervision. Within certain limits, the teachers will always produce results of the standard that is demanded. The difficulty is that what may reasonably be demanded no one knows. And the difficulty is to be overcome only by extensive investigations of the kind that he has illustrated. Such investigations should be made by the national Bureau of Education, but for the present the responsibility rests upon the schools themselves. At the same time every school should be a training school for teachers, under the direction of the principals and superintendents. Dr. Rice is no friend of pedagogy, but he holds that teachers should be trained; and he believes that just what the pupils need to make them think, rather than merely acquiesce in set formulas, is frequent questioning (introducing a fresh point of view) by the principal or superintendent. Neither of these proposals seems unreasonable. If our grading of students stands for anything, it ought to be possible to formulate, however roughly, some objective standards. And it seems proper that a superintendent of schools should be a trainer of teachers. Yet in that case he would need to be both a scholar and a master of the art of teaching.

The "Selected Essays of Plutarch" contains some nine pieces from the "Moralia" translated by Prof. T. G. Tucker, of the University of Melbourne. To those who know Plutarch only through the "Lives" we may recommend this volume as an introduction to a storehouse of wisdom and entertaining anecdote. The English of the translation is smooth and pleasant; occasionally it is ingenious, as when in the essay "On Bringing Up a Boy," the play on the words *ēthikas* and *ĕthikas* is thus rendered: "Character is long-standing habit, and it would scarcely be beside the mark to speak of the virtues of the mind as the virtues 'of minding.'" Henry Frowde is the publisher.

"Isles in Summer Seas" (Dillingham), by J. Law Redman, is a breezy account of the journey of a scribe and an artist to Bermuda and their rambles among native 'Mudians, not to speak of fellow-travellers from America. The text, illuminated here and there with legend and history, furnishes a background for a large number of pen-and-ink sketches by J. Hodson Redman, who found a variety of characteristic material in the quaint streets and high-walled gardens of old St. George's, the coralline beaches, and tiny bays and inlets that mark the shore of every island, large and small, in the Bermuda archipelago.

"The Empress Josephine" (Lane), translated from the French of Joseph Turquan, is a continuation of the author's previously published "Wife of General Bonaparte," and, like the earlier volume, portrays her as a most unsuitable kind of a wife for such a man as Napoleon. She never had any influence over his mind, only over his senses; and her sensual influence became less as her rouge and her age became more evident. M. Turquan retails at length in this volume her extravagance in money matters, her spiteful dislike of her husband's brothers and sisters, her utter shallowness of mind, her jealous suspicions, and her floods of tears caused by the Emperor's improper intimacies with other women and by the dreaded spectre of her own divorce. For a brief period in 1804, when she was crowned Empress and when she obtained the Pope's support in persuading Napoleon to go through the forms of a religious marriage with her, she had joyful hopes that she might remain his wife forever. But in the following five years of painful uncertainty her fears and her tears were renewed with increasing frequency. When in 1809 Napoleon finally told her that the divorce was inevitable for reasons of state she made the terrible scene which is familiar from the memoirs of Bausset. M. Turquan rests easily on well-known memoirs and secondary authorities, and adds to our knowledge of this most unfortunate woman little that is new except his own moralizations and imaginings.

Among the writers of fourteenth-century England, some of whom are not always immediate in their appeal to the modern reader, the nameless poet of the West Midlands can be counted on to charm, by reason of his literary artistry and the delicacy of his feeling, those who do not allow themselves to be repulsed by the bristling difficulties of his language. Of his works, "Gawain and the Green Knight," less certainly ascribable to him perhaps, but unquestionably, as it has been called, the gem of Middle English romance, and the "Pearl," from which has been fabricated a prettily pathetic but highly insubstantial biography of the author, have of late years been the occasion of much illuminating scholarship. Less discussed, because perhaps in subject less attractive, are the two Biblical paraphrases "Cleanness" and "Patience." Mr. Hartley Bateson's convenient edition of the latter poem is, therefore, most welcome (Manchester University Press). Besides text, notes, and bibliography, the editor provides a substantial introduction canvassing the whole problem of the poet and his works. Study of the relative chronology of the four poems results in the sensible conclusion, though contrary to the view elaborated by Ten Brink, that the more baldly homiletic and metrically simpler "Patience" and "Cleanness" preceded the more splendid vision and richer cadences of the better-known poems. The dependence of "Patience" on Tertullian's poem of the same subject, "De Jona et de Nineve," is carefully worked out—a fact which accounts for certain Vergilian reminiscences in the poem, but scarcely detracts from the spirited originality of a poet who could describe Jonah entering the huge mouth of the whale as easily "as a mote in at a minster door, so muckle were his chawles (jaws)." Less happy is the discussion of the complicated relations between this poem and "Piers Plowman." We are asked to follow an argument, purporting to demonstrate that "Patience" was influenced by "Langland's" portion of "Piers Plowman," but in turn influenced the work of the A-continuator and the author of the B-version, throughout the course of which no passage is quoted except from the B-version. It is possible, after all, that the resemblances are too slight to be of much probative value. In the bibliography, Weinhardt should be Weichardt, and Schofield's second article on the "Pearl" in Publications of the Modern Language Association ought to be included.

Thomas Allibone Janvier, the author, died last week in New York, aged sixty-three. He was born in Philadelphia in 1849. From 1870 to 1881 he was chiefly occupied with editorial work upon various Philadelphia newspapers; after that he devoted himself to literary work, and his home for most of the time was in New York, with the exception of travels in Mexico, three years in the south of France, and three years in London, and many visits abroad. When Mr. Janvier came to New York, about 1881, to enter definitely upon a literary career, there was something very like a Latin Quarter in the neighborhood of Washington Square. To the south there was a French Quarter, where various simple, old-fashioned French restaurants attracted artists. To the north was an artist colony. There was the old Studio building at No. 58 West Tenth Street, and across the street in a rear courtyard was the house where Edwin A. Abbey, Frank Millet, Hopkinson Smith, William Laffan, and others made the Tile Club famous. To the west was old Greenwich Village. An early result of Janvier's association with such surroundings was the production of his tales of artist life, familiarly known as the "Ivory Black Stories." They appeared in the magazines, and afterwards in his first book, entitled "Color Studies," published in 1885. After Mr. Janvier went to Mexico and the Southwest, he wrote "The Mexican Guide," a romance called "The Aztec Treasure-House," and "Stories of Old New Spain." A few years later, when in southern France, he became a warm friend of Mistral, the Provençal poet, and was made an honorary member of the Felibrige society of poets and men of letters. Mr. Janvier's life in the Midi yielded various magazine articles and stories, among them "An Embassy to Provence" and "The Christmas Kalends of Provence." The attraction which he felt for the past of New York found expression in a book entitled "In Old New York," published in 1894. In 1898 he published "In the Sargasso Sea." His interest in the old was shown again in "The Dutch Founding of New York," published in 1903, and also in his life of Henry Hudson, published in 1909, and in another field in his "Legends of the City of Mexico," published in 1910. His last book was entitled "From the South of France," issued last year.

Judge Thomas Manson Norwood, soldier of the Confederate army and, from 1871 to 1877, U. S. Senator from Georgia, died last week at the age of eighty-three. He wrote several books: "Plutocracy, or American White Slavery," "Mother Goose Carved by a

Commentator," and "Patriotism, Democracy, or Empire."

The Rev. Edgar Gardner Murphy died on Monday at his home in New York. He was born in Fort Smith, Ark., August 31, 1869. He was graduated from the University of the South, at Sewanee, with the class of 1889, and in 1904 received the degree of A.M. from Yale, and in 1911 the degree of D.C.L. from Sewanee. For twelve years he was a minister of the Protestant Episcopal Church, but in 1903 withdrew from the pulpit to engage exclusively in educational and civic work. He became executive secretary of the Southern Educational Board and vice-president of the Conference for Education in the South. In 1908 he was forced to retire on account of ill-health. He was the organizer and secretary of the Southern Society for Consideration of Race Problems and Conditions of the South, which held a national conference at Montgomery, Ala., in 1900. He was also chairman of the Alabama Child Labor Committee. In 1904 Mr. Murphy came North, and by his personal efforts enlisted the interest of philanthropists and others, and as the direct result of his pleading the National Child Labor Committee was organized. He was the author of the following books: "Words for the Church," "The Larger Life," "Problems of the Present South," and "The Basis of Ascendency."

Science

Human Behavior: A First Book in Psychology for Teachers. By S. S. Colvin and W. C. Bagley. New York: The Macmillan Co. $1 net.

Those who write for the audience to which this book is addressed too frequently assume that the ordinary teacher is more learned than he in fact is. This difficulty our authors have avoided. Only the elementary facts of psychology are brought forward, and these are stated simply in short and well-written chapters which bear constant relation to pedagogical demands. Each chapter is followed by a series of questions and exercises.

The title of the book is indicative of a certain tendency of thought among those who are, or who call themselves, psychologists. Many of the younger writers in this field to-day give the impression of being almost ashamed to acknowledge their interest in their subject. Psychic analysis is treated as a somewhat discreditable performance; yet since there can be no psychology without such mental analysis, the attempt is made to mask their efforts in this direction by asserting that "structural psychology" has been discarded in favor of a "functional psychology."

This drift of thought is readily traceable to the somewhat scornful attitude towards introspective analysis assumed by those who have devoted themselves to the so-called "new psychology," which, as now largely taught in our colleges, is really little more than a branch of physiology in which introspective data are found useful to check up objective experiments. As a consequence, some of the most skilful leaders in the realm of psycho-physics have been drawn into other fields more closely related with the objective sciences than with psychology. Interest in Galton's work has led some to devote themselves to statistical anthropology, and even to statistical inquiries pure and simple. Others who have turned to anthropology have later assumed a more decidedly objective position, treating man as akin to the animals, calling their work comparative psychology in the first instance, but finally dubbing themselves "behaviorists"—a term, by the way, which one might think had been devised by some subtle enemy. These workers have indeed developed a new science of behavior which has already yielded, and seems likely to yield still further, valuable results.

The interest in this new branch of science, coupled with the fact that many of those who have developed it hold chairs of psychology in our universities, has emphasized the general tendency. We find the younger psychological writers speaking of psychology as the "science of mental behavior"; and in his lately published "Essentials of Psychology" Professor Pillsbury actually goes so far as to define psychology as the "science of behavior," although he quickly drops what may properly be called the science of behavior and turns to the subjects and methods found in the ordinary psychological textbooks.

It has remained for Prof. John B. Watson, however, to bring the drift of things into clear view. His position at Johns Hopkins University, and his interesting and valuable work as a leader among the "behaviorists," gives his word especial weight. In a recent article (*Psychological Review*, March, 1913) he boldly asserts that "the time seems to have come when psychology must discard all reference to consciousness." "I believe," he says, "we can write a psychology, define it as Pillsbury does, and never go back upon our definition, never use the terms consciousness, mental states, mind, content, introspectively verifiable, imagery, and the like." Such statements from a man of so authoritative a position must lead psychologists to consider the direction in which they are drifting. No one can hesitate to admit the value of the new science of behavior, a science which is quite independent of analogical interpretations in terms of human consciousness. But why call this psychology? Why give the impression that it is psychology by having it taught, as such, by professors of psychology in our leading universities? If the science of behavior is to yield its best results, its devotees must assume the purely objective attitude taken by the professed zoölogist, and must treat human behavior in exactly the same objective manner in which they treat the functioning of animals; in other words, psychology may best be left altogether to one side in studying behavior. This argument does not mean that behavior is wanting in significance in relation to consciousness; it does remind us, however, that psychology as such necessarily involves the study of our mental states. The relations of these conscious states to their correspondents in behavior are of the utmost significance to a just conception of life, but the full study of these relations is within the broader field of philosophical discourse; beyond both the subjective field of psychology, strictly speaking, and the objective field sought to be covered by the science of behavior.

"A Reader of Scientific and Technical Spanish," with vocabulary and notes by Lieut.-Col. C. de W. Willcox, is promised for July by Sturgis & Walton.

O. F. Hudson's "Iron and Steel" is a brief treatise, with a section on "Corrosion" by Guy D. Bengough. The purpose is to present in as short a manner as possible the more important principles. Practical details of the methods of production are for the most part avoided; so that more attention is given to such subjects as an explanation of the constitution of steel and cast iron, and the effect of mechanical and heat treatment on the properties of these alloys. The book should be found useful by the engineer and student of metallurgy. It forms a good introductory textbook to the standard treatises of Turner, Harbord, Stoughton, Howe, and Campbell. It belongs to Van Nostrand's series of "Outlines of Industrial Chemistry."

Dr. Frank Hartley died last Friday at his home in New York. He was fifty-seven years old. Dr. Hartley was the originator of the intercranial method for the cure of trigeminal neuralgia, and made many other important contributions to surgery. From 1900 until his death he was professor of clinical surgery and instrumental operative surgery at the College of Physicians and Surgeons. He was born at Washington in 1856, and graduated from Princeton in 1877, receiving his degree of master of arts two years later. He graduated from the College of Physicians and Surgeons in 1880, and studied at the University of Vienna from 1882 to 1884. Princeton conferred the degree of doctor of laws on him in 1909.

The death of Sir Jonathan Hutchinson was announced in London on Monday. He was born in 1828, and was educated at Selby. He studied also at St. Bartholomew's Hospital, London, and in time became one of the foremost physicians in Great Britain, being regarded as an authority on leprosy. He was president of the Royal College of Surgeons in 1889 and 1890, and a member of two royal commissions, one dealing with smallpox hospitals, the other with vaccination. Sir Jonathan was the author of several books on medical subjects, one of which was "Fish-eating

and Leprosy," his contention being that that disease was often caused by eating bad fish.

Drama

Court Masques of James I. By Mary Sullivan. New York: G. P. Putnam's Sons. $2.50 net.

This book comprises an account of certain external conditions touching the masque within the reign of King James. It includes by way of illustration some matters both earlier and later. It is concerned neither with the nature, the origin, nor the character of the masque. Authorship is a matter incidental and the texts of the masques themselves have yielded the author the least of her material. Her sources, extensively studied and spread out for the reader's examination, are the court records of the time, the calendars of state papers, domestic and foreign, and the correspondence especially of contemporary ambassadors, French and other, at the Court of St. James's. Recent scholarship has been particularly active in the study of the English masque. There is Evans's "English Masques," 1897; Brotanek's thorough study, "Die englischen Maskenspiele," 1902, and now Reyher's "Les Masques anglais," 1909, to say nothing of earlier single dissertations like that of Soergel, Halle, 1882, and the treatment of the subject in general histories of the drama, such as Ward, Creizenach, and Schelling. The special studies Miss Sullivan mentions; she does not use them. While it is substantially true that scholarship in English, as in other subjects, has wasted much of its effort on the discovery of former error, this process is inextricably interwoven with the discovery of former truth, the neglect of which no amount of turning up of novel material can justify.

However, we can see no possible objection to a presentation of the masques of King James as Sir Dudley Carleton, a flippant and gossiping courtier, saw them, or as an intriguing French ambassador imagined them, provided we are not misled as to facts by the characters of our witnesses.

There is a great deal of interesting matter in this book, and the details of the fencing and manœuvring for invitation and place between the ambassador of his "most Catholic Majesty" and his "most Christian Majesty" (which terms Miss Sullivan obligingly explains to the unhistorical reader), rise at times to a level which, considering the altitude of those august personages, we cannot but designate high comedy. The trouble was one of precedent: Spain could not yield to France, France would not yield to Spain. The Flemings could not abide the precedence in place of the Venetians, the Venetians must outrank the Savoyards. Those were troublous times for court officials and gentlemen of ceremony, for all must be placated. The Russian embassy stayed away from one masque because the Emperor's representatives could give precedence to no man. The French ambassador on another occasion refused to attend a second representation of a masque because "his stomach would not suffer him to eat cold meat"; another French ambassador was recalled by Henry IV because of a preference in an invitation to a masque shown his Spanish rival. These facts, together with the difficulties of the royal council and the King himself because of them, are not to be disputed; nor is it to be denied that the favor shown an ambassador was often indicative of the *rapprochement* of the two countries concerned. But this is a very different thing from accepting the author's thesis that "a masque was a diplomatic function" employed to "advertise" and exploit the success of the reign, and that its subject and treatment were dependent mainly on political considerations.

Several things seem to have conspired in this book to bring about these unsafe generalizations. First, the witnesses as to the masque are mainly of one kind: foreign correspondents who were on the lookout for political significances, and courtiers who could see, to use an Elizabethan phrase, almost equally far into a millstone. Again, the author blinks both the place of the Jacobean masque in the long history of royal entertainments, lost as to origins in mediæval times, and the actual relations of the masque to the drama. For example, she is troubled, in view of the part taken by noble women in what she calls "the private theatricals in the court," to explain why "Shakespeare and his fellows who watched and acted with such actresses, [could] be pleased with a boy's interpretation of an Imogen, a Portia, or a Juliet?" The answer is obvious to the student of our old drama. No lady of the court was an actress or recited a word in play or masque until we come to Queen Henrietta Maria's unfortunate effort to learn English by means of Walter Montague's tedious pastoral play, "The Shepherd's Paradise," in 1633. As to masques, it is perfectly well known that ladies and gentlemen of the court dressed in character, learned certain postures, evolutions, and dances. That was all. Public actors were employed in the masques, but never in company with the noble masquers. It may be surmised that the independent development of the antimasque, which was acted by professionals, arose out of this separation. The suggestion that Shakespeare "acted with such actresses" or even "watched" them (a circumstance possible, but unproved) is absolutely gratuitous and the kind of misleading surmise that unsteadies the half-informed. Once more, in substantiating the "influence [of the masque] upon literature," Miss Sullivan cites (p. 177) a well-known letter of the Venetian ambassador concerning the "mockery" of a Catholic churchman on the stage. The passage is too long to quote here, but any reader of so universally known a production as Webster's "Duchess of Malfi" will recognize the description at once, note that the correspondent has missed the point, and recall that "The Duchess of Malfi" is as much a masque as "Hamlet."

There remains a more serious question in connection with this book; we shall call it the question of labels. The cover adds to the title "Court Masques of James I" the words, "their influence on Shakespeare and the Public Theatres" and this "description":

> The author establishes Shakespeare's connection not only as a private "Groom of the King's Chamber" and one of the company of the King's own players, but as an important instrument in entertainments prepared for the reception of kings, queens, and their ambassadors under stress of peculiarly delicate diplomatic complications. Interesting reading concerning kings and queens of Shakespeare's day is afforded, and yet every statement supported from original documents. The volume does away forever with the old story of Shakespeare and his fellows being ranked as "rogues and vagabonds."

Few unacquainted with history could avoid being misled by such statements. As a matter of fact, this book contains neither an account of the influence of the masque on the public theatres nor on Shakespeare. Moreover, Miss Sullivan has really "established" none of the things claimed in her "label." We have known since Shakespeare's time that he was a member of the King's company: the information is on the titles of some of his plays. We have known since the publication of a note by Mrs. Stopes in the *Athenæum*, March 12, 1910, that Philips and Heming with ten of their fellows were paid "to wait and attend on his Majesty's service at Somerset House for eighteen days of August, 1604." Shakespeare may have been among them. They were doubtless retained professionally to give a play (not a masque) when the negotiations were complete. But this is a very different matter from the statement of the "description" or the "label" under a well-known picture of these very ambassadors in conclave which Miss Sullivan uses for a frontispiece of her book and calls "ambassadors whom Shakespeare was paid by the state to entertain." We know, and have long known, that the royal players received allowances for liveries, and that the companies were retained on other occasions to act before the King. But we also know—what Miss Sullivan may also know but does not state—that there is absolutely no word

of evidence to show that Shakespeare was ever called in to devise a single scene in any one of the royal masques, and that to make him "an important instrument in the entertainment of kings, queens, and their ambassadors" is romancing without labelling the book "romance."

"Cymbeline," the eighteenth volume of the New Variorum edition of Shakespeare, is now in the press. The work was completed before Dr. Furness's death. It will be brought out by Lippincott early in the summer.

Edward Vroom, who received his early stage training with Booth, Barrett, and Modjeska, and learned the almost forgotten art of delivering blank verse, and has been well trained in the methods of the romantic drama, will be the stage director and leading actor of the Dramatic Art Society of Boston, just formed. It is proposed to start the movement with a series of six productions, beginning with revivals of "Cyrano de Bergerac," "Hamlet," "The Merchant of Venice," "The Taming of the Shrew," to be followed by "The Fortunes of Ronsac," a heroic comedy of the Richelieu period, first produced at the Drury Lane Theatre, London, and new to America, and "The Luck of MacGregor," a Colonial military play, first produced at the Garden Theatre, New York, and new to Boston.

Music

Two new short operas by Dohnanyi have been performed in Berlin-Charlottenburg. One of them, "The Veil of Pierrette," achieved a success; the other, "Tante Simonia," was criticised adversely because the music was too heavy for the frivolous nature of the libretto.

A new American symphony, by Edgar Stillman Kelley, had its first performance last week at Carl Stoeckel's Norfolk Music Festival. It was played by musicians selected from the best New York orchestras. The composer himself conducted. The symphony is entitled "New England," and the composer writes in regard to it:

> I endeavored to express one phase—and certainly an important one—of American thought, the Puritan pioneer's ideal. Of course, each American must give voice to the sentiment of his own branch, racial, religious, etc., and mine being thoroughly of the New England east, on both sides of the house, I have sought to embody in this work something of the experiences, ambitions, and aspirations of my ancestors. The four movements are preceded by mottoes from the log book of the Mayflower, and some of the material is as American as one could wish. The slow movements consist of variations on a grand old choral written in New England a century ago; the number corresponding to a scherzo is built upon themes of New England birds treated symphonically.

No one has done more to encourage American composers than Mr. Stoeckel. Among the works specially written for his Norfolk festivals (all the expenses of which he bears, no tickets being sold) are: "King Gorm, the Grim," a ballad for chorus and orchestra, by Horatio Parker (1908); "Noël, a Christmas Pastoral," for soli, chorus, and orchestra, by George W. Chadwick (1909); "The Bamboula," a rhapsodic dance founded on a West Indian air, by Samuel Coleridge-Taylor (1910); Henry K. Hadley's Fourth Symphony (North, East, South, West), and "Collegiate Overture," for male chorus and orchestra, by Horatio Parker (1911); "Aphrodite," a symphonic fantasie for orchestra, by George W. Chadwick, and two works by Samuel Coleridge-Taylor, "A Tale of Old Japan," for soli, chorus, and orchestra, and a concerto for violin and orchestra (1912); the Kelley Symphony, just described, and another novelty of this year's concerts, a "Negro Rhapsody," by Henry Gilbert. This piece, also, which is founded on a negro "shout," was conducted by its composer.

When Siegfried Wagner was asked to contribute an article on the Wagner centenary to the London *Daily News*, he replied: "I prefer to be silent on this occasion. We have our reasons, the same reasons for which we do not play this year at our Festspielhaus in Bayreuth." What are those reasons? Are Siegfried and Cosima Wagner out of humor because all their efforts to save the "Parsifal" monopoly for Bayreuth have failed? Evidently, "Parsifal" next year will be common. In Paris alone, three theatres are preparing to perform it.

Giovanni Sgambati, whose seventieth birthday was celebrated in Rome on May 18, is one of the very few Italian composers of note who preferred the concert stage to the opera house. He owed his prominence early in his career to Liszt, who assisted him in various ways, as he did so many other talented young men. Subsequently, Wagner became interested in him, and it was on Wagner's recommendation that the publisher, Schott, of Mainz, printed some of his most important works, including two symphonies, a piano concerto, two quintets, two quartets, and many pieces for the piano. Sgambati was the first to produce in Italy Liszt's "Dante" symphony, which Wagner called "divine."

Leonardo da Vinci is the hero of an opera recently produced at the Imperial Opera House at Warsaw. Its title is "Medusa," and its composer the Polish musician, Ludomar von Pozyeki. The libretto deals with a love episode in the artist's life, and there is a scene in which he paints Mona Lisa. Several German opera houses have already arranged to produced this novelty.

In no country is less attention paid to oratorios than in Italy. The Milanese were, however, greatly edified by two performances of Bach's St. Matthew's Passion and Brahms's "German Requiem," recently given for them by the Berlin Singakademie and Philharmonic Orchestra. Turin and Bologna also heard this combination in the same choral works.

Alexander von Bandrowski, the Polish tenor, is dead in Cracow, after a short illness, aged fifty-three. He was known to the New York public through his appearances at the Metropolitan Opera House in the title rôle of Ignace Paderewski's opera "Manru" about ten years ago. It was at the request of the composer that Maurice Grau brought Mr. von Bandrowski to this country, as he had first sung the rôle of the gypsy hero in Cracow, Lemberg, Zurich, and Cologne. He appeared only in this opera and in one represenation of "Lohengrin."

Ingeborg Bronsart von Schellendorff, a woman composer of Germany, is dead in Munich at the age of seventy-three. She was born in St. Petersburg, and studied piano with Liszt, Martinoff, and Henselt. In addition to compositions for the piano, she composed three operas, of which one, entitled "Hiarne," was frequently sung in Germany.

Art

A History of Painting in Northern Italy, from the Fourteenth to the Sixteenth Century. By J. A. Crowe and G. B. Cavalcaselle. Edited by Tancred Borenius, Ph.D. New York: Charles Scribner's Sons. 3 vols. Illustrated.

It is forty-two years since the indefatigable partners, Crowe and Cavalcaselle, published their survey of painting in Northern Italy. The work lacked the consistency of their more famous "History of Painting in Central Italy," but in some ways was even more valuable. It was the first comprehensive treatment of a subject which had been neglected or relegated to the local historians. The authors were the first to trace the main lines of development from Mantegna, Giambellino, Titian, Giorgione, and Palma. In particular, they were the first to subject the legend of Giorgione to rational sifting. The defects of the book were a certain condescension or positive scorn of some charming primitive artists. The delightful Borgognone receives scant recognition, the bewitching Stefano da Zevio is actually flouted. Self-imposed limitations were the omission of the Piedmont school, and that of Nice. At times the authors were overmastered by sheer bulk of material. Minor artists, like G. A. Pordenone and Pellegrino da San Daniele, were treated with inordinate breadth. Still, as a scholar's manual, the book was of extraordinary richness, compact with information, and, despite the numerous special researches of the contributors to the *Rassegna d'Arte* and Mr. Berenson's and Dr. Gronau's comprehensive surveys, Crowe and Cavalcaselle has kept its place at the elbow of every serious student of Northern Italian painting.

But aside from the usual copyright considerations, the time for a revision had come. For ten years past Italian, English, and German scholars have been working steadily in this field. That the time was ripe for a summary of results is shown in the simultaneous appearance of Dr. Borenius's revision of Crowe and Cavalcaselle and Dr. Toesca's "La Pittura e la Miniatura Lombarda." These works in many respects supplement each other. Toesca's book is especially full on the earliest Lombard paint-

ing and on miniatures, treating as well the subject of Transalpine influence in Northern Italy—topics omitted or handled very summarily by Dr. Borenius. The new editor of Crowe and Cavalcaselle is a young scholar who has distinguished himself by broad and exact researches into the painting of the Vincenza school. In general, he has acquitted himself well of the task of revision. He has left the original text intact, merely changing gallery numbers, etc., when necessary, and his own additional notes are succinct and clearly marked. His additions swell the original two volumes to three, which, considering the enormous increment of special literature and discovery, is very moderate.

Well conceived as is the general scheme of revision, there are necessarily many slips in detail. As usual, knowledge of American collections would have added many important pictures to the lists. For example, Mr. John G. Johnson, Mr. Carnegie, and Mr. Harry Payne Whitney own good Costas. Mr. D. F. Platt has a Viti; the estate of Charles Eliot Norton a fine Bartolommeo Veneto. Mr. Johnson's collection would, among many, furnish examples of Basaiti, Cima, Lotto, Palma, Romanino, and Tura. Such addenda could be carried much further did space permit. Obviously, it is imperative either that the more important works by old masters in America should be adequately published, or that all European editors of comprehensive books on art should include in their preparation a trip to America. Other oversights are less explicable. Concerning the Giorgione Judith at St. Petersburg, nothing is said either of the cutting down of the picture nor of the print that gives its original dimensions. Under Giorgione generally a full registration of the ascriptions of Cook and Justi would have been useful. It is odd to write of Timoteo delle Viti without mentioning Morelli's famous theory that he was Raphael's first master.

But on the whole, Dr. Borenius has kept a sure and steady hand. By turning to such notes as those on Amico Aspertini and Antonio Pisano (Pisanello), one may realize how much new matter has been packed into little space throughout the volumes. Almost invariably one will commend the editor's judgment as to the substance and scale of the annotation, compared with which positive merit occasional slips are negligible. For this revived Crowe and Cavalcaselle a long and useful life may confidently be predicted.

"The Guild of the Garden Lovers" (Dutton) is a book of English amateur gardening cast in an unusual form. The "guild" is a group of Englishwomen, old friends, who decide, as it were, to "pool" their skill at gardening. The book is made up of conversations, letters, and little essays exchanged among the garden lovers. Special problems of gardening—the treatment of certain plots of ground according to special circumstances; the proper grouping of perennials so as to secure the greatest harmony of colors and a constant succession of bloom; scented gardens, wild plant borders—these are the kinds of themes dealt with informally in these pages. It is a book for those who have passed the first stages of flower-growing and have become interested in the subtler questions which belong to gardening as a fine art. There are a good many photographs, which are as unsatisfactory as photographs usually are in the attempt to give an idea of the confined and interwoven beauties of flowers in a garden.

Finance

WHEN WE "MOVE THE CROPS."

Two incidents of last week—the tightening of certain European money markets and the somewhat remarkable statement of the country's foreign trade for May—directed attention sharply to one factor that will be important for the next few months. That factor is our actual position on international exchange; which would include the questions, how far our markets are dependent on Europe for obtaining credit on a substantial scale, and what the prospects are of our getting such facilities (if they are needed for the moving of our crops) between now and the end of the year. The problem is of singular importance, because of the seeming unwillingness or inability of Europe's markets to undertake burdens which they usually accept as a matter of course. Can we, or can we not, obtain such facilities from Europe?

First, as to the "visible" international position, shown by our trade in merchandise with the outside world. It is most unusual. Last month, our exports ran $19,200,000 beyond the highest previous May record. Partly because of the impending change in tariff duties, imports decreased $22,000,000 from 1912, and, as a result, the excess of exports over imports went beyond all precedent for the month.

This, to be sure, is only one month's showing. But the eleven completed months of the fiscal year are equally remarkable. Our merchandise exports for the period were $236,000,000 above those of the same months in the year before, while imports increased only $159,000,000. Excess of exports runs far beyond all precedent, except for the two noteworthy years 1908 and 1901. As compared with a fiscal year as recent as 1911, the eleven months' "export excess" is greater by $431,000,000.

These are large figures; but, as even the schoolboys know, a "merchandise export surplus" of $621,000,000 for eleven months is offset by some important debit items, and is surrounded by perpetual controversy as to how far a "merchandise trade balance" is wiped out by annual interest dues to foreign investors, by freight payments to foreign ships, by expenditure of our citizens in foreign lands, and so on. If all these items were to be footed up, there would still remain the powerful influence of purchases or sales of one nation's stocks and bonds by the markets of another state.

It is a most obscure and difficult problem to work out; it can never be satisfactorily determined. The worst thing of all about it is that the man who undertakes to solve it, out-of-hand, will presently be lost in the fog and begin to talk absurdities—which range all the way from assurances that New York has a thousand million dollars' credit, placed in Europe and subject to instantaneous recall (the favorite theory of 1901), to warnings that our annual net obligations to the outside world are half a billion dollars, which Europe, in its own good pleasure, could withdraw from here in gold.

The truth is that in this complicated matter there is only one firm rock to stand on. Comparison of one year with another, all surrounding circumstances being allowed for, will show whether our position on international exchange is worse or better than the average; for the country has certainly continued to flourish in the average years. The course of the sterling market will usually help to settle the uncertainty. This season's exchange rate—which, in spite of the urgent demands for capital or gold by Europe, has ruled steadily at par or in this country's favor—testifies to a strong position. The foreign trade comparisons speak for themselves; the only remaining question being, how far the "export excess" has been or is to be offset by unusually heavy resale of American securities to us by Europe.

There would still be left for consideration the question of "drawing on Europe next autumn to move the crops." Supposing, for the sake of argument, that we ordinarily borrow for that purpose $100,000,000—to take a purely arbitrary figure—shall we get it or not? If we are able to command it, how will Europe's money markets be affected? If not, then what will be the sequel on our own?

The reasonable probability is that we shall "draw on Europe" for commercial purposes, during the coming season, much as we usually do. In an operation of the sort, the United States occupies towards London much the same position as a merchant borrowing to provide for a season's ordinary trade occupies towards his bank. It is the

business of the bank, and it is the business of financial Europe, to hold itself ready for such loans.

Indeed, the case is stronger as regards our commercial borrowings from Europe; for those loans are made by a customer as well as a creditor. Europe must buy, within the period from which its advances of capital run, the grain and cotton which the proceeds of the loans will be used to move. What the foreign banks lend to us for the purpose, in August, September, and October, will obviously go towards paying for the agricultural products which the foreign markets import from us in the later autumn. If such payment is not made at one time, it must be made at another, and in either case the European markets must provide the capital.

As to how the earlier "drafts on Europe" would affect these foreign markets in their own affairs, that, too, must be judged by the fact that the operation is of a normal routine character, the coming performance of which must have been kept in view for months beforehand. Without these usual advances of foreign capital, we should presumably have to face very tight money in this country at the end of summer. With the advances granted, we may discover later on that the money situation is, by autumn, much less formidable than any one had imagined.

(My commission expires March 31st, 1915.)

A MONTESSORI MOTHER

By DOROTHY CANFIELD FISHER, author of "The Squirrel Cage." $1.25 net.

"To those who found some difficulty in comprehending fully Dr. Montessori's own description of her system, this book will particularly appeal."—*Boston Transcript.*

4th American edition; 2nd English edition; Italian, French and German translations under way

Henry Holt & Co., 34 W. 33 St. New York

BY THE BROWN BOG

By OWEN ROE and HONOR URSE. With Silhouettes. Crown 8vo. $1.35 *net.* (Postage 12 cents).

Readers familiar with the delightful humor of the "Experiences of an Irish R. M." will welcome this new collection of stories dealing with the more humorous side of life and sport in Ireland, as related by the "District Inspector."

LONGMANS, GREEN, & CO.

The Price of Inefficiency

By FRANK KOESTER

Author of "Hydroelectric Developments and Engineering," etc.

This book lays bare in searching analysis and startling deductions, national ills and weaknesses due to inefficiency, Governmental or non-Governmental, and largely responsible for the high cost of living and other harsh conditions. Comparisons with the methods and results of other countries give point to both constructive and destructive criticism. *Octavo,* $2.00 *net; postpaid,* $2.15.

THE EDUCATION OF TO-MORROW

By ARLAND D. WEEKS, M.A.

A vigorous overhauling of educational ideals to show what sort of curricula are best for an economic democracy. It contends for a closer relation between education and the life interests, if not the vocations, of the community. 12*mo.* $1.25 *net.*

STURGIS & WALTON CO.

31-33 East 27th Street, New York.

10 WEEKS IN EUROPE FOR $300

BOOK ABOUT IT, $1.10 POSTPAID.

DODD, MEAD & COMPANY,

FOURTH AVE. AND 30TH STREET, NEW YORK

The Southland of North America

Rambles and Observation in Central America during the Year 1912

8vo. *With nearly* 100 *Illustrations and a Map.* $2.50 *net; by mail,* $2.75.

By GEORGE PALMER PUTNAM

"Shows a keen sense of 'actuality,' a lively pen and a well-directed camera. . . . It is really an amusing and instructive and tempting account of travel in the byways just off the new highway."—*N. Y. Sun.*

"A very attractive and highly interesting book. There has, perhaps, been no more satisfactory work on Central America, not excepting the letters of James Bryce, than this. A valuable impression of this vast country."—*Gazette Times,* Pittsburgh.
